Cotton batting. Stearns & Foster Company. 156,432, June 20, 1922. Republished Dec. 7.

Cotton batting. Stearns & Foster Company. 246,470, renewed Sept. 11, 1948. O. G. Dec. 7.

Cotton, quilting. Stearns & Foster Company. 266,824, Feb. 4, 1930. Republished Dec. 7.

Cotton wadding and cotton batting. Stearns & Foster Company. 79,706, Sept. 27, 1910. Republished Dec. 7.

Flower seeds. Ohio Florists' Association. 504,811, Dec. 7; Serial No. 517,508.

Flower-seeds, grass-seed, vegetable-seeds and field-seeds. Springfield Seed Company. 98,581, July 21, 1914. Republished Dec. 7.

Fuel. Great Lakes Coal & Dock Co. 383,130–1, Nov. 26, 1940. Republished Dec. 7.

Fuel. Great Lakes Coal & Dock Co. 383,147, Nov. 26, 1940. Republished Dec. 7.

Fuel. Great Lakes Coal & Dock Co. 383,313, Dec. 3, 1940. Republished Dec. 7.

Fuel. Great Lakes Coal & Dock Co. 383,573, Dec. 17, 1940. Republished Dec. 7.

Fuel. Great Lakes Coal & Dock Co. 396,773, Aug. 4, 1942. Republished Dec. 7.

Fuel. Great Lakes Coal & Dock Co. 424,598, Oct. 15, 1946. Republished Dec. 7.

Jute and cotton bats. Stearns & Foster Company. 146,885, Sept. 20, 1921. Republished Dec. 7.

Lacing Leather. American Stay Company. 272,171, July 1, 1930. Republished Dec. 7.

Peat moss, Granulated, and peat-moss products. Atkins & Durbrow, Inc. 258,748, July 16, 1929. Republished Dec. 7.

Plaster resins, Synthetic. Reichhold Chemicals, Inc. 408,699, Aug. 29, 1944. Republished Dec. 7.

Resins, resin solutions. Reichhold Chemicals, Inc. 407,306, May 30, 1944. Republished Dec. 7.

Resins, Synthetic. Sherwin-Williams Company. 384,679–80, Jan. 28, 1941. Republished Dec. 7.

Resins, Synthetic. Sherwin-Williams Company. 387,756–7, May 27, 1941. Republished Dec. 7.

CLASS 2

Cartons. Chicago Carton Company. 504,500, Dec. 7; Serial No. 527,624, published Sept. 7, 1948.

Bags of paper or cloth, Garment. White Tar Company of New Jersey, Inc. 247,600–1, renewed Oct. 2, 1948. O. G. Dec. 7.

Jewelry made of semi-precious metals and precious metals, Men's and ladies'. M. Hoffman. 416,079, Aug. 28, 1945. Republished Dec. 7.

Oilers with spouts, Portable. Chase Brass & Copper Co. Incorporated. 257,780, June 18, 1929. Republished Dec. 7.

Plates, Paper. Old Town Company. 504,658, Dec. 7; Serial No. 537,496, published Sept. 7, 1948.

CLASS 3

Handbags. M. Roskin. 431,750–1, Aug. 5, 1947. Republished Dec. 7.

Jewelry made of semi-precious metals and precious metals, Men's and ladies'. M. Hoffman. 416,079, Aug. 28, 1945. Republished Dec. 7.

CLASS 4

Cleaning compound. Markem Machine Company. 504,703, Dec. 7; Serial No. 554,138, published Aug. 24, 1948.

Cleaning compound. Solvay Process Company. 405,065, Jan. 4, 1944. Republished Dec. 7.

Cleaning compound, Non-saponaceous. Mo-Zel Chemical Products Company. 376,958, Apr. 9, 1940. Republished Dec. 7.

Cleaning fluid, Dry, rug and carpet wet shampoo, dry cleaner, etc. D. H. Goldman. 350,985, Oct. 12, 1937. Republished Dec. 7.

Cleanser. Beacon Chemical Corporation. 400,868, Apr. 6, 1943. Republished Dec. 7.

Cleanser, Household. Steele-Wedeles Company. 374,474, Jan. 9, 1940. Republished Dec. 7.

Cleansing and polishing cloth, and impregnating compound therefor, Impregnated. H. Honig. 504,692, Dec. 7; Serial No. 545,985, published Sept. 7, 1948.

Cleansing compounds and detergents, Liquid. Stanco Incorporated. 249,191, renewed Nov. 6, 1948. O. G. Dec. 7.

Detergents, Synthetic organic. Solvay Process Company. 419,765, Mar. 5, 1946. Republished Dec. 7.

Powder, Scouring. I. Rokeach & Sons, Inc. 247,568, renewed Oct. 2, 1948. O. G. Dec. 7.

Preparation for shaving, Paste-like. Barbasol Company. 344,122, Mar. 16, 1937. Republished Dec. 7.

Preparation for shaving, Pastelike. Barbasol Company. 406,257, Mar. 21, 1944. Republished Dec. 7.

Preparations used as cleansing agents. Solvay Process Company. 398,201, Oct. 13, 1942. Republished Dec. 7.

Shaving cream. Mennen Company. 253,177, renewed Feb. 19, 1949. O. G. Dec. 7.

Shaving soap, shaving cream and bar soap. House for Men, Inc. 383,988, Dec. 31, 1940. Republished Dec. 7.

Soap. Essential Chemicals Co. 504,702, Dec. 7; Serial No. 550,591, published Aug. 24, 1948.

Soap. Los Angeles Soap Company. 319,539, Nov. 27, 1934. Republished Dec. 7.

Soap, Baby. C. M. D'Arcy. 412,227, Feb. 27, 1945. Republished Dec. 7.

Soaps. P. P. Mulhens. 248,478, renewed Oct. 23, 1948. O. G. Dec. 7.

Soda ash cleanser, Modified. Solvay Process Company. 405,795, Feb. 22, 1944. Republished Dec. 7.

CLASS 5

Binders in liquid form. Masonite Corporation. 504,545, Dec. 7; Serial No. 521,742, published Aug. 31, 1948.

Paste, Linoleum. Sears, Roebuck and Co. 504,690, Dec. 7; Serial No. 544,912, published Aug. 24, 1948.

CLASS 6

Algin product for use as a hydrophilic colloid. Kelco Company. 433,814, Oct. 28, 1947. Republished Dec. 7.

Ammonia. Beacon Chemical Corporation. 379,366, July 9, 1940. Republished Dec. 7.

Antisposmodic, nervine, anodyne, etc. Dios Chemical Company. 44,421, July 4, 1905. Republished Dec. 7.

Beer, brown stout, porter and malt extract. Stroh Brewery Company. 71,606, re-renewed Dec. 1, 1948. O. G. Dec. 7.

Bleaching, cleansing, antiseptic, and germicidal compounds. Clorox Chemical Corporation. 251,292, renewed Jan. 1, 1949. O. G. Dec. 7.

Capsules, Vitamin. Harold N. Simpson Company. 504,681, Dec. 7; Serial No. 540,207, published Aug. 24, 1948.

Caustic soda. H. M. Sinclair, Jr. 504,552, Dec. 7; Serial No. 527,006, published Sept. 7, 1948.

Chemicals for exterminating weeds. Sherwin-Williams Company. 504,532, Dec. 7; Serial No. 504,217, published Aug. 31, 1948.

Cleansing, sterilizing, and purifying fluid. Dehls & Stein. 246,039, renewed Aug. 26, 1948. O. G. Dec. 7.

Compound used as a flux. Imperial Type Metal Company. 290,008, Dec. 22, 1931. Republished Dec. 7.

Compound used as a flux. Imperial Type Metal Company. 290,722, Jan. 12, 1932. Republished Dec. 7.

Corn-starch, corn-flour, and starch for laundry purposes. National Starch Manufacturing Company. 30,327, July 6, 1897. Republished Dec. 7.

Cosmetics and beauty preparations. Jacqueline Cochran. 383,068, Nov. 19, 1940. Republished Dec. 7.

Cosmetics and beauty preparations. Jacqueline Cochran. 384,245, Jan. 7, 1941. Republished Dec. 7.

Deodorant. Anderson-Stolz Corporation. 384,188, Jan. 7, 1941. Republished Dec. 7.

Deodorant and moth preventative, Household. Arwell Products Company. 239,245, renewed Feb. 28, 1948. O. G. Dec. 7.

Deodorant cream. Barbasol Company. 397,965, Sept. 29, 1942. Republished Dec. 7.

Deodorants. Odorono Company. 252,478, renewed Feb. 5, 1949. O. G. Dec. 7.

Douche, Antiseptic. Table Rock Laboratories, Inc. 504,559, Dec. 7; Serial No. 527,473, published Aug. 24, 1948.

Dyeing assistants. American Aniline Products, Inc. 504,573, Dec. 7; Serial No. 529,220, published Aug. 24, 1948.

Face creams, face powders, and hand, face and skin lotions. G. W. Beeman. 297,197, Sept. 6, 1932. Republished Dec. 7.

Feed supplement, Animal. Marblehead Lime Company. 504,683, Dec. 7; Serial No. 540,427, published Aug. 31, 1948.

Film developer, Fine grain. Edwal Laboratories, Inc. 504,563, Dec. 7; Serial No. 527,949, published Aug. 31, 1948.

Food colors. Price Flavoring Extract Co. 395,668, June 2, 1942. Republished Dec. 7.

Hair dressing. Mennen Company. 504,689, Dec. 7; Serial No. 544,454, published June 1, 1948.

Hypo-allergenic product, etc. Mead Johnson & Company. 504,543, Dec. 7; Serial No. 516,940, published Aug. 31, 1948.

Insecticide or preparation to kill lice. Burrell-Dugger Co. 126,647, Sept. 30, 1919. Republished Dec. 7.

Insecticides. Sam Houston Company. 504,676, Dec. 7; Serial No. 539,170, published Aug. 31, 1948.

Insecticides. Roman J. Irwin, Inc. 504,659, Dec. 7; Serial No. 537,702, published Aug. 17, 1948.

Iodine in colloidal form, Solution of. Mulford Colloid Laboratories. 344,767, Apr. 6, 1937. Republished Dec. 7.

Liniment. Polk Miller Products Corporation. 331,624, Jan. 14, 1936. Republished Dec. 7.

Liquid material for cleaning the hair, after shampooing. John H. Breck, Inc. 395,869, June 16, 1942. Republished Dec. 7.

Lotion, After shaving, cologne, hair tonic, etc. House for Men, Inc. 374,854, Jan. 30, 1940. Republished Dec. 7.

Manganese in colloidal form, Solution of. Mulford Colloid Laboratories. 344,545, Mar. 30, 1937. Republished Dec. 7.

Medicinal preparation. Owens & Minor Drug Co., Inc. 271,635, June 17, 1930. Republished Dec. 7.

Mineral oil, White. Stanco Incorporated. 251,298, renewed Jan. 1, 1949. O. G. Dec. 7.

Oil, White. Stanco Incorporated. 250,426, renewed Dec. 11, 1948. O. G. Dec. 7.

Oils. Sherwin-Williams Company. 371,288, Sept. 19, 1939. Republished Dec. 7.

Organic materials, Synthetic. Solvay Process Company. 418,564, Jan. 1, 1946. Republished Dec. 7.

Perfume. Inland Laboratories, Incorporated. 376,877, Apr. 9, 1940. Republished Dec. 7.

Perfumes. Joubert Cie, Inc. 313,649, June 5, 1934. Republished Dec. 7.

Perfumes. G. R. Parkinson. 504,619, Dec. 7; Serial No. 532,489, published Sept. 7, 1948.

Pharmaceutical preparation. Burrell-Dugger Company. 266,527, Jan. 28, 1930. Republished Dec. 7.

Poultry remedy. Burrell-Miller. 115,730, Mar. 6, 1917. Republished Dec. 7.

Powder, Toilet. Barbasol Company. 333,919, Apr. 14, 1936. Republished Dec. 7.

Preparation for exterminating rodents. J. A. Stanley. 504,712, Dec. 7; Serial No. 519,045.

Preparation for use in the control of rodents. Zehrung Chemical Company. 504,705, Dec. 7; Serial No. 507,650.

Preparations for the treatment of the hair and scalp. John H. Breck, Inc. 285,031, July 14, 1931. Republished Dec. 7.

Salt. Alex Kerr Bro. & Co., Inc. 403,828, Oct. 19, 1943. Republished Dec. 7.

Sanitizing agents with germicidal properties. Mathieson Alkali Works. 504,618, Dec. 7; Serial No. 532,472, published Aug. 10, 1948.

Shampoo. J. W. Murphy. 431,875, Aug. 12, 1947. Republished Dec. 7.

Shampoo. M. C. Schwab. 311,562, Mar. 27, 1934. Republished Dec. 7.

Shampoo, talcum powder, face powder, etc. M. C. Schwab. 336,936, July 21, 1936. Republished Dec. 7.

Solvent, Motor gum. Shaler Company. 361,931, Nov. 8, 1938. Republished Dec. 7.

Sour, Laundry. Crescent Chemical Corporation. 418,261, Dec. 11, 1945. Republished Dec. 7.

Sours, Laundry. Crescent Chemical Corporation. 271,851, June 17, 1930. Republished Dec. 7.

Spray, Nose and throat. Stanco Incorporated. 248,984, renewed Nov. 6, 1948. O. G. Dec. 7.

Spray, Nose and throat. Stanco Incorporated. 249,823, renewed Nov. 20, 1948. O. G. Dec. 7.

Spray, Nose and throat. Stanco Incorporated. 250,034, renewed Nov. 27, 1948. O. G. Dec. 7.

Tablet. Table Rock Laboratories, Inc. 504,558, Dec. 7; Serial No. 527,448, published Sept. 7, 1948.

Tablet for the relief of head colds. Clear-Again, Inc. 335,556, June 9, 1936. Republished Dec. 7.

Tablets, Headache. A. J. Affleck. 260,475, Aug. 27, 1929. Republished Dec. 7.

Tablets, Poultry tonic. Burrell-Dugger Co. 127,002, Oct. 21, 1919. Republished Dec. 7.

Tonic, Malt. M. K. Goetz Brewing Co. 252,361, renewed Feb. 5, 1949. O. G. Dec. 7.

Turpentine, bluing, peroxide, etc. Helwig & Leitch Corporation. 273,491, Aug. 5, 1930. Republished Dec. 7.

CLASS 7

Twine, Binder. Frank W. Winne & Son, Inc. 257,061, May 28, 1929. Republished Dec. 7.

CLASS 8

Humidors, Cigarette and ash trays. Chase Brass & Copper Co. Incorporated. 257,690, June 18, 1929. Republished Dec. 7.

Jewelry made of semi-precious metals and precious metals, Men's and ladies'. M. Hoffman. 416,079, Aug. 28, 1945. Republished Dec. 7.

Pipes, pipe cleaners, ash trays, etc. Faber, Coe & Gregg, Inc. 504,593, Dec. 7; Serial No. 530,635, published Aug. 24, 1948.

CLASS 9

Shotguns and rifles. Marlin Firearms Co. 72,755, renewed Feb. 16, 1949. O. G. Dec. 7.

CLASS 11

Carbon paper and inked ribbons. Manifold Supplies Company. 504,693, Dec. 7; Serial No. 546,504, published Aug. 31, 1948.

Carbon paper and typewriter ribbons. Executive Ribbon & Carbon Co., Inc. 254,133, renewed Mar. 12, 1949. O. G. Dec. 7.

CLASS 12

Asphaltic compound. Davison Chemical Corporation. 504,704, Dec. 7; Serial No. 470,258.

Bedding composition. Estate of H. B. Fred Kuhls. 381,986, Oct. 15, 1940. Republished Dec. 7.

Cement. Bird-Archer Company. 333,800, Apr. 7, 1936. Republished Dec. 7.

Cement, Portland. Volunteer Portland Cement Company. 261,810–11, Sept. 24, 1929. Republished Dec. 7.

Composition for glazing, caulking, pointing, and filling in seams. H. Kuhls. 277,117, Nov. 4, 1930. Republished Dec. 7.

Elbows for eaves-trough leaders, Sheet-metal. Chase Brass & Copper Co. Incorporated. 257,662, June 18, 1929. Republished Dec. 7.

Insulation blanket, Thermal and other thermal insulation materials. American Hair & Felt Company. 373,918, Dec. 26, 1939. Republished Dec. 7.

Plastic compound for waterproofing surfaces. Arco Company. 108,734, Feb. 22, 1916. Republished Dec. 7.

Plastic leak-sealing compound. Furmanite Corporation. 231,409, Aug. 16, 1927. Republished Dec. 7.

Plywood, High density resin-impregnated. Pluswood Incorporated. 410,597, Dec. 5, 1944. Republished Dec. 7.

Roofing and building and sheathing papers, Felt. Paraffine Paint Co. 72,496, re-renewed Jan. 26, 1949. O. G. Dec. 7.

Roofing, Composition roll, composition shingles and strip shingles, waterproof roofing and building paper. Flintkote Company. 250,528, renewed Dec. 11, 1948. O. G. Dec. 7.

Shingles, Asphaltic composition roofing. Flintkote Company. 248,265, renewed Oct. 16, 1948. O. G. Dec. 7.

Shingles, Asphaltic composition roofing. Flintkote Company. 248,278, renewed Oct. 16, 1948. O. G. Dec. 7.
Shingles, Asphaltic composition roofing. Flintkote Company. 250,643, renewed Dec. 11, 1948. O. G. Dec. 7.

CLASS 13

Air chucks, water faucets, radiators, air hose, etc. Druge Brothers Manufacturing Co. 504,572, Dec. 7; Serial No. 529,219, published Aug. 17, 1948.
Brackets, Drapery and curtain. Plasti-Glo Manufacturing Company. 504,581, Dec. 7; Serial No. 530,017, published Aug. 24, 1948.
Caps and suspension rings for whisk brooms, Metallic. Chase Brass & Copper Co. Incorporated. 257,783, June 18, 1929. Republished Dec. 7.
Chain, Base metal. American Chain Company, Inc. 256,346, May 14, 1929. Republished Dec. 7.
Coil springs, Door check and door closer. Norton Lasier Company. 340,692, Nov. 17, 1936. Republished Dec. 7.
Cooking, kitchen, household, etc., ware, Stainless steel. Carrollton Manufacturing Company. 504,602, Dec. 7; Serial No. 531,311, published Aug. 31, 1948.
Couplings and clamps, Air hose. Dixon Valve & Coupling Co. 441,561, Dec. 7; Serial No. 522,901, published Aug. 17, 1948.
Fences, Metal, metal gates, metal clothes posts, etc. P. O'Drago. 441,534, Dec. 7; Serial No. 502,592, published Aug. 31, 1948.
Ground-anchors. W. N. Matthews Corporation. 504,553, Dec. 7; Serial No. 527,120, published Aug. 31, 1948.
Hanger supports. Estate of Lester G. Black. 441,544, Dec. 7; Serial No. 510,477, published Aug. 17, 1948.
Metallic fabrics, Knitted. Metal Textile Corporation. 228,603, June 7, 1927. Republished Dec. 7.
Numbers and letters, House. Chisholm-Ryder Co., Inc. 354,803, Feb. 22, 1938. Republished Dec. 7.
Nuts and bolts, Various types of, nut locking devices of the kind, etc. MacLean-Fogg Lock Nut Company. 504,579, Dec. 7; Serial No. 529,902, published Aug. 24, 1948.
Pipe and conduits, Ferrous metal. American Rolling Mill Company. 504,561, Dec. 7; Serial No. 527,685, published Sept. 7, 1948.
Pipe, Metal water and steam. Wheatland Tube Company. 504,565, Dec. 7; Serial No. 528,665, published Aug. 24, 1948.
Plate, Detachable cleated non-skid metal sole. Parcleat Company, Inc. 441,560, Dec. 7; Serial No. 521,681, published Aug. 24, 1948.
Plumbing fixtures. W. A. Case and Son Manufacturing Company. 504,621–22, Dec. 7; Serial Nos. 532,684–5, published Aug. 17, 1948.
Screws. National Lock Company. 441,559, Dec. 7; Serial No. 521,675, published Sept. 7, 1948.
Screws and sheet metal screws, Wood. Blake & Johnson Company. 405,273, Jan. 18, 1944. Republished Dec. 7.
Screws, Closet, sink plugs, plumbing traps, etc. Chase Brass & Copper Co. Incorporated. 280,870, Mar. 3, 1931. Republished Dec. 7.
Tea kettles, Enamel, enamel preserving kettles, enamel dish pans, etc. Van Camp Hardware & Iron Company. 326,326, July 23, 1935. Republished Dec. 7.
Toe and heel plates. Scholl Mfg. Co., Inc. 420,023, Mar. 19, 1946. Corrected. O. G. Dec. 7.
Traps, Steam. V. D. Anderson Company. 504,601, Dec. 7; Serial No. 531,284, published Aug. 24, 1948.
Valves, Flow control, pressure reducing valves, pressure relief valves, etc. Bell & Gossett Company. 504,605, Dec. 7; Serial No. 531,425, published Aug. 17, 1948.
Valves, Liqu'd gage, gage cocks and floats. Reliance Gauge Column Company. 504,578, Dec. 7; Serial No. 529,693, published Aug. 24, 1948.
Wash basins, dish pans, combinets, and stock pots, Base metal. Van Camp Hardware & Iron Company. 319,456, Nov. 27, 1934. Republished Dec. 7.
Wire cloth. Hanover Wire Cloth Company. 424,371, Oct. 1, 1946. Republished Dec. 7.

CLASS 14

Alloys, Type metal. Imperial Type Metal Company. 299,936, Jan. 3, 1933. Republished Dec. 7.
Castings, Iron and steel. Duquesne Steel Foundry Company. 262,962, Oct. 29, 1929. Republished Dec. 7.
Castings of metal alloy. General Alloys Company. 252,137–9, renewed Jan. 22, 1949. O. G. Dec. 7
Castings of metal alloy. General Alloys Company. 253,524, renewed Feb 26, 1949. O. G. Dec. 7.
Metal products. American Metal Company (Limited). 433,797, Oct. 28, 1947. Republished Dec. 7.
Metals, Powdered or finely divided. General Metals Powder Company. 316,538, Aug. 28, 1934. Republished Dec. 7
Sheets and plates, Steel. Inland Steel Company. 504,632, Dec. 7; Serial No. 534,448, published Aug. 10, 1948.
Sheets, rods, and plain wire, etc., Brass, copper, and nonferrons alloy. Chase Brass & Copper Co. Incorporated. 257,679, June 18, 1929. Republished Dec. 7.
Steel bars, blocks, disks, and pieces of steel. Firth-Sterling Steel Company. 238,319, Feb. 7, 1928. Republished Dec. 7.
Steel bars, blocks, steel disks, etc. Firth-Sterling Steel Company. 238,338, Feb. 7, 1928. Republished Dec. 7.
Type-metal. Imperial Type Metal Co. 114,767, Jan. 2, 1917. Republished Dec. 7.

CLASS 15

Emulsions, Wax-like. Perkins Soap Company. 504,571, Dec. 7; Serial No. 528,904, published Aug. 17, 1948.
Gasoline. Standard Oil Company. 265,920, Jan. 7, 1930. Republished Dec. 7.
Gasoline and lubricating oils. Citizens Oil Company, Inc. 382,004, Oct. 15, 1940. Republished Dec. 7.
Grease, Lubricating. Pure Oil Company. 504,551, Dec. 7; Serial No. 526,833, published Aug. 24, 1948.
Greases, Lubricating, and lubricating oils. New York Lubricating Oil Company. 106,793, Oct. 26, 1915. Republished Dec. 7.
Oil, Lubricating, motor gum solvent, and compounding material. Shaler Company. 340,285, Nov. 3, 1936. Republished Dec. 7.
Oils and greases, Extreme pressure lubricating. D. A. Stuart Oil Co., Limited. 504,635, Dec. 7; Serial No. 534,687, published Aug. 31, 1948.

Fanelli, Walter, and Laystrom.
Voss, John H., Rochester, N. Y., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill. Relay automatic telephone system. Re. 23,056, Dec. 7.

LIST OF PLANT PATENTEES

Satterfield, Lawrence, deceased, by L. Satterfield, administratrix, Port Clinton, Ohio. Peach tree. 813, Dec. 7.
Satterfield, Luella, administratrix: *See*—
Satterfield, Lawrence.

LIST OF DESIGN PATENTEES

Acosta, Pablo M., San Gabriel, Calif. Airplane. 151,948, Dec. 7.
Allen, Alan A.: *See*—
Allen, Dorothy B., and Allen.
Allen, Dorothy B. and A. A., Los Angeles, Calif. Combined chest and desk. 151,949, Dec. 7.
American Optical Company, assignee: *See*—
Armbruster, John T.
Anderson, Sidney G., San Francisco, Calif. Accessory kit. 151,950, Dec. 7.
Armbruster, John T., Niagara Falls, N. Y., assignor to American Optical Company, Southbridge, Mass. Contour projector or the like. 151,951, Dec. 7.
Babcock, George, Chicago, Ill., assignor to Wm. Wrigley Jr. Company. Confection vending machine. 151,952, Dec. 7.
Babcock, George, Chicago, Ill., assignor to Wm. Wrigley Jr. Company. Confection vending machine. 151,953, Dec. 7.
Baldocchi, Archie A., San Francisco, Calif. Jar or similar container. 151,954, Dec. 7.
Barrows, Donald S., Rochester, N. Y. Journal box lid for railway cars. 151,955, Dec. 7.
Baud, Georges, Paris, France. Box for cosmetics or the like. 151,956, Dec. 7.
Bell & Howell Company, assignee: *See*—
Reinecke, Jean O.
Boeringer, Barbara J., Minneapolis, Minn. Protective head covering. 151,957, Dec. 7.
Bogoff, Herman, Chicago, Ill. Necklace or the like. 151,958, Dec. 7.
Bowers, Bailey T., Chicago, Ill. Desk unit. 151,959, Dec. 7.
Brasfield, George A., Berkeley, Calif. Tank vehicle. 151,960, Dec. 7.
Buckner, Anthony J., assignor to Grosfeld House, Inc., New York, N. Y. Bed. 151,961, Dec. 7.
Buckner, Anthony J., assignor to Grosfeld House, Inc., New York, N. Y. Commode. 151,962, Dec. 7.
Buckner, Anthony J., assignor to Grosfeld House, Inc., New York, N. Y. Cabinet. 151,963, Dec. 7.
Buckner, Anthony J., assignor to Grosfeld House, Inc., New York, N. Y. Commode. 151,964, Dec. 7.
Chase Candy Company, assignee: *See*—
Yantis, William A.
Coro, Inc., assignee: *See*—
Katz, Adolph.
Crapsey, Arthur H., Jr., assignor to Eastman Kodak Company, Rochester, N. Y. Box camera. 151,965, Dec. 7.
Crot, André, Topanga, assignor to Motion Picture Research Council, Inc., Hollywood, Calif. Camera boom. 151,966, Dec. 7.
Cunningham, Jack B., North Hollywood, Calif. Chair. 151,967, Dec. 7.
Danielson, Carl E., North Sacramento, Calif. Cabinet for shoe shining machines. 151,968, Dec. 7.
Davis, Frances P., Atlanta, Ga. Baby bed. 151,969, Dec. 7.
Donahue, A. J., Corporation, The, assignee: *See*—
Granitto, James V.
Eastman Kodak Company, assignee: *See*—
Crapsey, Arthur H., Jr.
Ellberg, Ernest, assignor to B. F. Mead, Warren, Pa. Semi-trailer. 151,970, Dec. 7.
Ferar, Montgomery: *See*—
Sunberg, Carl W., and Ferar.
Fine, Lewis, assignor to Stuart Inc., St. Paul, Minn. Display case for bottles or the like. 151,971, Dec. 7.
Freimauer, Samuel, and J. Skoloff, Hillside, N. J. Fish type harmonica. 151,972, Dec. 7.
Frettoloso, Lawrence P., Brooklyn, assignor to Udall & Landan Manufacturing Co. Inc., New York, N. Y. Pry-off type container cap removing tool. 151,973, Dec. 7.
Gambardella, Ralph, Warwick, R. I., assignor to Narragansett Machine Company. Bumper engaging member for an automobile jack. 151,974, Dec. 7.
Gelb, Arthur H., Milwaukee, Wis. Duplicating machine. 151,975, Dec. 7.
General Electric Company, assignee: *See*—
Welch, Alanson U., Jr.
Gessler, Harry C., Brooklyn, N. Y., assignor to Medco Products, Inc., North Bergen, N. J. Glass jar. 151,976, Dec. 7.
Gifford, Zilpah C., Oakland, Calif. Combination figurine and beverage set. 151,977, Dec. 7.
Glavies, Mike A., Campbell, Ohio. Garment hanger. 151,978, Dec. 7.
Goshen Manufacturing Company, The, assignee: *See*—
Rink, Robert M.
Gouirand, Rene, New York, N. Y. Carpenter's plane. 151,979, Dec. 7.
Graham, Elizabeth N., New York, N. Y. Combined twin lipstick case and mirror compartment or the like. 151,980, Dec. 7.
Graham, Elizabeth N., New York, N. Y. Combined air travel bag and cosmetic case. 151,981, Dec. 7.
Granitto, James V., assignor to The A. J. Donahue Corporation, Milford, Conn. Tape or similar article. 151,982, Dec. 7.
Grosfeld House, Inc., assignee: *See*—
Buckner, Anthony J.
Guertin, Gabriel C., Boston, Mass. Combination hassock and coffee table. 151,983, Dec. 7.
Guertin, Gabriel C., Boston, Mass. Combination circular hassock and coffee table. 151,984, Dec. 7.
Halls, Simon A., Zumbrota, Minn. Feed carrier. 151,985, Dec. 7.
Hamilton, Bertis F., Columbus, Ind. Waste can. 151,986, Dec. 7.
Hampden Sales Associates, Inc., assignee: *See*—
Leavin, William H.
Hauser, Jon W., Oak Park, assignor to Sears, Roebuck and Co., Chicago, Ill. Water heater. 151,987, Dec. 7.
Hayman, Fred J., Forest Hills, N. Y. Dental dispensing unit. 151,988, Dec. 7.
Hirsch, Mahlon E., Erie, Pa., assignor to Louis Marx & Company, Inc., New York, N. Y. Ball point fountain pen. 151,989, Dec. 7.
Hobé, William W., New York, N. Y. Brooch or similar article. 151,990, Dec. 7.

Hobé, William W., New York, N. Y. Brooch or similar article. 151,991, Dec. 7.
Hochbaum, Norman, New York, N. Y. Slip. 151,992, Dec. 7.
Hockery, John C., assignee, trustee: *See*—
Talge, Henry J.
Howard, Viola T., Saylesville, R. I., assignor to Swank, Inc. Alphabet for forming monograms or similar article. 151,993, Dec. 7.
Howard, Viola T., Saylesville, R. I., assignor to Swank, Inc. Alphabet for forming monograms or similar article. 151,994, Dec. 7.
International Harvester Company, assignee: *See*—
Koeber, Theodore H.
Jack & Heintz Precision Industries, Inc., assignee: *See*—
Sonnhalter, John E.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Revolving brooch or similar article. 151,995, Dec. 7.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Separable brooch or similar article. 151,996, Dec. 7.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Separable brooch or similar article. 151,997, Dec. 7.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Separable brooch or similar article. 151,998, Dec. 7.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Separable brooch or similar article. 151,999, Dec. 7.
Koeber, Theodore H., Oak Park, Ill., assignor to International Harvester Company. Freezer chest cabinet. 152,000, Dec. 7.
Koeber, Theodore H., Oak Park, Ill., assignor to International Harvester Company. Combination refrigerator and cooler cabinet. 152,001, Dec. 7.
Kunz, Althea W., Minneapolis, Minn. Collapsible crib. 152,002, Dec. 7.
Leavin, William H., assignor to Hampden Sales Associates, Inc., New York, N. Y. Lipstick case or similar article. 152,003, Dec. 7.
Lerman, Ben, Chicago, Ill. Clock. 152,004, Dec. 7.

Zwart, Joseph, Rockville Centre, N. Y. Combination hanging corner toilet tissue cabinet and utility holder. 152,052, Dec. 7.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 7TH DAY OF DECEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abiuso, John, New Cumberland, Pa. Airway marker. 2,455,721, Dec. 7.
Adams, Robert R., and H. S. Mosher, State College, Pa., assignors to Parke, Davis, & Company, Detroit, Mich. Organic nitrogen compounds and obtaining same. 2,455,396, Dec. 7.
Adelson, David E., and H. F. Gray, Jr., Berkeley, assignors, to Shell Development Company, San Francisco, Calif. Production of polymeric beta, gamma-olefinic alcohols. 2,455,722, Dec. 7.
Adler, Solomon, Kew Gardens, N. Y. Bobbin winder for sewing machines. 2,455,638, Dec. 7.
Advance Manufacturing, Inc., assignee: *See*—
Kirkpatrick, Henry O.
Agriculture, United States of America, as represented by the Secretary of, assignee: *See*—
Loughborough, William K.
Alfandre, Harry, Jamaica, N. Y. Strap assembling apparatus. 2,455,545, Dec. 7.
Allen-Bradley Company, assignee: *See*—
Matthias, Lynn H.
Allen, Herman C.: *See*—
Ariente, Peter J., and Allen.
Allied Chemical & Dye Corporation, assignee: *See*—
Wahl, Eugene A.
Allis-Chalmers Manufacturing Company, assignee: *See*—
Cobb, Carroll F., Brill, and Guenther.
Allmanna Svenska Elektriska Aktiebolaget, assignee: *See*—
Krabbe, Ulrik.
American Coach & Body Company, The, assignee: *See*—
Holan, James H., and Troche.
American Cyanamid Company, assignee: *See*—
Lecher, Hans Z., Parker, and Long.
Nagy, Daniel E.
Nagy, Daniel E., and Redmon.
Ness, Walter E.
Redmon, Byran C., and Nagy.
American District Telegraph Company, assignee: *See*—
Lindsay, Maxwell H. A.
American Felt Company, assignee: *See*—
Shrager, Hymen, and Shinberg.
American Potash & Chemical Corporation, assignee: *See*—
May, Frank H.
American Steel and Wire Company of New Jersey, The, assignee: *See*—
Williams, Alvin R.
American Type Founders, Incorporated, assignee: *See*—
Hacker, Fred A.
American Viscose Corporation, assignee: *See*—
Stanley, Richard W.
Anaconda Wire and Cable Company, assignee: *See*—
Johnson, Richard A.
Anderer, Theodore A., Philadelphia, and R. W. Tafel, Drexel Hill, Pa. Varilength tandem self-aligning gauge. 2,455,347, Dec. 7.
Anderson, Earl I., Manhasset, N. Y., assignor to Radio Corporation of America. Ground speed indicator utilizing doppler effect. 2,455,639, Dec. 7.
Anderson, Edward E., Loma Linda, Calif. Individual container sealer. 2,455,461, Dec. 7.
Angel, Henry S.: *See*—
Fuller, Everett W., and Angel.
Anglo-Iranian Oil Company Limited, assignee: *See*—
Fawcett, Eric W. M., Millien, and Mulhern.
Ansbacher, Stefan: *See*—
Fernholz, Erhard, and Ansbacher.
Ansbacher, Stefan, Rockville Centre, N. Y., and E. Fernholz, deceased, Princeton, N. J., by M. B. Fernholz, administratrix, assignors to E. R. Squibb & Sons, New York, N. Y. Medicinal composition for hemorrhagic conditions. 2,455,398, Dec. 7.
Ardron, Gerald L., Seattle, Wash., assignor to Continental Can Company, Inc., New York, N. Y. Receptacle-movement controlled filling apparatus. 2,455,723, Dec. 7.
Argus, Incorporated, assignee: *See*—
Barstow, Carl A.
Ariente, Peter J., Pawtucket, and H. C. Allen, assignors to Sayles Finishing Plants, Inc., Saylesville, R. I. Rendering textile material water repellent, and the product. 2,455,886, Dec. 7.
Armstrong Cork Company, assignee: *See*—
Baymiller, John W.
Garrett, Richard A.
Ashbaugh, Clair F., Portland, Oreg. Curtain stretcher. 2,455,640, Dec. 7.
Atchison, Leonard W., Erie, Pa., assignor to General Electric Company. Two-temperature refrigerating system. 2,455,850, Dec. 7.
Atomic Energy Commission, the United States of America, as represented by the, assignee: *See*—
Lindsay, William S.
Weller, Barton L.
Attorney General of the United States: *See*—
Diterichs, Wladimir.
Bacon, Walter M., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Control of selectors over communication channels by storage controlled transmitters. 2,455,724, Dec. 7.
Badeau, Carroll A., Westfield, and J. B. Clapp, North Plainfield, assignors to The Thomas & Betts Co., Elizabeth, N. J. Grounding pole plate. 2,455,641, Dec. 7.
Bader, Harry J., and W. C. Daniel, assignors to The Troy Sunshade Company, Troy, Ohio. Window construction. 2,455,462, Dec. 7.
Baer, Samuel I., Youngstown, Ohio. Window sash construction. 2,455,642, Dec. 7.
Bahan, George F., Charlotte, N. C. Bobbin control for battery looms. 2,455,463, Dec. 7.
Bailie, James C.: *See*—
See, Melvin J., and Bailie.
Bakalar, Arthur B., assignor to Shell Development Company, San Francisco, Calif. Condensation products from ketones and aralkyl organic compounds and producing the same. 2,455,643, Dec. 7.
Baker, Lester A., assignee: *See*—
Deakins, Grover C.
Bailey, Eric J. G., Welwyn Garden City, F. M. Page, Newcastle under Lyme, and J. C. McGowan, Muswell Hill, London, England, assignors to Imperial Chemical Industries Limited. Adhesives. 2,455,392, Dec. 7.
Barber, Eugene F., Minneapolis, Minn. Sash hanger. 2,455,546, Dec. 7.
Barnes, Charles H., assignor to Remington Arms Company, Inc., Bridgeport, Conn. Firearm receiver. 2,455,644, Dec. 7.
Barneycastle, Alexander E.: *See*—
Fonville, John L., and Barneycastle.
Baron, Stanley A., assignee: *See*—
Ushakoff, Alexis E.
Barrett, Guy, Bosham, near Chichester, assignor to Wycliffe Foundry & Engineering Company Limited, Lutterworth, Leicestershire, England. Reversing gear. 2,455,547, Dec. 7.
Barridon Oil Burner Corporation, assignee: *See*—
Levine, Gabriel Z.
Barstow, Carl A., Anoka, Minn., assignor, by mesne assignments, to Argus, Incorporated, Ann Arbor, Mich. Making sparking wheels. 2,455,348, Dec. 7.
Bartell, Ernest J., Rome, N. Y. Saw gauge. 2,455,464, Dec. 7.
Barton, Raymond W., assignor to Mead Johnson and Company, Evansville, Ind. Closure. 2,455,645, Dec. 7.
Basic Refractories, Inc., assignee: *See*—
Schoenlaub, Robert A.
Battelle Development Corporation, The, assignee: *See*—
Sherman, Ralph A.
Baymiller, John W., Manheim Township, Lancaster County, assignor to Armstrong Cork Company, Lancaster, Pa. Making textile units for fiber drafting. 2,455,349, Dec. 7.
Beam, Vilynn O., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Control device. 2,455,350, Dec. 7.
Beam, Vilynn O., and J. M. Wilson, assignors to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Fire detecting apparatus. 2,455,351, Dec. 7.
Beard, Joseph G., Haddonfield, and R. W. Harralson, Masonville, N. J., and A. Kreithen, Philadelphia, Pa., assignors to Radio Corporation of America. Phase responsive control circuit. 2,455,646, Dec. 7.
Beaven, Leslie W., Chicago, Ill. Engine construction. 2,455,647, Dec. 7.
Beckman, John H., Long, Md. Machine gun ammunition bandoleer. 2,455,352, Dec. 7.
Beerbower, Alan, Westfield, and H. A. Ricards, Jr., Cranford, N. J., assignors to Standard Oil Development Company. Solidified oils and manufacture. 2,455,649, Dec. 7.
Beggs, James E., Schenectady, N. Y., assignor to General Electric Company. Improved electrode and envelope structure for electric discharge devices. 2,455,851, Dec. 7.
Bell & Howell Company, The, assignee: *See*—
Howell, Albert S.
Bell, Joseph D., San Francisco, Calif. Exercising machine. 2,455,548, Dec. 7.
Bell, Rupert B., assignor to King-Seeley Corporation, Ann Arbor, Mich. Windshield wiper mechanism. 2,455,725, Dec. 7.

Bell, Stanley T., Washington, D. C. Copy and practice book. 2,455,353, Dec. 7.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Bacon, Walter M.
Carter, Herman T.
Curl, Herbert C., and Kleinkauf.
King, Douglas H.
Morton, Jack A., and Speck.
Shann, Oscar A.
Sippel, Theodore E.
West, John W.

Bendix Aviation Corporation, assignee: *See*—
Fant, William J., Jr.
Ulrich, Bernhard, Jr.

Bendix, Gordon H., Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y. Electrolytic stripping and determination of plating metal. 2,455,726, Dec. 7.

Benjamin, Allen, Chicago, Ill. Spring winding machine. 2,455,549, Dec. 7.

Bennett, Wallis R., assignor to The Dow Chemical Company, Midland, Mich. Producing an alkaline detergent. 2,455,648, Dec. 7.

Betts, Mazeppa D.: *See*—
Thomas, Ralph B., and Betts.

Bidwell, Homer T.: *See*—
Wedge, Arthur F., and Bidwell.

Bilbner, Karl P., Philadelphia, Pa., assignor to Vacuum Concrete, Inc. Handling apparatus. 2,455,650, Dec. 7.

Bisch, James L., U. S. Army. Mine destroyer. 2,455,354, Dec. 7.

Black, Bruce H., Gary, Ind. Valve reseating tool. 2,455,550, Dec. 7.

Blackhawk Mfg. Co., assignee: *See*—
Trant, William A.

Blumstein, Abraham, Forest Hills, N. Y. Strap-end attaching clasp. 2,455,465, Dec. 7.

Blythen, Roy: *See*—
Cork, Edward C., Bowman-Manifold, Gale, and Blythen.

Boeing Airplane Company, assignee: *See*—
Schairer, George S.

Boenau, Arthur H.: *See*—
Seplshonse, Wallace E., and Boenau.

Booth, Jack J., Dallas, Tex. Drink vending machine. 2,455,551, Dec. 7.

Borders, Bert: *See*—
Marple, Kenneth E., and Borders.

Bortnick, Newman M., assignor to Rohm & Haas Company, Philadelphia Pa. Preparation of nitriles. 2,455,651, Dec. 7.

Botts, Hugh P., assignor of one-half to L. G. Botts, New York, N. Y. Paper clip. 2,455,399, Dec. 7.

Botts, Lawrence G., assignee: *See*—
Botts, Hugh P.

Bower, Clark D., Lomona, Calif., assignor to Fairbanks, Morse & Co., Chicago, Ill. Turbine pump. 2,455,552, Dec. 7.

Bowman-Manifold, Michael: *See*—
Cork, Edward C., Bowman-Manifold, Gale, and Blythen.

Bralley, James A., Akron, and F. B. Pope, Cuyahoga Falls, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Nuclear halogenated 4,4'-bis-(alkenyl carbonato) diphenyl alkanes and polymers thereof. 2,455,652, Dec. 7.

Bralley, James A., Akron, and F. B. Pope, Cuyahoga Falls, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y. Di-(alkenyl carbonato) aromatic compounds and polymers thereof. 2,455,653, Dec. 7.

Brammer, Harry, Leeds, England. Laminated driving belt. 2,455,400, Dec. 7.

Braude, Jack J., assignor to Evco, Inc., Los Angeles, Calif. Toy steering wheel. 2,455,887, Dec. 7.

Brause, Philip R., Casper, Wyo. Refrigerating unit for vehicles. 2,455,401, Dec. 7.

Bremner, John G. M.: *See*—
Jones, David G., and Bremner.

Breuer Electric Mfg. Company, assignee: *See*—
Lanter, Clarence W.

Brill, Edward F.: *See*—
Cobb, Carroll F., Brill, and Guenther.

Briscoe, James W., Los Angeles, Calif. Block molding machine. 2,455,353, Dec. 7.

Bromley, William H., Jr., Agawam, assignor to Shawinigan Resins Corporation, Springfield, Mass. Preparing aqueous dispersions of polyvinyl butyral. 2,455,402, Dec. 7.

Brown, George H., Princeton, N. J., assignor to Radio Corporation of America. Antenna. 2,455,403, Dec. 7.

Brown, George H., Princeton, N. J., assignor to Radio Corporation of America. Antenna. 2,455,888, Dec. 7.

Brown, Henry, assignor to The Udylite Corporation, Detroit, Mich. Electrodeposition of copper. 2,455,554, Dec. 7.

Brown, Henry, assignor to The Udylite Corporation, Detroit, Mich. Electrodeposition of nickel from an acid bath. 2,455,555, Dec. 7.

Brown, William H. and W. S., Bedford, Ohio. Christmas tree holder. 2,455,404, Dec. 7.

Brown, William S.: *See*—
Brown, William H. and W. S.

Browne, Kenneth A., Lakewood, Ohio, assignor to Wright Aeronautical Corporation. Multiple thermocouple arrangements. 2,455,654, Dec. 7.

Brubaker, George P., Los Angeles, Calif., assignor, by mesne assignments, to Dictophone Corporation, New York, N. Y. Combination phonograph recording and reproducing mechanism. 2,455,466, Dec. 7.

Bryson, Dorothy S. T.: *See*—
Levy, Norman S., and Bryson.

Bunting, Ernest V., assignor to Harry Ferguson, Inc., Dearborn, Mich. Implement control means for tractor mounted agricultural implements. 2,455,727, Dec. 7.

Burby, Philip E., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Method for use in lasting shoes. 2,455,467, Dec. 7.

Burch, Julius G., Borger, Tex. Well treating apparatus. 2,455,556, Dec. 7.

Burner, Bingham F., Arlington, Va. Rod clamp tool. 2,455,557, Dec. 7.

Burrows, Lawton A., Mendenhall, Pa., and M. F. Fuller, Woodbury, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of monochloracetic acid. 2,455,405, Dec. 7.

Burton, Thomas F., Brentwood, Mo. Elastic band projector and cap exploder. 2,455,558, Dec. 7.

Bushby, David, assignor to Vacuum Air Pressure Company Limited, Regina, Saskatchewan, Canada. Piston, expander. 2,455,728, Dec. 7.

Byers, Lawrence, Homeworth, Ohio. Sack holder. 2,455,729, Dec. 7.

Cade, Phillip J., Sharon, assignor to Photoswitch, Incorporated, Cambridge, Mass. Electronic timing device. 2,455,468, Dec. 7.

Caldwell, John R., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Sulfonated aromatic derivatives. 2,455,730, Dec. 7.

Caldwell, John R., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester N. Y. Resinous condensates of β-propionolactone and polyhydroxy compounds. 2,455,731, Dec. 7.

Calpat Corporation, The, assignee: *See*—
Harris, Ford W.

Campbell, Josephine H., Jackson, Mich. Underwear supported suspender. 2,455,852, Dec. 7.

Carlson, Oscar, Spokane, Wash. Saw blade and handle. 2,455,853, Dec. 7.

Carnegie-Illinois Steel Corporation, assignee: *See*—
Dailey, William H., Jr.
Wilson, Philip J., Jr., Wells, and Liebel.

Carroll, Gay V., Houston, Tex. Bone saw. 2,455,655, Dec. 7.

Carter, Herman T., Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Double balanced modulator. 2,455,732, Dec. 7.

Case, J. I., Company, assignee: *See*—
Clausen, Leon R.

Caspar, Frank A., assignor to Pak Parachute Company Limited, Tiverton, England. Meterological balloon. 2,455,469, Dec. 7.

Cass, William E.: *See*—
Norlander, Birger W., and Cass.

Castedello, William: *See*—
Schwartz, Morris, and Castedello.

Cauley, Stephen P., Garden City, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated. Production of commercially pure mercaptans and disulfides. 2,455,656, Dec. 7.

Celanese Corporation of America, assignee: *See*—
Fonville, John L., and Barneycastle.

Chadwick, Earl L., Portland, Oreg. Stove pipe fastener. 2,455,406, Dec. 7.

Chance, A. B., Company, assignee: *See*—
Hubbard, David C.

Chemical Developments Corporation, assignee: *See*—
Luaces, Enrique L.

Chicago Coin Machine Co., assignee: *See*—
Ellenberger, Stanley D.

Chicago Pneumatic Tool Company, assignee: *See*—
Fischer, Howard R.
Fischer, Howard R., and Stevens.

Christmann, John L., Passaic, N. J. Variable-speed transmission. 2,455,407, Dec. 7.

Christoffer, Donald F., Spirit Lake, Iowa. Tool handle wedge. 2,455,733, Dec. 7.

Chrysler Corporation, assignee: *See*—
Woolson, Harry T.

Clapp, Jerome B.: *See*—
Badeau, Carroll A., and Clapp.

Clark, Edward H., Mishawaka, Ind., assignor to United States Rubber Company, New York, N. Y. Apparatus for pressing footwear as it is conveyed. 2,455,559, Dec. 7.

Clausen, Leon R., assignor to J. I. Case Company, Racine, Wis. Radiator shield. 2,455,734, Dec. 7.

Cleveland Pneumatic Tool Company, The, assignee: *See*—
Hoffar, Henry S.

Cobb, Carroll F., Silverton, Ohio, E. F. Brill, Milwaukee, Wis., and J. R. Guenther, Chicago, Ill., assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Arranging and brazing superposed commutator leads. 2,455,560, Dec. 7.

Cockrell, William D., Schenectady, N. Y. Calculating and aerial navigation instrument. 2,455,902, Dec. 7.

Collison, William J., Costa Mesa, Calif. Soil pipe reducer. 2,455,470, Dec. 7.

Colt's Manufacturing Company, assignee: *See*—
Wedge, Arthur F., and Bidwell.

Combs, Edward E., Long Branch, N. J. Making spherical coils for variometers. 2,455,355, Dec. 7.

Combustion Control Corporation, assignee: *See*—
Thomson, E. Craig.

Condax, Louis M., assignor to Eastman Kodak Company, Rochester, N. Y. Registration of color separation images. 2,455,735, Dec. 7.

Condé, George E., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Strippable coating composition comprising a polychloroprene and aluminum powder. 2,455,854, Dec. 7.

Conley, Clarence, Adamsville, Tex. Well cylinder valve puller. 2,455,736, Dec. 7.

Continental Can Company, Inc., assignee: *See*—
Ardron, Gerald L.
Bendix, Gordon H.
Coyle, John.
Dodge, Thomas C.
Henchert, John.
Hermani, Louis.
Johnson, Scott R., and Mero.
Keogh, Thomas P.
Larson, Ralph A.
Pfeffer, Edward C., Jr.
Seigh, Joseph W.
Thanem, Oswald I.
Treff, Alfred.

Control Instrument Company, Inc., assignee: *See*—
Lang, Walter T.

Copeman Laboratories Company, assignee: *See*—
Jennings, Harley Y.

Cork, Edward C., and M. Bowman-Manifold, Ealing, London, F. H. Gale, Hillingdon, and R. Blythen, Norwood Green, assignors to Electric & Musical Industries Limited, Hayes, England. Circuit arrangement for mixing oscillations. 2,455,657, Dec. 7.

Coyle, John, Baltimore, Md., assignor to Continental Can Company, Inc., New York, N. Y. Attaching metal closures to containers. 2,455,737, Dec. 7.

Crane, Webster O., assignor to Operadio Manufacturing Co., St. Charles, Ill. Electrical apparatus for loud speaker systems. 2,455,471, Dec. 7.

Crede, Charles E., Alexandria, Va. Shock gauge. 2,455,356, Dec. 7.

Creelman, George D., Cleveland Heights, Ohio, assignor to The M. W. Kellogg Company, New York, N. Y. Reducing disengaging height in fluidized powder systems. 2,455,561, Dec. 7.

Crise, George W., Columbus, Ohio. Electrostatic air filter and circulator. 2,455,738, Dec. 7.

Crompton & Knowles Loom Works, assignee: *See*—
Kronoff, Clarence R., and Sepavich.

Crosby, Edward, assignee: *See*—
Schultz, Anthony J.

Crowther, David, Minneapolis, Minn. Device for repointing twist drills. 2,455,562, Dec. 7.

Curl, Herbert C., Jackson Heights, N. Y., and J. D. Kleinkauf, East Orange, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Method and system for electronically generating complex signals. 2,455,472, Dec. 7.

Current, Ira B.: *See*—
Dearing, Le Roy M., and Current.

Curtis, Edna H., Cincinnati, assignor to The Nivison-Weiskopf Company, Reading, Ohio. Collapsible storage cabinet. 2,455,739, Dec. 7.

Curtis, Leslie F., Haydenville, Mass., assignor to Hazeltine Research, Inc., Chicago, Ill. Magnetostrictive time-delay device. 2,455,740, Dec. 7.

Curtiss-Wright Corporation, assignee: *See*—
Engelhardt, Lloyd F.
Houser, Herbert C.
Newman, Albert J.
Statham, Louis D.

Cutler-Hammer, Inc., assignee: *See*—
Hunter, Richard B.

Dague, Silas R., Wichita, Kans. Typewriter carriage retractor device. 2,455,563, Dec. 7.

Dailey, William H., Jr., Library, Pa., assignor to Carnegie-Illinois Steel Corporation. Spot welding apparatus. 2,455,564, Dec. 7.

Daniel, Walter C.: *See*—
Bader, Harry J., and Daniel.

Daniels, Henry L., Kell, Ill. Portable projector table. 2,455,408, Dec. 7.

Danco Products, Inc., assignee: *See*—
Hadley, Harold F.

Darkins, Samuel P.: *See*—
Wilson, George V., and Darkins.

Davis, Robert F., Hibbing, Minn. Vertical axis cone and shell mill. 2,455,565, Dec. 7.

Davison Chemical Corporation, The, assignee: *See*—
Hartlove, Leslie T.
Weir, Horace M.

Deakins, Grover C., Orange, assignor of one-half to L. A. Baker, Anaheim, Calif. Apparatus for forming irrigation mounds. 2,455,566, Dec. 7.

Dearing, Le Roy M., and I. B. Current, U. S. Navy. Apparatus for processing film. 2,455,357, Dec. 7.

De Armond, Harry, assignor to Rowe Industries, Toledo, Ohio. Microphone pickup and volume control. 2,455,567, Dec. 7.

Dederick, Clinton H., Brentwood, assignor to The Emerson Electric Mfg. Company, St. Louis, Mo. Remote control for displaceable objects. 2,455,568, Dec. 7.

Dely, Josef G., Queens Village, N. Y. Regenerating spent ammoniacal cuprous solution. 2,455,473, Dec. 7.

Despard, Victor R., assignor to Pass & Seymour, Inc., Syracuse, N. Y. Quick attach strap. 2,455,889, Dec. 7.

Dickey, Frank H., Pasadena, assignor to Shell Development Company, San Francisco, Calif. Reaction products of tertiary organic hydroperoxides with aldehydes or ketones. 2,455,569, Dec. 7.

Dickey, George D., assignor of one-half to H. M. Hunter, New York, N. Y. Rotary filter. 2,455,409, Dec. 7.

Dictaphone Corporation, assignee: *See*—
Brubaker, George P.

Distillation Products, Inc., assignee: *See*—
Nagel, Gerhard R., and Johnson.

Ditterichs, Wladimir, Paris, France; vested in the Attorney General of the United States. Manufacture of synthetic mineral products. 2,455,358, Dec. 7.

Dodge, Thomas C., Seattle, Wash., assignor to Continental Can Company, Inc., New York, N. Y. Automatic can distributor. 2,455,741, Dec. 7.

Dole Refrigerating Company, assignee: *See*—
Kleist, Herman W.

Donaldson, James E., Columbus, Ohio. Holder. 2,455,857, Dec. 7.

Donovan, John T.: *See*—
Swalinkavich, Joseph E., Jr., and Donovan.

Dons, Eddie M., Tulsa, and J. V. Stevens, Oakhurst, Okla. Pipe coupling. 2,455,658, Dec. 7.

Dorlan, Rudolph P., Wichita Falls, Tex. Pipe grinder. 2,455,742, Dec. 7.

Douglas Aircraft Company, Inc., assignee: *See*—
Rechton, George D., and Ward, and Watson.

Dow Chemical Company, The, assignee: *See*—
Bennett, Wallis R.
Havens, Carl B.

Droeger, Carl C., Greenfield, Ind. Chimney construction. 2,455,570, Dec. 7.

Drott, Edward A., and J. H. Kerber, assignors to Hi-Way Service Corporation, Milwaukee, Wis. Excavator. 2,455,474, Dec. 7.

Duncan, Gordon W., Westfield, and J. C. Zimmer, Union, N. J., assignors to Standard Oil Development Company. Oily composition. 2,455,659, Dec. 7.

Dunlop, Donald E., San Pedro, Calif. Coffee percolator. 2,455,660, Dec. 7.

Du Pont, E. I, de Nemours & Company, assignee: *See*—
Burrows, Lawton A., and Fuller.
Condé, George E.
Matsen, Morris, and Jones.
Murphy, Clyde G., and Sermattei.
Salisbury, Leroy F.

Du Pont, Francis G., Utica, N. Y., assignor to Remington Arms Company, Inc., Bridgeport, Conn. Target throwing device. 2,455,661, Dec. 7.

Dyer, Charles W., Stratton, Maine. Milling attachment for lathes. 2,455,662, Dec. 7.

East Coast Ship Yards, assignee: *See*—
Tenety, Vincent J.

Eastman Kodak Company, assignee: *See*—
Caldwell, John R.
Condax, Louis M.
Fitch, Harold L.
Harrison, Henry.
Kenyon, William C., and Unruh.
Luboshez, Benjamin E.
Reiss, Max.
Yule, John A. C.

Eaton, John, Cheltenham, assignor, to S. C. Icke, Solihull, England. Chuck. 2,455,663, Dec. 7.

Edwards, Herbert C., Massillon, assignor, to The Timken Roller Bearing Company, Canton, Ohio. Fuel injection pump. 2,455,571, Dec. 7.

Ellenberger, Stanley D., Kenosha, Wis., assignor, by mesne assignments, to Chicago Coin Machine Co. Ultrasonic pulse signaling. 2,455,475, Dec. 7.

Ellerman, George E., Milwaukee, Wis., assignor to Pittsburgh Plate Glass Company. Water dispersible coating vehicle. 2,455,743, Dec. 7.

Electric & Musical Industries Limited, assignee: *See*—
Cork, Edward C., Bowman-Manifold, Gale, and Blythen.

Electric Steel Foundry, assignee: *See*—
McGee, James D.
Haun, Joye C., and Simpson.

Elliott, Harry D., Wenham, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Machine for applying tape to shoe parts. 2,455,359, Dec. 7.

Emerson Electric Mfg. Company, The, assignee: *See*—
Dederick, Clinton H.

Emerson, Walter H., East Liverpool, Ohio, assignor to The Homer Laughlin China Company, Newell, W. Va. Cup finishing apparatus. 2,455,744, Dec. 7.

Engelhardt, Lloyd F., Ferguson, Mo., assignor to Curtiss-Wright Corporation. Cowl flap operating mechanism. 2,455,858, Dec. 7.

Epstein, David W., Princeton, N. J., assignor to Radio Corporation of America. Mounting system for elements of television projectors. 2,455,476, Dec. 7.

Erickson, Edwin R., Niagara Falls, N. Y., assignor to Mathieson Chemical Corporation. Stabilization of styrene and polymerizable ring chlorinated styrenes. 2,455,745, Dec. 7.

Erickson, Edwin R., Niagara Falls, N. Y., assignor to Mathieson Chemical Corporation. Stabilization of vinyl aromatic compounds. 2,455,746, Dec. 7.

Eulhardt, Edward C.: *See*—
Jones, Minor C. K., and Eulhardt.
Evans, Earl R., Urbana, Ill. Grain blender. 2,455,572, Dec. 7.
Evco, Inc., assignee: *See*—
Braude, Jack J.
Even-Pul Foundations, Inc., assignee: *See*—
Lo Cascio, Jack J.
Fairbanks, Morse & Co., assignee: *See*—
Bower, Clark D.
Fairchild Engine and Airplane Corporation, assignee: *See*—
Whitfield, Marshall G., and Sheshunoff.
Fant, William J., Jr., assignor to Bendix Aviation Corporation, South Bend, Ind. Signal mechanism. 2,455,573, Dec. 7.
Farina, Julius, assignor to Princes Shoe Company, Keene, N. H. Shoe last and support. 2,455,360, Dec. 7.
Farnsworth Research Corporation, assignee: *See*—
Sanders, Robert W.
Farrar, Charles E., Sidon, Ark. Electric branding iron. 2,455,410, Dec. 7.
Fawcett, Eric W. M., A. Millien, and N. Mulhern, Sunbury-on-Thames, assignors to Anglo-Iranian Oil Company Limited, London, England. Polystyrene-mineral oil extract plastic composition. 2,455,890, Dec. 7.
Feldman, Harry A., New York, N. Y. Attachment for violins and analogous instruments. 2,455,574, Dec. 7.
Fender, Clarence L., and C. O. Kauffman, Fullerton, Calif. Pickup unit for stringed instruments. 2,455,575, Dec. 7.
Ferguson, Harry, Inc., assignee: *See*—
Bunting, Ernest V.
Ferguson, William H., Malden, and J. W. Geddes, Boston, assignors to H. K. Porter, Inc., Everett, Mass. Strut terminal for metal-bending jacks. 2,455,664, Dec. 7.
Fernholz, Erhard: *See*—
Ansbacher, Stefan, and Fernholz.
Fernholz, Erhard, Princeton, and S. Ansbacher, Highland Park, N. J., assignors to E. R. Squibb & Sons, New York, N. Y. Vitamin k-active compositions. 2,455,397, Dec. 7.
Fernholz, Mary B., administratrix: *See*—
Ansbacher, Stefan, and Fernholz.
Finnern, John J.: *See*—
Ushakoff, Alexis E.
Fiorentino, Vitantonio, Long Island City, N. Y. Curtain and drape mounting. 2,455,576, Dec. 7.
Fischer, Howard R., Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y. Dimpling mandrel. 2,455,903, Dec. 7.
Fischer, Howard R., and E. W. Stevens, Detroit, Mich., assignors to Chicago Pneumatic Tool Company, New York, N. Y. Valve control for fluid levels in hydraulic power plants. 2,455,747, Dec. 7.
Fitch, Harold L., assignor to Eastman Kodak Company, Rochester, N. Y. Position indicator device for film strip. 2,455,748, Dec 7.
Flanagan, John E., Chicago, Ill., assignor to Tinnerman Products, Inc., Cleveland, Ohio. Shockproof mounting. 2,455,891, Dec. 7.
Flexibox Limited, assignee: *See*—
Porges, Frederick B.
Foley, Frederic E. B., St. Paul, Minn. Artificial sphincter and method. 2,455,859, Dec. 7.
Fonville, John L., and A. E. Barneycastle, Burlington, N. C., assignors to Celanese Corporation of America. Feed plate. 2,455,412, Dec. 7.
Fonyo, Aladar, La Grange, assignor to Wm. J. Stange Co., Chicago, Ill. Condiment. 2,455,749, Dec. 7.
Ford, William C.: *See*—
Vinciguerra, Joseph F., and Ford.
Ford, William W., and F. D. Thiel, Baton Rouge, La., assignors to Standard Oil Development Company. Low-temperature polymerization process. 2,455,665, Dec. 7.
Fournier, John L., Los Gatos, Calif. Transforming volcanic rock. 2,455,666, Dec. 7.
Fram Corporation, assignee: *See*—
Hicks, Richard V.
Franchi, Francisco A. R., Villa Christa, La Rosiaz, near Lausanne, Switzerland. Treatment of iron in order to obtain a clean metallic surface. 2,455,411, Dec. 7.
Franck, George E., Riverside, assignor to The Imperial Brass Manufacturing Company, Chicago, Ill. Coupling for high-pressure tubing. 2,455,667, Dec. 7.
Franklin Transformer Manufacturing Company, assignee: *See*—
Williams, Alan C.
Fraser, Harold M., assignor to International Lubricant Corporation, New Orleans, La. Lubricating greases and making the same. 2,455,892, Dec. 7.
Freed, Edward A., Moline, Ill. Scrap separator for materials conveyer. 2,455,750, Dec. 7.
Frez-O-Mat Corporation, assignee: *See*—
Rifkin, Milton.
Froelich, Herman C., Cleveland Heights, Ohio, assignor to General Electric Company. Ultraviolet emitting magnesium pyrophosphate phosphor. 2,455,415, Dec. 7.
Froelich, Herman C., and J. M. Margolis, Cleveland Heights, Ohio, assignors to General Electric Company. Calcium phosphate phosphor. 2,455,413, Dec. 7.
Froelich, Herman C., and J. M. Margolis, Cleveland Heights, Ohio, assignors to General Electric Company. Aluminum phosphate phosphor. 2,455,414, Dec. 7.
Fuller, Alfred J.: *See*—
Potter, William W., and Fuller.
Fuller, Everett W., and H. S. Angel, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Mineral oil composition. 2,455,668, Dec. 7.
Fuller, Mack F.: *See*—
Burrows, Lawton A., and Fuller.
Gagnebin, Albert P., Red Bank, N. J., L. L. Seigle, Philadelphia, Pa., and J. S. Vanick, Westfield, N. J., assignors to The International Nickel Company, Inc., New York, N. Y. Alloys for making cast iron. 2,455,751, Dec. 7.
Gagnier, George E., Detroit, Mich. Self-supporting resilient article. 2,455,669, Dec. 7.
Gale, Frederick H.: *See*—
Cork, Edward C., Bowman-Manifold, Gale, and Blythen.
Garand, John C., Springfield, Mass., assignor to the United States of America as represented by the Secretary of War. Grenade launcher. 2,455,361, Dec. 7.
Garner, Russell F.: *See*—
Weber, Victor, and Garner.
Garrett, Richard A., Lancaster Township, Lancaster County, assignor to Armstrong Cork Company, Lancaster, Pa. Making textile fiber drafting aprons. 2,455,362, Dec. 7.
Geddes, John W.: *See*—
Ferguson, William H., and Geddes.
Geh, Ernest, Rocky River, Ohio. Bottle opener. 2,455,752, Dec. 7.
General Electric Company, assignee: *See*—
Atchinson Leonard W.
Beggs, James E.
Froelich, Herman C.
Froelich, Herman C., and Margolis.
Hanna, Max R.
Koch, Arthur R.
Maul, John A., and Lautzenheiser.
Norlander, Birger W., and Cass.

Safford, Moyer M.
Safford, Moyer M., and Mincher.
General Electric Company Limited, The, assignee: *See*—
Ransley, Charles E., and Williams.
General Motors Corporation, assignee: *See*—
Watt, Andrew K., and Hays.
Gerbing, Willard E., assignor to The Scholl Mfg. Co., Inc., Chicago, Ill. Tube capping machine. 2,455,860, Dec. 7.
Gerson, Morris, Newark, N. J., assignor to Henry L. Kotkins, Seattle, Wash. Reinforced luggage. 2,455,861, Dec. 7.
Getchell, Benjamin E., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn. Thermal circuit breaker. 2,455,753, Dec. 7.
Girard, Wilfrid J., San Francisco, Calif. Knife sharpening kit. 2,455,477, Dec. 7.
Glover, Bill, Incorporated, assignee: *See*—
Glover, William C., Jr.
Glover, William C., Jr., Lee's Summit, Mo., assignor to Bill Glover Incorporated. Device for tempering steam. 2,455,754, Dec. 7.
Glover, William C., Jr., Kansas City, Mo., assignor to Bill Glover Incorporated. Steam vacuum finisher. 2,455,755, Dec. 7.
Glover, William C., Jr., Kansas City, Mo., assignor to Bill Glover Incorporated. Mechanism for supplying steam and heated air to spotting machines. 2,455,756, Dec. 7.
Goldberg, Richard O., assignor to Pioneer Gen-E-Motor Corporation, Chicago, Ill. Continuous strip slot insulation. 2,455,862, Dec. 7.
Goodrich, B. F., Company, The, assignee: *See*—
Bralley, James A., and Pope.
Niessen, Paul F.
Olson, Frederick F.
Reuter, Louis F.
Grant, Watson R., Elgin, Ill. Combined coat hanger and necktie rack. 2,455,478, Dec. 7.
Graves, Francis M., Beaumont, Tex., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Deodorizing petroleum oils and waxes. 2,455,670, Dec. 7.
Gray, Harold F., Jr.: *See*—
Adelson, David E., and Gray.
Graybeal, Ella S., Great Falls, Mont. Device for administering anaesthetics. 2,455,757, Dec. 7.
Green, Arthur D., Cranford, N. J., assignor, by mesne assignments, to Jasco, Incorporated. Manufacture of high molecular weight polymers. 2,455,671, Dec. 7.
Greenough, Maurice L., Groveland, Mass., assignor to Radio Corporation of America. Correction device for electronic function generators. 2,455,672, Dec. 7.
Gregor, Herbert H., Washington, D. C. Preparing a mineral binder. 2,455,758, Dec. 7.
Gregory, John J., Creighton, assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa. Manufacturing synthetic bristles for brushes. 2,455,759, Dec. 7.
Grover, Elliott E.: *See*—
Kruck, Ralph E., and Grover.
Guard-It Manufacturing Co., assignee: *See*—
Malme, Elmer K.
Guass, Eugene S., assignee: *See*—
Kenyon, Sidney C.
Guass, Lawrence A., assignee: *See*—
Keyon, Sidney C.

Gudheim, Arne, Winchester, assignor to Lever Brothers Company, Cambridge, Mass. Making shortening. 2,455,363, Dec. 7.
Guenther, John R.: *See*—
Cobb, Carroll F., Brill, and Guenther.
Gustafson, Gustaf, Yakima, Wash. Hose clamp. 2,455,760, Dec. 7.
Haberfeld, Paul, Portland, Oreg., assignor to Jantzer Knitting Mills. Ski pants. 2,455,479, Dec. 7.
Hacker, Fred A., Cranford, assignor, by mesne assignments, to American Type Founders, Incorporated, Elizabeth, N. J. Printing plate whirler. 2,455,761, Dec. 7.
Hadley, Harold F., Defiance, Ohio, assignor to Dapco Products, Inc. Diaphragm pump. 2,455,480, Dec. 7.
Hager, Emil F., Queens Village, N. Y. Center punch. 2,455,577, Dec. 7.
Hall, Oil R., Wichita Falls, Tex. Pipe grinder. 2,455,762, Dec. 7.
Haller, Pearl M., Bay City, Mich. Outboard motor clamp. 2,455,578, Dec. 7.
Halvorsen, Elmer W., Worcester, Mass., assignor to The Torrington Manufacturing Company, Torrington, Conn. Spring coiling machine embodying a change speed mechanism. 2,455,863, Dec. 7.
Hanna, Max R., Erie, Pa., assignor to General Electric Company. Manufacture of plural circuit connecting members. 2,455,864, Dec. 7.
Hansell, Clarence W., Port Jefferson, N. Y., assignor to Radio Corporation of America. Distance selective system. 2,455,673, Dec. 7.
Happley, Joseph P., assignee: *See*—
Meyer, Arthur W.
Harbanoff, Joseph W., New York, N. Y. Device for slicing eggs into layers. 2,455,416, Dec. 7.
Harralson, Robert W.: *See*—
Beard, Joseph G., Harralson, and Kreithen.
Harris, Ford W., assignor, by mesne assignments, to The Calpar Corporation, Los Angeles, Calif. Reverse gear. 2,455,481, Dec. 7.
Harrison, Henry, assignor to Eastman Kodak Company, Rochester, N. Y. Interferometric light valve. 2,455,763, Dec. 7.
Harry, Geoffrey M., Oak Park, Ill. Variable-speed transmission. 2,455,483, Dec. 7.
Hart, Fred V., Lynn, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Leveling machine. 2,455,482, Dec. 7.
Hartlove, Leslie T., assignor to The Davison Chemical Corporation, Baltimore, Md. Gel manufacture. 2,455,764, Dec. 7.
Harvey, James W., Lakeville, Conn. Fish net hanger. 2,455,765, Dec. 7.
Harvey, James W., Lakeville, Conn. Fish carrier. 2,455,766, Dec. 7.
Hauer, Frank J., Dayton, Ohio. Carbon set form. 2,455,484, Dec. 7.
Haun, Joye C., San Francisco, Calif., and R. Simpson, assignors to Electric Steel Foundry, Portland, Oreg. Austenitic stainless steel. 2,455,485, Dec. 7.
Havens, Carl B., Hope, assignor to The Dow Chemical Company, Midland, Mich. Light stable compositions comprising polymeric vinylidene chloride and 2-hydroxy-5-chloro-benzophenone-2'-carboxylic acid. 2,455,674, Dec. 7.
Hawk, Zoid G., Findlay, Ohio. Machine for handling and preparing oysters. 2,455,675, Dec. 7.
Hays, Albert B.: *See*—
Watt, Andrew K., and Hays.
Hays, Robert F., Jr., Syosset, N. Y., assignor to The Sperry Corporation. Selsyn-controlled servo system. 2,455,364, Dec. 7.
Hazeltine Research, Inc., assignee: *See*—
Curtis, Leslie F.
Heaton, Henry T.: *See*—
Peterson, Eric O., Wright, and Heaton.
Heiligman, Harold A.: *See*—
Tauber, John A., and Heiligman.
Helmold, J. F., & Bro., Inc., assignee: *See*—
Wagner, Frank.
Henchert, John, Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y. Sput connection. 2,455,767, Dec. 7.
Henderson, Lloyd F.: *See*—
Libby, Louis H., and Henderson.
Hensel, Otto F., Hustisford, Wis. Apparatus for treating cheese. 2,455,579, Dec. 7.
Herman, Richard H., Massillon, Ohio. Automatic beading and trimming machine. 2,455,768, Dec. 7.
Hermani, Louis, Baltimore, Md., assignor to Continental Can Company, Inc., New York, N. Y. Dispensing container. 2,455,769, Dec. 7.
Hermani, Louis, Baltimore, Md., assignor to Continental Can Company, Inc., New York, N. Y. Powder dispensing container. 2,455,770, Dec. 7.
Hewitt, Ivan N., Medicine Lodge, Kans. Axially shifting type, pedestal mounted, tire removing machine. 2,455,580, Dec. 7.
Hiatt, Gordon D.: *See*—
Malm, Carl J., and Hiatt.
Hicks, Richard V., East Providence, R. I., assignor to Fram Corporation. Liquid filtration. 2,455,486, Dec. 7.
Hillier, James, Cranbury, N. J., assignor to Radio Corporation of America. Electron lens correction device. 2,455,676, Dec. 7.
Hitchens, Richard M., Webster Groves, assignor to Monsanto Chemical Company, St. Louis, Mo. Stabilized cellulose ester compositions. 2,455,581, Dec. 7.
Hi-Way Service Corporation, assignee: *See*—
Drott, Edward A., and Kerber.
Hoessel, Carl L., Wauwatosa, Wis. Safety electric wall plate. 2,455,582, Dec. 7.
Hoffar, Henry S., near Sidney, British Columbia, Canada, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio. Antifriction screw and nut bearing mechanism. 2,455,368, Dec. 7.
Hoffar, Henry S., Vancouver, British Columbia, Canada, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio. Antifriction worm gearing. 2,455,487, Dec. 7.
Holan, James H., Rocky River, and H. J. Troche, Cleveland Heights, assignors to The American Coach & Body Company, Cleveland, Ohio. Vehicle body tool compartment construction. 2,455,417, Dec. 7.
Holcombe, Mack H., Scottdale, Ga. Loom bumper. 2,455,418, Dec. 7.
Holman, James W., Tulsa, Okla. Door check. 2,455,488, Dec. 7.
Holst, Paul F. G., and L. R. Kirkwood, Oaklyn, N. J., assignors to Radio Corporation of America. Centering means for cathode-ray deflecting circuits. 2,455,771, Dec. 7.
Homer Laughlin China Company, The, assignee: *See*—
Emerson, Walter H.
Horeczy, Joseph T., Cedar Bayou, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Preparation of vinyl acetylenes. 2,455,677, Dec. 7.
Houser, Herbert C., St. Louis, Mo., assignor to Curtiss-Wright Corporation. Measuring instrument having an adjustable scale. 2,455,865, Dec. 7.
Howell, Albert S., Culver, Ind., assignor to The Bell & Howell Company, Chicago, Ill. Bearing. 2,455,489, Dec. 7.
Hubbard, David C., assignor to A. B. Chance Company, Centralia, Mo. Tool for applying armor rods to energized conductors. 2,455,490, Dec. 7.
Hunter, Henry M., assignee: *See*—
Dickey, George D.
Hunter, Richard B., Shorewood, assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Control of alternating current motors. 2,455,491, Dec. 7.
Hydraulic Development Corporation, The, assignee: *See*—
Waldie, George A.
Ilford Limited, assignee: *See*—
Kendall, John D., Suggate, and Wood.
Imperial Brass Manufacturing Company, The, assignee: *See*—
Franck, George E.
Imperial Chemical Industries Limited, assignee: *See*—
Balley, Eric J. G., Page, and McGowan.
Jones, David G., and Bremner.
Levy, Norman, Scalfe, and Bryson.
International Lubricant Corporation, assignee: *See*—
Fraser, Harold M.
International Nickel Company, Inc., The, assignee: *See*—
Gagnebin, Albert P., Seigle, and Vanick.
Ireson, Paul T., East Detroit, Mich. Combined smoking pipe and lighter. 2,455,583, Dec. 7.
Iske, Stanley C., assignee: *See*—
Eaton, John.
Jackle, John, Gratiot Township, Wayne County, Mich. Locking device for gates. 2,455,772, Dec. 7.
Jackson, William L., Greenville, S. C. Cigarette holder. 2,455,492, Dec. 7.
Jacobs, Harold, Clayton, Mo. Exhaust manifold. 2,455,493, Dec. 7.
Jamison, Charles R., Morgantown, W. Va. Control for airplanes. 2,455,584, Dec. 7.
Janes, A. Leslie, Jr., assignee: *See*—
Smith, Putnam M.
Jantzen Knitting Mills, assignee: *See*—
Haberfeld, Paul.
Jasco, Incorporated, assignee: *See*—
Green, Arthur D.
Jaynes, Hal B., Lenoir, N. C. Electrically operated generator. 2,455,494, Dec. 7.
Jellum, Kristen, Spooner, Wis. Casting reel. 2,455,495, Dec. 7.
Jenner, Myron S., New York, N. Y. Flash synchronizer for cameras with curtain shutters. 2,455,365, Dec. 7.
Jennings, Harley Y., Clio, assignor to Copeman Laboratories Company, Flint, Mich. Ice tray and slip surface flexible grid. 2,455,366, Dec. 7.
Jennings, Irving C., South Norwalk, Conn. Power transmission. 2,455,678, Dec. 7.
Johnson, Everett A., Park Ridge, assignor to Standard Oil Company, Chicago, Ill. Synthesis of hydrocarbons and regeneration of synthesis catalyst. 2,455,419, Dec. 7.
Johnson, Merriam E.: *See*—
Nagel, Gerhard R., and Johnson.
Johnson, Richard A., Marion, Ind., assignor to Anaconda Wire and Cable Company. Electric cable. 2,455,773, Dec. 7.
Johnson, Scott R., and R. M. Mero, Chicago, Ill., assignors to Continental Can Company, Inc., New York, N. Y. Water jacketed and ventilated horse. 2,455,774, Dec. 7.
Johnston, Ralph J., and A. R. Novotney, Pontiac, Mich. Internal-combustion engine. 2,455,775, Dec. 7.

Jones, David G., and J. G. M. Bremner, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited. Halogenated pyran compounds and production thereof. 2,455,776, Dec. 7.

Jones, Earl R.: *See*—
Matsen, Morris, and Jones.

Jones, James R., Jenkintown, Pa., assignor to Paulsboro Manufacturing Company. Floor covering. 2,455,777, Dec. 7.

Jones, Minor C. K., Mountainside, and E. C. Eulhardt, Union, N. J., assignors to Standard Oil Development Company. Distillation of acid-treated oils. 2,455,679, Dec. 7.

Juice Industries, Inc., assignee: *See*—
Nelson, Richard C.

Kalart Company, Inc., The, assignee: *See*—
Schwartz, Morris, and Castedello.

Kaman Aircraft Corporation, The, assignee: *See*—
Kaman, Charles H.

Kaman, Charles H., assignor to The Kaman Aircraft Corporation, West Hartford, Conn. Aircraft of rotary wing type. 2,455,866, Dec. 7.

Kantor, James, and E. F. Rosenberg, assignors to The Liquid Carbonic Corporation, Chicago, Ill. Preparing carbonated beverages. 2,455,681, Dec. 7.

Kaplan, Nathan, Freehold, N. J. Buffing wheel. 2,455,680, Dec. 7.

Kardorff, Leon: *See*—
Yardeny, Michel N., and Kardorff.

Kaskouras, Thomas, Chicago, Ill. Can and bottle opener. 2,455,496, Dec. 7.

Kauffman, Claytor O.: *See*—
Fender, Clarence L., and Kauffman.

Kawneer Company, The, assignee: *See*—
Miller, James T.

Keith, Kenneth M.: *See*—
Romming, Martin, and Keith.

Kelco Company, assignee: *See*—
Steiner, Arnold B.

Kellogg, W. M., Company, The, assignee: *See*—
Credman, George D.

Kelly, Joseph A., assignor to Luminous Processes, Inc., New York, N. Y. Luminous pendant. 2,455,893, Dec. 7.

Kendall, John D., H. G. Suggate, and H. W. Wood, assignors to Ilford Limited, Ilford, England. Cyanine dyestuff. 2,455,420, Dec. 7.

Kennecott Wire & Cable Company, assignee: *See*—
Kessler, Philip V., and Moss.

Kennelly, Jeremiah D., Oak Park, Ill. Oscillating warning light for vehicles. 2,455,497, Dec. 7.

Kenyon, William O., and C. C. Unruh, assignors to Eastman Kodak Company, Rochester, N. Y. Copolymers of 1-acyloxy-1,3-butadienes and acrylonitrile. 2,455,778, Dec. 7.

Keogh, Thomas P., assignor to Continental Can Company, Inc., New York, N. Y. Tongueless tearing strip container. 2,455,779, Dec. 7.

Kerber, Joseph H.: *See*—
Drott, Edward A., and Kerber.

Kern, Albert F., San Francisco, Calif. Shelving. 2,455,682, Dec. 7.

Kern, Clarence T., Milwaukee, assignor to Pick Manufacturing Company, West Bend, Wis. Steam injection type water heater. 2,455,498, Dec. 7.

Kessler, Philip V., Phillipsdale, and J. B. Moss, Providence, assignors to Kennecott Wire and Cable Company, Phillipsdale, R. I. Applicator for applying insulation to wire. 2,455,499, Dec. 7.

King, Douglas H., Short Hills, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Clip for coiling wire. 2,455,683, Dec. 7.

King, Peter, Washington, D. C. Depositing nonreflective films and composition therefor. 2,455,367, Dec. 7.

King-Seeley Corporation, assignee: *See*—
Bell, Rupert B.

Kirkpatrick, Henry O., assignor to Advance Manufacturing, Inc., Detroit, Mich. Control means for air conditioning apparatus. 2,455,421, Dec. 7.

Kirkpatrick, Hiram S., Fayetteville, N. C. Tobacco leaf support and drier. 2,455,684, Dec. 7.

Kirkwood, Loren R.: *See*—
Holst, Paul F. G., and Kirkwood.

Kleinkauf, James D.: *See*—
Curl, Herbert C., and Kleinkauf.

Kleist, Herman W., assignor to Dole Refrigerating Company, Chicago, Ill. Pressure type freezer. 2,455,867, Dec. 7.

Knellwolf, Hans C., Zurich, Switzerland. Shoe sole. 2,455,560, Dec. 7.

Knight, Cosler D., Chicago, Ill., assignor to Zenith Radio Corporation. High gain amplifier. 2,455,501, Dec. 7.

Koch, Arthur R., Schenectady, N. Y., assignor to General Electric Company. Control grid for electric discharge devices and making same. 2,455,868, Dec. 7.

Kohout, Eugene A., Miami, Fla. Alarm system for doors having a plurality of door panels operated in succession. 2,455,780, Dec. 7.

Konrad, Alexander, Cleveland, Ohio. Motor vehicle carrying case. 2,455,587, Dec. 7.

Koolma, Charles, Grand Rapids, Mich. Air collet closer. 2,455,586, Dec. 7.

Kotkins, Henry L., assignee: *See*—
Gerson, Morris.

Kotzin, Tobias, Los Angeles, Calif. Garment. 2,455,588, Dec. 7.

Kotzin, Tobias, Los Angeles, Calif. Trousers. 2,455,589, Dec. 7.

Krabbe, Ulrik, Fruens Boge, Denmark, assignor to Allmanna Svenska Elektriska Aktiebolaget, vasteras, Sweden. Operating separately excited direct-current motors. 2,455,869, Dec. 7.

Krauss, Herbert, Woodside, N. Y. Temperature limiting hot-water system supply. 2,455,590, Dec. 7.

Kreithen, Alexander: *See*—
Beard, Joseph G., Harralson, and Kreithen.

Kronoff, Clarence R., and V. F. Sepavich, assignors to Crompton & Knowles Loom Works, Worcester, Mass. Driving control for axminster looms. 2,455,502, Dec. 7.

Kronoff, Clarence R., and V. F. Sepavich, assignors to Crompton & Knowles Loom Works, Worcester, Mass. Driving control for axminster looms. 2,455,503, Dec. 7.

Kronoff, Clarence R., and V. F. Sepavich, assignors to Crompton & Knowles Loom Works, Worcester, Mass. Driving control for axminster looms. 2,455,504, Dec. 7.

Kruck, Ralph E., and E. E. Grover, Springfield, Mass., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Air circulating duct for two-temperature refrigerator cabinets. 2,455,781, Dec. 7.

Kucks, Howard H., Rockville Centre, N. Y. Scoring device for table tennis. 2,455,422, Dec. 7.

Kuder, John M., Winter Haven, Fla. Making citrus waste feed products. 2,455,782, Dec. 7.

Kuykendall, Bill, Buda, Tex. Manually guided two-wheeled portable circular power saw. 2,455,369, Dec. 7.

Lamy, Arthur C., Milwaukee, Wis. Fleshing tool. 2,455,505, Dec. 7.

Landis & Gyr, A. G., assignee: *See*—
Perret, Henri.

Lang, Walter T., Brooklyn, assignor to Control Instrument Company, Inc., New York, N. Y. Selector mechanism. 2,455,783, Dec. 7.

Lansing, Charles B., Geauga County, Ohio. Automatic band saw machine. 2,455,423, Dec. 7.

Lanter, Clarence W., Bartlett, assignor to Breuer Electric Mfg. Company, Chicago, Ill. Handle for portable blowers. 2,455,786, Dec. 7.

Lapsensohn, Jacob, Brooklyn, N. Y. Fish spear and hook. 2,455,784, Dec. 7.

Larson, Ralph A., Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y. Apparatus for lacquer coating side seams of can bodies. 2,455,785, Dec. 7.

Lautzenheiser, Willis P.: *See*—
Maul, John A., Lautzenheiser.

Lavino, E. J., and Company, assignee: *See*—
Tanber, John A., and Heiligman.

Lawson, Robert H., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Fastening inserting machine. 2,455,370, Dec. 7.

Lawson, Robert H., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Driver guard for fastening inserting machines. 2,455,371, Dec. 7.

Lecher, Hans Z., Plainfield, R. P. Parker, Somerville, and R. S. Long, Plainfield, N. J., assignors to American Cyanamid Company, New York, N. Y. Production of 1-mono-and 1,2-disubstituted-3-cyanoguanidines. 2,455,894, Dec. 7.

Lee Rubber & Tire Corporation, assigne: *See*—
Love, Fred W., and McCormick.

Leeper, Sam P., Mineola, Tex. Portable gun sight reticule producing apparatus. 2,455,372, Dec. 7.

Lehman, Chester M., St. Louis, Mo. Dispensing container. 2,455,685, Dec. 7.

Leslie, Myrl M., Detroit, Mich. Pin pickup and holder. 2,455,506, Dec. 7.

Lester, John M., Rockville Centre, N. Y., assignor to The Sperry Corporation. Time base sweep and intensifier pulse generator. 2,455,373, Dec. 7.

Lev, Harry, Chicago, Ill. Uniform cap. 2,455,686, Dec. 7.

Lever Brothers Company, assignee: *See*—
Gudheim, Arne.
Libby, Louis H., and Henderson.

Levine, Gabriel Z., West Hartford, assignor to Barrdon Oil Burner Corporation, Hartford, Conn. Perforated combustion tube distillate burner. 2,455,424, Dec. 7.

Levy, Norman, C. W. Scaife, and D. S. T. Bryson, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited. Production of nitroparaffins. 2,455,425, Dec. 7.

Libby, Louis H., Boston, and L. F. Henderson, Reading, assignors to Lever Brothers Company, Cambridge, Mass. Rendering oleaginous tissue material. 2,455,374, Dec. 7.

Liberthson, Leo, New York, N. Y., assignor to L. Sonneborn Sons, Inc. Cupranmmonical petroleum mahogany sulfonates. 2,455,687, Dec. 7.

Liebel, Charles R.: *See*—
Wilson, Philip J., Jr., Wells, and Liebel.

Light, Oliver A., East Orange, N. J. Storage rack. 2,455,507, Dec. 7.

Lillistion Implement Company, assignee: *See*—
Robinson, Samuel S., Jr.

Lilly, Eugene, Colorado Springs, Colo. Food product. 2,455,508, Dec. 7.

Lindan Electro, Inc., assignee: *See*—
Lindholm, Jorgen P.

Linde Air Products Company, The, assignee: *See*—
Shorter, Albert E.
Zenner, George H.

Lindholm, Jörgen P., Stockholm, Sweden, assignor to Lindan Electro, Inc. Driving mechanism for knitting needles. 2,455,375, Dec. 7.

Lindsay, Maxwell H. A., Summit, assignor to American District Telegraph Company, Jersey City, N. J. Capacity alarm system. 2,455,376, Dec. 7.

Lindsay, William S., Harriman, Tenn., assignor, by mesne assignments, to the United States of America as represented by the United States Atomic Energy Commission. Insulation cutting tool. 2,455,591, Dec. 7.

Line Material Company, assignee: *See*—
Schultz, William O.

Linn, Frank F., Walnut Creek, Calif., assignor to Frank F. Linn Corporation. Trailer axle. 2,455,787, Dec. 7.

Linn, Frank F., Corporation, assignee: *See*—
Linn, Frank F.

Liquid Carbonic Corporation, The, assignee: *See*—
Kantor, James, and Rosenberg.

Lively, John F., Mount Vernon, Ohio. Adapter attachment for indicator dials. 2,455,592, Dec. 7.

Livingston, Edmund C., Rehoboth, Mass. Safety stop for barrels. 2,455,426, Dec. 7.

Lo Cascio, Jack J., Bayonne, N. J., assignor to Even-Pul Foundations, Inc., New York, N. Y. Brassière. 2,455,788, Dec. 7.

Loewenstein, Ernst, San Francisco, Calif. Arrangement for covering ship hulls. 2,455,593, Dec. 7.

Long, Robert S.: *See*—
Lecher, Hans Z., and Parker, and Long.

Loughborough, William K., Madison, Wis., assignor to United States of America as represented by the Secretary of Agriculture. Impregnating wood and composition therefor. 2,455,427, Dec. 7.

Love, Fred W., Youngstown, and C. E. McCormick, Poland, assignors to Lee Rubber & Tire Corporation, Youngstown, Ohio. Coating machine. 2,455,428, Dec. 7.

Luáces, Enrique L., assignor to Chemical Developments Corporation, Dayton, Ohio. Extruding irregularly shaped carbon rods. 2,455,509, Dec. 7.

Luboshez, Benjamin E., assignor to Eastman Kodak Company, Rochester, N. Y. Optical rectification for motion-picture apparatus and the like. 2,455,789, Dec. 7.

Lucien, René, Farnham Common, England. Vehicle body. 2,455,429, Dec. 7.

Luckhaupt, Christopher, Jamaica, N. Y. Animated toy. 2,455,430, Dec. 7.

Ludwig, James H., Collingswood, N. J., assignor to Radio Corporation of America. Band-pass amplifier. 2,455,510, Dec. 7.

Luminous Processes, Inc., assignee: *See*—
Kelly, Joseph A.

MacGregor, Robert A., Olney, Ill. Engine mounting and drive wheel suspension for motorcycles. 2,455,431, Dec. 7.

Maggiacomo, Chauncey N., U. S. Army, Poughkeepsie, N. Y. Wire-winding device. 2,455,377, Dec. 7.

Magoun, Carleton M.: *See*—
Putman, Robert D., and Magoun.

Mailander, Joseph F.: *See*—
Nader, Joseph, and Mailander.

Malickson, Philip S., Philadelphia, Pa., assignor to Sentry Safety Control Corp. Portable electric steam radiator. 2,455,688, Dec. 7.

Mallory, Marion, Detroit, Mich. Ignition system for internal-combustion engines. 2,455,594, Dec. 7.

Malm, Carl J., and G. D. Hiatt, assignors to Eastman Kodak Company, Rochester, N. Y. Enteric coatings. 2,455,790, Dec. 7.

Malme, Elmer K., assignor to Guard-It Manufacturing Co., Chicago, Ill. Electrical fence charger. 2,455,511, Dec. 7.

Margolis, Joseph M.: *See*—
Froelich, Herman C., and Margolis.

Marple, Kenneth E., Oakland, and B. Bordas, assignors to Shell Development Company, San Francisco, Calif. Stabilization of unsaturated nitriles. 2,455,689, Dec. 7.

Marsh, Jas. P., Corporation, assignee: *See*—
McCoy, Edward A.

Martin, Melvin B., Piqua, Ohio. Tractor tire lift. 2,455,432, Dec. 7.

Masciarelli, Camillo, Clinton, Mass. System for operating electric discharge tubes. 2,455,791, Dec. 7.

Mathieson Chemical Corporation, assignee: *See*—
Erickson, Edwin R.

Matsen, Morris, Wilmington, Del., and E. R. Jones, Philadelphia, Pa., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Loading and packaging device. 2,455,433, Dec. 7.

Matthias, Lynn H., Fox Point, assignor to Allen-Bradley Company, Milwaukee, Wis. Electromagnet with pivotally mounted armature. 2,455,690, Dec. 7.

Maul, John A., and W. P. Lautzenheiser, Fort Wayne, Ind., assignors to General Electric Company. Coupling. 2,455,870, Dec. 7.

May, Frank H., assignor to American Potash & Chemical Corporation, Trona, Calif. Manufacturing potassium tetraborate and sodium tetraborate. 2,455,595, Dec. 7.

McCormick, Clarence E.: *See*—
Love, Fred W., and McCormick.

McCoy, Edward A., Eau Claire, Wis., assignor, by mesne assignments, to Jas. P. Marsh Corporation, Skokie, Ill. Bourdon tube end cap. 2,455,512, Dec. 7.

McCoy, Howard M., Patterson Field, Ohio. Mechanism and controls for controllable aircraft propellers; complete propeller with automatic controls. 2,455,378, Dec. 7.

McCulloch, Cameron B., Hollywood, Calif. Sound transmission control system. 2,455,691, Dec. 7.

McDunnah, Frederick A., Hampton Falls, N. H. Velocipede toy shovel attachment. 2,455,692, Dec. 7.

McGee, James D., London, assignor to Electric & Musical Industries Limited, Hayes, England. Manufacture of mosaic screens. 2,455,513, Dec. 7.

McGowan, John C.: *See*—
Bailey, Eric J. G., Page, and McGowan.

McLennan, Miles A., Dayton, Ohio. Electronic temperature control. 2,455,379, Dec. 7.

Mead Johnson and Company, assignee: *See*—
Barton, Raymond W.

Mead, William H., Oakland, Calif. Surface treating method and apparatus. 2,455,514, Dec. 7.

Mease, Wilbur D., Berkeley, Calif. Mechanical pencil. 2,455,596, Dec. 7.

Meister, Leo T., Bradley Beach, N. J. Manufacturing primers. 2,455,380, Dec. 7.

Mercer, William R., Boston, Mass., assignor to Radio Corporation of America. Distance determining system. 2,455,693, Dec. 7.

Mero, Ralph M.: *See*—
Johnson, Scott R., and Mero.

Metzger, Leopold H., and W. B. Muse, Chicago, Ill., and F. J. Pease, Wauwatosa, Wis., assignors, by mesne assignments, to Super-Cut, Inc., Chicago, Ill. Grinding wheel. 2,455,597, Dec. 7.

Meulenbergh, Emil C., Brooklyn, N. Y. Metal cross bridging. 2,455,904, Dec. 7.

Meunier, Frederick A., assignor to Republic Steel Corporation, Cleveland, Ohio. Limiter circuit for electric testing apparatus. 2,455,792, Dec. 7.

Meyer, Arthur W., assignor of one-half to J. P. Happley, St. Louis, Mo. Adjustable drill jig. 2,455,871, Dec. 7.

Michalenko, Andrew B., Los Angeles, Calif. Clamp. 2,455,598, Dec. 7.

Middleton, Frederick A.: *See*—
Ushakoff, Alexis E.

Mikelson, Nordal, Yankton, S. Dak. Universal speed wrench. 2,455,434, Dec. 7.

Miller, James T., assignor to The Kawneer Company, Niles, Mich. Glass holding device. 2,455,599, Dec. 7.

Miller, Lloyd G., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Lasting machine. 2,455,694, Dec. 7.

Miller, Samuel, Kew Gardens, N. Y. Reinforcement and spring clip construction for billfolds. 2,455,515, Dec. 7.

Millien, Albert: *See*—
Fawcett, Eric W. M., Millien, and Mulhern.

Mincher, Edwin L.: *See*—
Safford, Moyer M., and Mincher.

Mine Safety Appliances Company, assignee: *See*—
Myers, Charles H., and Yant.

Minneapolis-Honeywell Regulator Company, assignee: *See*—
Beam, Vilynn O.
Beam, Vilynn O., and Wilson.

Minneapolis-Moline Power Implement Company, assignee: *See*—
Ronning, Martin, and Keith.

Molumby, Leon F.: *See*—
Molumby, Matthew J. and L. F.

Molumby, Matthew J. and L. F., West Union, Iowa. Pocket prophylaxis dental unit. 2,455,600, Dec. 7.

Monaco, Foster F., Jackson Heights, N. Y. Brush and crumber set. 2,455,695, Dec. 7.

Monklewicz, Rudolf A., North Tonawanda, N. Y. Carriage stop. 2,455,793, Dec. 7.

Monsanto Chemical Company, assignee: *See*—
Hitchens, Richard M.
Schlattman, Russell H.
Seymour, Raymond B.
Weinkauff, Oliver J.

Montemotte, Charles J., Detroit, Mich. Stop light for automobiles. 2,455,794, Dec. 7.

Morris, Lloyd C., Bartlesville, Okla., assignor to Phillips Petroleum Company. Production of solvents. 2,455,601, Dec. 7.

Morrison, Willard L., Lake Forest, Ill. Cylindrical domestic refrigerator. 2,455,872, Dec. 7.

Morton, Jack A., Neshanic Station, N. J., and L. J. Speck, Flushing, assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y. Cathode assembly for electron discharge devices. 2,455,381, Dec. 7.

Mosesman, Max A., Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Iron oxide-alkali metal ferrate catalyst and its method of preparation. 2,455,696, Dec. 7.

Mosher, Harry S.: *See*—
Adams, Robert R., and Mosher.

Moss, Earl C., Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Gauge for checking the centerline of elongate parts. 2,455,516, Dec. 7.

Moss, John B.: *See*—
Kessler, Philip V., and Moss.

Mulhern, Norah: *See*—
Fawcett, Eric W. M., Millien, and Mulhern.

Mullins Manufacturing Corporation, assignee: *See*—
Theil, Michael, and Woina.

Murphy, Clyde G., Metuchen, and J. P. Sermattei, Matawan, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Strippable coating composition comprising a polychloroprene and a stripping agent. 2,455,855, Dec. 7.

Murphy, Clyde G., Metuchen, and J. P. Sermattei, Matawan, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Strippable coating composition comprising a polychloroprene and carbon black. 2,455,856, Dec. 7.

Murphy, Ralph E., Beverly Hills, Calif. Shadow box container for merchandise. 2,455,795, Dec. 7.

Muse, Wilson B.: *See*—
Metzger, Leopold H., Muse and Pease.

Myer, Bert W., Jr., assignee: *See*—
Myer, Bert W., Sr.

Myer, Bert W., Sr., assignor of one-half to B. W. Myer, Jr., Manitou Springs, Colo. Adjustable watch band. 2,455,796, Dec. 7.

Myers, Charles H., and W. P. Yant, assignors to Mine Safety Appliances Company, Pittsburgh, Pa. Helmet. 2,455,797, Dec. 7.

Nader, Joseph, and J. F. Mallander, Glen Ellyn, Ill. Troque and speed responsive mechanism. 2,455,435, Dec. 7.

Nagel, Gerhard R., and M. E. Johnson, assignors to Distillation Products, Inc., Rochester, N. Y. Ionization gauge circuits. 2,455,437, Dec. 7.

Nagy, Daniel E.: *See*—
Redmon, Byron C., and Nagy.

Nagy, Daniel E., Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y. 1-aryl,5-alkyl, biguanides. 2,455,896, Dec. 7.

Nagy, Daniel E., Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y. 1,5-diarylbiguanides from aromatic amines and dicyanimide. 2,455,897, Dec. 7.

Nagy, Daniel E., and B. C. Redmon, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y. Preparation of alkali metal salts of dicyanimide. 2,455,895, Dec. 7.

Naidor, George, Gouldsboro, Pa. Fur-covered shoe vamp. 2,455,436, Dec. 7.

Nathan Manufacturing Company, assignee: *See*—
Winther, Howard.

Naythons, William B., administrator: *See*—
Witlin, Isadore B.

Neirynck, Roger, Mont-sur-Marchienne, assignor to Societe anonyme dite: Ateliers de Constructions Electriques de Charleroi, Brussels, Belgium. Mercury-vapor electric converter. 2,455,602, Dec. 7.

Nelson, Richard C., Clearwater Beach, assignor, by mesne assignments, to Juice Industries, Inc., Dunedin, Fla. Method of making a pectin product. 2,455,382, Dec. 7.

Ness, Walter E., Middlesex, N. J., assignor to American Cyanamid Company, New York, N. Y. Lakes of basic dyestuffs. 2,455,898, Dec. 7.

Newman, Albert J., Kenmore, N. Y., assignor to Curtiss-Wright Corporation. Machine for testing and marking parts magnetically. 2,455,874, Dec. 7.

New Wrinkle, Inc., assignee: *See*—
Waldie, William A.

Nichols, Harry J., New York, N. Y. Fuse. 2,455,603, Dec. 7.

Nicolaysen, Hans, Brooklyn, N. Y. Fluorescent light holder for pianos. 2,455,798, Dec. 7.

Nielson, Morgan L., Richmond, Calif. Double-acting chain-type pipe vise. 2,455,517, Dec. 7.

Niessen, Paul F., Canal Fulton, Ohio, assignor, to The B. F. Goodrich Company, New York, N. Y. Vulcanization of neoprene. 2,455,897, Dec. 7.

Niles-Bement-Pond Company, assignee: *See*—
Potter, William W. and Fuller.
Shaw, Robert D.

Nissen, Warren I., assignor to Ronson Art Metal Works, Inc., Newark, N. J. Cigar lighter construction. 2,455,698, Dec. 7.

Nivison-Weiskopf Company, The, assignee: *See*—
Curtis, Edna H.

Nordlander, Birger W., and W. E. Cass, Schenectady, N. Y., assignors to General Electric Company. Modified wax-compatible ethylene glycoltetrachlorophthalate resins. 2,455,873, Dec. 7.

Novotney, Arthur R.: *See*—
Johnston, Ralph J., and Novotney.

Ohlson, Reynold A., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn. Electric switch actuating mechanism. 2,455,799, Dec. 7.

Ohsol, Ernest O.: *See*—
Waterman, Wendell W., and Ohsol.

Oldham, Henry V., McRoberts, Ky. Undergarment. 2,455,604, Dec. 7.

Oliver, Benton A., Bloomington, Ind. Land anchor. 2,455,800, Dec. 7.

Olson, Frederick F., Sudbury, Mass., assignor to The B. F. Goodrich Company, New York, N. Y. Close-fitting boot. 2,455,801, Dec. 7.

Olson, Raymond E., Pittsford, assignor to Taylor Instrument Companies, Rochester, N. Y. Pasteurizing system. 2,455,605, Dec. 7.

Operadio Manufacturing Co., assignee: *See*—
Crane, Webster O.

Oppold, Harry E., Sterling, Ill. Recoil absorber for firearms. 2,455,438, Dec. 7.

Owens-Corning Fiberglas Corporation, assignee: *See*—
Slayter, Games.

Page, Francis M.: *See*—
Bailey, Eric J. G., Page, and McGowan.

Page, Herbert E., Alhambra, Calif. Fluid jack with ram locking means. 2,455,439, Dec. 7.

Page, Herbert E., Alhambra, Calif. Hydraulic jack. 2,455,440, Dec. 7.

Pak Parachute Company Limited, assignee: *See*—
Caspar, Frank A.

Parke, Davis, & Company, assignee: *See*—
Adams, Robert R., and Mosher.

Parker, Robert P.: *See*—
Lecher, Hans Z., Parker, and Long.

Pass & Seymour, Inc., assignee: *See*—
Despard, Victor R.

Paulsboro Manufacturing Company, assignee: *See*—
Jones, James R.

Paulsen, Hans C., Medford, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Insole rib cementer. 2,455,518, Dec. 7.

Pease, Fred J.: *See*—
Metzger, Leopold H., Muse, and Pease.

Peillon, Paul, assignor to Salvage & Marine Company of Egypt S. A. E., Cairo, Egypt. Arc welding within hydrocarbon oil. 2,455,441, Dec. 7.

Pennsylvania Salt Manufacturing Company, The, assignee: *See*—
Smith, Adrian C., and Staubly.

People of the United States of America, assignee: *See*—
Weyl, Woldemar A., and Williams.

Perret, Henri, Zug, Switzerland, assignor to Landis & Gyr, A. G. Relay for reliable operation with definite excitation. 2,455,699, Dec. 7.

Petersen Oven Company, The, assignee: *See*—
Stroman, Jack L.

Peterson, Eric O., Bridgeport, D. I. Wright, Westport, and H. T. Heaton, Milford, Conn., assignors to General Electric Company. Inductance unit. 2,455,875, Dec. 7.

Pfeffer, Edward C., Jr., Troy, assignor to Continental Can Company, Inc., New York, N. Y. Glass cloth spotting material. 2,455,802, Dec. 7.

Philco Corporation, assignee: *See*—
Sunstein, David E.
Tellier, Joseph C., and Wilson, Jr.

Phillips Petroleum Company, assignee: *See*—
Morris, Lloyd C.

Photoswitch, Incorporated, assignee: *See*—
Cade, Phillip J.

Pick Manufacturing Company, assignee: *See*—
Kern, Clarence T.

Pickard, Percy, London, Ontario, Canada, assignor to Richmond Manufacturing Company, Lockport, N. Y. Screen for gyratory sifters, screens, or bolting equipment. 2,455,383, Dec. 7.

Pierotti, Gino J., Albany, assignor to Shell Development Company, San Francisco, Calif. Extractive distillation process. 2,455,803, Dec. 7.

Pioneer Gen-E-Motor Corporation, assignee: *See*—
Goldberg, Richard O.

Pittsburgh Plate Glass Company, assignee: *See*—
Ellerman, George E.
Gregory, John J.
Sherts, James H.

Pleiss, Walter H., Ludington, Mich. Concealed post support. 2,455,606, Dec. 7.

Polytron Corp., assignee: *See*—
Shortt, Hubert L.

Pope, Frank B.: *See*—
Bralley, James A., and Pope.

Porges, Frederick B., assignor to Flexibox Limited, Manchester, England. Mechanical seal. 2,455,700, Dec. 7.

Porter, H. K., Inc., assignee: *See*—
Ferguson, William H., and Geddes.

Potter, William W., and A. J. Fuller, Pawtucket, R. I., assignors, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn. Machine tool. 2,455,876, Dec. 7.

Power Jets (Research and Development) Limited, assignee: *See*—
Whittle, Frank.

Powers, James C., Jr., Barrington, R. I. Sailing game. 2,455,519, Dec. 7.

Price, Ervin C., Washington, D. C. Portable hair-rinsing basin. 2,455,607, Dec. 7.

Princess Shoe Company, assignee: *See*—
Farina, Julius.

Prudhon, Glenn L., Plainfield, and R. W. Spikula, Newark, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y. Temperature controlled test system. 2,455,520, Dec. 7.

Pure Oil Company, The, assignee: *See*—
Schindler, Hans.

Putman, Robert D., and C. M. Magoun, Sioux City, Iowa. Seed counting and selecting device. 2,455,701, Dec. 7.

Radio Corporation of America, assignee: *See*—
Anderson, Earl I.
Beard, Joseph G., Harralson, and Krelthen.
Brown, George H.
Epstein, David W.
Greenough, Maurice L.
Hansell, Clarence W.
Hillier, James.
Holst, Paul F. G., and Kirkwood.
Ludwig, James H.
Mercer, William R.
Sarnoff, David.
Szikiai, George C.
Whittaker, James L.

Ransley, Charles E., Sudbury, and S. V. Williams, Kenton, assignors to The General Electric Company Limited, London, England. Nickel chromium tungsten composite metal body and making same. 2,455,804, Dec. 7.

Rasmussen, Olaf, Sidney, Ohio. Safety razor. 2,455,877, Dec. 7.

Raudabaugh, Stanley E., East Cleveland, Ohio. Shoe holder. 2,455,805, Dec. 7.

Rauland Corporation, The, assignee: *See*—
Szegho, Constantin S.

Raykoff, Philip C., assignee: *See*—
Witlin, Isadore B.

Reach, Milton B., Springfield, Mass. Construction of fields for playing golf. 2,455,806, Dec. 7.

Read, Worth G., St. Paul, Minn. Punch sheet records. 2,455,384, Dec. 7.

Rechton, George D., Los Angeles, D. J. Ward, Sherman Oaks, and J. H. Watson, Los Angeles, assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif. Forming material. 2,455,702, Dec. 7.

Redmon, Bryan C.: *See*—
Nagy, Daniel E., and Redmon.

Redmon, Bryan C., and D. E. Nagy, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y. Preparation of substituted cyanoguanidine. 2,455,807, Dec. 7.

Reiss, Max, assignor to Eastman Kodak Company, Rochester, N. Y. Objective of low index glass with negative components of high curvature. 2,455,808, Dec. 7.

Remco Electronic, Inc., assignee: *See*—
Schmidt, Ernest H., Jr.
Shepard, Francis H., Jr.

Remington Arms Company, Inc., assignee: *See*—
Barnes, Charles H.
Du Pont, Francis G.

Republic Steel Corporation, assignee: *See*—
Meunier, Frederick A.

Reuter, Louis F., Elyria, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Purifying nuclear-chlorinated bis-phenols by steam distillation. 2,455,703, Dec. 7.

Ricards, Harold A., Jr.: *See*—
Beerbower, Alan, and Ricards.

Rice, Harold W., Los Angeles, and G. B. Solovieff, South Gate, Calif., assignors to Robertshaw-Fulton Controls Company. Safety control for gaseous fuel burners. 2,455,521, Dec. 7.

Richmond Manufacturing Company, assignee: *See*—
Pickard, Percy.

Rifkin, Milton, Denver, Colo., assignor, by mesne assignments, to Frez-O-Mat Corporation. Package and cabinet for frozen foods. 2,455,809, Dec. 7.

Ringler, Irving, New York, N. Y. X-ray apparatus. 2,455,522, Dec. 7.

Robar Research, Inc., assignee: *See*—
Rodack, James.

Roberts, Elmer F.: *See*—
Wright, William C., Rowe, Jr., and Roberts.

Robertshaw-Fulton Controls Company, assignee: *See*—
Rice, Harold W., and Solovieff.
Weber, Victor, and Garner.

Robinson, Samuel S., Jr., U. S. Army, assignor to Lilliston Implement Company, Albany, Ga. Baling press and baling method. 2,455,442, Dec. 7.

Rodack, James, assignor to Robar Research, Inc., Detroit, Mich. Tray siphon and agitator. 2,455,523, Dec. 7.

Rohm & Haas Company, assignee: *See*—
Bortnick, Newman M.

Ronning, Martin, St. Louis Park, and K. M. Keith, assignors to Minneapolis-Moline Power Implement Company, Minneapolis, Minn. Combine. 2,455,905, Dec. 7.

Ronning, Martin, St. Louis Park, and K. M. Keith, assignors to Minneapolis-Moline Power Implement Company, Minneapolis, Minn. Crop gathering mechanism for combines. 2,455,906, Dec. 7.

Ronson Art Metal Works, Inc., assignee: *See*—
Nissen, Warren I.

Rosenberg, Edward F.: *See*—
Kantor, James, and Rosenberg.

Rosengren, Orvar E., Hamden, Conn. Barrel lock. 2,455,608, Dec. 7.

Rowe, Daniel G., Jr.: *See*—
Wright, William C., Rowe, Jr., and Roberts.

Rowe Industries, assignee: *See*—
De Armond, Harry.

Ryan, William, New York, N. Y. Device for inspecting blood circulation. 2,455,810, Dec. 7.

Sadowsky, Charles, Great Neck, assignor to United Device Corporation, New York, N. Y. Antiskid device for tires. 2,455,878, Dec. 7.

Safford, Moyer M., Schenectady, N. Y., assignor to General Electric Company. Organic lead salt stabilizers for vinyl halide resins. 2,455,879, Dec. 7.

Safford, Moyer M., and E. L. Mincher, Schenectady, N. Y., assignors to General Electric Company. Lead silanolate stabilizers for vinyl halide resins. 2,455,880, Dec. 7.

Salisbury, Leroy F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Mercury-treated charcoal catalyst and its preparation. 2,455,881, Dec. 7.

Salvage & Marine Company of Egypt, assignee: *See*—
Peillon, Paul.

Sanders, Robert W., Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation. Automatic signal level control. 2,455,899, Dec. 7.

Sarnoff, David, New York, N. Y., assignor to Radio Corporation of America. Secret radio signaling system. 2,455,443, Dec. 7.

Sayles Finishing Plants, Inc., assignee: *See*—
Ariente, Peter J., and Allen.

Scaife, Charles W.: *See*—
Levy, Norman, Scaife, and Bryson.

Schairer, George S., Seattle, Wash., assignor to Boeing Airplane Company. Alternate passage double ring cowl. 2,455,385, Dec. 7.

Scheib, Burton V., Toledo, Ohio. Wire applying forceps. 2,455,609, Dec. 7.

Schieffelin & Co., assignee: *See*—
Tallman, Ralph C., and Stuart.

Schindler, Hans, Evanston, assignor to The Pure Oil Company, Chicago, Ill. Hydroaromatic sulfonates and their preparation. 2,455,811, Dec. 7.

Schlattman, Russell H., Richmond Heights, assignor to Monsanto Chemical Company, St. Louis, Mo. Compositions comprising a polyvinyl chloride resin stabilized with ortho-sulfobenzimide. 2,455,611, Dec. 7.

Schlattman, Russell H., Richmond Heights, assignor to Monsanto Chemical Company, St. Louis, Mo. Compositions comprising a polyvinyl chloride resin stabilized with the alkali metal salts and the alkaline earth metal salts of ortho-sulfobenzimide. 2,455,612, Dec. 7.

Schlattman, Russell H., Richmond Heights, assignor to Monsanto Chemical Company, St. Louis, Mo. Compositions comprising a polyvinyl chlorine resin stabilized with the dialkyl tin salts of ortho-sulfobenzimide. 2,455,613, Dec. 7.

Schlattman, Russell H., Richmond Heights, assignor to Monsanto Chemical Company St. Louis, Mo. Compositions comprising a polyvinyl chloride resin stabilized with the lead salt of ortho-sulfobenzimide. 2,455,614, Dec. 7.

Schlesman, Carleton H., Camden, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Fractionation in presence of radiant energy. 2,455,812, Dec. 7.

Schmidt, Ernest H., Jr., Williamstown, Mass., assignor, by mesne assignments, to Remco Electronic, Inc., New York, N. Y. Harmonic two-phase motor damping circuits. 2,455,610, Dec. 7.

Schoenlaub, Robert A., Tiffin, assignor to Basic Refractories, Inc., Cleveland, Ohio. Working up of magnesia rock, and purification of magnesium carbonate. 2,455,813, Dec. 7.

Scholl Mfg. Co., Inc., The, assignee: *See*—
Gerbing, Willard E.

Schultz, Anthony J., assignor of one-half to E. Crosby, St. Paul, Minn. Tire deflation indicator. 2,455,524, Dec. 7.

Schultz, William O., South Milwaukee, assignor to Line Material Company, Milwaukee, Wis. Electrical cutout. 2,455,704, Dec. 7.

Schulz, Herman, Chicago, Ill. Tripod. 2,455,525, Dec. 7.

Schwartz, Morris, and W. Castedello, assignors to The Kalart Company, Inc., Stamford, Conn. Plateholder for photographic apparatus. 2,455,814, Dec. 7.

Schwartz, Nathan R., New York, N. Y. Clamp. 2,455,444, Dec. 7.

Sciaky, David, assignor to Welding Research, Inc., Chicago, Ill. Welding apparatus. 2,455,526, Dec. 7.

Scovill, Royal J., Jr., Middletown, Pa. Machine for and method of cutting blooms and the like. 2,455,615, Dec. 7.

Seager, John C., Hartsdale, N. Y. Golf tee. 2,455,705, Dec. 7.

Seamon, A. & L., assignee: *See*—
Seamon, Louis.

Seamon, Louis, assignor to A. & L. Seamon, Brooklyn, N. Y. Stitchless combined billfold and coin purse. 2,455,527, Dec. 7.

See, Melvin J., and J. C. Bailie, assignors to Standard Oil Company, Chicago, Ill. Gel catalyst. 2,455,445, Dec. 7.

Seigh, Joseph W., Teaneck, N. J., assignor to Continental Can Company, Inc., New York, N. Y. Solder splash shielding means. 2,455,815, Dec. 7.

Seigle, Leslie L.: *See*—
Gagnebin, Albert P., Seigle, and Vanick.

Sentry Safety Control Corp., assignee: *See*—
Malickson, Philip S.

Sepavich, Victor F.: *See*—
Kronoff, Clarence R., and Sepavich.

Sermattei, John P.: *See*—
Murphy, Clyde G., and Sermattei.

Seymour, Mary E., Union Star, Mo. Clothesline structure. 2,455,446, Dec. 7.

Seymour, Raymond B., Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo. Accelerating vulcanization of rubber. 2,455,528, Dec. 7.

Shann, Oscar A., Short Hills, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Ringer circuit. 2,455,386, Dec. 7.

Shann, Oscar A., Short Hills, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Telephone subscriber's set illumination. 2,455,816, Dec. 7.

Shaw, Robert D., Bloomfield, assignor to Niles-Bement-Pond Company, West Hartford, Conn. Automatic duplicating machine. 2,455,882, Dec. 7.

Shaw, Thomas, Cranston, R. I., assignor to Stackbin Corporation. Inclined bin. 2,455,706, Dec. 7.

Shawinigan Resins Corporation, assignee: *See*—
Bromley, William H., Jr.

Sheffer, Andrew D., Brighton, Mich. Golf instructor. 2,455,707, Dec. 7.

Shell Development Company, assignee: *See*—
Adelson, David E., and Gray.
Bakalar, Arthur B.
Dickey, Frank H.
Marple, Kenneth E., and Borders.
Pierotti, Gino J.

Shepard, Francis H., Jr., Madison, N. J., assignor, by mesne assignments, to Remco Electronic, Inc., New York, N. Y. Transientless modulator system for keying. 2,455,616, Dec. 7.

Shepard, Francis H., Jr., Madison, N. J., assignor, by mesne assignments, to Remco Electronic, Inc., New York, N. Y. Telescriber system utilizing carrier transmission of four intelligences. 2,455,617, Dec. 7.

Shepard, Francis H., Jr., Madison, N. J., assignor, by mesne assignments, to Remco Electronic, Inc., New York, N. Y. Damping follow-up mechanism by degenerative derivative. 2,455,618, Dec. 7.

Sherman, Ralph A., assignor, by mesne assignments, to The Battelle Development Corporation, Columbus, Ohio. Method and apparatus for burning carbonaceous fuels. 2,455,817, Dec. 7.

Sherts, James H., Pittsburgh, assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa. Glare reducing rear-vision mirror. 2,455,818, Dec. 7.

Sherwin, Frederick S., Fair Lawn, N. J., assignor to Wright Aeronautical Corporation. Fin vibration dampener. 2,455,708, Dec. 7.

Sheshunoff, Victor: *See*—
Whitfield, Marshall G., and Sheshunoff.

Shinberg, Barney: *See*—
Shrager, Hymen, and Shinberg.

Shorter, Albert E., Sheffield, England, assignor to The Linde Air Products Company, New York, N. Y. Flame treatment of substantially cylindrical internal surfaces such as bores. 2,455,447, Dec. 7.

Shortt, Hubert L., assignor to Polytron Corp., White Plains, N. Y. Phonographic device. 2,455,529, Dec. 7.

Shrager, Hymen, and B. Shinberg, Westerly, R. I., assignors to American Felt Company, Glenville, Conn. Hat. 2,455,619, Dec. 7.

Simpson, Randolph: *See*—
Haun, Joye C., and Simpson.

Sippel, Theodore E., Valley Stream, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Thermostat-controlled heater circuit. 2,455,387, Dec. 7.

Slayter, Games, Newark, Ohio, assignor to Owens-Corning Fiberglas Corporation. Apparatus for melting glass. 2,455,907, Dec. 7.

Slayter, Games, Newark, Ohio, assignor to Owens-Corning Fiberglas Corporation. Method of making glass fibers. 2,455,908, Dec. 7.

Smith, Adrian C., Philadelphia, and J. L. Staubly, Drexel Hill, assignors to The Pennsylvania Salt Manufacturing Company, Philadelphia, Pa. Preparation of 2,2-bis(p-chlorophenyl) 1,1,1-trichlorethane. 2,455,388, Dec. 7.

Smith, Louis R., Portland, Oreg. Winding reel for tape measures. 2,455,819, Dec. 7.

Smith, Putnam M., assignor of one-half to A. L. Janes, Jr., Redwood Falls, Minn. Foul detector and indicator for bowling alleys. 2,455,909, Dec. 7.

Societe anonyme dite: Ateliers de Constructions Electriques de Charlerol, assignee: *See*—
Neirynck, Roger.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Canley, Stephen P.
Fuller, Everett W., and Angel.
Graves, Francis M.
Schlesman, Carleton H.
Spelshouse, Wallace E., and Boenau.

Soller, Walter, Cincinnati, Ohio, assignor of one-half to W. H. Woodin, Jr., San Mateo, Calif. Method and apparatus for separating audio frequencies. 2,455,389, Dec. 7.

Solovieff, George B.: *See*—
Rice, Harold W., and Solovieff.

Sonneborn, L., Sons, Inc., assignee: *See*—
Liberthson, Leo.

Spanogle, John A., Dayton, Ohio. Hydraulic mechanism for synchronizing a plurality of prime movers with a master prime mover. 2,455,390, Dec. 7.

Speck, Lawrence J.: *See*—
Morton, Jack A., and Speck

Spelshouse, Wallace E., East Hills, and A. H. Boenau, Long Island City, N. Y., assignors to Socony-Vacuum Oil Company, Incorporated. Battery box asphalt and making the same. 2,455,709, Dec. 7.

Sperry Corporation, The, assignee: *See*—
Hays, Robert F., Jr.
Lester, John M.
Varian, Russell H.
Webber, Hugh E.

Spikula, Russell W.: *See*—
Prudhon, Glenn L., and Spikula.

Sponge Rubber Company, The, assignee: *See*—
Talalay, Anselm.

Squibb, E. R., & Sons, assignee: *See*—
Ansbacher, Stefan, and Fernholz.
Fernholz, Erhard, and Ansbacher.

Sreb, Jules H., Silver Spring, Md., assignor to United States of America as represented by the Secretary of War. Centrifugal switch. 2,455,620, Dec. 7.

Stackbin Corporation, assignee: *See*—
Shaw, Thomas.

Stallbaum, Charles F. R., Everett, Wash., assignor to C. Williams as trustee of 32½ per cent for himself, 33⅓ per cent for V. L. Tore and 34⅙ per cent for said Stallbaum. Fire and water tube boiler. 2,455,621, Dec. 7.

Standard Oil Company, assignee: *See*—
Johnson, Everett A.
See, Melvin J., and Baille.

Standard Oil Development Company, assignee: *See*—
Beerbower, Alan, and Ricards.
Duncan, Gordon W., and Zimmer.
Ford, William W., and Thiel.
Horeczy, Joseph T.
Jones, Minor C. K., and Eulhardt.
Mosesman, Max A.
Voorhies, Alexis, Jr.
Waterman, Wendell W., and Ohsol.

Stange, Wm. J., Co., assignee: *See*—
Fonyo, Aladar.

Stanley, Richard W., Drexel Hill, Pa., assignor to American Viscose Corporation, Wilmington, Del. Apparatus for the production of artificial filaments. 2,455,530, Dec. 7.

Statham, Louis D., Beverly Hills, Calif., assignor to Curtiss-Wright Corporation. Electric pressure strain gauge. 2,455,883, Dec. 7.

Staubly, Julian L.: *See*—
Smith, Adrian C., and Staubly.

Steigerwald, Libera L., Chicago, Ill. Infant's sleeping garment combination. 2,455,884, Dec. 7.

Steiner, Arnold B., La Jolla, assignor to Kelco Company, San Diego, Calif. Production of oil-in-water emulsions. 2,455,820, Dec. 7.

Stenger, Willebaid C., Chicago, Ill. Cradle for bass viols or other stringed instruments. 2,455,821, Dec. 7.

Stevens, Edward W.: *See*—
Fischer, Howard R., and Stevens.

Stevens, Jess V.: *See*—
Dons, Eddie M., and Stevens.

Stewart, Andrew G., Edinburgh, Scotland. Beating engine and the like. 2,455,622, Dec. 7.

Stone, Sam H., New York, N. Y. Combination serving, straining, and carving implement. 2,455,623, Dec. 7.

Strom, Herbert F., West Allis, Wis., assignor to Sunbeam Corporation. Apparatus for heat-treating metal parts. 2,455,822, Dec. 7.

Stre[illegible], Jack L., Elmwood Park, assignor to The Petersen [illegible] Company, Chicago, Ill. Metal furnace. 2,455,531, [illegible].

St[illegible], Alfred H.: *See*—
Tallman, Ralph C., and Stuart.

Suggate, Harold G.: *See*—
Kendall, John D., Suggate, and Wood.

Sunbeam Corporation, assignee: *See*—
Strom, Herbert F.

Sunstein, David E., Elkins Park, Pa., assignor to Philco Corporation. Light responsive displacement indicator 2,455,532, Dec. 7.

Super-Cut, Inc., assignee: *See*—
Metzger, Leopold H., Muse, and Pease.

Sutton Engineering Company, assignee: *See*—
Sutton, John B.

Sutton, John B., Bellefonte, assignor to Sutton Engineering Company, Pittsburgh, Pa. Round straightener. 2,455,391, Dec. 7.

Swalinkavich, Joseph E., Jr., Robbinsdale, and J. T. Donovan, Minneapolis, Minn.; said Donovan assignor to said Swalinkavich. Adjustable clothesline prop. 2,455,448, Dec. 7.

Swindle, John A., Norwalk, Calif. Combined safety and sound-producing device for radiators. 2,455,533, Dec. 7.

Sylvania Electric Products Inc., assignee: *See*—
Thomas, Ralph B., and Betts.

Szegho, Constantin S., assignor to The Rauland Corporation, Chicago, Ill. Color television system. 2,455,710, Dec. 7.

Sziklai, George C., Princeton, N. J., assignor to Radio Corporation of America. Bidirectional high gain amplifier. 2,455,711, Dec. 7.

Tafel, Robert W.: *See*—
Anderer, Theodore A., and Tafel.

Talalay, Anselm, New Haven, assignor to The Sponge Rubber Products Company, Shelton, Conn. Reticulated structure and making the same. 2,455,534, Dec. 7.

Tallman, Ralph C., Morristown, N. J., and A. H. Stuart, assignors to Schleffelin & Co., New York, N. Y. Estrogenic substances. 2,455,535, Dec. 7.

Tauber, John A., and H. A. Heiligman, Norristown, assignors to E. J. Lavino and Company, Philadelphia, Pa. Control apparatus for molding presses. 2,455,823, Dec. 7.

Taylor Instrument Companies, assignee: *See*—
Olson, Raymond E.

Tellier, Joseph C., and H. H. Wilson, Jr., assignors, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Harmonic generator. 2,455,824, Dec. 7.

Temple, Robert, Swissvale, Pa., assignor to Temple Velocity Equipment, Inc., Wilmington, Del. Explosively actuated fastening apparatus. 2,455,825, Dec. 7.

Temple, Robert, Swissvale, Pa., assignor to Temple Velocity Equipment, Inc., Wilmington, Del. Explosively actuated tool. 2,455,826, Dec. 7.

Temple Velocity Equipment, Inc., assignee: *See*—
Temple, Robert.

Tenety, Vincent J., Jersey City, assignor to East Coast Ship Yards, Cliffside Park, N. J. Drive or sprocket chain. 2,455,624, Dec. 7.

Thames, Frank C., San Antonio, Tex. Machine for shearing green corn from the cob, including an annular rotary cutter. 2,455,449, Dec. 7.

Thanem, Oswald I., Seattle, Wash., assignor to Continental Can Company, Inc., New York, N. Y. Centering device. 2,455,827, Dec. 7.

Theil, Michael, and B. A. Woina, assignors to Mullins Manufacturing Corporation, Salem, Ohio. Production of washing machine tubs. 2,455,828, Dec. 7.

Theurer, Erich G., Teaneck, N. J. Screw fastening. 2,455,885, Dec. 7.

Thiel, Fred D.: *See*—
Ford, William W., and Thiel.

Thomas & Betts Co., assignee: *See*—
Badeau, Carroll A., and Clapp.

Thomas, Ralph B., Beverly, and M. D. Betts, Rockport, assignors to Sylvania Electric Products Inc., Salem, Mass. Electric lamp. 2,455,829, Dec. 7.

Thompkins, Albert H., Springfield, Mass. Flexible sear mechanism for firearms. 2,455,830, Dec. 7.

Thompson, Robert T., Oak Park, Ill., assignor to Zenith Radio Corporation. Radio receiver noise suppression circuit. 2,455,450, Dec. 7.

Thomson, E. Craig, Boston, assignor to Combustion Control Corporation, Cambridge, Mass. Apparatus for supervising heat generating means. 2,455,536, Dec. 7.

Timken Roller Bearing Company, The, assignee: *See*—
Edwards, Herbert C.

Tinnerman Products, Inc., assignee: *See*—
Flanagan, John E.

Tore, Victor L., assignee: *See*—
Stallbaum, Charles F. R.

Torrington Manufacturing Company, The, assignee: *See*—
Halvorsen, Elmer W.

Townsend Engineering Company, assignee: *See*—
Townsend, Ray T.

Townsend, Ray T., assignor to Townsend Engineering Company, Des Moines, Iowa. Skinning machine. 2,455,831, Dec. 7.

Trantin, Jacob, Jr., Youngstown, Ohio. Hydraulic control valve. 2,455,625, Dec. 7.

Traut, William A., Wauwatosa, assignor to Blackhawk Mfg. Co., Milwaukee, Wis. Mechanical movement for converting rotary motion into reciprocating movement. 2,455,626, Dec. 7.

Treff, Alfred, Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y. Apparatus for straightening cans and the flanges thereof. 2,455,832, Dec. 7.

Troche, Herman J.: *See*—
Holan, James H., and Troche.

Trombetta, Louis, Bronx, N. Y. Clamping and knot tying instrument. 2,455,833, Dec. 7.

Troy Sunshade Company, The, assignee: *See*—
Bader, Harry J., and Daniel.

Trumbull Electric Manufacturing Company, The, assignee: *See*—
Getchell, Benjamin E.
Ohlson, Reynold A.

Tully, Charles F., San Diego, Calif. Condyle position indicating apparatus. 2,455,451, Dec. 7.

Tung-Sol Lamp Works Inc., assignee: *See*—
Weinhardt, Heinz H.

Udylite Corporation, The, assignee: *See*—
Brown, Henry.

Uhlmann, Hubert J., Grand Rapids, Mich. Film holding clip. 2,455,627, Dec. 7.

Ulrich, Bernhard, Jr., assignor to Bendix Aviation Corporation, South Bend, Ind. Snap action valve mechanism for expansible chamber motors with oscillating pistons. 2,455,628, Dec. 7.

United Device Corporation, assignee: *See*—
Sadowsky, Charles.

United Shoe Machinery Corporation, assignee: *See*—
Burby, Philip E.
Elliott, Harry D.
Hart, Fred V.
Lawson, Robert H.
Miller, Lloyd G.
Paulson, Hans C.

United States Rubber Company, assignee: *See*—
Clark, Edward H.

Unruh, Cornelius C.: *See*—
Kenyon, William O., and Unruh.

Ushakoff, Alexis E., Newton, Mass., assignor of thirty-five per cent to S. A. Baron, New Orleans, La., for the benefit of himself and F. A. Middleton. Inflatable solar still. 2,455,834, Dec. 7.

Ushakoff, Alexis E., Beverly, Mass., assignor of thirty-five per cent to S. A. Baron, New Orleans, La., for the benefit of himself, F. A. Middleton, and J. J. Finnorn. Inflatable solar still. 2,455,835, Dec. 7.

Vacuum Air Pressure Company Limited, assignee: *See*—
Bushby, David.

Vacuum Concrete, Inc., assignee: *See*—
Billner, Karl P.

Van Brummelen, Marinus, New York, N. Y. Box blank separator. 2,455,836, Dec. 7.

Van Eps, George, North Hollywood, Calif. Bridge. 2,455,452, Dec. 7.

Vanick, James S.: *See*—
Gagnebin, Albert P., Seigle, and Vanick.

Van Stone, Robert J., Rocky River, Ohio. Fender brace. 2,455,629, Dec. 7.

Varian, Russell H., Garden City, N. Y., assignor to The Sperry Corporation. Modulated wave modifying apparatus. 2,455,393, Dec. 7.

Varnum, Victor V., Tama, Iowa. Heating instrument. 2,455,453, Dec. 7.

Vickers-Armstrongs Limited, assignee: *See*—
Wallis, Barnes N.

Vinciguerra, Joseph F., Methuen, and W. C. Ford, Andover, Mass. Antirattle device for windows. 2,455,537, Dec. 7.

Von Soden, Adolph F., Los Angeles, Calif. Recording disk for sound and pictures. 2,455,712, Dec. 7.

Voorhies, Alexis, Jr., Baton Rouge, La., assignor to Standard Oil Development Company. Preparation of a sulfide catalyst. 2,455,713, Dec. 7.

Wagner, Frank, assignor to J. F. Helmold & Bro., Inc., Chicago, Ill. Making cutting tools. 2,455,538, Dec. 7.

Wahl, Eugene A., New York, N. Y., assignor to Allied Chemical & Dye Corporation. Joint construction. 2,455,539, Dec. 7.

Waldie, George A., Edison, Ohio, assignor to The Hydraulic Development Corporation, Wilmington, Del. Pump control means for hydraulic systems. 2,455,837, Dec. 7.

Waldie, William A., Oakwood, Ohio, assignor to New Wrinkle, Inc., Wilmington, Del. Flexible wrinkle finish and making. 2,455,540, Dec. 7.

Waldie, William A., Oakwood, Ohio, assignor to New Wrinkle, Inc., Wilmington, Del. Air dry wrinkle finish. 2,455,541, Dec. 7.

Wallis, Barnes N., Weybridge, assignor to Vickers-Armstrongs Limited, Westminster, London, England. Airframe structure. 2,455,838, Dec. 7.

Walter, Zachary T., Los Angeles, Calif. Making a fire resistant laminated fabric. 2,455,454, Dec. 7.

Walton, Ernest R., Seattle, Wash. Finned electric air heater. 2,455,839, Dec. 7.

War, United States of America, as represented by the Secretary of, assignee: *See*—
Garand, John C.
Sreb, Jules H.

Ward, Delbert J.: *See*—
Rechton, George D., Ward, and Watson.

Waterman, Wendell W., Cranford, and E. O. Ohsol, Rahway, N. J., assignors to Standard Oil Development Company. Coagulation of emulsion polymerizates. 2,455,714, Dec. 7.

Watson, Jack H.: *See*—
Rechton, George D., Ward, and Watson.

Watt, Andrew K., and A. B. Hays, Lansing, assignors to General Motors Corporation, Detroit, Mich. Feeding mechanism. 2,455,630, Dec. 7.

Webb, James S., Demopolis, Ala. Tree-felling saw attachment for tractors. 2,455,840, Dec. 7.

Webber, Hugh E., Williston Park, N. Y., assignor to The Sperry Corporation. Accelerometer. 2,455,394, Dec. 7.

Weber, Victor, Greensburg, and R. F. Garner, Youngwood, Pa., assignors to Robertshaw-Fulton Controls Company. Safety device for fuel burners. 2,455,542, Dec. 7.

Webster, Judith T., Boston, Mass. Ornamental hair fillet. 2,455,715, Dec. 7.

Wedge, Arthur F., Hartford, and H. T. Bidwell, Manchester, Conn., assignors to Colt's Manufacturing Company. Honing spindle. 2,455,841, Dec. 7.

Weeks, Walter L., Wyckoff, N. J., assignor to Wright Aeronautical Corporation. Automatically submerged sump pump. 2,455,717, Dec. 7.

Weichardt, Heinz H., New York, N. Y., assignor to Tung-Sol Lamp Works, Inc., Newark, N. J. Electronic circuit control and relay therefor. 2,455,395, Dec. 7.

Weigel, Daniel M., Detroit, Mich. Power transmission mechanism. 2,455,842. Dec. 7.

Weinkauff, Oliver J., assignor to Monsanto Chemical Company, St. Louis, Mo. Producing diacetyl. 2,455,631, Dec. 7.

Weir, Horace M., Wynnewood, Pa., assignor to The Davison Chemical Corporation, Baltimore, Md. Method and apparatus for production of gel bodies. 2,455,843, Dec. 7.

Weiss, Shirley I., New York, N. Y. Radio receiver. 2,455,716, Dec. 7.
Welborn, Thomas J., Lubbock, Tex. Closure lock. 2,455,844, Dec. 7.
Welding Research, Inc., assignee: *See*—
Sciaky, David.
Weller, Barton L., Richland, Wash., assignor to the United States of America as represented by the United States Atomic Energy Commission. Direct-current amplifier. 2,455,718, Dec. 7.
Wells, Edward P., Jacksonville, Fla. Rocket. 2,455,845, Dec. 7.
Wells, Joseph H.: *See*—
Wilson, Philip J., Jr., Wells, and Liebel.
West, John W., Jackson Heights, assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Coaxial leadin for electron discharge devices. 2,455,846, Dec. 7.
West, Paul B., Newark, N. J. Prefabricated concrete form. 2,455,455, Dec. 7.
Western Electric Company, Incorporated, assignee: *See*—
Moss, Earl C.
Prudhon, Glenn L., and Spikula.
Westinghouse Electric Corporation, assignee: *See*—
Kruck, Ralph E., and Grover.
Weyl, Woldemar A., and H. S. Williams, State College, Pa., dedicated, by mesne assignments, to the People of the United States of America. Glass manufacture. 2,455,719, Dec. 7.
Whitfield, Marshall G., and V. Sheshunoff, Garden City, assignors, by mesne assignments, to Fairchild Engine and Airplane Corporation, New York, N. Y. Coated metal article. 2,455,457, Dec. 7.
Whittaker, James L., Princeton, N. J., assignor to Radio Corporation of America. Three-dimensional oscillograph system. 2,455,456, Dec. 7.
Whittle, Frank, Rugby, assignor to Power Jets (Research and Development) Limited, London, England. Thrust augmenting device for a system for developing propulsive thrust. 2,455,458, Dec. 7.
Williams, Alan C., assignor to Franklin Transformer Manufacturing Company, Minneapolis, Minn. Capacitor testing instrument. 2,455,543, Dec. 7.
Williams, Alvin R., Cleveland, Ohio, assignor to The American Steel and Wire Company of New Jersey. Silicon electrical steel. 2,455,652, Dec. 7.
Williams, Charles, assignee: *See*—
Stallbaum, Charles F. R.
Williams, Helen S.: *See*—
Weyl, Woldemar A., and Williams.
Williams, Stanley V.: *See*—
Ransley, Charles E., and Williams.
Wilson, George V., and S. P. Darkins, Homestead, Pa. Tobacco can. 2,455,633, Dec. 7.
Wilson, Harry H., Jr.: *See*—
Tellier, Joseph C., and Wilson, Jr.
Wilson, John M.: *See*—
Beam, Vilynn O., and Wilson.
Wilson, Philip J., Jr., J. H. Wells, and C. R. Liebel, Pittsburgh, Pa., assignors to Carnegie-Illinois Steel Corporation. Refining aromatic hydrocarbons. 2,455,634, Dec. 7.
Winther, Howard, Harrington Park, N. J., assignor to Nathan Manufacturing Company, New York, N. Y. Lubricating system for vehicles. 2,455,847, Dec. 7.
Witlin, Isadore B., Los Angeles, Calif.; W. B. Naythons, administrator of the estate of said I. B. Witlin, deceased, assignor to P. Raykoff, Los Angeles, Calif. Slipper with chenille surfacing. 2,455,459, Dec. 7.
Witte, Byron V., Birmingham, Ala. Waterproof pistol holster. 2,455,635, Dec. 7.
Woina, Benjamin A.: *See*—
Theil, Michael, and Woina.
Wood, Henry W.: *See*—
Kendall, John D., Suggate, and Wood.
Woodin, William H., Jr., assignee: *See*—
Soller, Walter.
Woolson, Harry T., Detroit, assignor to Chrysler Corporation, Highland Park, Mich. Mine exploder. 2,455,636, Dec. 7.
Wright Aeronautical Corporation, assignee: *See*—
Browne, Kenneth A.
Sherwin, Frederick S.
Weeks, Walter L.
Wright, David I.: *See*—
Peterson, Eric O., Wright, and Heaton.
Wright, William C., D. G. Rowe, Jr., and E. F. Roberts, Hickory, N. C. Vulcanizing apparatus. 2,455,637, Dec. 7.
Wycliffe Foundry & Engineering Company Limited, assignee: *See*—
Barrett, Guy.
Yant, William P.: *See*—
Myers, Charles H., and Yant.
Yardeny, Michel N., New York, N. Y. Remote control with multiple-speed governor. 2,455,901, Dec. 7.
Yardeny, Michel N., and L. Kardorff, New York, N. Y.; said Kardorff assignor to said Yardeny. Combined clutch and brake. 2,455,900, Dec. 7.
Yonkers, John L., Northbrook, Ill. Pipe coupling. 2,455,544, Dec. 7.
Young, Carroll T., Westminster, Md. Calf feeder. 2,455,848, Dec. 7.
Young, Leonard P., Chester, Conn. Core insulator. 2,455,720, Dec. 7.
Yule, John A. C., assignor to Eastman Kodak Company, Rochester, N. Y. Photographic unsharp masking method. 2,455,849, Dec. 7.
Zenner, George H., Kenmore, N. Y., assignor to The Linde Air Products Company. Rotary pump for liquefied gases. 2,455,460, Dec. 7.
Zenith Radio Corporation, assignee: *See*—
Knight, Cosler D.
Thompson, Robert T.
Zimmer, John C.: *See*—
Duncan, Gordon W., and Zimmer.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 7TH DAY OF DECEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Front for bathroom cabinet or similar article. W. Fanelli and C. A. Laystrom. Re. 23,055, Dec. 7.
Telephone exchange system. G. Deakin. Re. 23,054, Dec. 7.
Telephone system, relay automatic. J. H. Voss. Re. 23,056, Dec. 7.

LIST OF PLANT INVENTIONS

Peach tree. L. Satterfield. 813, Dec. 7.

LIST OF DESIGN INVENTIONS

Airplane. P. M. Acosta. 151,948, Dec. 7.
Air travel bag and cosmetic case, Combined. E. N. Graham. 151,981, Dec. 7.
Alphabet for forming monograms or similar article. V. T. Howard. 151,993–4, Dec. 7.
Ash tray. L. A. Revell. 152,022, Dec. 7.
Automobile grille and bumper assembly or similar article, Combined. E. Macauley. 152,010, Dec. 7.
Bed. A. J. Buckner. 151,961, Dec. 7.
Bed, Baby. F. P. Davis. 151,969, Dec. 7.
Book end. D. Rego. 152,019, Dec. 7.
Boom, Camera. A. Crot. 151,966, Dec. 7.
Bottle. B. Lewis. 152,005, Dec. 7.
Box for cosmetics or the like. G. Band. 151,956, Dec. 7.
Broiler base. H. J. Taige. 152,043, Dec. 7.
Brooch or similar article. W. W. Hobé. 151,990–1, Dec. 7.
Brooch or similar article. V. Silson. 152,031, Dec. 7.
Brooch, Revolving, or similar article. A. Katz. 151,995, Dec. 7.
Brooch, Separable, or similar article. A. Katz. 151,996–9, Dec. 7.
Bumper engaging member for an automobile jack. R. Gambardella. 151,974, Dec. 7.
Cabinet. A. J. Buckner. 151,963, Dec. 7.
Cabinet, Combination refrigerator and cooler. T. H. Koeber. 152,001, Dec. 7.
Cabinet for shoe shining machines. C. E. Danielson. 151,968, Dec. 7.
Cabinet, Freezer chest. T. H. Koeber. 152,000, Dec. 7.
Camera, Box. A. H. Crapsey, Jr. 151,965, Dec. 7.
Camera, Photographic. J. O. Reinecke. 152,021, Dec. 7.
Can, Waste. B. F. Hamilton. 151,986, Dec. 7.
Carrier, Feed. S. A. Halls. 151,985, Dec. 7.
Case and mirror compartment or the like, Combined twin lipstick. E. N. Graham. 151,980, Dec. 7.
Case or similar article, Lipstick. W. H. Leavin. 152,003, Dec. 7.
Casing for shower valve. H. H. Logan. 152,007, Dec. 7.
Chair. J. B. Cunningham. 151,967, Dec. 7.
Chest and desk, Combined. D. B. and A. A. Allen. 151,949, Dec. 7.
Circular hassock and coffee table, Combination. G. C. Guertin. 151,984, Dec. 7.
Clock. B. Lerman. 152,004, Dec. 7.
Comb holder and wall cabinet, Combined. S. Strick. 152,039, Dec. 7.
Commode. A. J. Buckner. 151,962, Dec. 7.
Commode. A. J. Buckner. 151,964, Dec. 7.
Container, Cosmetic. P. L. Schluttig. 152,026–7, Dec. 7.
Control unit for return of condensate to boiler, Steam system. L. Tiller. 152,044, Dec. 7.
Creeper, Utility, with illuminator or the like. S. J. Lucas. 152,008, Dec. 7.
Crib, Collapsible. A. W. Kunz. 152,002, Dec. 7.
Desk unit. B. T. Bowers. 151,959, Dec. 7.
Dispenser, Cigarette. D. Volpe. 152,047, Dec. 7.
Dispenser for canned liquids. F. J. Strodel. 152,040, Dec. 7.
Dispensing unit, Dental. F. J. Hayman. 151,988, Dec. 7.
Display case for bottles or the like. L. Fine. 151,971, Dec. 7.
Duplicating machine. A. H. Geib. 151,975, Dec. 7.
Figurine and beverage set, Combination. Z. C. Gifford. 151,977, Dec. 7.
Fountain pen, Ball point. M. E. Hirsch. 151,989, Dec. 7.
Furniture base or similar article. G. H. Mildwoff. 152,013, Dec. 7.
Hanger, Garment. M. A. Glavies. 151,978, Dec. 7.
Harmonica, Fish type. S. Freimauer and J. Skoloff. 151,972, Dec. 7.
Hassock and coffee table, Combination. G. C. Guertin. 151,983, Dec. 7.
Head covering, Protective. B. J. Boeringer. 151,957, Dec. 7.
Heater, Water. J. W. Hauser. 151,987, Dec. 7.
Holder, Scouring pad. A. C. Weiss. 152,048, Dec. 7.
Jar, Glass. H. C. Gessler. 151,976, Dec. 7.
Jar or similar container. A. A. Baldocchi. 151,954, Dec. 7.
Journal box lid for railway cars. D. S. Barrows. 151,955, Dec. 7.
Kit, Accessory. S. G. Anderson. 151,950, Dec. 7.
Lamp. J. J. Stupka and J. Venekamp. 152,041, Dec. 7.
Lamp and mirror, Combined. P. E. Merrill and O. R. Titchenal. 152,012, Dec. 7.
Lock for handbags or the like. R. T. Sporman. 152,036, Dec. 7.
Necklace or similar article. A. Philippe. 152,016–17, Dec. 7.
Necklace or the like. H. Bogoff. 151,958, Dec. 7.
Oil drain or similar article, Extension. W. C. Moore. 152,015, Dec. 7.
Ornament, Christmas tree. E. J. Schwartzman. 152,028, Dec. 7.
Plane, Carpenter's. R. Gouirand. 151,979, Dec. 7.
Projector, Contour, or the like. J. T. Armbruster. 151,951, Dec. 7.
Protector for baby's shoe. V. L. Lyons. 152,009, Dec. 7.
Rack. Coat and hat. A. Stauber. 152,038, Dec. 7.
Radio cab. H. Sherry. 152,029, Dec. 7.
Renovator, Floor. H. G. Lilly. 152,006, Dec. 7.
Ring or the like. S. A. Reichmuth. 152,020, Dec. 7.
Roaster, Electric. C. W. Sunberg and M. Ferar. 152,042, Dec. 7.
Sandal base, Beach. A. B. Vickers. 152,046, Dec. 7.
Seat, Lawn. R. M. Rink. 152,023, Dec. 7.
Semi-trailer. E. Ellberg. 151,970, Dec. 7.
Separator, Ball-bearing. J. E. Sonnhalter. 152,035, Dec. 7.
Shirt or similar article. V. Zito. 152,051, Dec. 7.
Showcase. W. A. Yantis. 152,050, Dec. 7.
Skate sharpener and chain, Combined. M. J. McGoey. 152,011, Dec. 7.
Slip. N. Hochbaum. 151,992, Dec. 7.
Stamping machine, Hot. J. A. Stadler. 152,037, Dec. 7.
Stand, Flower. F. F. Solak. 152,034, Dec. 7.
Stand, Lamp. M. E. Miller. 152,014, Dec. 7.
Stocking. B. F. Playford. 152,018, Dec. 7.
Streamer toy. D. M. Smith. 152,033, Dec. 7.
Support for a sadiron. M. A. Rollman. 152,024, Dec. 7.
Sweater or similar article. M. W. Rosen. 152,025, Dec. 7.
Tank vehicle. G. A. Brasfield. 151,960, Dec. 7.
Tape or similar article. J. V. Granitto. 151,982, Dec. 7.
Toilet tissue, cabinet, and utility holder, Combination hanging corner. J. Zwart. 152,052, Dec. 7.
Tool, Pry-off type container cap removing. L. P. Fretto1oso. 151,973, Dec. 7.
Vending machine, Confection. G. Babcock. 151,952–3, Dec. 7.
Walker and stroller for children, Combination twin. J. R. Vibber. 152,045, Dec. 7.
Welder. A. U. Welch, Jr. 152,049, Dec. 7.
Whirling toy. D. M. Smith. 152,032, Dec. 7.
Writing instrument. I. Shupack. 152,030, Dec. 7.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 7TH DAY OF DECEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Absorber for firearms, Recoil. H. E. Oppold. 2,455,438, Dec. 7.
Accelerometer. H. E. Webber. 2,455,394, Dec. 7.
Adapter attachment for indicator dials. J. F. Lively. 2,455,592, Dec. 7.
Adhesives. E. J. G. Bailey, F. M. Page, and J. C. McGowan. 2,455,392, Dec. 7.
Air circulating duct for two-temperature refrigerator cabinet. R. E. Kruck and E. E. Grover. 2,455,781, Dec. 7.
Air collet closer. C. Koolma. 2,455,586, Dec. 7.
Aircraft of rotory wing type. C. H. Kaman. 2,455,866, Dec. 7.
Airframe structure. B. N. Wallis. 2,455,838, Dec. 7.
Airway marker. J. Abiuso. 2,455,721, Dec. 7.
Alarm system, Capacity. M. H. A. Lindsay. 2,455,376, Dec. 7.
Alarm system for doors having a plurality of door panels operated in succession. E. A. Kohout. 2,455,780, Dec. 7.
Alkali metal salts of dicyanamide, Preparation of. D. E. Nagy and B. C. Redmon. 2,455,895, Dec. 7.
Alkaline detergent, Producing an. W. R. Bennett. 2,455,648, Dec. 7.
Alloys for making cast iron. A. P. Gagnebin, L. L. Seigle, and J. S. Vanick. 2,455,751, Dec. 7.
Alternate passage double ring cowl. G. S. Schairer. 2,455,385, Dec. 7.
Aluminum phosphate phosphor. H. C. Froelich and J. M. Margolis. 2,455,414, Dec. 7.
Ammoniacal cuprous solution, Regenerating spent. J. G. Dely. 2,455,473, Dec. 7.
Ammunition bandoleer, Machine gun. J. H. Beckman. 2,455,352, Dec. 7.
Amplifier, Band-pass. J. H. Ludwig. 2,455,510, Dec. 7.
Amplifier, Bidirectional high gain. G. C. Szikiai. 2,455,711, Dec. 7.
Amplifier, Direct-current. B. L. Weller. 2,455,718, Dec. 7.
Amplifier, High gain. C. D. Knight. 2,455,501, Dec. 7.
Anchor, Land. E. A. Oliver. 2,455,800, Dec. 7.
Antenna. G. H. Brown. 2,455,403, Dec. 7.
Antenna. G. H. Brown. 2,455,888, Dec. 7.
Antirattle device for windows. J. F. Vinciguerra and W. C. Ford. 2,455,537, Dec. 7.
Antiskid device for tires. C. Sadowsky. 2,455,878, Dec. 7.
Apparatus for forming irrigation mounds. G. C. Deakins. 2,455,566, Dec. 7.
Apparatus for heat-treating metal parts. H. F. Strom. 2,455,822, Dec. 7.
Apparatus for lacquer coating side seams of can bodies. R. A. Larson. 2,455,785, Dec. 7.
Apparatus for melting glass. G. Slayter. 2,455,907, Dec. 7.
Apparatus for pressing footwear as it is conveyed. E. H. Clark. 2,455,559, Dec. 7.
Apparatus for processing film. L. R. M. Dearing and I. B. Current. 2,455,357, Dec. 7.
Apparatus for straightening cans and the flanges thereof. A. Treff. 2,455,832, Dec. 7.
Apparatus for supervising heat generating means. E. C. Thomson. 2,455,536, Dec. 7.
Apparatus for the production of artificial filaments. R. W. Stanley. 2,455,530, Dec. 7.
Apparatus for treating cheese. O. F. Hensel. 2,455,579, Dec. 7.
Applicator for applying insulation to wire. P. V. Kessler and J. B. Moss. 2,455,499, Dec. 7.
Aqueous dispersions of polyvinyl butyral, Preparing. W. H. Bromley, Jr. 2,455,402, Dec. 7.
Arc welding within hydrocarbon oil. P. Peillon. 2,455,441, Dec. 7.
Aromatic derivatives, Sulfonated. J. R. Caldwell. 2,455,730, Dec. 7.
Arrangement for covering ship hulls. E. Loewenstein. 2,455,593, Dec. 7.
Arranging and brazing superposed commutator leads. C. F. Cobb, E. F. Brill, and J. R. Guenther. 2,455,560, Dec. 7.
Artificial sphincter and method. F. E. B. Foley. 2,455,859, Dec. 7.
Attachment for violins and analogous instruments. H. A. Feldman. 2,455,574, Dec. 7.
Automatically submerged sump pump. W. L. Weeks. 2,455,717, Dec. 7.
Axially shifting type, pedestal mounted tire removing machine. I. N. Hewitt. 2,455,580, Dec. 7.
Axis cone and shell mill, Vertical. R. F. Davis. 2,455,565, Dec. 7.
Axle, Trailer. F. F. Linn. 2,455,787, Dec. 7.

Baling press and baling method. S. S. Robinson, Jr. 2,455,442, Dec. 7.
Barrel lock. O. E. Rosengren. 2,455,608, Dec. 7.
Basin, Portable hair-rinsing. E. C. Price. 2,455,607, Dec. 7.
Battery box asphalt and making the same. W. E. Speilshouse and A. H. Boenau. 2,455,709, Dec. 7.
Bending and trimming machine, Automatic. R. H. Herman. 2,455,768, Dec. 7.
Bearing. A. S. Howell. 2,455,489, Dec. 7.
Beverages, Preparing carbonated. J. Kantor and E. F. Rosenberg. 2,455,681, Dec. 7.
Billfold and coin purse, Stitchless combined. L. Seamon. 2,455,527, Dec. 7.
Bin, Inclined. T. Shaw. 2,455,706, Dec. 7.
Blade and handle, Saw. O. Carlson. 2,455,853, Dec. 7.
Bobbin control for battery looms. G. F. Bahan. 2,455,463, Dec. 7.
Bobbin winder for sewing machines. S. Adler. 2,455,638, Dec. 7.
Boiler: *See*—
Fire and water tube boiler.
Book, Copy and practice. S. T. Bell. 2,455,353, Dec. 7.
Boot, Close-fitting. F. F. Olson. 2,455,801, Dec. 7.
Bourdon tube end cap. E. A. McCoy. 2,455,512, Dec. 7.
Box blank separator. M. Van Brummelen. 2,455,836, Dec. 7.
Brace, Fender. R. J. Van Stone. 2,455,629, Dec. 7.
Brassière. J. J. Lo Cascio. 2,455,788, Dec. 7.
Bridge. G. Van Eps. 2,455,452, Dec. 7.
Brush and crumber set. F. F. Monaco. 2,455,695, Dec. 7.
Buffing wheel. N. Kaplan. 2,455,680, Dec. 7.
Burner: *See*—
Perforated combustion tube distillate burner.
Burning carbonaceous fuels, Method and apparatus for. R. A. Sherman. 2,455,817, Dec. 7.
Cabinet: *See*—
Collapsible storage cabinet
Cable: *See*—
Electric cable.
Calcium phosphate phosphor. H. C. Froelich and J. M. Margolis. 2,455,413, Dec. 7.
Calf feeder. C. I. Young. 2,455,848, Dec. 7.
Can: *See*—
Tobacco can.
Can distributor, Automatic. T. C. Dodge. 2,455,741, Dec. 7.
Cap: *See*—
Bourdon tube end cap. Uniform cap.
Carbon set form. F. J. Hauer. 2,455,484, Dec. 7.
Carriage stop. R. A. Monkiewicz. 2,455,793, Dec. 7.
Carrier: *See*—
Fish carrier.
Case: *See*—
Motor vehicle carrying case.
Casting reel. K. Jellum. 2,455,495, Dec. 7.
Cathode assembly for electron discharge devices. J. A. Morton and L. J. Speck. 2,455,381, Dec. 7.
Cellulose ester compositions, Stabilized. R. M. Hitchens. 2,455,581, Dec. 7.
Cementer, Insole rib. H. C. Paulsen. 2,455,518, Dec. 7.
Center punch. E. F. Hager. 2,455,577, Dec. 7.
Centering device. O. I. Thanem. 2,455,827, Dec. 7.
Centering means for cathode-ray deflecting circuits. P. F. G. Holst and L. R. Kirkwood. 2,455,771, Dec. 7.
Centrifugal switch. J. H. Sreb. 2,455,620, Dec. 7.
Chain: *See*—
Drive or sprocket chain.
Chimney construction. C. C. Droeger. 2,455,570, Dec. 7.
Christmas tree holder. W. H. and W. S. Brown. 2,455,404, Dec. 7.
Chuck. J. Eaton. 2,455,663, Dec. 7.
Cigarette holder. W. L. Jackson. 2,455,492, Dec. 7.
Circuit: *See*—
Phase responsive control circuit. Ring circuit.
Radio receiver noise suppression circuit. Thermostat - controlled heater circuit.
Circuit arrangement for mixing oscillations. E. C. Cork, M. Bowman-Manifold, F. H. Gale, and R. Blythen. 2,455,657, Dec. 7.
Circuit breaker, Thermal. B. E. Getchell. 2,455,753, Dec. 7.
Circuit connecting members, Manufacture of plural. M. R. Hanna. 2,455,864, Dec. 7.
Circuit control and relay therefor, Electronic. H. H. Weichardt. 2,455,395, Dec. 7.
Circuit for electric testing apparatus, Limiter. F. A. Meunier. 2,455,792, Dec. 7.

Circular power saw, Manually guided two-wheeled portable. B. Kuykendall. 2,455,369, Dec. 7.
Citrus waste feed products, Making. J. M. Kuder. 2,455,782, Dec. 7.
Clamp: *See*—
Hose clamp. Outboard motor clamp.
Clamp. A. B. Michalenko. 2,455,598, Dec. 7.
Clamp. N. R. Schwartz. 2,455,444, Dec. 7.
Clasp, Strap-end attaching. A. Blumstein. 2,455,465, Dec. 7.
Clip: *See*—
Film holding clip. Paper clip.
Clip construction for billfolds, Reinforcement and spring. S. Miller. 2,455,515, Dec. 7.
Clip for coiling wire. D. H. King. 2,455,683, Dec. 7.
Closure. R. W. Barton. 2,455,645, Dec. 7.
Closure lock. T. J. Welborn. 2,455,844, Dec. 7.
Clothesline prop, Adjustable. J. E. Swalinkavich, Jr., and J. T. Donovan. 2,455,448, Dec. 7.
Clothesline structure. M. E. Seymour. 2,455,446, Dec. 7.
Clutch and brake, Combined. M. N. Yardeny and L. Kardorff. 2,455,900, Dec. 7.
Coagulation of emulsion polymerizates. W. W. Waterman and E. O. Ohsol. 2,455,714, Dec. 7.
Coating composition comprising a polychloroprene and a stripping agent, Strippable. C. G. Murphy and J. P. Sermattei. 2,455,855, Dec. 7.
Coating composition comprising a polychloroprene and aluminum powder, Strippable. G. E. Condé. 2,455,854, Dec. 7.
Coating composition comprising a polychloroprene and carbon black, Strippable. C. G. Murphy and J. P. Sermattei. 2,455,856, Dec. 7.
Coating machine. F. W. Love and C. E. McCormick. 2,455,428, Dec. 7.
Coatings, Enteric. C. J. Malm and G. D. Hiatt. 2,455,790, Dec. 7.
Coils for variometers, Making spherical. E. E. Combs. 2,455,355, Dec. 7.
Collapsible storage cabinet. E. H. Curtis. 2,455,739, Dec. 7.
Color separation images, Registration of. L. M. Condax. 2,455,735, Dec. 7.
Combine. M. Ronning and K. M. Keith. 2,455,905, Dec. 7.
Compositions comprising a polyvinyl chloride resin stabilized with ortho-sulfobenzimide. R. H. Schlattman. 2,455,611, Dec. 7.
Compositions comprising a polyvinyl chloride resin stabilized with the alkali metal salts and the alkaline earth metal salts of ortho-sulfobenzimide. R. H. Schlattman. 2,455,612, Dec. 7.
Compositions comprising a polyvinyl chloride resin stabilized with the dialkyl tin salts of ortho-sulfobenzimide. R. H. Schlattman. 2,455,613, Dec. 7.
Compositions comprising a polyvinyl chloride resin stabilized with the lead salt of ortho-sulfobenzimide. R. H. Schlattman. 2,455,614, Dec. 7.
Concealed post support. W. H. Pleiss. 2,455,606, Dec. 7.
Concrete form, Prefabricated. P. B. West. 2,455,455, Dec. 7.
Condensation products from ketones and aralkyl organic compounds and producing the same. A. B. Bakalar. 2,455,643, Dec. 7.
Condiment. A. Fonyo. 2,455,749, Dec. 7.
Construction of fields for playing golf. M. B. Reach. 2,455,806, Dec. 7.
Container: *See*—
Dispensing container. Tongueless tearing strip container.
Powder dispensing container.
Container for merchandise, Shadow box. R. E. Murphy. 2,455,795, Dec. 7.
Container sealer, Individual. E. E. Anderson. 2,455,461, Dec. 7.
Control apparatus for molding presses. J. A. Tauber and H. A. Heiligman. 2,455,823, Dec. 7.
Control device. V. O. Beam. 2,455,350, Dec. 7.
Control for airplanes. C. R. Jamison. 2,455,584, Dec. 7.
Control for Axminster looms, Driving. C. R. Kronoff and V. F. Sepavich. 2,455,502–4, Dec. 7.
Control for gaseous fuel burners, Safety. H. W. Rice and G. B. Solovieff. 2,455,521, Dec. 7.
Control grid for electric discharge devices and making same. A. R. Koch. 2,455,868, Dec. 7.
Control means for air conditioning apparatus. H. O. Kirkpatrick. 2,455,421, Dec. 7.
Control of alternating current motors. R. B. Hunter. 2,455,491, Dec. 7.
Control of selectors over communication channels by storage controlled transmitters. W. M. Bacon. 2,455,724, Dec. 7.
Converter, Mercury-vapor electric. R. Neirynck. 2,455,602, Dec. 7.
Copolymers of 1-acyloxy-1,3-butadienes and acrylonitrile. W. O. Kenyon and C. C. Unruh. 2,455,778, Dec. 7.
Correction device for electronic function generators. M. L. Groenough. 2,455,672, Dec. 7.
Coupling: *See*—
Pipe coupling.
Coupling. J. A. Maul and W. P. Lautzenheiser. 2,455,870, Dec. 7.
Coupling for high-pressure tubing. G. E. Franck. 2,455,667, Dec. 7.
Cradle for bass viols or other stringed instruments. W. C. Stenger. 2,455,821, Dec. 7.
Crop gathering mechanism for combines. M. Ronning and K. M. Keith. 2,455,906, Dec. 7.
Cup finishing apparatus. W. H. Emerson. 2,455,744, Dec. 7.
Cuprammoniacal petroleum mahogany sulfonates. L. Liberthson. 2,455,687, Dec. 7.
Curtain and drape mounting. V. Fiorentino. 2,455,576, Dec. 7.
Curtain stretcher. C. F. Ashbaugh. 2,455,640, Dec. 7.
Cutout, Electrical. W. O. Schultz. 2,455,704, Dec. 7.
Damping follow-up mechanism by degenerative derivative. F. H. Shepard, Jr. 2,455,618, Dec. 7.
Dental unit, Pocket prophylaxis. M. J. and L. F. Molumby. 2,455,600, Dec. 7.
Depositing nonreflective films and composition therefor. P. King. 2,455,367, Dec. 7.
Destroyer, Mine. J. L. Bisch. 2,455,354, Dec. 7.
Detector and indicator for bowling alleys, Foul. P. M. Smith. 2,455,909, Dec. 7.
Device for administering anaesthetics. E. S. Graybeal. 2,455,757, Dec. 7.
Device for inspecting blood circulation. W. Ryan. 2,455,810, Dec. 7.
Device for repointing twist drills. D. Crowther. 2,455,562, Dec. 7.
Device for slicing eggs into layers. J. W. Harbanoff. 2,455,416, Dec. 7.
Device for tempering steam. W. C. Glover, Jr. 2,455,754, Dec. 7.
Device for truing and sharpening dough cutters. S. C. Kenyon. 2,455,585, Dec. 7.
Diacetyl, Producing. O. J. Weinkauff. 2,455,631, Dec. 7.
Di (alkenyl carbonato) aromatic compounds and polymers thereof. J. A. Bralley and F. B. Pope. 2,455,653, Dec. 7.
Diaphragm pump. H. F. Hadley. 2,455,480, Dec. 7.
Dimpling mandrel. H. R. Fischer. 2,455,903, Dec. 7.
Disk for sound and pictures, Recording. A. F. von Soden. 2,455,712, Dec. 7.
Dispensing container. L. Hermani. 2,455,769, Dec. 7.
Dispensing container. C. M. Lehman. 2,455,685, Dec. 7.
Distance determining system. W. R. Mercer. 2,455,693, Dec. 7.
Distance selective system. C. W. Hansell. 2,455,673, Dec. 7.
Distillation process, Extractive. G. J. Pierotti. 2,455,803, Dec. 7.
Door check. J. W. Holman. 2,455,488, Dec. 7.
Drive or sprocket chain. V. J. Tenety. 2,455,624, Dec. 7.
Driving belt, Laminated. H. Brammer. 2,455,400, Dec. 7.
Driving mechanism for knitting needles. J. P. Lindholm. 2,455,375, Dec. 7.
Duplicating machine, Automatic. R. D. Shaw. 2,455,882, Dec. 7.
Dyestuff, Cyanine. J. D. Kendall, H. G. Suggate, and H. W. Wood. 2,455,420, Dec. 7.
Electric branding iron. C. E. Farrar. 2,455,410, Dec. 7.
Electric cable. R. A. Johnson. 2,455,773, Dec. 7.
Electric lamp. R. B. Thomas and M. D. Betts. 2,455,829, Dec. 7.
Electric pressure strain gauge. L. D. Statham. 2,455,883, Dec. 7.
Electrical apparatus for loud speaker systems. W. O. Crane. 2,455,471, Dec. 7.
Electrically operated generator. H. B. Jaynes. 2,455,494, Dec. 7.
Electrode and envelope structure for electric discharge devices, Improved. J. E. Beggs. 2,455,851, Dec. 7.
Electrodeposition of copper. H. Brown. 2,455,554, Dec. 7.
Electrodeposition of nickel from an acid bath. H. Brown. 2,455,555, Dec. 7.
Electrolytic stripping and determination of plating metal. G. H. Bendix. 2,455,726, Dec. 7.
Electromagnet with pivotally mounted armature. L. H. Matthias. 2,455,690, Dec. 7.
Engine: *See*—
Internal-combustion engine.
Engine construction. L. W. Beaven. 2,455,647, Dec. 7.
Engines and the like, Beating. A. G. Stewart. 2,455,622, Dec. 7.
Estrogenic substances. R. C. Tallman and A. H. Stuart. 2,455,535, Dec. 7.
Ethylene glycoltetrachlorophthalate resins, Modified wax-compatible. B. W. Nordlander and W. E. Cass. 2,455,873, Dec. 7.
Excavator. E. A. Drott and J. H. Kerber. 2,455,474, Dec. 7.
Exercising machine. J. D. Bell. 2,455,548, Dec. 7.
Exhaust manifold. H. Jacobs. 2,455,493, Dec. 7.
Explosively actuated tool. R. Temple. 2,455,826, Dec. 7.
Extruding irregularly shaped carbon rods. E. L. Luáces. 2,455,509, Dec. 7.
Fabric, Making a fire resistant laminated. Z. T. Walter. 2,455,454, Dec. 7.
Fastener: *See*—
Stove pipe fastener.
Fastening apparatus, Explosively actuated. R. Temple. 2,455,825, Dec. 7.
Fastening inserting machine. R. H. Lawson. 2,455,370, Dec. 7.
Feeder: *See*—
Calf feeder.
Feeding mechanism. A. K. Watt and A. B. Hays. 2,455,630, Dec. 7.

Fence charger, Electrical. E. K. Malme. 2,455,511, Dec. 7.
Filling apparatus, Receptacle-movement controlled. G. L. Ardron. 2,455,723, Dec. 7.
Film holding clip. H. J. Uhlmann. 2,455,627, Dec. 7.
Filter: *See*—
Rotary filter.
Filter and circulator, Electrostatic air. G. W. Crise. 2,455,738, Dec. 7.
Finned electric air heater. E. R. Walton. 2,455,839, Dec. 7.
Fire and water tube boiler. C. F. R. Stallbaum. 2,455,621, Dec. 7.
Firearm receiver. C. H. Barnes. 2,455,644, Dec. 7.
Fire detecting apparatus. V. O. Beam and J. M. Wilson. 2,455,351, Dec. 7.
Fish carrier. J. W. Harvey. 2,455,766, Dec. 7.
Fish net hanger. J. W. Harvey. 2,455,765, Dec. 7.
Flame treatment of substantially cylindrical internal surfaces such as bores. A. E. Shorter. 2,455,447, Dec. 7.
Fleshing tool. A. C. Lamy. 2,455,505, Dec. 7.
Floor covering. J. R. Jones. 2,455,777, Dec. 7.
Food product. E. Lilly. 2,455,508, Dec. 7.
Forceps, Wire applying. B. V. Scheib. 2,455,609, Dec. 7.
Forming material. G. D. Rechton, D. J. Ward, and J. H. Watson. 2,455,702, Dec. 7.
Fractionation in presence of radiant energy. C. H. Schlesman. 2,455,812, Dec. 7.
Freezer, Pressure type. H. W Kleist 2,455,867, Dec 7
Fuel injection pump. H. C. Edwards. 2,455,571, Dec. 7.
Furnace: *See*—
Metal furnace.
Fuse. H. J. Nichols. 2,455,603, Dec. 7.
Game, Sailing. J. C. Powers, Jr. 2,455,519, Dec. 7.
Garment. T. Kotzin. 2,455,588, Dec. 7.
Garment combination, Infant's sleeping. L. L. Steigerwald. 2,455,884, Dec. 7.
Gauge: *See*—
Electric pressure strain gauge.
Shock gauge.
Varilength tandem self-aligning gauge.
Saw gauge.
Gauge circuits, Ionization. G. R. Nagel and M. E. Johnson. 2,455,437, Dec. 7.
Gauge for checking the centerline of elongate parts. E. C. Moss. 2,455,516, Dec. 7.
Gear: *See*—
Reverse gear.
Reversing gear.
Gearing, Antifriction worm. H. S. Hoffar. 2,455,487, Dec. 7.
Gel bodies, Method and apparatus for production of. H. M. Weir. 2,455,843, Dec. 7.
Gel catalyst. M. J. See and J. C. Baillie. 2,455,445, Dec. 7.
Gel manufacture. L. T. Hartlove. 2,455,764, Dec. 7.
Generator: *See*—
Electrically operated generator.
Time base sweep and intensifier pulse generator.
Harmonic generator.
Generating complex signals, Method and system for electronically. H. C. Curl and J. D. Kleinkauf. 2,455,472, Dec. 7.
Glass fibers, Making. G. Slayter. 2,455,908, Dec. 7.
Glass holding device. J. T. Miller. 2,455,599, Dec. 7.
Glass manufacture. W. A. Weyl and H. S. Williams. 2,455,719, Dec. 7.
Golf instructor. A. D. Sheffer. 2,455,707, Dec. 7.
Golf tee. J. C. Seager. 2,455,705, Dec. 7.
Grain blender. E. R. Evans. 2,455,572, Dec. 7.
Greases and making the same, Lubricating. H. M. Fraser. 2,455,892, Dec. 7.
Grenade launcher. J. C. Garand. 2,455,361, Dec. 7.
Grinder, Pipe. R. P. Dorian. 2,455,742, Dec. 7.
Grinder, Pipe. O. R. Hall. 2,455,762, Dec. 7.
Grinding wheel. L. H. Metzger, W. B. Muse, and F. J. Pease. 2,455,597, Dec. 7.
Guard for fastening inserting machines, Driver. R. H. Lawson. 2,455,371, Dec. 7.
Gun sight reticule producing apparatus, Portable. S. P. Leeper. 2,455,372, Dec. 7.
Hair fillet, Ornamental. J. T. Webster. 2,455,715, Dec. 7.
Halogenated pyran compounds and production thereof. D. G. Jones and J. G. M. Bremner. 2,455,776, Dec. 7.
Handle for portable blowers. C. W. Lanter. 2,455,786, Dec. 7.
Handling apparatus. K. P. Billner. 2,455,650, Dec. 7.
Hanger: *See*—
Fish net hanger.
Sash hanger.
Hanger and necktie rack, Combined coat. W. R. Grant. 2,455,478, Dec. 7.
Harmonic generator. J. C. Tellier and H. H. Wilson, Jr. 2,455,824, Dec. 7.
Hat. H. Shrager and B. Shinberg. 2,455,619, Dec. 7.
Heater: *See*—
Finned electric air heater.
Steam injection type water heater.
Helmet. C. H. Myers and W. P. Yant. 2,455,797, Dec 7.
Holder: *See*—
Christmas tree holder.
Sack holder.
Cigarette holder.
Shoe holder.
Holder. J. E. Donaldson. 2,455,857, Dec. 7
Holster, Waterproof pistol. B. V. Witte. 2,455,635, Dec. 7.
Hose clamp. G. Gustafson. 2,455,760, Dec. 7.
Hot-water system supply, Temperature limiting. H. Krauss. 2,455,590, Dec. 7.
Hydraulic control valve. J. Trantin, Jr. 2,455,625, Dec. 7.
Hydraulic jack. H. E. Page. 2,455,440, Dec. 7.
Hydraulic mechanism for synchronizing a plurality of prime movers with a master prime mover. J. A. Spanogle. 2,455,390, Dec. 7.
Hydroaromatic sulfonates and their preparation. H. Schindler. 2,455,811, Dec. 7.
Hydrocarbons and regeneration of synthesis catalyst, Synthesis of. E. A. Johnson. 2,455,419, Dec. 7.
Hydrocarbons, Refining aromatic. P. J. Wilson, Jr., J. H. Wells, and C. R. Liebel. 2,455,634, Dec. 7.
Ice tray and slip surface flexible grid. H. Y. Jennings. 2,455,366, Dec. 7.
Ignition system for internal-combustion engines. M. Mallory. 2,455,594, Dec. 7.
Implement control means for tractor mounted agricultural implements. E. V. Bunting. 2,455,727, Dec. 7.
Indicating apparatus, Condyle position. C. F. Tully. 2,455,451, Dec. 7.
Indicator: *See*—
Light responsive displacement indicator.
Tire deflation indicator.
Indicator device for film strip, Position. H. L. Fitch. 2,455,748, Dec. 7.
Indicator utilizing doppler effect, Ground speed. E. I. Anderson. 2,455,639, Dec. 7.
Inductance unit. E. O. Peterson, D. I. Wright, and H. T. Heaton. 2,455,875, Dec. 7.
Instrument, Clamping and knot tying. L. Trombetta. 2,455,833, Dec. 7.
Instrument, Heating. V. V. Varnum. 2,455,453, Dec. 7.
Insulation cutting tool. W. S. Lindsay. 2,455,591, Dec. 7.
Insulator, Core. L. P. Young. 2,455,720, Dec. 7.
Interferometric light valve. H. Harrison. 2,455,763, Dec. 7.
Internal-combustion engine. R. J. Johnston and A. R. Novotney. 2,455,775, Dec. 7.
Iron: *See*—
Electric branding iron.
Iron in order to obtain a clean metallic surface, Treatment of. F. A. R. Franchi. 2,455,411, Dec. 7.
Iron oxide-alkali metal ferrate catalyst and its preparation. M. A. Moseman. 2,455,696, Dec. 7.
Jack: *See*—
Hydraulic jack.
Jack with ram locking means, Fluid. H. E. Page. 2,455,439, Dec. 7.
Jig, Adjustable drill. A. W. Meyer. 2,455,871, Dec. 7.
Joint construction. E. A. Wahl. 2,455,539, Dec. 7.
Knife sharpening kit. W. J. Girard. 2,455,477, Dec. 7.
Lakes of basic dyestuffs. W. E. Ness. 2,455,898, Dec. 7.
Lamp: *See*—
Electric lamp.
Lasting machine. L. G. Miller. 2,455,694, Dec. 7.
Lasting shoes, Method for use in. P. E. Burby. 2,455,467, Dec. 7.
Leadin for electron discharge devices, Coaxial. J. W. West. 2,455,846, Dec. 7.
Lead salt stabilizers for vinyl halide resins, Organic. M. M. Safford. 2,455,879, Dec. 7.
Lead silanolate stabilizers for vinyl halide resins. M. M. Safford and E. L. Mincher. 2,455,880, Dec. 7.
Lens correction device, Electron. J. Hillier. 2,455,676, Dec. 7.
Leveling machine. F. V. Hart. 2,455,482, Dec. 7.
Light for automobiles, Stop. C. J. Montenotte. 2,455,794, Dec. 7.
Light for vehicles, Oscillating warning. J. D. Kennelly. 2,455,497, Dec. 7.
Light holder for pianos, Fluorescent. H. Nicolaysen. 2,455,798, Dec. 7.
Light responsive displacement indicator. D. E. Sunstein. 2,455,532, Dec. 7.
Light stable compositions comprising polymeric vinylidene chloride and 2-hydroxy-5-chloro-benzophenone-2'-carboxylic acid. C. B. Havens. 2,455,674, Dec. 7.
Lighter construction, Cigar. W. I. Nissen. 2,455,698, Dec. 7.
Liquid filtration. R. V. Hicks. 2,455,486, Dec. 7.
Loading and packaging device. M. Matsen and E. R. Jones. 2,455,433, Dec. 7.
Lock: *See*—
Barrel lock.
Closure lock.
Locking device for gates. J. Jackle. 2,455,772, Dec. 7.
Loom bumper. M. H. Holcombe. 2,455,418, Dec. 7.
Lubricating system for vehicles. H. Winther. 2,455,847, Dec. 7.
Luggage, Reinforced. M. Gerson. 2,455,861, Dec. 7.
Machine for and method of cutting blooms and the like. R. J. Scovill, Jr. 2,455,615, Dec. 7.
Machine for applying tape to shoe parts. H. D. Elliott. 2,455,359, Dec. 7.
Machine for handling and preparing oysters. Z. G. Hawk. 2,455,675, Dec. 7.
Machine for shearing green corn from the cob, including an annular rotary cutter. F. C. Thames. 2,455,449, Dec. 7.
Machine for testing and marking parts magnetically. A. J. Newman. 2,455,874, Dec. 7.

Machine tool. W. W. Potter and A. J. Fuller. 2,455,876, Dec. 7.
Magnesia rock, and purification of magnesium carbonate, Working up of. R. A. Schoenlaub. 2,455,813, Dec. 7.
Means for transforming volcanic rock. J. L. Fournier. 2,455,666, Dec. 7.
Measuring instrument having an adjustable scale. H. C. Houser. 2,455,865, Dec. 7.
Mechanical movement for converting rotary motion into reciprocating movement. W. A. Traut. 2,455,626, Dec. 7.
Mechanism and controls for controllable aircraft propellers: complete propeller with automatic controls. H. M. McCoy. 2,455,378, Dec. 7.
Mechanism for firearms, Flexible sear. A. H. Thompkins. 2,455,830, Dec. 7.
Mechanism for supplying steam and heated air to spotting machines. W. C. Glover, Jr. 2,455,756, Dec. 7.
Medicinal composition for hemorrhagic conditions. S. Ansbacher and E. Fernholz. 2,455,398, Dec. 7.
Mercaptans and disulfides, Production of commercially pure. S. P. Cauley. 2,455,656, Dec. 7.
Mercury-treated charcoal catalyst and its preparation. L. F. Salisbury. 2,455,881, Dec. 7.
Metal article, Coated. M. G. Whitfield and V. Sheshunoff. 2,455,457, Dec. 7.
Metal closures to containers, Attaching. J. Coyle. 2,455,737, Dec. 7.
Metal cross bridging. E. C. Meulenbergh. 2,455,904, Dec. 7.
Metal furnace. J. L. Stroman. 2,455,531, Dec. 7.
Meteorological balloon. F. A. Caspar. 2,455,469, Dec. 7.
Milling attachment for lathes. C. W. Dyer. 2,455,662, Dec. 7.
Mine exploder. H. T. Woolson. 2,455,636, Dec 7.
Mineral binder, Preparing a. H. H. Greger. 2,455,758, Dec. 7.
Mineral oil composition. E. W. Fuller and H. S. Angel. 2,455,668, Dec. 7.
Mineral products, Manufacture of synthetic. W. Diterichs. 2,455,358, Dec. 7.
Mirror, Glare reducing rear-vision. J. H. Sherts. 2,455,818, Dec. 7.
Modulator, Double balanced. H. T. Carter. 2,455,732, Dec. 7.
Modulator system for keying, Transientless. F. H. Shepard, Jr. 2,455,616, Dec. 7.
Molding machine, Block. J. W. Briscoe. 2,455,553, Dec. 7.
Monochloroacetic acid, Preparation of. L. A. Burrows and M. F. Fuller. 2,455,405, Dec. 7.
Motor damping circuits, Harmonic two-phase. E. H. Schmidt, Jr. 2,455,610, Dec. 7.
Motor vehicle carrying case. A. Konrad. 2,455,587, Dec. 7.
Mounting: *See*—
Curtain and drape mounting.
Shockproof mounting.
Mounting and drive wheel suspension for motorcycles, Engine. R. A. MacGregor. 2,455,431, Dec. 7.
Mounting system for elements of television projectors. D. W. Epstein. 2,455,476, Dec. 7.
Navigation instrument, Calculating and aerial. W. D. Cockrell. 2,455,902, Dec. 7.
Neoprene, Vulcanization of. P. F. Niessen. 2,455,697, Dec. 7.
Nickel chromium tungsten composite metal body and making same. C. E. Ransley and S. V. Williams. 2,455,804, Dec. 7.
Nitriles, Preparation of. N. M. Bortnick. 2,455,651, Dec. 7.
Nitriles, Stabilization of unsaturated. K. E. Marple and B. Borders. 2,455,689, Dec. 7.
Nitroparaffins, Production of. N. Levy, C. W. Scaife, and D. S. T. Bryson. 2,455,425, Dec. 7.
Nuclear-chlorinated bis-phenols by steam distillation, Purifying. L. F. Reuter. 2,455,703, Dec. 7.
Nuclear halogenated 4,4'-bis-(alkenyl carbonato) diphenyl alkanes and polymers thereof. J. A. Bralley and F. B. Pope. 2,455,652, Dec. 7.
Objective of low index glass with negative components of high curvature. M. Reiss. 2,455,808, Dec. 7.
Oil-in-water emulsions, Production of. A. B. Steiner. 2,455,820, Dec. 7.
Oils and manufacture, Solidified. A. Beerbower and H. A. Ricards, Jr. 2,455,649, Dec. 7.
Oils, Distillation of acid-treated. M. C. K. Jones and E. C. Eulhardt. 2,455,679, Dec. 7.
Oily composition. G. W. Duncan and J. C. Zimmer. 2,455,659, Dec. 7.
Oleaginous tissue material, Rendering. L. H. Libby and L. F. Henderson. 2,455,374, Dec. 7.
1-aryl, 5-alkyl, biguanides. D. E. Nagy. 2,455,896, Dec. 7.
1,5-diarylbiguanides from aromatic amines and dicyanimide. D. E. Nagy. 2,455,897, Dec. 7.
1-mono-and 1,2-disubstituted-3-cyanoguanidines, Production of. H. Z. Lecher, R. P. Parker and R. S. Long. 2,455,894, Dec. 7.
Opener, Bottle. E. Geh. 2,455,752, Dec. 7.
Opener, Can and bottle. T. Kasbouras. 2,455,496, Dec. 7.
Operating mechanism, Cowl flap. L. F. Engelhardt. 2,455,858, Dec. 7.
Operating separately excited direct-current motors. U. Krabbe. 2,455,869, Dec. 7.
Optical rectification for motion-picture apparatus and the like. B. E. Luboshez. 2,455,789, Dec. 7.
Organic nitrogen compounds and obtaining same. R. R. Adams and H. S. Mosher. 2,455,396, Dec. 7.
Oscillograph system, Three-dimensional. J. L. Whittaker. 2,455,456, Dec. 7.
Outboard motor clamp. P. M. Haller. 2,455,578, Dec. 7.
Package and cabinet for frozen foods. M. Rifkin. 2,455,809, Dec. 7.
Pants, Ski. P. Haberfeld. 2,455,479, Dec. 7.
Paper clip. H. P. Botts. 2,455,399, Dec. 7.
Pasteurizing system. R. E. Olson. 2,455,605, Dec. 7.
Pectin product, Making a. R. C. Nelson. 2,455,382, Dec. 7.
Pencil, Mechanical. W. D. Mease. 2,455,596, Dec. 7.
Pendant, Luminous. J. A. Kelly. 2,455,893, Dec. 7.
Percolator, Coffee. D. E. Dunlop. 2,455,660, Dec. 7.
Perforated combustion tube distillate burner. G. Z. Levine. 2,455,424, Dec. 7.
Petroleum oils and waxes, Deodorizing. F. M. Graves. 2,455,670, Dec. 7.
Phase responsive control circuit. J. G. Beard, R. W. Harralson, and A. Kreithen. 2,455,646, Dec. 7.
Phonograph recording and reproducing mechanism, Combination. G. P. Brubaker. 2,455,466, Dec. 7.
Phonographic device. H. L. Shortt. 2,455,529, Dec. 7.
Photographic unsharp masking method. J. A. C. Yule. 2,455,849, Dec. 7.
Pickup and volume control, Microphone. H. De Armond. 2,455,567, Dec. 7.
Pickup unit for stringed instruments. C. L. Fender and C. O. Kauffman. 2,455,575, Dec. 7.
Pin pickup and holder. M. M. Leslie. 2,455,506, Dec. 7.
Pipe and lighter, Combined smoking. P. T. Ireson. 2,455,583, Dec. 7.
Pipe coupling. E. M. Dons and J. V. Stevens. 2,455,658, Dec. 7.
Pipe coupling. J. L. Yonkers. 2,455,544, Dec. 7.
Pipe reducer, Soil. W. J. Collison. 2,455,470, Dec. 7.
Piston expander. D. Bushby. 2,455,728, Dec. 7.
Plate, Feed. J. L. Fonville and A. E. Barneycastle. 2,455,412, Dec. 7.
Plate, Grounding pole. C. A. Badeau and J. B. Clapp. 2,455,641, Dec. 7.
Plateholder for photographic apparatus. M. Schwartz and W. Castedello. 2,455,814, Dec. 7.
Plate, Safety electric wall. C. L. Hoessel. 2,455,582, Dec. 7.
Polymeric beta, gamma-olefinic alcohols, Production of. D. E. Adelson and H. F. Gray, Jr. 2,455,722, Dec. 7.
Polymerization process, Low-temperature. W. W. Ford and F. D. Thiel. 2,455,665, Dec. 7.
Polymers, Manufacture of high molecular weight. A. D. Green. 2,455,671, Dec. 7.
Polystyrene-mineral oil extract plastic composition. E. W. M. Fawcett, A. Millien, and N. Mulhern. 2,455,890, Dec. 7.
Portable projector table. H. L. Daniels. 2,455,408, Dec. 7.
Potassium tetraborate and sodium tetraborate, Manufacturing. F. H. May. 2,455,595, Dec. 7.
Powder dispensing container. L. Hermani. 2,455,770, Dec. 7.
Power transmission. I. C. Jennings. 2,455,678, Dec. 7.
Power transmission mechanism. D. M. Weigel. 2,455,842, Dec. 7.
Primers, Manufacturing. L. T. Meister. 2,455,380, Dec. 7.
Printing plate whirler. F. A. Hacker. 2,455,761, Dec. 7.
Projector and cap exploder, Elastic band. T. F. Burton. 2,455,558, Dec. 7.
Puller: *See*—
Well cylinder valve puller.
Pulse signaling, Ultrasonic. S. D. Eilenberger. 2,455,475, Dec. 7.

Wrinkle finish, Air dry. W. A. Waldie. 2,455,541, Dec. 7.
Wrinkle finish and making, Flexible. W. A. Waldie. 2,455,540, Dec. 7.
X-ray apparatus. I. Ringler. 2,455,522, Dec. 7.

CLASSIFICATION OF PATENTS

ISSUED DECEMBER 7, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number = class, second number = subclass, third number = patent number

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE KNIEL

No. 5482. Decided June 1, 1948. Petition for rehearing denied Sept. 30, 1948

[169 F.2d 820; 79 USPQ 75]

1. WORDS AND PHRASES—A PORTION ONLY.

Where the reference fully discloses the process of the appealed claim except that the appealed claim calls for a portion only of the excess isoparaffin being removed whereas in the process disclosed by the reference all the isoparaffin is removed, *Held* that the claim is broad enough to cover a process in which ninety-nine percent or more is removed, and that the claim fails to present any patentable distinction over the disclosure of the reference patent.

2. PATENTABILITY—EVIDENCE OF—STATEMENTS IN BRIEF OF ALLEGED ADVANTAGES NOT.

While there are general statements in the application and more specific statements in the brief of counsel for appellant as to the alleged advantages inherent in appellant's process, there is no actual evidence of comparative tests between appellant's process and that of the reference, *Held* that statements in the brief cannot take the place of actual evidence on questions of this sort.

3. PATENTABILITY—FUNCTIONAL DEFINITION IMPROPER.

Held that a characteristic essential to patentability cannot properly be defined in functional terms only.

4. SAME—PROCESS OF ALKYLATING AN ISOPARAFFIN.

Certain claims to a process of alkylating an isoparaffin *Held* failing to present any patentable distinction over the prior art, and certain other claims held patentable.

APPEAL from the Patent Office. Serial No. 440,931.

MODIFIED.

Nathaniel Ely (*Richard G. Radue* of counsel) for Kniel.

W. W. Cochran (*E. L. Reynolds* of counsel) for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting all of the claims, Nos. 1 to 7, inclusive, 9 and 10, in appellant's application for a patent for an alleged invention for a process relating to the alkylation of isoparaffinic hydrocarbons with olefinic hydrocarbons.

Claim 1 is sufficiently illustrative of appealed claims 3, 5, 6, 9, and 10. Claim 2 is representative of appealed claims 4 and 7. Claims 1 and 2 read:

1. In the process of alkylating an isoparaffin with an olefin to form high antiknock motor fuel in the presence of an alkylation catalyst wherein the isoparaffin is present in excess of that required to react with the olefin and wherein unreactive hydrocarbons lower boiling than the isoparaffin are also present, the improvement which comprises subjecting the hydrocarbon effluent from the alkylation zone consisting of alkylate and unreacted hydrocarbons to a prefractionation to separate the lower boiling unreactive hydrocarbons and a portion only of the excess isoparaffin as overhead therefrom and to concentrate the lower boiling hydrocarbons in an overhead stream, passing such overhead stream to a zone independent of the zone of said prefractionation and there fractionating such overhead alone under fractionating conditions independent of fractionating conditions within the prefractionation zone to separate the unreactive lower boiling hydrocarbons from the unreacted isoparaffin contained therein, eliminating the separated lower boiling hydrocarbons from the system, recycling the recovered isoparaffin to the alkylation zone to maintain the excess of isoparaffin therein, and fractionating the alkylate to recover a high antiknock motor fuel.

2. The process of alkylating an isoparaffin with a normally gaseous olefin to form high antiknock motor fuel, which comprises fractionating a feed stock containing the isoparaffin and unreactive hydrocarbons both higher boiling and lower boiling than the isoparaffin to separate the isoparaffin and the lower boiling hydrocarbons as overhead therefrom, contacting the isoparaffin overhead with the normally gaseous olefin in the presence of an alkylation catalyst to effect alkylation of the isoparaffin with the olefin, maintaining an excess of isoparaffin over that required to react with the olefin during alkylation, separating the resulting hydrocarbon mixture from the alkylation catalyst, subjecting the hydrocarbon mixture to a prefractionation to separate the lower boiling unreactive hydrocarbons and a portion only of the excess isoparaffin as overhead therefrom to concentrate the unreactive hydrocarbons in such overhead passing such overhead to a zone independent of the zone of said prefractionation and there fractionating such overhead alone under fractionating conditions independent of fractionating conditions within the prefractionation zone to separate the unreactive lower boiling hydrocarbons from the excess isoparaffin therein, eliminating the separated unreactive hydrocarbons from the system, fractionating the remainder of said hydrocarbon mixture to separate the remaining isoparaffin from the alkylate, recycling the isoparaffin recovered in the system to the alkylation zone to maintain the excess of isoparaffin therein, and fractionating the alkylate to recover a high antiknock motor fuel.

The references relied on are: Kemp et al., 2,172,560, September 12, 1939; Goldsby et al., 2,283,603, May 19, 1942; Westenberg, 2,338,272, January 4, 1944; Gardner, 2,345,742, April 4, 1944.

Appellant's application discloses a process in which a hydrocarbon is fractionated into a normal butane fraction which is withdrawn, and an isobutane fraction containing propane which is removed as an overhead and passed to a reaction zone. Butanes and a sulfuric acid catalyst are also introduced into the reaction zone. The catalyst is separated from the reacted material which comprises four major components; namely, propane, isobutane, normal butane, and isooctane, the boiling points of which components ascend in the order named. The effluent material enters a prefractionator which is operated under such conditions that all the propane and part of the isobutane are separated as overhead vapors, while the remainder of the material is removed from the bottom of the prefractionator. The overhead vapors are condensed and a part of

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

the condensate is returned to the prefractionator, while the remainder passes to a depropanizer, where the propane is taken off as an overhead and removed from the system, while the isobutane is removed from the bottom of the depropanizer and recycled to the reactor. The materials removed from the bottom of the prefractionator are subjected to a further fractionation, by which the desired final product, a motor fuel, referred to in the claims as a "high antiknock motor fuel," is obtained.

The patent to Goldsby et al., which is the reference principally relied on, discloses an alkylation system in which isobutane and a hydrocarbon charge containing olefins are fed into a reactor with a sulfuric acid catalyst. The effluent from this reactor, which contains propane, isobutane, normal butane, and a gasoline fraction, passes to a stabilizer, from which the propane and isobutane, together with "all or a portion" of the normal butane, are removed as overhead vapors, while the remaining components, including "a portion or all" of the normal butane, are removed from the bottom of the stabilizer. The overhead vapors are then subjected to a further fractionation, in which the propane is withdrawn from the system as an overhead vapor and the normal butane is removed from the bottom of the fractionator, while a side stream which "may comprise essentially isobutane, but ordinarily contains in addition some normal butane," is removed from the side of the fractionator and returned to the reactor. It will be observed from the quoted statement that a portion or all of the normal butane is removed from the bottom of the stabilizer; that the patentees contemplate a type of operation in which none of this material is removed at the top; and that the overhead will consist essentially of the propane and all of the isobutane.

The patent to Gardner discloses a process of alkylating olefins by means of isobutane with the use of a sulfuric acid catalyst. In the process disclosed, the feed material which contains the isobutane may be fractionated to remove normal butane from it before it enters into the alkylation reaction.

The patents to Kemp et al. and Westenberg are cumulative to the disclosure in the Goldsby et al. patent and need not be considered in detail.

[1] The patent to Goldsby et al. fully discloses the process of appealed claim 1 except that the appealed claim calls for a portion only of the excess isoparaffin (isobutane) being removed as overhead, whereas in the process disclosed by the Patentees, all of the isobutane is removed in that manner. The appealed claim does not state what portion of the isobutane is removed as overhead and is, therefore, broad enough to cover a process in which ninety-nine percent or more of isobutane is removed in that manner. Since there is nothing of record to show that there is any material difference between removing all of the isobutane as overhead and removing ninety-nine percent of it as overhead and the remainder from the bottom of the fractionator, we are of opinion that claim 1 fails to present any patentable distinction over the disclosure in the patent to Goldsby et al.

[2] It was held by the Board of Appeals that the exact point at which the cut is taken in the fractionation of the effluent from the reactor is a question of engineering economics rather than invention. The advantages and disadvantages of taking the cut at any particular point would, in general, be recognized by those skilled in the art. Accordingly, in the absence of some showing of critical values or unexpected results, the making of the cut at some particular point would not be patentable. In the instant case, while there are general statements in the application and more specific statements in the brief of counsel for appellant as to the alleged advantages inherent in appellant's process, there is no actual evidence of comparative tests between appellant's process and that of the patent to Goldsby et al. Statements in a brief cannot take the place of actual evidence on questions of this sort. See *In re Burns*, 23 CCPA (Patents) 1091, 83 F.2d 292, 29 USPQ 423, 471 O. G. 246. We must hold, therefore, that no showing has been made to justify a holding that invention is involved in removing any desired portion of the isobutane from the top of the prefractionator, instead of removing all of it in that manner.

Claim 2, in addition to the steps recited by claim 1, calls for a preliminary fractionation of the feed stock to separate the isobutane and lower boiling hydrocarbons as an overhead, and also calls for a fractionation of the materials remaining after the prefractionation of the effluent from the reactor to separate isobutane, which is recycled to the reactor. Those steps are not shown in the patent to Goldsby et al. and, although the preliminary fractionation is shown in the patent to Gardner in a system generally similar to that of Goldsby et al., we are of opinion that the specific combination of steps recited in claim 2 presents a sufficient distinction over the prior art to justify the allowance of that claim.

[3] Claim 3 adds to claim 1 the statement that reflux is supplied to the prefractionator in an amount only sufficient to prevent separation of hydrocarbons higher boiling than isobutane. In the process disclosed in the patent to Goldsby et al. no reflux is supplied to the prefractionator (stabilizer), but conditions may be so maintained to prevent separation of hydrocarbons higher boiling than isobutane, since the patentees state that all the normal butanes may be removed as bottoms. The broad statement in claim 3 that the desired condition is obtained by steps including a reflux does not, in our opinion, define a patentably different process. Moreover, claim 3 defines the amount of reflux in functional terms only, and a characteristic essential of patentability cannot properly be defined in such manner. See *General Electric Co.* v. *Wabash Appliance Corp. et al.*, 304 U. S. 364, 491, O. G. 463.

Claim 4 depends upon claim 3 but calls for a definite reflux ratio. No such ratio is suggested by the prior art. We are of opinion, therefore, that the steps called for by claim 3, together with the definitely recited range of claim 4, constitute a patentable process.

Claim 5 adds to claim 3 the statement that the proportion of propane in the alkylation zone is less than 3%. It has not been established that this proportion is critical and the application merely states that it is "generally desirable." We are of opinion, therefore, that claim 5 is unpatentable for the same reasons hereinbefore set forth with reference to claim 3.

Claim 6 adds to claim 3 the statement that only a portion of the overhead from the prefractionator is fractionated, whereas the remainder is passed directly to the reactor. This is merely a matter of choice, the expediency of which depends upon the specific composition of the overhead. It has not been established that the limitation in claim 6 is critical and, in our opinion, that claim involves no more than ordinary mechanical skill. Claim 6, therefore, was properly rejected.

Claim 7 is somewhat more specific than claim 2 and is patentable for the same reasons hereinbefore stated with reference to claim 2.

Claim 9 adds to claim 1 the broad statement that prefractionator bottoms are fractionated to separate the isoparaffin (isobutane) therefrom. This step, as defined, does not lead to any unexpected result. It is conventional, as disclosed by the prior art, to fractionate hydrocarbons to separate various desired components. Claim 9, therefore, is unpatentable for the reasons stated in connection with claim 1.

Claim 10 does not differ materially from claim 9 and is unpatentable for the same reasons stated in our disposition of that claim.

For the reasons stated, the decision of the Board of Appeals is modified, being reversed as to claims 2, 4, and 7, and affirmed as to claims 1, 3, 5, 6, 9, and 10.

MODIFIED.

By reason of illness, O'CONNELL, *J.*, was not present at the argument of this case and did not participate in the decision.

Adverse Decisions in Interferences

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed.

Pat. 2,425,607, M. A. Edwards and H. M. Ogle, Control system for aircraft turbosuperchargers, decided Nov. 2, 1948, claims 1, 2, 3, and 5.

Pat. 2,270,155, Blanche Willen, Tenter for the treatment of cloth, decided Nov. 10, 1948, the claim.

Interference Notice

Louis S. Richman, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Cudahy Packing Co., 221 North La Salle Street, Chicago, Ill., for registration of a trade-mark and registration No. 388,367, issued June 24, 1941, to Louis S. Richman, 225 Grand Street, New York, N. Y., and the notice of such declaration sent by registered mail to the said Richman at the said address of record having been returned by the post office undeliverable, notice is hereby given that unless said Richman, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the interference will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Nov. 4, 1948. *Assistant Commissioner of Patents.*

Cancellation Notice

Mary Pardo, her assigns or legal representatives, take notice:

A petition for cancellation having been filed in this Office by Elizabeth Arden Sales Corporation, 681 Fifth Ave., New York 22, N. Y., to effect the cancellation of trade-mark registration of Mary Pardo, 552 Cabrini Place, Chicago, Ill., No. 347,316, dated June 22, 1937, and the notice of such proceeding sent by registered mail to the said Mary Pardo at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Mary Pardo, her assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order, the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS F. MURPHY,
Nov. 5, 1948. *Assistant Commissioner of Patents.*

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

E. I. du Pont de Nemours and Company has placed more than 4,000 of its patents on the Register of Patents as available for license on reasonable terms. The index to these patents was published in the Official Gazette, November 2, 1948. Abstracts of the patents are being published in the Official Gazette beginning November 9, 1948. The following patents (Reg. Nos. 14,176 through 14,510) are Schedule 3 and part of Schedule 4, Groups 28; 32.

Detailed information concerning specific abstracts should be addressed to Patent Division, E. I. du Pont de Nemours and Company, Wilmington 98, Del.

SCHEDULE 3

Patents Relating to Blasting Explosives

Pat. 1,895,517. Manufacture of Polyhydric Alcohols. Jan. 31, 1933. Continuous process for the manufacture of glycol comprising hydrolyzing an olefine of chlorhydrin step-wise at progressively increased temperatures.

Pat. 1,905,289. Explosive. Apr. 25, 1933. An antiacid for gelatin dynamites comprising from .1% to 5.0% magnesium oxide.

Pat. 1,920,438. Treatment of Absorbent Material. Aug. 1, 1933. Carbonaceous absorbent material comprises plant tissue impregnated with a molten composition of urea and ammonium nitrate.

Pat. 1,923,848. Process of Making Absorbent Materials and Compounds Made Therefrom. Aug. 22, 1933. A dynamite composition comprising a carbonaceous absorbent material impregnated with starch and ammonium nitrate.

Pat. 1,927,832. Explosive Composition. Sept. 26, 1933. An explosive composition comprising nitroglycerin and an organic ester of phosphoric acid.

Pat. 1,936,497. Method of Manufacturing Fermentation Glycerol. Nov. 21, 1933. The manufacture of glycerin comprising sugar fermentation in alkaline medium, distilling the glycerin, treating with lime and with air to destroy the phenols.

Pat. 1,940,255. Explosive. Dec. 19, 1933. A free-flowing non-gelatinous dynamite composition containing pelleted sodium nitrate.

Pat. 1,944,910. Explosive Composition and Method of Making. Jan. 30, 1934. A portion of dynamite composition comprising from 75% to 90% of a liquid nitric ester, from 1.5% to 2.5% of a gelatinous agent, and between 23.5% and 6.5% of a combustible absorbent material.

Pat. 1,947,530. Nitrated Sugar Explosive. Feb. 20, 1934. Explosive composition comprising levulose sugar dissolved in nitroglycerin.

Pat. 1,963,619. Explosive Composition. June 19, 1934. Low density nitroglycerin dynamites are prepared by using a flaked cereal product as the combustible material.

Pat. 1,963,622. Gelatin Dynamite Composition. June 19, 1934. Low density gelatin dynamites comprising gelatinized nitroglycerin and as the combustible an expanded cereal product.

Pat. 1,963,627. Explosive Composition. June 19, 1934. Low density explosive compositions comprising nitroglycerin and a low density combustible ingredient consisting of puffed cereal grains.

Pat. 1,964,755. Explosive Composition. July 3, 1934. Gelatin dynamites are prepared by mixing a carbonaceous absorbent material with nitrocellulose and gelatinizing the mixture with a liquid aliphatic nitric ester.

Pat. 1,965,731. Explosive Composition. July 10, 1934. A blasting gelatin composition comprising not less than from 88% to 92% nitroglycerin, .5% to 9.4% of fibrous carbonaceous absorbent material and not more than 5% of nitrocellulose.

Pat. 1,966,090. Gelatinized High Explosive Composition. July 10, 1934. Gelatinization of dynamite compositions is accelerated by incorporating a derivative of a polyhydroxy aliphatic alcohol containing at least one hydroxyl group and at least one ether group.

Pat. 1,972,938. Explosive Coating Material. Sept. 11, 1934. Inorganic explosive salts such as ammonium nitrate are particularly suitable for high explosive compositions when coated with PETN.

Pat. 1,991,856. Fuse Connection. Feb. 19, 1935. Cordeau branch lines are connected to a main fuse line by means of a detonating and booster charge containing shell which fits over the end of the branch line.

Pat. 1,992,189. Gelatin Dynamite Composition. Feb. 26, 1935. As a low density carbonaceous ingredient for gelatin dynamites, vegetable pith such as bagasse is suitable.

Pat. 1,992,216. Method of Blasting. Feb. 26, 1935. A blasting assembly comprising an initiator, a booster charge and a main charge of ammonium nitrate.

Pat. 1,992,217. Ammonium Nitrate Explosive. Feb. 26, 1935. Ammonium nitrate blasting explosive comprising ammonium nitrate and dinitrotoluene wherein the cross sectional area is greater than 3 sq. inches.

Pat. 1,992,224. Low Density Dynamite Composition. Feb. 26, 1935. A low density dynamite composition comprising a liquid explosive and disintegrated sunflower stalks.

Pat. 2,012,985. Process for the Nitration of Aromatic Hydrocarbons. Sept. 3, 1935. Toluene can be nitrated with an acid mixture of low nitric acid content such as nitroglycerin spent acid.

Pat. 2,012,986. Process of Producing a Liquid Explosive Compound. Sept. 3, 1935. Glycerin and toluene may be simultaneously nitrated by adding each to the nitrating acid prior to mixing.

Pat. 2,033,196. Explosive Compound. Mar. 10, 1936. A headache free blasting powder comprising PETN and less than 5% nitroglycerin.

Pat. 2,033,198. Explosive. Mar. 10, 1936. The sensitivity of a dynamite composition may be decreased by replacing a substantial portion of the nitroglycerin with an aromatic nitro compound without loss of ability to detonate.

Pat. 2,037,906. Explosive Container. Apr. 21, 1936. A blasting assembly comprising a receptacle with a high explosive primer in a central compartment surrounded by black powder.

Pat. 2,048,050. Explosive Composition. July 21, 1936. The moisture resistance of an explosive composition containing ammonium nitrate is increased by incorporating calcium stearate.

Pat. 2,064,581. Explosive Manufacture. Dec. 15, 1936. Gelatin dynamites are manufactured in a nonferrous metal container, the mixing being done by a "Wheeling" process.

Pat. 2,069,612. Blasting Explosive. Feb. 2, 1937. High density ammonium nitrate explosive composition comprising a blend of coarse and fine particles of ammonium nitrate.

Pat. 2,087,285. Ammonium Nitrate Explosive. July 20, 1937. A low density explosive composition comprising ammonium nitrate having a density lower than 0.80, said ammonium nitrate being obtained by a spraying process.

Pat. 2,107,157. Explosive. Feb. 1, 1938. Low power ammonium nitrate explosive composition comprising at least 65% ammonium nitrate wherein the greater part thereof will be held on a 24 mesh screen and said explosive being cartridged in a diameter of not less than 1½ inches.

Pat. 2,110,695. Production of Dimers of Polyhydric Alcohols. Mar. 8, 1938. Dimers of aliphatic polyhydric alcohols are produced by heating the alcohol to the condensation-polymerization temperature and thereafter heating with steam.

Pat. 2,112,174. Bomb. Mar. 22, 1938. An oil well bomb comprising a time-controlled igniting device, an explosive charge, a casing for said charge and a pressure responsive closure element.

Pat. 2,117,173. Explosive. May 10, 1938. Free-flowing water resistant dynamite comprising comminuted gelatin dynamite with particle size range of ¼ in. to ⅝ inch.

Pat. 2,124,201. Explosive Composition and Process of Production. July 19, 1938. Ammonium nitrate explosive composition comprising pelleted ammonium nitrate mixed with a mass of readily detonatable explosive matter.

Pat. 2,124,202. Explosive. July 19, 1938. Ammonium nitrate gelatin dynamite comprising a water insoluble soap, coarse ammonium nitrate and fine ammonium nitrate.

Pat. 2,125,161. Ammonium Nitrate Explosive. July 26, 1938. Ammonium nitrate explosive composition comprising nitroglycerin and porous ammonium nitrate having a density less than 0.7.

Pat. 2,125,376. Waterproofing Process. Aug. 2, 1938. Ammonium nitrate for dynamite is waterproofed by coating with an acyloin derived from a fatty acid of more than six carbons.

Pat. 2,138,581. Primer for High Explosives. Nov. 29, 1938. A primer for "Nitramon" comprising a booster of trinitrotoluene sealed in a rigid receptacle having a recess adapted to hold an initiator.

Pat. 2,138,603. Explosive Package. Nov. 29, 1938. An explosive package comprising a cartridge, a web of netting about the cartridge and means of attaching said netting to a lowering element.

Pat. 2,140,345. Controlling Temperature of Nitration Reactions. Dec. 13, 1938. A process of nitrating glycerin comprising maintaining the reaction mixture in direct heat-exchange relationship with a mixed acid as a cooling means.

Pat. 2,145,397. Treatment of Ammonium Nitrate Explosives. Jan. 31, 1939. A sensitized explosive composition containing ammonium nitrate and a solid organic sensitizer is attained by heating the mixture under confinement to liquify the sensitizer, then cooling.

Pat. 2,155,499. Method of Waterproofing Hygroscopic Materials. Apr. 25, 1939. Ammonium nitrate for dynamite is waterproofed with resinous mixed esters of a polyhydric alcohol, a polycarboxylic acid and a fatty acid of at least six carbon atoms.

Pat. 2,159,973. Gelatinized High Explosive Composition and Method of Preparation. May 30, 1939. Gelatinization of nitrocellulose is accelerated by incorporating dimethylformamide.

Pat. 2,168,562. Inorganic Nitrate Explosive. Aug. 8, 1939. An explosive composition comprising a solid dispersion of ammonium nitrate and dinitrotoluene in liquid ammonia.

Pat. 2,168,563. Nitrostarch Explosive. Aug. 8, 1939. An explosive composition comprising nitrostarch dispersed in the crystalline ammonium nitrate is obtained by crystallization from anhydrous solution.

Pat. 2,171,371. Crimping Device. Aug. 29, 1939. A crimping device comprising a blade and a crimping slot wherein the edges converge to form a semi-circular end portion.

Pat. 2,171,379. Ammonium Nitrate Explosive. Aug. 29, 1939. A granular explosive composition comprising ammonium nitrate and nitrocellulose.

Pat. 2,171,384. Blasting Assembly. Aug. 29, 1939. A blasting assembly comprising a watertight metal container, an insensitive main charge, a booster charge and a metal tunnel on the outside of said container for confining a detonating fuse.

Pat. 2,185,248. Ammonium Nitrate Explosive. Jan. 2, 1940. An explosive composition containing at least 85% ammonium nitrate, mononitronaphthalene, and a normally solid hydrocarbon amine compound soluble in molten naphthalene.

Pat. 2,190,703. Perchlorate Explosive. Feb. 20, 1940. Explosive composition comprising a solid dispersion of a sensitizer in an inorganic perchlorate obtained by crystallization from anhydrous ammonia.

Pat. 2,194,544. Gelatinized High Explosive Compositions. Mar. 26, 1940. Explosive composition comprising gelatinized nitroglycerin and a gelatinization accelerant, diacetone alcohol.

Pat. 2,199,217. Granular Ammonium Nitrate Explosive. Apr. 30, 1940. Detonating explosive comprising ammonium nitrate, a binding agent insoluble in nitroglycerin and less than 10% nitroglycerin.

Pat. 2,199,218. Granular Ammonium Nitrate Explosive. Apr. 30, 1940. A process for the production of granular explosive comprising intermingling ammonium nitrate with a binding agent insoluble in nitroglycerin, adding a wetting agent, graining and then coating with nitroglycerin.

Pat. 2,215,189. Treatment of Glycerol Solutions. Sept. 17, 1940. Distillation of glycerin from beer slops is obtained by forming thin films on two heated revolving drums.

Pat. 2,220,891. Ammonium Nitrate Explosive Composition. Nov. 12, 1940. A high density ammonium nitrate explosive comprising at least 50% ammonium nitrate, dinitrotoluene, and a reaction product of ammonia with an inorganic nitrate.

Pat. 2,220,892. Method of Preparing Ammonium Nitrate Explosives. Nov. 12, 1940. Ammonium nitrate explosives are prepared by mixing ammonium nitrate with a sensitizer, an inorganic nitrate, and ammonia.

Pat. 2,222,175. Nonsetting Ammonium Nitrate Explosive Composition and Process. Nov. 19, 1940. An explosive composition comprising ammonium nitrate coated with a reaction product of zinc oxide and ammonium nitrate.

Pat. 2,231,043. Blasting Explosive Composition. Feb. 11, 1941. A high explosive composition comprising an explosive ingredient, a water soluble inorganic salt and a comminuted starch product.

Pat. 2,231,044. Blasting Explosive Composition Feb. 11, 1941. A blasting explosive composition comprising ammonium nitrate, starch and a gelatinizing agent for the said starch.

Pat. 2,238,058. Expansible Cover. Apr. 15, 1941. A hydraulic mining cartridge cover comprising sets of strands, each set being carried alternately over and under at least 3 other sets to form a tubular expansible braid.

Pat. 2,238,939. Blasting Assembly. Apr. 22, 1941. A blasting unit comprising a watertight-metal container of ammonium nitrate, said container having a projecting portion with an external screw at one end and a crimping recess at the other end.

Pat. 2,284,259. Crimping Device. May 26, 1942. A crimping device comprising a truncated cone, a spring disc slotted to form segments about the circumference of a central hole, a flexing means, a hollow plunger, and hand levers cooperating therewith.

Pat. 2,286,136. Expansible Fabric Cover. June 9, 1942. A hydraulic mining cartridge cover comprising braided strands of wire wherein the outer circumference of the strands is reduced to smoothness to eliminate nicking.

Pat. 2,299,907. Explosive Charge for Oil Wells. Oct. 27, 1942. An oil well explosive charge comprising ammonium nitrate dispersed in at least 50% by weight of nitroglycerin.

Pat. 2,312,744. Blasting Cartridge Shell. Mar. 2, 1943. A blasting cartridge shell containing spiral perforations, thereby permitting cartridge to be expanded in a bore hole.

Pat. 2,314,806. Explosive Composition. Mar. 23, 1943. An explosive composition wherein increased water resistance is attained by using barley meal as the carbonaceous material.

Pat. 2,314,807. Explosive Composition. Mar. 23, 1943. An explosive composition wherein increased water resistance is attained by using rye flour as the carbonaceous material.

Pat. 2,314,808. Explosive Composition. Mar. 23, 1943. An explosive composition wherein increased water resistance is attained by using spelt meal as the carbonaceous material.

Pat. 2,314,809. Explosive Composition. Mar. 23, 1943. An explosive composition wherein increased water resistance is attained by using oat flour as the carbonaceous material.

Pat. 2,314,810. Explosive Composition. Mar. 23, 1943. An explosive composition wherein increased water resistance is attained by using grain sorghum as the carbonaceous material.

Pat. 2,314,832. Explosive Composition. Mar. 23, 1943. An explosive composition wherein increased water resistance is attained by using linseed meal as the carbonaceous material.

Pat. 2,316,054. Perforating Apparatus. Apr. 6, 1943. A paper perforating assembly comprising a cylindrical perforating roll with pointed perforators projecting therefrom and helically arranged thereon, and means for rotating said perforating rolls while the paper is passed thereover.

Pat. 2,320,465. Shell-Feeding Device. June 1, 1943. An automatic shell-feeding device comprising an extensible distributor device provided with projections adapted to receive and support said shells.

Pat. 2,326,310. End Closure for Explosive Cartridges. Aug. 10, 1943. An end closure of an explosive cartridge comprising peripheral beads consisting of a reverse fold in the side wall of said cartridge, forming a series of substantially radial overlapping and interlocking folds.

Pat. 2,356,149. Blasting Explosive Composition and Method. Aug. 22, 1944. A detonating explosive comprising an inorganic oxidizing salt, and oxidizable material, and a sensitized alkali nitrate composition, formed into a cap sensitive cohesive block.

Pat. 2,358,384. Detonating Explosive. Sept. 19, 1944. A free-flowing granular detonating explosive comprising a carbonaceous combustible material as an absorbent for a liquid explosive nitric ester, ammonium nitrate, and at least 15% liquid nitric ester.

Pat. 2,358,385. Explosive. Sept. 19, 1944. A detonating explosive comprising an inorganic oxidizing agent, a solid explosive nitrate of an aliphatic polysaccharide, and a vegetable product, for example, a pregelatinized cereal product.

Pat. 2,362,617. Explosive Composition. Nov. 14, 1944. Sensitivity and maximum detonating velocity of blasting gelatin are retained after storage and under high pressure when small amounts of metallic oxides are added.

Pat. 2,362,618. Gelatin Dynamites. Nov. 14, 1944. Explosive composition comprising a liquid explosive, nitrocellulose and a metallic oxide, hydroxide, or normal and basic salt of lead, iron, or aluminum.

Pat. 2,363,494. Recovery of Glycerin. Nov. 28, 1944. Glycerin is recovered from fermentation slops by mixing therewith a volatile solvent of glycerin which is partly miscible in water, permitting separation into layers, and removing the glycerin with the top layer.

Pat. 2,371,874. Explosive Cartridge. Mar. 20, 1945. A cartridge shell comprising a convolute tube having a plurality of overlapping plies, the free ends thereof being fixed by an adhesive and the ends sealed by curling the two walls over and about the cup-shaped disc.

Pat. 2,411,465. Ammonium Nitrate Explosives. Nov. 26, 1946. Explosive composition of cyclotrimethylenetrinitramine and an organic base having a dissociation constant lower than 1×10^{-5}.

Pat. 2,415,422. Blasting Explosive Assembly. Feb. 11, 1947. A coupler unit for blasting column assembly.

Pat. 2,425,310. Explosive. Aug. 12, 1947. An explosive composition containing tetryl, and a liquid nitrated organic compound.

Patents Relating to Acids and Salts

Pat. 1,901,875. Evaporation of Nitric Acid. Mar. 21, 1933. A process for the vaporization of nitric acid comprising spraying the acid onto a dry surface of chromium steel maintained at a temperature above the boiling point of the acid.

Pat. 1,903,815. Process for the Production of Nitrites. Apr. 18, 1933. Relatively pure nitrites are produced by contacting the material with NO and NO_2 in the presence of an alkaline absorbing medium.

Pat. 1,915,126. Method of Determining Traces of Nitric in Sulphuric Acid Solutions. June 20, 1933. The amount of nitric acid in solution with other acids can be determined by measuring the E. M. F. developed by two dissimilar electrodes immersed in the solution.

Pat. 1,919,216. Process of Ammonia Oxidation. July 25, 1933. Ammonia oxidation catalyst in the form of a multi-layer gauze containing a metal of the platinum group wherein the exposed surface is greater than that of 4 thicknesses of 80 mesh wire per unit of the cross sectional area of the gas stream.

Pat. 1,922,278. Process of Concentrating Nitric Acid. Aug. 15, 1933. A process for concentrating nitric acid comprising passing nitric and sulfuric acid through a dehydrating tower, evaporating strong nitric acid, passing residual acids through a series of boiling vessels in a form of cascades and retaining all nitric vapors from the vessels in the system for returning to the dehydrating tower.

Pat. 1,922,289. Process of Concentrating Nitric Acid. Aug. 15, 1933. Process of concentrating nitric acid comprising the process as set forth in Patent No. 1,922,278 wherein the mixture from the boiling vessels is passed into a second fractionating tower to drive off the remaining nitric acid.

Pat. 1,923,865. Temperature Control of Chemical Reactions. Aug. 22, 1933. Temperature control in the oxidation of ammonium comprising regulating the proportion of ammonia entering the catalyst chamber so that the temperature rise is maintained at a predetermined value.

Pat. 1,928,749. Nitric Acid Concentration. Oct. 3, 1933. Nitric acid concentration comprising passing mixed acids into a fractionating tower, separating the vapors of nitric acid by passing the remaining liquid through a second fractionating tower counter-current to water vapor, and then passing the vapors to a dephlegmating column.

Pat. 1,943,948. Production of Raw Materials for the Manufacture of Iron Red Dry Colors. Jan. 16, 1934. Raw material for the production of iron red dry colors prepared by treating aniline sludge with sulfuric acid substantially less than the chemical equivalent of the iron present in the sludge.

Pat. 1,978,198. Process of Oxidizing Ammonia and Catalyst Therefor. Oct. 23, 1934. Ammonia oxidation catalyst comprising an alloy of platinum and a metal taken from the fifth or sixth group of the periodic system.

Pat. 1,978,431. Process of Producing Nitrites. Oct. 30, 1934. Process for the production of nitrites comprising passing gaseous oxides of nitrogen into a solution of alkali base wherein not more than 40% of the gas is NO_2.

Pat. 1,980,451. Tube Joint. Nov. 13, 1934. A tube joint for connecting a pair of flow tubes by mechanical means comprising bolt connected flanges and spring members to compensate for the unequal expansion.

Pat. 1,986,396. Ammonia Oxidation Process. Jan. 1, 1935. Decomposition of nitrogen oxides is reduced by passing reaction gases through a catalyst in the direction perpendicular to the surface thereof at a high velocity and thereafter cooling below 500° C.

Pat. 2,019,533. Process for Cooling Gases. Nov. 5, 1935. Ammonia oxidation gases are cooled by bubbling the gases through superimposed pools of cooled liquid.

Pat. 2,032,457. Process of Concentrating Sulphuric Acid. Mar. 3, 1936. Concentrated and fuming sulfuric acid is produced by use of partially dehydrated phosphoric acid.

Pat. 2,034,863. Absorption of Oxides of Nitrogen. Mar. 24, 1936. Oxidizable nitrogen oxides are recovered from fluoride containing gases by washing in a high silica-iron alloy tower. The purified gases are absorbed in a counter-flow of water and nitric acid in a chrome-iron alloy tower.

Pat. 2,034,864. Ammonia Recovery Process. Mar. 24, 1936. In the production of ammonium nitrate the excess ammonium is recovered by absorption in a solution of ammonium nitrate continuously maintained acid.

Pat. 2,046,162. Process for Producing Concentrated Nitric Acid. June 30, 1936. Concentrated nitric acid is prepared by counter-flow of a gas rich in oxygen to liquid nitrogen peroxide and weak nitric acid at a high temperature.

Pat. 2,075,075. Method and Apparatus for the Manufacture of Sulfuric Acid. Mar. 30, 1937. In the process of manufacturing sulfuric acid the step comprising passing converter gases through an expansion engine to perform work while being cooled.

Pat. 2,075,984. Process of Compressing Gases. Apr. 6, 1937. Corrosive gases are compressed at a temperature above the condensation point in a compressor wherein the frictional moving and gas contacting surfaces comprise at least 2 dissimilar materials including a metal and graphite.

Pat. 2,088,057. Production of Nitric Acid from Oxides of Nitrogen. July 27, 1937. Concentrated nitric acid is prepared by passing gases containing oxides of nitrogen counter-current to strong cold nitric acid, the solution then being passed counter-current to an oxygen containing gas.

Pat. 2,088,636. Production of Ammonium Picrate. Aug. 3, 1937. Ammonium picrate is produced by reacting picric acid with gaseous ammonia.

Pat. 2,089,945. Process of Producing Ammonium Nitrate and Other Fusible Compounds. Aug. 17, 1937. Process of drying decomposable material which comprises flowing in a continuously moving film over a surface at a temperature above the melting point of the compound and regulating the rate of flow so that dehydration is substantially complete without decomposition.

Pat. 2,089,957. Manufacture of Salts. Aug. 17, 1937. Process for the manufacture of dehydrated salts which comprises using the heat of the exothermic reaction to volatilize the liquid by flowing the solution in a thin film adjacent to the reaction zone.

Pat. 2,111,276. Process for the Production of Nitrous Oxide. Mar. 15, 1938. Process for the production of nitrous oxides comprising maintaining at decomposition temperature a mixture of ammonium nitrate and a catalyst selected from the group consisting of phosphorus and arsenic wherein the amount of ammonium nitrate is maintained substantially constant in ratio to the amount of catalyst.

Pat. 2,111,277. Process for Reacting Ammonium Nitrate to Form Nitrous Oxide. Mar. 15, 1938. Nitrous oxides are prepared by heating ammonium nitrate to its decomposition temperature in contact with a catalyst comprising a compound containing phosphorus and arsenic.

Pat. 2,115,851. Process for Producing Ammonium Nitrate. May 3, 1938. A process of producing solid ammonium nitrate of predetermined size and density comprising spraying a solution of the ammonium nitrate by means of a disc revolving at set speeds, the temperature of the solution being at about the solidification point.

Pat. 2,124,729. Concentrating Acid Solutions. July 26, 1938. Sulfuric acid is concentrated by passing a film of aqueous acid down the inner surface of a heated vertical tube while maintaining the system under vacuum.

Pat. 2,125,143. Process of Recovering Sulphuric Acid from Hot Gas Mixtures Containing Sulphur Oxides. July 26, 1938. Production of sulfuric acid which comprises passing parts of the gas through a Glover column, passing a greater proportion in contact with sulfuric acid in a concentrated tower to yield 90% sulfuric acid, collecting the exit gases and reuniting them with the gases leaving the Glover tower.

Pat. 2,130,483. Production of Phosphoric Acid and Concentrated Nitric Acid. Sept. 20, 1938. Nitric acid is concentrated by counter-current flow of vaporized phosphoric pentoxide which is electrically precipitated in the dilute acid.

Pat. 2,139,721. Concentration of Nitric Acid. Dec. 13, 1938. Nitric acid is concentrated by mixing with concentrated sulfuric acid and contacting the mixture with counter-current gases of sulfur trioxide.

Pat. 2,142,646. Production of Nitric Acid. Jan. 3, 1939. Colorless nitric acid is produced by introducing beneath the surface of the body of nitric acid a heated oxygen containing gas.

Pat. 2,163,371. Process of Producing Sulphuric Acid. June 20, 1939. In the contact process for manufacture of sulfuric acid, pre-drying is accomplished with an activated alumina.

Pat. 2,174,238. Manufacture of Ammonium Nitrate. Sept. 26, 1939. Low density dry ammonium nitrate is produced by forming a film of molten ammonium nitrate over a heated surface and subjecting the film to subatmospheric pressure.

Pat. 2,190,304. Concentration of Nitric Acid. Feb. 13, 1940. In the sulfuric acid concentration of nitric acid the residual liquid from the dehydration zone is elevated to the denitration zone by means of a steam lift.

Pat. 2,201,631. Nitric Acid Concentration. May 21, 1940. Process for the concentration of nitric acid comprising flowing the residual liquid from a dehydrating tower in the form of a film down the inner surfaces of a plurality of heated tubes.

Pat. 2,278,059. Free-Flowing Sodium Nitrite Product and Method of Preparation. Mar. 31, 1942. Free-flowing sodium nitrite is produced by spraying the nitrite at a temperature above the fusion point but below the decomposition point and cooling by passage through a gaseous medium.

Pat. 2,316,154. Nitrite Composition. Apr. 13, 1943. Sodium nitrite has increased setting resistance when small quantities of calcium nitrite and the like are incorporated.

Pat. 2,327,767. Salt Composition. Aug. 24, 1943. Sodium nitrite has increased setting resistance when small quantities of alkali metal carbonate and the like are incorporated.

Pat. 2,337,025. Treatment of Waste Acid. Dec. 21, 1943. Process for purifying tetryl waste acid comprising heating to at least 135° C. for at least 15 minutes, volatilizing, cooling the gases to a temperature below the boiling point of nitric acid, returning the condensed nitric acid to the heat treated residual acid and collecting residual acid.

Pat. 2,348,328. Process of and Apparatus for Treating Sulfuric Acid Containing Dissolved Nitro-Bodies. May 9, 1944. Residual sulfuric acid is treated by heating in the form of a thin layer at approximately 300° F.

Pat. 2,366,309. Apparatus for the Treatment of Waste Acid. Jan. 2, 1945. An apparatus for the purification of tetryl waste acid comprising an acid resistant container provided with heating means, a condenser and collecting means.

Pat. 2,382,189. Preparation of Nitric Oxide. Aug. 14, 1945. Pure nitric oxide is prepared by vaporizing 98% nitric acid, mixing with a combustible gas in stoichiometrical proportions, passing the mixture into a burning chamber, igniting, and thereafter removing the water vapor and the carbon dioxide.

Pat. 2,403,050. Concentration of Nitric Acid. July 2, 1946. Preliminary boiling of weak nitric acid mixed with a dehydrating agent permits a considerable proportion of concentrated nitric acid to be recovered directly by cooling the fumes, the remaining liquid then being treated in the usual manner to recover the remainder of the nitric acid.

Pat. 2,403,902. Nitric Acid Concentration. July 16, 1946. Reduction of pressure fluctuations and increased capacity is obtained in the concentration of nitric acid by cooling the fume line between the fractionating tower and the bleaching tank.

Pat. 2,404,260. Method of Treating Spent Acid. July 16, 1946. Usable nitric acid can be recovered from solutions wherein no dehydrating agent is present by boiling until all the NO_2 is removed.

Patents Relating to Initiators, Rivets and Miscellaneous Uses of Explosives

Pat. 1,906,869. Electric Blasting Cap. May 2, 1933. Electric blasting cap comprising a main charge of lead azide and a loose ignition composition of lead sulphocyanate, potassium chlorate and ground Pyro Powders.

Pat. 1,918,920. Ignition Composition. July 18, 1933. An ignition composition as the top charge in a blasting cap containing a secondary charge and a priming charge of lead azide, consisting of lead sulphocyanate, potassium chlorate and ground Pyro Powders.

Pat. 1,964,825. Ignition Composition. July 3, 1934. An ignition composition comprising a sulphocyanate, an oxidizing agent and a combustible accelerant such as magnesium, aluminum or sulfur.

Pat. 1,964,826. Electric Squib. July 3, 1934. Electric squib comprising a metal shell having a closed end, a base charge of deflagrating explosive, and sulphocyanate ignition mixture.

Pat. 1,975,608. Electric Blasting Cap. Oct. 2, 1934. Electric blasting cap having a high degree of water resistance by closing the clearance between the bridge plug and the shell mechanically, producing an internal groove or bead about the base of the shell.

Pat. 1,984,846. Ignition Composition. Dec. 18, 1934. An ignition charge comprising tetramethylenediperoxidedicarbamide.

Pat. 1,991,857. Detonator. Feb. 19, 1935. A blasting cap comprising a shell having a closed end, a main charge and a primary charge of detonating explosive wherein the primary charge is at the closed end of the tube.

Pat. 1,992,304. Electrical Apparatus. Feb. 26, 1935. Small electrical impulses are relayed and amplified by means of a liquid potentiometer, electrodes controlling the voltage of relaying and amplifying means being placed adjacent thereto but not in contact therewith.

Pat. 1,995,354. Electrical Igniter. Mar. 26, 1935. Electric igniter for liquid fuel comprising a block of wood impregnated with an oxidizing material and an electric squib inserted in said block of wood.

Pat. 2,007,223. Ignition Composition. July 9, 1934. Ignition composition comprising nitrocellulose impregnated with nitroglycerin and an oxidizing agent.

Pat. 2,007,959. Initiator. July 16, 1935. An electric blasting cap wherein the shell is made of stainless steel.

Pat. 2,020,390. Shunt for Electric Blasting Caps. Nov. 12, 1935. A shunting device for electric blasting caps comprising a bare metal section with ends thereof bent forming jagged contact.

Pat. 2,024,586. Initiator. Dec. 17, 1935. Lead azide may be used in blasting cap made of a zinc-copper-silver alloy.

Pat. 2,031,677. Blasting Cap Charge. Feb. 25, 1936. Blasting cap base charge comprising nitrocellulose impregnated with liquid nitric ester and with or without an oxidizing salt.

Pat. 2,080,220. Explosive Rivet. May 11, 1937. Explosive rivet comprising a shank with a longitudinal recess opened at one end and an explosive charge within said recess.

Pat. 2,086,527. Electric Blasting Initiator. July 13, 1937. An electric initiator having one of the leg wires provided with means to transmit static electricity to the shell wall.

Pat. 2,086,530. Electric Blasting Initiator. July 13, 1937. A static reduced electric initiator having an ignition composition of a lead salt of a nitrophenol.

Pat. 2,086,531. Electric Blasting Initiator. July 13, 1937. An electric initiator provided with a static shunt and having an ignition composition comprising copper acetylide.

Pat. 2,086,532. Electric Blasting Initiator. July 13, 1937. An electric initiator provided with a static shunt and having an ignition composition comprising silver azide.

Pat. 2,086,533. Ignition Composition. July 13, 1937. New ignition compound comprising the silver or mercury derivative of chlorinated azodicarbonamidine.

Pat. 2,086,548. Electric Initiator. July 13, 1937. Electric initiator having reduced static susceptibility by inserting a plug of material of high resistance to low voltage and low resistance to high voltage between uninsulated leg wires and the shell wall.

Pat. 2,093,275. Electric Blasting Initiator. Sept. 14, 1937. A shunting means to eliminate inadvertent firing of blasting caps by stray sources of electrical energy comprising connecting uninsulated portions of the two leg wires with a strip of metallic foil.

Pat. 2,105,635. Ignition Composition. Jan. 18, 1938. An ignition composition comprising an alkyl lead salt of a member of the group consisting of hydrozoic acid, azidodithiocarbonic acid and styphnic acid, the lead being in a tetravalent state.

Pat. 2,112,974. Electric Initiator. Apr. 5, 1938. Moistureproof ventless delay electric squibs comprise a localized shell opening charge of detonating explosive at a point adjacent to the base charge.

Pat. 2,115,066. New Compositions of Matter. Apr. 26, 1938. New explosive composition comprising the nitration product of alpha-2,4-dinitraniline-isobutyric acid.

Pat. 2,118,533. Electric Blasting Initiator. May 24, 1938. Electric squib comprising an ignition charge of a blend of black and smokeless powder.

Pat. 2,123,691. Electric Initiator. July 12, 1938. A moistureproof electric squib comprising a ventless shell, a base charge capable of fusing a vent in the shell, and an ignition charge adjacent thereto; neither being capable of generating sufficient gas pressure to burst the shell.

Pat. 2,125,356. Initiator. Aug. 2, 1938. An aluminum shell made corrosion and abrasion resistant by an anodic oxidation coating of aluminum oxide.

Pat. 2,150,374. Electric Blasting Cap. Mar. 14, 1939. Electric blasting caps are sealed with a bridge plug of metal such as copper, brass or aluminum by mechanically compressing an extending portion of the shell wall about the plug.

Pat. 2,153,171. Electric Blasting Cap. Apr. 4, 1939. Electric blasting cap wherein the bridge wire is capable of attaining sufficient temperature to detonate the cap but not fuse.

Pat. 2,173,270. Electric Blasting Initiator. Sept. 19, 1939. Electric blasting cap with a static shunt having as an ignition composition the double salt of lead hypophosphite with lead nitrate.

Pat. 2,173,271. Ignition Composition. Sept. 19, 1939. An ignition composition comprising calcium hypophosphite and an oxidizing agent.

Pat. 2,175,249. Ignition Composition. Oct. 10, 1939. An ignition composition for blasting caps comprising the complex salts of lead nitrate with a lead salt of nitrophenol.

Pat. 2,175,250. Electric Fuse Having Combustible Elements Comprising Lead Salts of Nitrophenols. Oct. 10, 1939. Electric fuse having combustible elements comprising lead salts of nitrophenols.

Pat. 2,185,370. Electric Initiator. Jan. 2, 1940. Electric detonators in which the ignition composition is in the form of a bead about the bridge wire, said bead being coated with a hard pressure resistant coating of a sulfur composition.

Pat. 2,185,371. Delay Composition. Jan. 2, 1940. Delay compositions comprising an oxidizing agent and an alloy of antimony with a metal of a heat of combustion substantially different from that of antimony.

Pat. 2,189,301. Blasting Initiator. Feb. 6, 1940. A squib ignition composition comprising smokeless powder, an oxidizing agent and a fuel.

Pat. 2,204,994. Electric Blasting Initiators. June 18, 1940. Composition plugs for electric blasting caps are made by placing the composition about a pair of parallel leg wires, molding 2 plugs with the base ends face to face, then severing each wire a given distance from the base of each plug.

Pat. 2,205,081. Collapsible Tube Method of Depositing Explosive Charges. June 18, 1940. Ignition compositions are charged onto filaments by extrusion in plastic form from a collapsible tube.

Pat. 2,212,118. Electric Blasting Initiator. Aug. 20, 1940. Electric blasting cap seal comprising forming a plug of resilient material about the leg wires and then crimping the plug into the blasting cap shell.

Pat. 2,212,474. Electric Blasting Initiators. Aug. 20, 1940. A blasting cap having a bridge plug of rubber-like material with an extension of decreased cross-sectional area located at its base.

Pat. 2,223,964. Explosive Composition for Detonating Rivets. Dec. 3, 1940. An explosive rivet charge comprising hexamethylenetriperoxidediamine.

Pat. 2,228,539. Electric Squibs. Jan. 14, 1941. Electric squib bridge wire comprising an alloy of nickel and chromium having a diameter of .00225 inch.

Pat. 2,228,873. Electric Blasting Initiators. Jan. 14, 1941. An electric blasting cap sealed by a plug of rubber-like thermoplastic material by crimping the shell wall about its entire circumference.

Pat. 2,228,878. Method of Making Electric Blasting Initiators. Jan. 14, 1941. A method of preparing a waterproof electric blasting cap comprising forming a resilient bridge plug about the leg wires having a decreased cross-section extending beyond the base of the plug and closely adhering to the leg wires thereof forming a waterproof seal.

Pat. 2,230,080. Protective Device for Electric Blasting Initiator. Jan. 28, 1941. Static resistant blasting cap wherein the leg wires have insulated end portions connected with metallic foil, said foil having a dielectric coating on the surface in contact with the wires.

Pat. 2,237,932. Electric Blasting Initiators. Apr. 8, 1941. Electric blasting cap having a crystal free thermoplastic plug spacing the leg wires and sealing the initiator.

Pat. 2,242,117. Electric Blasting Initiators. May 13, 1941. A method of molding a rubber composition in juxtaposition with a preformed body of thermo-plastic resin without intermingling the two materials.

Pat. 2,257,104. Extrusion Method for Organic Materials. Sept. 30, 1941. A method for coating and insulating wire comprising extruding a thermoplastic cellulose derivative, at an elevated temperature upon moving wire and cooling said extruded insulated coating.

Pat. 2,261,195. Explosive Composition for Detonating Rivets. Nov. 4, 1941. An explosive composition for rivets comprising nitromannitol, tetrazine and aluminum.

Pat. 2,268,372. Ignition Compositions Comprising Pyro-Lead Salt-Chlorate. Dec. 30, 1941. An ignition composition comprising a loose charge of comminuted smokeless powder and a lead salt of a nitrophenol.

Pat. 2,276,380. Electric Blasting Initiators. Mar. 17, 1942. Apparatus for molding rubber plugs on thermoplastic insulated blasting cap wires without intermingling.

Pat. 2,279,323. Manufacture and Packeting of Detonators. Apr. 14, 1942. A winding mechanism for blasting cap wires comprising an oscillatory winding form with spaced winding members and extendible holder between said members.

Pat. 2,279,451. Electric Blasting Initiator. Apr. 14, 1942. Electric blasting cap construction wherein the bridge wire is jointed to a bridge post by a welding juncture including the post, the wire, and a strip of metal sheeting.

Pat. 2,293,373. Explosive Rivet. Aug. 18, 1942. An explosive rivet charge comprising a solid nitrated explosive compound such as nitromannitol and a powdered metal such as aluminum.

Pat. 2,295,075. Heating Device. Sept. 8, 1942. A heating device for explosive rivets comprising a heat producing member with a pistol grip at one end, a contact member of high conductivity at the other end and an insulated stand connected thereto provided with a hand grip.

Pat. 2,307,046. Stripping Machine. Jan. 5, 1943. Apparatus for stripping plastic insulation from the ends of insulated wire and cutting the wire into predetermined lengths.

Pat. 2,312,741. Explosive Composition. Mar. 2, 1943. An ignition composition for blasting caps comprising a colloided nitrocellulose wherein the nitrogen content is at least 13.15%.

Pat. 2,312,752. Explosive Composition. Mar. 2, 1943. A blasting unit comprising a watertight pressure resistant container, a pelleted charge comprising ammonium nitrate, the reaction product of ammonium with a non-alkali nitrate, and PETN.

Pat. 2,313,189. Predetermining Counter. Mar. 9, 1943. A continuously operating revolution counter for an insulated wire stripping apparatus.

Pat. 2,327,763. Method of Firing Explosive Rivets. Aug. 24, 1943. A method of firing explosive rivets comprising igniting the detonating explosive by electrical induction.

Pat. 2,329,343. Electrical Devices. Sept. 14, 1943. The method of securing a filament to a larger conductor by welding.

Pat. 2,351,468. Stabilized Explosive Composition. June 13, 1944. An oil well explosive composition comprising a liquid explosive nitric ester and from 0.5 to 5.0% of an organic base having a dissociation constant lower than 1×10^{-5}.

Pat. 2,364,730. Means for Detonating Explosive Rivets. Dec. 12, 1944. An apparatus for firing explosive rivets by means of radiant energy.

Pat. 2,367,206. Method of Joining Objects. Jan. 16, 1945. By wrapping an explosive cord about the sleeve or coupling surrounding a pipe, rod, cable, etc., a strong joint is formed when the cord is detonated.

Pat. 2,376,427. Electric Blasting Initiators. May 22, 1945. Electric blasting cap having a bridge plug of substantially non-inflammable, compressible and extensible material formed about the leg wires.

Pat. 2,380,312. Detonating Fuse. July 10, 1945. By using braided wire to give an explosive core flexibility and shear strength, the size of the detonator can be reduced.

Pat. 2,387,742. Explosive Rivet. Oct. 30, 1945. An explosive rivet wherein the detonating explosive charge comprises a static sensitive explosive compound.

Pat. 2,388,901. Heating Device. Nov. 13, 1945. An explosive rivet firing device comprising a heating apparatus adapted to be heated by a vaporizable or finely divided fuel.

Pat. 2,393,594. Operation of Internal Combustion Engines. Jan. 29, 1946. A fuel for internal combustion engines comprising ammonium nitrate dissolved in liquid ammonia.

Pat. 2,396,152. Initiating Explosive Composition. Mar. 5, 1946. An initiating explosive composition comprising PETN as the base charge and as the priming charge a compressed admixture of diazodinitrophenol and nitromannitol.

Pat. 2,402,235. Blasting Initiator. June 18, 1946. Sensitivity of primer powders to friction and shock without reduction in effectiveness is obtained by incorporating a water insoluble metal soap.

Pat. 2,403,286. Detonator Loading Machine. July 2, 1946. An apparatus for the continuous loading of explosive material into a casing by mechanical means with minimum risk of detonation.

Pat. 2,403,907. Smoke Pot Igniter. July 16, 1946. Smoke pot igniter comprising a water-proof container, black powder, a primer and an electric squib.

Pat. 2,410,047. Explosive. Oct. 29, 1946. A method of forming a pressure-tight joint between a fastening element and a main body by means of a detonating explosive.

Pat. 2,420,306. Blasting Cap Primer Composition. May 13, 1947. A blasting cap charge comprising a nitrated amide of polyhydroxy monocarboxylic acid or polyhydroxy dicarboxylic acid.

Pat. 2,420,651. Ignition Device. May 20, 1947. Ignition device with a flash-producing agent assembled so that ignition is obtained by the frictional passage of a wire through the charge.

Pat. 2,427,899. Blasting Cap. Sept. 23, 1947. An intermediate charge for a blasting cap comprising a compressed explosive material incapable of transmitting combustion in the absence of confinement.

Pat. 2,432,578. Explosive. Dec. 16, 1947. Smokeless powder grains surface coated with a water-insoluble ester of a dicarboxylic aliphatic acid.

Pat. 2,432,580. Low Voltage Rivet Heater. Dec. 16, 1947. A device for expanding explosive rivets comprising a low voltage rivet heater.

Patents Relating to Miscellaneous Explosives

Pat. 1,924,464. Smokeless Powder and Process of Manufacturing Same. Aug. 29, 1933. A process for preparing propellent powders comprising adding a water insoluble volatile solvent to a nitrocellulose water slurry, removing excess water, further colloiding nitrocellulose, and then removing the solvent.

Pat. 1,924,465. Process of Producing Propellent Powder. Aug. 29, 1933. A smokeless powder is produced by incorporating nitroglycerin into a water slurry of nitrocellulose powder grains.

Pat. 1,927,870. Black Powder Composition. Sept. 26, 1933. A black powder composition wherein the rate of combustion is retarded by incorporating of a high viscosity vegetable oil.

Pat. 1,932,050. Explosive Coating Material. Oct. 24, 1933. A coating ingredient for explosive materials comprising trimethylol ethyl methane trinitrate.

Pat. 1,962,172. Process of Nitrating Quebrachitol. June 12, 1934. Quebrachitol is nitrated by adding the finely divided material to 95% nitric acid while the temperature is maintained constant and thereafter concentrated sulfuric acid is added slowly.

Pat. 1,964,792. Process of Purifying Crude Aromatic Nitrocompounds. July 3, 1934. A process for the purification of trinitrotoluene which comprises washing the crystals in an aqueous solution of acetone.

Pat. 1,975,186. Explosive Charge. Oct. 2, 1934. A cast explosive charge comprising a fused mixture of trinitrophenylethylnitramine with either tetryl or PETN or both.

Pat. 2,024,396. Process for Purifying Organic Explosive Compounds. Dec. 17, 1935. A process for the purification of tetryl comprising crystallization from a neutral, inert solvent miscible in water.

Pat. 2,030,096. Black Powder Composition. Feb. 11, 1936. A black powder composition wherein an inorganic base such as urea is present as a stabilizer.

Pat. 2,031,659. Process for Making Smokeless Powder. Feb. 25, 1936. A method of manufacturing shot gun powder comprising treating a nitrocellulose water slurry with a mixed solvent consisting of a water miscible solvent and a non-miscible solvent.

Pat. 2,033,217. Process of Treating Smokeless Powder. Mar. 10, 1936. A process of rejuvenating coated smokeless powders comprising immersing in ethyl alcohol, heating, removing the solvent, and introducing a fresh hot solvent containing the stabilizer.

Pat. 2,038,700. Propellent Powder. Apr. 28, 1936. A flash reducing composition comprising a finely distributed mixture of tin dioxide and potassium sulphate.

Pat. 2,050,871. Flashless Powder Charge. Aug. 11, 1936. Muzzle flash is inhibited by enclosing the smokeless powder in a bag impregnated with an alkali metal salt.

Pat. 2,062,636. Cohesive Low Density Pellets and Process of Controlled Drying. Dec. 1, 1936. Firm low density pellets of black powder are produced by compressing a charge of wheel cake having a moisture content between 5 and 8 per cent in a container, removing, and drying to a moisture content of less than 1 per cent.

Pat. 2,062,666. Pelleted Blasting Powder. Dec. 1, 1936. A formed block of black blasting powder having a density between 0.9 and 1.3 and containing ammonium nitrate.

Pat. 2,063,572. Process of Preparing Explosive Charges. Dec. 8, 1936. A process for preparing high density ammonium nitrate explosives comprising adding a freezing depressant, heating to a temperature sufficient to liquidize a portion of the ammonium nitrate, compacting, and cooling to a firm solid mass.

Pat. 2,113,418. Propellant Powder. Apr. 5, 1938. A double base smokeless powder with improved stability made by impregnating the powder with diethyldiphenyl urea.

Pat. 2,118,487. Process for Preparing Polyvinyl Nitrate. May 24, 1938. A method of preparing polyvinyl nitrate comprising nitrating polyvinyl alcohol with nitric acid under conditions whereby oxidation will not occur.

Pat. 2,118,501. Ignition Compositions. May 24, 1938. The lead salt of tetranitrodiphenylolpropane may be used either alone or mixed with zirconium and nitro starch as an ignition composition.

Pat. 2,123,517. Process of Treating Smokeless Powder. July 12, 1938. A process of restoring stability of stabilized nitrocellulose powder comprising treating the grains with ethyl alcohol at a temperature between 30° C. and 40° C. and thereafter impregnating with fresh diphenylamine.

Pat. 2,132,845. Process for Purification of Trinitrotoluene. Oct. 11, 1938. Process for the purification of TNT comprising treating with an aqueous solution containing an alkali metal sulphite and an acid reacting metal to maintain the pH of the solution between 7.0 and 8.3.

Pat. 2,168,020. Black Powder Manufacture. Aug. 1, 1939. High density black powder is produced by preliminary drying of the wheel cake and thereafter compressing to a density of at least 1.4.

Pat. 2,168,030. Explosive Composition. Aug. 1, 1939. A deflagrating explosive composition comprising black powder and ammonium nitrate intermingled with a metal which undergoes rapid combustion between 300° C. and 900° C.

Pat. 2,204,059. Process for Crystallizing Organic Explosive Compounds. June 11, 1940. A process for the production of coarse crystalline PETN comprising forming a neutral solution of PETN in a neutral organic solvent miscible with water at a temperature from 80° F., to 90° F., cooling to between 50° F. and 55° F. by adding cold water.

Pat. 2,222,405. Internal Anchor Device for Wells. Nov. 19, 1940. An anchor device for oil well shooting comprising a spider slidably mounted on a hub, said spider being provided with movable arms.

Pat. 2,224,297. Treatment of Oil Wells. Dec. 10, 1940. A method of increased flow in oil wells comprising introducing an aqueous solution of ammonium nitrate having a pH between 3.5 and 7.0.

Pat. 2,230,100. Smokeless Powder. Jan. 28, 1941. Cellular smokeless powder is produced by colloiding the nitrocellulose with a high boiling point solvent, granulating the colloid, and removing the solvent by heating in the presence of water.

Pat. 2,230,848. Progressive Burning Smokeless Powder. Feb. 4, 1941. A progressive burning double base smokeless powder comprising a coated base grain impregnated with a liquid explosive nitric ester.

Pat. 2,247,392. Process of Making Smokeless Powder. July 1, 1941. A process for manufacture of smokeless powder which comprises mixing a water suspension of nitrocellulose colloided with nitroglycerin with a water suspension of nitrotoluene at an elevated temperature and then chilling the suspension during agitation.

Pat. 2,256,195. Manufacture of Dinitro-Ortho-Cresol. Sept. 16, 1941. 4,6-dinitro-ortho-cresol is prepared by adding sulfuric acid to ortho-cresol, maintaining the mixture at 90° to 100° C. diluting the solution and reacting the nitric acid at a temperature of at least 70°, and thereafter separating the product.

Pat. 2,261,630. Propellent Powder. Nov. 4, 1941. A dense nitrocellulose powder of improved burning characteristics comprising nitrocellulose of cellular texture obtained by the extraction of from 5 to 25% of incorporated pulverized sugar.

Pat. 2,280,803. Solvent Recovery from Smokeless Powder. Apr. 28, 1942. A method of recovering a solvent from freshly granulated smokeless powder comprising forming a layer of said powder, passing a drying medium through the powder at a temperature above that of the powder at a rate of about .2 cu. ft. per lb. of dry powder.

Pat. 2,281,560. Drying of Smokeless Powder. May 5, 1942. After the solvent has been removed from smokeless powder the powder is dried by heating with recirculating but dry gases passing through the charge.

Pat. 2,294,334. Method of Treating Aluminum. Aug. 25, 1942. A method of coating the surface of aluminum comprises treating said surface with a hot solution of an alkali carbonate, and an insoluble chromate, and thereafter steam treating at elevated pressures.

Pat. 2,301,231. Nitration of Alcohols. Nov. 10, 1942. A method of producing erythritol tetranitrate comprising dissolving erythritol in an aqueous sulfuric acid solution and treating the solution with a mixed nitric and sulfuric acid.

Pat. 2,311,784. Preparation of Nitrourea. Feb. 23, 1943. A method of preparing nitrourea comprising dissolving urea in acetic acid, treating with nitric acid, adding acetic anhydride, heating to between 30° C. and 70° C., cooling, and separating nitrourea.

Pat. 2,320,243. Smokeless Powder Composition. May 25, 1943. A smokeless powder charge adapted to resist fragmentation upon initiation comprising grains having random orientation of the particles.

Pat. 2,342,204. Method of Manufacturing Smokeless Powder. Feb. 22, 1944. A method of producing smokeless powder grains having random orientation of the particles therein comprising imparting helical flow to the colloid while extruding through a die.

Pat. 2,342,585. Graphite Recovery. Feb. 22, 1944. A method of purifying graphite after use in glazing of smokeless powder comprising treating with a hot caustic alkali solution and removing the dissolved impurities.

Pat. 2,349,048. Smokeless Powder. May 16, 1944. A progressive-burning smokeless powder charge comprising grains coated with a non-explosive high molecular weight organic material substantially non-soluble in the organic nitrates of the nitrocellulose composition.

Pat. 2,349,249. Apparatus for the Recovery of Solvent. May 23, 1944. An apparatus for treatment of smokeless powder comprising a container, a vapor entrance and exit, a vapor filter, a blower, and a heater connected in series to a conduit externally connecting the exit with the entrance, and a by-pass connected therewith leading to a condenser and separating means.

Pat. 2,353,147. High-Density Explosive Charge. July 11, 1944. A high-density explosive charge comprising an inorganic oxidizing agent, a solid organic sensitizer therefor, and a compound selected from the group consisting of sulfates of fatty alcohols, organic sulfonates, and soaps of fatty acid.

Pat. 2,358,697. Purification of Pentaerythritol. Sept. 19, 1944. A process for purifying pentaerythritol comprising subliming at temperatures between 240° and 260° C. at reduced pressure, recovering the sublimate, dissolving in water, and recrystallizing by concentration at reduced pressure.

Pat. 2,367,487. Apparatus for the Recovery of Solvent. Jan. 16, 1945. A solvent recovery apparatus comprising a container with a removable cover having at least one unsecured vapor-tight lid in the cover, an entrance for the introduction of a drying medium, a screen to separate the powder within the container, and an aperture at the base of the container for the exit of the drying medium.

Pat. 2,370,437. Nitration Process. Feb. 27, 1945. A process for the production of PETN comprising reacting pentaerythritol with nitric acid at a temperature above 100° F.

Pat. 2,371,879. Explosive Charge. Mar. 20, 1945. A high-density explosive charge comprising a solid solution of PETN-TNT.

Pat. 2,373,800. Preparation of Alkali Metal Azides. Apr. 17, 1945. A process for preparing an alkali metal azide comprising reacting an alkali metal with anhydrous ammonia, introducing nitrous oxide under superatmospheric pressure, and at all times holding the temperature below 132° C.

Pat. 2,380,246. Preparation of Aromatic Nitrocompounds. July 10, 1945. A method of producing crystalline TNT comprising mixing molten TNT in water, cooling slowly to crystallization temperature, controlling the crystalline growth by regulating the cooling rate thereafter, and then quickly introducing an excess of cold water.

Pat. 2,380,247. Trinitrotoluene. July 10, 1945. A method of producing TNT comprising adding cold water to crude molten TNT, and washing the crystals with a sodium sulfide solution at a temperature between 67° and 71.5° C.

Pat. 2,380,248. Purification of Trinitrotoluene. July 10, 1945. In purification of TNT, washing with sodium sulfite is accomplished with a minimum loss of TNT by first washing with an amount of sulfite less than required to remove all isomers and then rewashing to eliminate the remaining isomers.

Pat. 2,382,133. Manufacture of Trinitrotoluene. Aug. 14, 1945. A process for manufacturing TNT comprising separating molten TNT from the bulk of the spent acid, treating with alkali in an aqueous medium and cooling below the solidification point of the TNT.

Pat. 2,384,730. Method of Preparing Cast Explosive Charges. Sept. 11, 1945. A method of preparing cast explosive charges comprising blending TNT and wet PETN, heating until the TNT becomes molten, and thereafter removing the water.

Pat. 2,385,128. Nitration Process. Sept. 18, 1945. A method of preparing nitrated organic compounds comprising maintaining in separate layers, in contact with one another, a nitric acid and an organic material in liquid state, agitating the layers separately, thereby effecting nitration at the contact areas.

Pat. 2,385,135. Propellant Smokeless Powder. Sept. 18, 1945. A smokeless powder wherein the surface is glazed with a water insoluble metallic salt of a higher mono-basic aliphatic acid.

Pat. 2,385,162. Chemical Apparatus for the Manufacture of Explosives. Sept. 18, 1945. A continuous screening process for producing water insoluble explosive compounds such as TNT comprising forming a water slurry of the material, forcing the slurry from the mouth of the conduit against a conical deflector through a wire screen in the form of a frustum enclosing said deflector.

Pat. 2,387,488. Trinitrotoluene. Oct. 23, 1945. A process for refining TNT comprising treating crystalline TNT with aqueous sodium sulfide, filtering, washing, and thereafter introducing water with mechanical agitation to form a water slurry within the filter.

Pat. 2,404,215. Slurry Filtration. July 16, 1946. An apparatus for filtering odd sized particles which comprises agitating the slurry while passing air up through the filter to keep smaller particles from clogging the screen.

Pat. 2,405,340. Manufacture of Tetryl. Aug. 6, 1946. A process for producing tetryl comprising nitrating a solution of dimethylaniline in sulfuric acid with a mixed acid, the ratio of nitric acid to dimethylaniline being at least 7 : 1, the nitration temperature being between 150° and 180° F.

Pat. 2,414,405. Fuse Powder Compositions. Jan. 21, 1947. A fast burning black powder composition including a carbon black obtained by the incomplete combustion of gaseous carbonaceous fuels deposited on a surface from the flame thereof.

Patents Relating to Organic Compounds and Miscellaneous Subjects

Pat. 1,947,578. Inhibiting the Decomposition of Organic Compounds. Feb. 20, 1934. A method for the prevention of discoloration of aniline comprising replacing the dissolved air with nitrogen.

Pat. 1,957,935. Shot Shell. May 8, 1934. Shot-gun shells comprising coating paper with a cellulose ether composition, forming the tube, then impregnating inside of the tube with a paraffin composition.

Pat. 1,989,701. Cellulose Derivative Composition. Feb. 5, 1935. A cellulose derivative composition is plasticized with an ester of a polycarboxylic acid wherein the H of at least one carboxylic group is replaced with a tetrahydrofurfuryl radical.

Pat. 2,008,045. Manufacture of Aromatic Nitrocompounds. July 16, 1935. Separation of emulsified aromatic nitrocompounds from the spent nitration acid is facilitated by adding fuller's earth or kieselguhr.

Pat. 2,020,368. Process for Preparing Aromatic Amines. Nov. 12, 1935. Partly detinned tin scrap may be used as a reducing agent in the conversion of nitrobenzene to aniline.

Pat. 2,033,203. Process of Manufacturing Aminoguanidine. Mar. 10, 1936. A process comprising the catalytic reduction of nitroguanidine to aminoguanidine.

Pat. 2,082,815. Preparation of Diaryl Amines. June 8, 1937. Diphenylamine is prepared from aniline by refluxing the reagents in a pressure resistant column having a heat exchange medium, such as diphenylamine, interposed between the column and the liner.

Pat. 2,085,178. Process for Sludge Treatment. June 29, 1937. Iron in aniline sludge is recovered by sintering the sludge and thereafter treating with a reducing agent in the presence of sodium chloride.

Pat. 2,120,968. Production of Diaryl Amines. June 21, 1938. Diphenylamine is produced by heating aniline in the presence of a ferrous chloride and an ammonium halide.

Pat. 2,120,969. Production of Diaryl Amines. June 21, 1938. A method of preparing diphenylamine comprising continuously passing aniline and a catalyst through a reaction zone, heated to the reaction temperature and maintained at superatmospheric pressure.

Pat. 2,140,345. Controlling Temperature of Nitration Reactions. Dec. 13, 1938. A process for controlling the reaction temperature and nitration reaction comprising maintaining the reaction mixture in direct heat exchange relationship with a single liquid cooling medium consisting of nitric acid, sulfuric acid, or phosphoric acid, said acids being out of direct contact with the mixture.

Pat. 2,159,804. New Compositions of Matter. May 23, 1939. New compounds and nitroaryl polyhydroxy alkyl amino compounds are prepared by condensing gluconamide with a nitrated halogenated aromatic hydrocarbon in the presence of a basic condensation agent.

Pat. 2,179,919. Treatment of Sludges. Nov. 14, 1939. Iron is recovered from aniline sludge by forming a slurry of the sludge and passing the slurry through a cyclone separator.

Pat. 2,240,622. Process of Filtration Utilizing Porous Cements. May 6, 1941. Oil porous filter cement for sealing oil wells against sanding.

Pat. 2,256,196. Purification of Diphenylamine. Sept. 16, 1941. Freshly grained diphenylamine is treated with a solution comprising at least 50% by weight of a saturated monohydric lower alcohol said solution being intimately contacted with the surfaces of the grain.

Pat. 2,256,999. Nitration of Organic Compounds. Sept. 23, 1941. Nitrobenzene is prepared by reacting benzene with mixed acid and the resulting heat utilized in the concentration of residual acid.

Pat. 2,279,765. Preparation of Urea Nitrate. Apr. 14, 1942. Urea nitrate is prepared by reacting urea with nitric acid in the presence of acetic or propionic acid.

Pat. 2,285,302. Process for Cementing Oil Wells. June 2, 1942. Process of cementing oil well cavities.

Pat. 2,301,875. Method of Treating Oil Wells. Nov. 19, 1942. Oil well treating material comprising an aqueous weak acid capable of reacting with calcareous rock to yield water soluble products.

Pat. 2,348,326. Metal Clamp. May 9, 1944. A metal clamping device adapted to hold together at least two perforated sheets of material.

Pat. 2,357,589. Oil Well Filter. Sept. 5, 1944. An apparatus for forming a porous cement oil well filter.

Pat. 2,365,639. Oil Well Filter. Dec. 19, 1944. An apparatus for placing a porous cement in an oil well to form a filter.

Pat. 2,376,474. Nitrourea Product. May 22, 1945. A stabilized product comprising nitrourea and solid compounds from the group consisting of acids and acid salts.

Pat. 2,377,071. Reduction of Nitro Compounds to Amines by Means of Aliphatic Hydrocarbons. May 29, 1945. Reduction of nitrocompounds to amines by heating with aliphatic hydrocarbons.

Pat. 2,384,534. Explosive Dump Shell. Sept. 11, 1945. A dump shell for placing an explosive charge in a vertical bore hole or an oil well without loss of any parts.

Pat. 2,396,330. Process of Nitrating Alcohols. Mar. 12, 1946. Process for preparing aliphatic nitrates comprising reacting secondary or tertiary aliphatic alcohols with nitric acid in the presence of acetic anhydride.

Pat. 2,399,206. Process. Apr. 30, 1946. Gravity Separation of hydrocarbon emulsions accelerated by the addition of an inorganic fluoride.

Pat. 2,400,904. Chemical Process. May 28, 1946. Preparation of mononitroxylene comprising nitrating xylene, agitating until substantial emulsion is formed, and recovering nitroxylene.

Pat. 2,403,932. A Low-Freezing Oxidant. July 16, 1946. The freezing point of nitrogen tetroxide is lowered by the addition of nitrous oxide.

Pat. 2,411,502. Treatment of Mineral Oils. Nov. 26, 1946. Constituents of mineral oils are separated by first mixing with nitrocyclohexane and cooling until segregation results.

Pat. 2,417,488. Machine for Testing and Assorting Resistance Elements. Mar. 18, 1947. An apparatus for testing the circuit of blasting caps.

Pat. 2,420,382. Catalytic Reduction of Organic Chloro-Nitro Compounds. May 13, 1947. Catalytic reduction of nitrocompounds comprising reacting hydrogen with a nitrocompound having a halogen atom and a nitro group attached to the same carbon atom in the presence of a platinum hydrogenation catalyst.

SCHEDULE 4

Section 1

Cellulose Derivative Manufacture (Particularly Nitrocellulose) and Methods for Reducing Viscosity Characteristic

Pat. 1,904,406. Method of Reducing the Solution Viscosity of Cellulose. Apr. 18, 1933. Low-viscosity nitrocellulose produced by pretreatment of the cellulose with hydrochloric acid gas before nitration.

Pat. 1,961,251. Reduction of Viscosity of Cellulose Acetate. June 5, 1934. The process of preparing a low viscosity cellulose acetate comprising acetylating cellulose at at least 30° C. and then hydrolyzing at 50–70° C. for about 3¼ hours with a water ratio to original cellulose of substantially 10–100 and a sulphuric acid ratio to original cellulose of substantially 20–100.

Pat. 1,962,132. Organo Metallic Protective Agent. June 12, 1934. Stabilizing nitrocellulose with iron or cobalt salts of naphthalenic or resin acids.

Pat. 1,965,577. Manufacture of Nitrocellulose. July 10, 1934. The step in the nitration of cellulose in which the nitrocellulose is maintained in an inert gas having less than five grains of water per cubic foot, during the separation of the acids of nitration.

Pat. 1,997,766. Process of Preparing Cellulose Nitrate. Apr. 16, 1935. Process of preparing low viscosity cellulose nitrate comprising reducing regenerated cellulose sheeting to the form of small crumpled pieces of single thicknesses, washing to free from material other than regenerated cellulose, and nitrating.

Pat. 2,039,381. Reduction of Viscosity of Cellulose Nitrate. May 5, 1936. Reducing the viscosity of nitrocellulose by treating it with ammonia after nitration.

Pat. 2,077,455. Stabilization of Cellulose Nitrate. Apr. 20, 1937. Process for stabilization of nitrocellulose by treatment with aqueous solution of sodium nitrate.

Pat. 2,102,205. Cellulose Mixed Ethers and Process for the Preparation Thereof. Dec. 14, 1937. Mixed cellulose ethers of the "lorol"-ethyl cellulose type.

Pat. 2,102,799. Process for Dehydrating Cellulose Nitrate. Dec. 21, 1937. Process for dehydrating cellulose nitrate which comprises displacing the water in the press cake initially with dilute alcohol and finally with 95% alcohol until desired water content is reached.

Pat. 2,105,627. Process of Nitrating Cellulose. Jan. 18, 1938. Process for preparation of methyl alcohol soluble cellulose nitrate having a nitrogen content of 11.85 to 12.0% by nitrating at about 45° C. for 20 minutes with a mixed acid containing 30% nitric acid.

Pat. 2,219,644. Process for Nitrating Cellulose. Oct. 29, 1940. Process for preparing cellulose nitrate with a nitrogen content of 10.8 to 11.8% which comprises nitrating cotton linters under controlled conditions with a mixed acid containing 18.5 to 29% of nitric acid and 20 to 22% water.

Pat. 2,268,092. Treatment of Regenerated Cellulose. Dec. 30, 1941. Reducing the solution viscosity of regenerated cellulose by treating pure comminuted regenerated cellulose sheeting with a dilute aqueous nitric acid containing solution of between 0.1 to 2.0% concentration.

Pat. 2,302,558. Treatment of Smokeless Powder. Nov. 17, 1942. Process for reclaiming smokeless powder in which the powder is heated under pressure with dilute ethyl alcohol.

Pat. 2,399,620. Manufacture of Cellulose Nitrate. May 7, 1946. The production of nitrocellulose of medium viscosity from regenerated cellulose scrap, in which the temperature of the nitrating acid is kept low and the ratio of nitric acid is kept high.

Section 2

Adhesives—Shoe Cements, Activators and Processes Related Thereto

Re. 22,301. Cementing Process. May 13, 1943. Process for cementing shoes by means of high-frequency electric current, having a frequency of upwards of 30 megacycles.

Pat. 2,004,466. Abrasive. June 11, 1935. A flexible sheet of abrasive material comprising a base, abrasive material and a coating on said base comprising an antioxidant and a polyhydric alcohol-polybasic acid resin modified with a mixture of drying oils, one of which is China-wood oil.

Pat. 2,047,226. Chemical Process and Chemical Compounds Derived Therefrom. July 14, 1936. A process of laminating and adhesively cementing with an aqueous solution of deacetylated chitin.

Pat. 2,064,802. Adhesive Composition. Dec. 15, 1936. A heat energizable, or thermoplastic cement containing nitrocellulose and a castor oil modified alkyd resin.

Pat. 2,092,050. Composition and Method for Joining Surfaces. Sept. 7, 1937. Method of joining shoe parts, as soles to uppers, by means of applying a cellulose adhesive to at least one of the surfaces to be joined, allowing the adhesive to harden, activating it by applying a solution of 90% propylene oxide and 10% methanol, acetone or acetic acid ester, and immediately joining the surfaces by applying pressure.

Pat. 2,092,084. Composition and Method for Joining Surfaces. Sept. 7, 1937. Method of joining shoe parts, as soles to uppers, by means of a cellulose adhesive which is sufficiently slow in drying to allow the operator to assemble parts before putting them in the pressure device, and yet rapid enough to reduce the drying time in the device. Propylene oxide with or without solvents is used in the adhesive.

Pat. 2,138,699. Container. Nov. 29, 1938. Use of thermoplastic cement in the fabrication of fibre containers in which the metal ends are applied to a paper container with the aid of a thermoplastic cement at a temperature of above 120° C.

Pat. 2,146,034. Laminated Article and Process of Making. Feb. 7, 1939. A process of laminating which comprises adhesively joining two surfaces with a thermoplastic adhesive through application of heat and pressure, said adhesive solids containing cellulose nitrate characterized by a nitrogen content of 9.5 to 11.5% and a viscosity of less than 80 seconds and a solvent plasticizer present at an amount about twice that of the cellulose nitrate.

Pat. 2,184,293. Abrasive. Dec. 26, 1939. An abrasive sheet material comprising a base and abrasive material adhesively bound to the base with a coating comprised essentially of lower aliphatic alcohol modified urea formaldehyde resin.

Pat. 2,208,580. Plastic Adhesive Paste and Method of Producing Same. July 23, 1940. A substantially neutral plastic adhesive composition comprising the coaction product of a resin formed by reaction of hydrochloric acid, tar, Congo gum and urea, said resin being intimately intermixed with ammonium hydroxide, caustic soda, citric acid, casein, borax and water.

Pat. 2,223,575. Adhesive Compositions. Dec. 3, 1940. A heat energizable adhesive capable of forming high joint strength, the non-volatile ingredients of which consist essentially of thermoplastic, non-drying vegetable oil modified alkyd resin, cellulose nitrate and plasticizer dispersed in a liquid volatile solvent vehicle, and wax which is insoluble in the said solvent and incompatible with said non-volatile ingredients.

Pat. 2,234,236. Laminated Material and Process of Making the Same. Mar. 11, 1941. A thermoplastic cement consisting of a combination of a thermoplastic synthetic resin such as a castor oil modified alkyd resin with nitrocellulose, and the use of this product in laminating fabrics.

Pat. 2,281,483. Process of Preparing Laminated Material. Apr. 28, 1942. A thermoplastic adhesive comprising a cellulose derivative and from 0.6 to 5 parts of a synthetic resin compatible therewith for each part of cellulose derivatives.

Pat. 2,283,946. Process for Manufacture of Shoes. May 26, 1942. Process for fastening the soles to shoes by means of a nitrocellulose cement, in which the component parts of the shoe are held in position until the cementing medium has set.

Pat. 2,296,948. Plastics Manufacture. Sept. 29, 1942. Process for bonding cork or similar materials in which the mass is heated by means of high frequency electricity.

Pat. 2,364,790. Treatment of Organic Dielectric Materials With High-Frequency Electric Current. Dec. 12, 1944. Method for heating organic materials by means of high-frequency electric current, in which the organic materials are made susceptible to heating with high-frequency current, by the addition of rutile and brookite titanium dioxide.

Pat. 2,384,034. Polyvinyl Acetal Composition and Cement. Sept. 4, 1945. An adhesive comprising a polyvinyl acetal resin and a monocyclic urea having on each cyclic urea nitrogen a methylol group etherified with volatile alcohol.

Pat. 2,410,414. Adhesive Composition. Nov. 5, 1946. An adhesive resin composition comprising a polyvinyl acetal resin and a small amount of a Werner type organic compound such as stearato chromic acetate.

Pat. 2,436,596. Adhesive and Method of Making Same. Feb. 24, 1948. An adhesive for joining surfaces which have been treated with a waxy or greasy material comprising an emulsion of glue in a volatile solvent for wax or grease.

General Aniline & Film Corporation has placed more than 3,000 patents on the Register of Patents as being available for licensing. The patents are grouped in five sections. Publication began November 2, 1948, and is concluded in this issue. The following patents (Reg. Nos. 14,511 through 14,780) are the balance of Section 4, relating to Photographic—Chemical and Mechanical, Groups 28; 39—12, and Section 5, relating to Diazotype Sensitized Materials and Apparatus, Group 39—12. Inquiries concerning these patents should be addressed to the Patent Department, General Aniline & Film Corporation, 247 Park Ave., New York 17, N. Y.

SECTION 4—Continued

Pat. 2,157,351. Sensitizing Dyes for Photographic Emulsions. May 9, 1939.

Pat. 2,158,287. Sensitizing Silver Halide Emulsion. May 16, 1939.

Pat. 2,159,466. Reversal Development of Light-Sensitive Silver Halide Emulsions. May 23, 1939.

Pat. 2,160,710. Film Spool and Holder. May 30, 1939.

Pat. 2,161,339. Cyanine Dye. June 6, 1939.

Pat. 2,161,788. Photographic Antihalation Layer. June 13, 1939.

Pat. 2,161,909. Adjustable Tripod Top. June 13, 1939.

Pat. 2,162,408. Marking Means for Film Strips. June 13, 1939.

Pat. 2,163,146. Taurides. June 20, 1939.

Pat. 2,163,166. Photographic Developer. June 20, 1939.

Pat. 2,163,776. Copying Camera. June 27, 1939.

Pat. 2,163,781. Photographic Developing Process. June 27, 1939.

Pat. 2,163,820. Photographic Developer. June 27, 1939.

Pat. 2,168,181. Photographic Treating Bath. Aug. 1, 1939.

Pat. 2,168,182. Photographic Material for Color Photography. Aug. 1, 1939.

Pat. 2,168,183. Stereophotography. Aug. 1, 1939.

Pat. 2,168,190. Photographic Enlarging Apparatus. Aug. 1, 1939.

Pat. 2,169,320. Photographic Dyestuff Picture. Aug. 15, 1939.

Pat. 2,169,513. Process for Hardening Albuminous Substances. Aug. 15, 1939.

Pat. 2,169,537. Manufacture of Films. Aug. 15, 1939.

Pat. 2,172,192. Photographic Desensitizing. Sept. 5, 1939.

Pat. 2,172,216. Photographic Developer. Sept. 5, 1939.

Pat. 2,173,480. Manufacture of Photographic Materials. Sept. 19, 1939.

Pat. 2,173,486. Oxazole Trimethinecyanines. Sept. 19, 1939.

Pat. 2,173,491. 2-Alkylhexahydrobenzthiazoles and 2-Alkylhexahydrobenzselenazoles. Sept. 19, 1939.

Pat. 2,176,516. Polarizing Layer. Oct. 17, 1939.

Pat. 2,177,257. Colored Photographic Pictures. Oct. 24, 1939.

Pat. 2,177,632. Production of Colored Pictures. Oct. 31, 1939.

Pat. 2,177,770. Photographic Camera. Oct. 31, 1939.

Pat. 2,178,338. Production of Gelatin Printing Reliefs. Oct. 31, 1939.

Pat. 2,178,612. Photographic Silver Halide Emulsion Layers. Nov. 7, 1939.

Pat. 2,178,882. Color Film with Sound Record. Nov. 7, 1939.

Pat. 2,179,228. Process of Color Photography and Material Therefor. Nov. 7, 1939.

Pat. 2,179,234. Manufacture of Multicolor Photographs. Nov. 7, 1939.

Pat. 2,179,238. Manufacture of Polychrome Pictures. Nov. 7, 1939.

Pat. 2,179,239. Color Photography. Nov. 7, 1939.

Pat. 2,179,244. Silver Halide Emulsion for Color Photography. Nov. 7, 1939.

Pat. 2,180,222. Spool and Container for Sensitized Film or Paper. Nov. 14, 1939.

Pat. 2,180,335. Process for Hardening Albuminous Substances. Nov. 21, 1939.

Pat. 2,180,409. Photographic Material. Nov. 21, 1939.

Pat. 2,181,485. Gelatin Relief. Nov. 28, 1939.

Pat. 2,181,941. Photographic Developer. Dec. 5, 1939.

Pat. 2,181,944. Production of Black-and-White Photographic Pictures. Dec. 5, 1939.

Pat. 2,182,398. Film Spool. Dec. 5, 1939.

Pat. 2,183,068. Motion Picture Camera. Dec. 12, 1939.

Pat. 2,183,764. Photographic Enlarging Apparatus. Dec. 19, 1939.

Pat. 2,183,768. Camera with Exposure Meter. Dec. 19, 1939.

Pat. 2,186,045. Production of Color Photographic Pictures. Jan. 9, 1940.

Pat. 2,186,070. Subtractive Color Film. Jan. 9, 1940.

Pat. 2,186,685. Photographic Color Picture. Jan. 9, 1940.

Pat. 2,186,717. Production of Colored Photographic Pictures. Jan. 9, 1940.

Pat. 2,186,719. Photographic Silver Halide Emulsions. Jan. 9, 1940.

Pat. 2,186,730. Multicolor Photography. Jan. 9, 1940.

Pat. 2,186,731. Production of Colored Photographic Layers. Jan. 9, 1940.

Pat. 2,186,732. Silver Halide Emulsion Color Photography. Jan. 9, 1940.

Pat. 2,186,733. Color Photography. Jan. 9, 1940.

Pat. 2,186,734. Color Photography. Jan. 9, 1940.

Pat. 2,186,735. Silver Halide Emulsions for Color Photography. Jan. 9, 1940.

Pat. 2,186,736. Coupling Compounds for Color Forming Development. Jan. 9, 1940.

Pat. 2,186,849. Manufacture of Photographic Silver Halide Emulsions. Jan. 9, 1940.

Pat. 2,186,850. Color Photography. Jan. 9, 1940.

Pat. 2,186,851. Color Photography. Jan. 9, 1940.

Pat. 2,186,852. Photographic Silver Halide Emulsions. Jan. 9, 1940.

Pat. 2,187,780. Lens System. Jan. 23, 1940.

Pat. 2,188,711. Roll Film Camera with Exposure Meter. Jan. 30, 1940.

Pat. 2,188,779. Self-Sealing Film Roll for Cameras. Jan. 30, 1940.

Pat. 2,194,213. Dyestuffs of the Cyanine Series. Mar. 19, 1940.

Pat. 2,194,591. Apparatus for Projecting Color Films. Mar. 26, 1940.

Pat. 2,194,603. Daylight Photographic Developing Apparatus. Mar. 26, 1940.

Pat. 2,196,036. Subtractive Process for Color Photography. Apr. 2, 1940.

Pat. 2,196,275. Color Photography. Apr. 9, 1940.

Pat. 2,199,542. Sensitizing Silver Halide Emulsions. May 7, 1940.

Pat. 2,200,306. Compound Having Reactive Methylene Groups. May 14, 1940.

Pat. 2,203,036. Apparatus for Measuring the Color of Light. June 4, 1940.

Pat. 2,204,074. Photographic Printing. June 11, 1940.

Pat. 2,204,188. Polymethine Dyes. June 11, 1940.

Pat. 2,204,488. Photographic Camera. June 11, 1940.

Pat. 2,204,668. Picture Sound Film. June 18, 1940.

Pat. 2,205,516. Apparatus for Numbering or Marking Light-Sensitive Photographic Papers. June 25, 1940.

Pat. 2,205,615. Apparatus for the Making of Contact Copies of Films. June 25, 1940.

Pat. 2,205,755. Color Photography. June 25, 1940.

Pat. 2,205,756. Photographic Printing Paper. June 25, 1940.

Pat. 2,205,870. Photographic Filter Layer. June 25, 1940.

Pat. 2,207,388. Transfer Paper. July 9, 1940.

Pat. 2,207,915. Heptamethine Dyestuffs. July 16, 1940.

Pat. 2,207,916. Production of Photographic Color Sound Films. July 16, 1940.

Pat. 2,208,754. Multipack Photography. July 23, 1940.

Pat. 2,208,799. Camera Construction. July 23, 1940.

Pat. 2,209,196. Exposure Control. July 23, 1940.

Pat. 2,210,146. Color Photography. Aug. 6, 1940.

Pat. 2,210,905. Production of Photographic Multicolor Pictures. Aug. 13, 1940.

Pat. 2,211,408. Nonamethine Dyes. Aug. 13, 1940.

Pat. 2,213,382. Apparatus for Compensating for Incorrect Reproduction of Color in Color Photographs. Sept. 3, 1940.

Pat. 2,213,995. Photographic Emulsion. Sept. 10, 1940.

Pat. 2,214,072. Apparatus for the Reversal of Photographic Negatives. Sept. 10, 1940.

Pat. 2,214,446. Photographic Development of Silver Halide Layers. Sept. 10, 1940.

Pat. 2,214,483. Photographic Color Picture. Sept. 10, 1940.

Pat. 2,215,578. Equalization of Photographic Band Films. Sept. 24, 1940.

Pat. 2,217,829. Photographic Developing Paper. Oct. 15, 1940.

Pat. 2,217,861. Camera with Exposure Meter. Oct. 15, 1940.

Pat. 2,220,178. Process of Producing a Sound Track on a Light-Sensitive Color Film. Nov. 5, 1940.

Pat. 2,220,187. Filter Layer for Photographic Color Films and Plates. Nov. 5, 1940.

Pat. 2,220,207. Control Device for a Printing Light. Nov. 5, 1940.

Pat. 2,221,873. Production of Mat Light-Sensitive Photographic Paper. Nov. 19, 1940.

Pat. 2,224,329. Color Photography. Dec. 10, 1940.

Pat. 2,225,439. Apparatus for Intensification of Weak Radiations. Dec. 17, 1940.

Pat. 2,226,602. Automatic Setting Device for Shutters and Diaphragms of Photographic Apparatus. Dec. 31, 1940.

Pat. 2,226,971. Motion Picture Camera. Dec. 31, 1940.

Pat. 2,228,156. Selenoazolidones and Process of Preparing Them. Jan. 7, 1941.

Pat. 2,229,137. Production of Color Photographs. Jan. 21, 1941.

Pat. 2,229,283. Winding Device. Jan. 21, 1941.

Pat. 2,229,289. Photographic Camera. Jan. 21, 1941.

Pat. 2,230,584. Daylight Photographic Developing Tank. Feb. 4, 1941.

Pat. 2,230,590. Color Photographic Process. Feb. 4, 1941.

Pat. 2,230,710. Photographic Printing. Feb. 4, 1941.

Pat. 2,232,056. Production of Color Film Having a Silver Sound Track. Feb. 18, 1941.

Pat. 2,233,006. Roll Film Camera. Feb. 25, 1941.

Pat. 2,233,010. Lighttight Packing for Photographic Film. Feb. 25, 1941.

Pat. 2,235,027. Photographic Sensitizer. Mar. 18, 1941.

Pat. 2,235,033. Combined Sound and Color Picture Film. Mar. 18, 1941.

Pat. 2,238,231. Cyanine Dyestuffs. Apr. 15, 1941.

Pat. 2,238,631. Yellow Fog Inhibitor for Photographic Material. Apr. 15, 1941.

Pat. 2,238,632. Yellow Fog Inhibitor for Photographic Materials. Apr. 15, 1941.

Pat. 2,240,692. Color Photograph. May 6, 1941.

Pat. 2,242,747. Tripack for Producing Photographic Pictures. May 20, 1941.

Pat. 2,243,453. Supporting Spool for Spirally Coiled Film in Film Developing Devices. May 27, 1941.

Pat. 2,243,460. Camera Construction. May 27, 1941.

Pat. 2,245,177. Process of Producing Methine-Cyanine Dyestuffs. June 10, 1941.

Pat. 2,247,569. Process of Hardening and Simultaneously Increasing the Sensitivity of Photographic Silver Halide Emulsions. July 1, 1941.

Pat. 2,247,812. Spool for Cinematograph Films. July 1, 1941.

Pat. 2,248,179. Photographic Developing Apparatus. July 8, 1941.

Pat. 2,248,309. Film Spool Hub. July 8, 1941.

Pat. 2,249,975. Apparatus for Indicating the Amplitude of the Sound Record Made by a Sound-Film Cinematograph Camera. July 22, 1941.

Pat. 2,251,365. Photographic Sensitive Material. Aug. 5, 1941.

Pat. 2,255,128. Pseudocyanine Dye. Sept. 9, 1941.

Pat. 2,251,777. Sensitized Photographic Emulsion. Aug. 5, 1941.

Pat. 2,256,163. Photographic Silver Halide Emulsion. Sept. 16, 1941.

Pat. 2,265,138. Desensitizing of Light Sensitive Silver Halide Emulsions. Dec. 9, 1941.

Pat. 2,265,221. Pyrazolone Derivatives. Dec. 9, 1941.

Pat. 2,265,463. Process to Increase the Viscosity of Aqueous Gelatin Solutions. Dec. 9, 1941.

Pat. 2,265,547. Color Photography. Dec. 9, 1941.

Pat. 2,266,419. Camera Construction. Dec. 16, 1941.

Pat. 2,267,089. Color Photography. Dec. 23, 1941.

Pat. 2,268,630. Color Photography. Jan. 6, 1942.

Pat. 2,268,651. Adhesive Lacquer. Jan. 6, 1942.

Pat. 2,268,662. Production of Matt Photographic Emulsions. Jan. 6, 1942.

Pat. 2,270,287. Roll Film Camera. Jan. 20, 1942.

Pat. 2,272,000. Claw Mechanism for Motion Picture Apparatus. Feb. 3, 1942.

Pat. 2,272,646. Apparatus for the Production of Photographic Printing Light. Feb. 10, 1942.

Pat. 2,273,555. Camera Construction. Feb. 17, 1942.

Pat. 2,274,278. Package. Feb. 24, 1942.

Pat. 2,274,556. Marking the Flaps and the Films for Photographic Film Packs. Feb. 24, 1942.

Pat. 2,275,024. Organic Hexamethine Compound. Mar. 3, 1942.

Pat. 2,275,617. Photographic Strip Film and Strip-Film Paper. Mar. 10, 1942.

Pat. 2,276,548. Production of Photographic Multicolor Pictures. Mar. 17, 1942.

Pat. 2,276,554. Photographic Emulsion. Mar. 17, 1942.

Pat. 2,278,947. Photographic Silver Halide Emulsion. Apr. 7, 1942.

Pat. 2,280,067. Endless Band of Film and Reproducing Apparatus for Its Use. Apr. 21, 1942.

Pat. 2,280,721. Process of Developing Photographic Pictures. Apr. 21, 1942.

Pat. 2,281,273. Photographic Subtractive Multicolor Picture. Apr. 28, 1942.

Pat. 2,282,890. Antihalo Coating for Photographic Material. May 12, 1942.

Pat. 2,285,262. Process and Apparatus for the Printing of Subtractive Multicolor Images. June 2, 1942.

Pat. 2,285,868. Portable Light Stand. June 9, 1942.

Pat. 2,286,662. Color Photography. June 16, 1942.

Pat. 2,288,586. Yellow Fog Inhibitor. June 30, 1942.

Pat. 2,289,133. Camera with Filter. July 7, 1942.

Pat. 2,289,300. Photographic Sensitizer. July 7, 1942.

Pat. 2,289,303. Methine Dyestuffs. July 7, 1942.

Pat. 2,291,673. Production of Printing Forms. Aug. 4, 1942.

Pat. 2,291,834. Color Photographic Reversal Process. Aug. 4, 1942.

Pat. 2,292,021. Manufacture of Cyanine Dyestuffs. Aug. 4, 1942.

Pat. 2,292,575. Dyestuff Intermediate Products from Bile Acid Amides. Aug. 11, 1942.

Pat. 2,293,004. Photographic Color Picture. Aug. 11, 1942.

Pat. 2,294,731. Color Photography. Sept. 1, 1942.

Pat. 2,295,276. Photographic Emulsion. Sept. 8, 1942.

Pat. 2,295,628. Apparatus for the Reversal of Color Negatives. Sept 15, 1942.

Pat. 2,298,093. Production of Photographs in Blue-Black Tones. Oct. 6, 1942.

Pat. 2,298,097. Photographic Printer Mechanism. Oct. 6, 1942.

Pat. 2,300,970. Apparatus for Printing Subtractive Multicolor Images. Nov. 3, 1942.

Pat. 2,303,173. Film Cartridge and Means for Sealing the Same. Nov. 24, 1942.

Pat. 2,303,196. Apparatus for Compensating for Incorrect Reproduction of Color. Nov. 24, 1942.

Pat. 2,303,207. Base Type Range Finder for Medium Ranges and Short Distances. Nov. 24, 1942.

Pat. 2,303,208. View Finder. Nov. 24, 1942.

Pat. 2,303,215. Camera Construction. Nov. 24, 1942.

Pat. 2,303,928. Process for the Production of Photographic Color Images. Dec. 1, 1942.

Pat. 2,304,025. Process for Color Development of Photographic Materials. Dec. 1, 1942.

Pat. 2,304,981. Sensitizing of Photographic Silver Chloride, Chloro-Bromide, and Chloro-Bromo-Iodide Emulsions. Dec. 15, 1942.

Pat. 2,307,161. Color Photography. Jan. 5, 1943.

Pat. 2,307,162. Process for the Production of Color Images. Jan. 5, 1943.

Pat. 2,307,399. Process for the Production of Colored Photographic Images with Dyestuff Formers Fast to Diffusion. Jan. 5, 1943.

Pat. 2,308,005. Process for Removing Dust from Light Sensitive Photographic Emulsions. Jan. 12, 1943.

Pat. 2,309,492. Process for Avoiding Color Fog on Photographic Color Material. Jan. 26, 1943.

Pat. 2,309,515. Photographic Printing Frame. Jan. 26, 1943.

Pat. 2,309,539. Spool Construction. Jan. 26, 1943.

Pat. 2,309,562. Hydrazinoalkyl Sulphonic Acids. Jan. 26, 1943.

Pat. 2,312,004. Production of Photographic and Cinematographic Color Images. Feb. 23, 1943.

Pat. 2,312,068. Process for Sensitizing Photographic Emulsions. Feb. 23, 1943.

Pat. 2,312,153. Sensitizing of Silver Halide Emulsions. Feb. 23, 1943.

Pat. 2,313,138. Production of Color Photographic Images. Mar. 9, 1943.

Pat. 2,313,632. Production of Color Film Having a Silver Sound Track. Mar. 9, 1943.

Pat. 2,316,006. Shutter Release for Folding Cameras. Apr. 6, 1943.

Pat. 2,316,268. Photographic Emulsion. Apr. 13, 1943.

Pat. 2,316,291. Process for Retouching of Subtractive Multicolor Images. Apr. 13, 1943.

Pat. 2,318,605. Apparatus for Developing Photographic Films. May 11, 1943.

Pat. 2,319,102. Adhesive. May 11, 1943.

Pat. 2,319,157. Shutter Release for Folding Cameras. May 11, 1943.

Pat. 2,320,418. Color Photographs. June 1, 1943.

Pat. 2,320,422. Process for the Production of Photographic Color Images. June 1, 1943.

Pat. 2,320,439. Photographic Sensitizer. June 1, 1943.

Pat. 2,320,441. Film Moving and Counter Mechanism. June 1, 1943.

Pat. 2,320,654. Sensitization of Photographic Emulsions. June 1, 1943.

Pat. 2,320,722. Magazine Loaded with Different Sorts of Films. June 1, 1943.

Pat. 2,321,279. Process for the Manufacture of Antihalation Layers. June 8, 1943.

Pat. 2,323,187. Photographic Emulsion. June 29, 1943.

Pat. 2,323,246. Production of Multicolored Motion Pictures with Sound Track. June 29, 1943.

Pat. 2,323,590. Photographic Color Picture. July 6, 1943.

Pat. 2,323,739. Photographic Camera. July 6, 1943.

Pat. 2,324,831. Photographic Emulsion. July 20, 1943.

Pat. 2,324,832. Photographic Emulsion. July 20, 1943.

Pat. 2,326,431. Color Control in Photographic Copying Apparatus and the Like. Aug. 10, 1943.

Pat. 2,326,497. Water-Soluble Nitrogen-Containing Heterocyclic Compound. Aug. 10, 1943.

Pat. 2,326,500. Photographic and Cinematographic Multicolor Images of Correct Color Value. Aug. 10, 1943.

Pat. 2,326,870. Roll Holding Camera Construction. Aug. 17, 1943.

Pat. 2,327,728. Tripod and Other Constructions. Aug. 24, 1943.

Pat. 2,330,905. Soluble Photographic Layer of Colloidal Gums and Process of Conditioning Such Gums for Such Use. Oct. 5, 1943.

Pat. 2,335,107. Film Package. Nov. 23, 1943.

Pat. 2,335,746. Thin Sheet, Film, and the Like. Nov. 30, 1943.

Pat. 2,335,944. Protective and Auxiliary Layers of All Kinds for Photographic Materials. Dec. 7, 1943.

Pat. 2,336,380. Process for the Production of Color Separation Pictures of Correct Tone Value. Dec. 7, 1943.

Pat. 2,336,396. Shutter Release for Folding Cameras. Dec. 7, 1943.

Pat. 2,338,442. Automatic Working Up of Photographic Papers and Films. Jan. 4, 1944.

Pat. 2,341,372. Process for the Production of Photographic Color Images. Feb. 8, 1944.

Pat. 2,341,508. Process for Increasing the Transparency Differences of Sound Records in Multilayer Materials. Feb. 8, 1944.

Pat. 2,343,050. Tripod Improvement. Feb. 29, 1944.

Pat. 2,343,051. Process for Preparing Photographic Silver Halide Emulsions for Multicolor Photography. Feb. 29, 1944.

Pat. 2,343,424. Subtractive Color Photography. Mar. 7, 1944.

Pat. 2,346,329. Photographic Printing Device. Apr. 11, 1944.

Pat. 2,348,463. Production of Color Photographic Images. May 9, 1944.

Pat. 2,349,179. Production of Nitrogenous Heterocyclic Compounds. May 16, 1944.

Pat. 2,352,032. Production of Sound Records. June 20, 1944.

Pat. 2,352,243. Transparency Mount. June 27, 1944.

Pat. 2,352,287. Aminophenol Derivatives. June 27, 1944.

Pat. 2,352,794. Tripod Case. July 4, 1944.

Pat. 2,354,108. Copying Apparatus. July 18, 1944.

Pat. 2,354,121. Matrix Film for the Production of Colored Copies. July 18, 1944.

Pat. 2,354,524. Trimethinecyanine Dyestuffs. July 25, 1944.

Pat. 2,354,552. Color Photographic Image. July 25, 1944.

Pat. 2,357,393. Process for the Production of Photographic Color Images. Sept. 5, 1944.

Pat. 2,357,394. Photographic Emulsion. Sept. 5, 1944.

Pat. 2,357,395. Photographic Emulsion. Sept. 5, 1944.

Pat. 2,365,416. Production of Light Sensitive Photographic Material. Dec. 19, 1944.

Pat. 2,366,324. Production of Color Photographic Images. Jan. 2, 1945.

Pat. 2,373,821. Production of Color Photographic Images. Apr. 17, 1945.

Pat. 2,374,501. Aminophenol Derivatives and Photographic Developers Containing Them. Apr. 24, 1945.

Pat. 2,374,505. Photographic Multi-Color Images. Apr. 24, 1945.

Pat. 2,374,916. Apparatus for the Reversal of Color Photographic Negatives. May 1, 1945.

Pat. 2,376,679. Production of Color Photographic Images. May 22, 1945.

Pat. 2,376,822. Production of Color Photographic Images. May 22, 1945.

Pat. 2,378,779. Dyestuff Intermediate Products. June 19, 1945.

Pat. 2,379,646. Method of Preparing Nonturbid Homogeneous Solutions and Dispersions of Colloids and Products so Prepared. July 3, 1945.

Pat. 2,379,698. Camera and Range Finder. July 3, 1945.

Pat. 2,437,063. Nondiffusing 1-Phenyl-5-Pyrazolone Couplers for Color Photography. Mar. 2, 1948.

Pat. 2,442,283. Emulsion Copolymerization of Vinyl Furane and Styrene. May 25, 1948.

SECTION 5

Diazotype Sensitized Materials and Apparatus

(See also "Dyestuffs" classification)

Pat. 2,096,015. Apparatus for the Development of Light Sensitive Material. Oct. 19, 1937.

Pat. 2,219,584. Apparatus for the Development of Light Sensitive Material. Oct. 29, 1940.

Pat. 2,257,207. Apparatus for the Dry Development of Light Sensitive Material. Sept. 30, 1941.

Pat. 2,299,045. Developing Apparatus. Oct. 13, 1942.

Pat. 2,302,277. Diazotype Dry Development Apparatus. Nov. 17, 1942.

Pat. 2,308,130. Reproducing Apparatus for Light Sensitive Reproduction Media. Jan. 12, 1943.

Pat. 2,350,257. Gaseous Developing Apparatus. May 30, 1944.

TRADE-MARKS

OFFICIAL GAZETTE, DECEMBER 7, 1948

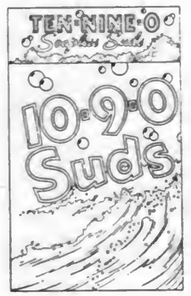
[VOL. 617. NO. 1]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 4



ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 502,797. GERALDINE F. BROWN, doing business as Brown Laboratories, Philadelphia, Pa. Filed May 27, 1946.

FOR ALL-PURPOSE CLEANER.
Claims use since January 1932.

Ser. No. 520,894. PACIFIC POWDER COMPANY, Tenino, Wash. Filed Apr. 17, 1947.

No claim is made to the words "Soapless Suds" and "Suds" apart from their association with the remaining features of the mark.
FOR CLEANING POWDERS.
Claims use since Nov. 15, 1946.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 506,014. CYETON PRODUCTS, Los Angeles, Calif. Filed July 22, 1946.

Per-Aid

FOR ANTIPERSPIRANT DEODORANT.
Claims use since July 1, 1946.

Ser. No. 513,875. PIERRE CHARTON, Montreal, Quebec, Canada. Filed Dec. 7, 1946.

CLAIR-OBSCUR
CHIAROSCURO

FOR PERFUMES, TOILET WATERS, COLOGNES AND POMADES, COLD-CREAM, BRILLIANTINES, LIP-STICKS, AND DENTIFRICES.
Claims use since Nov. 1, 1945.

Ser. No. 517,984. FRED THE HAIRSTYLIST, INC., New York, N. Y. Filed Feb. 24, 1947.

FRED *The* HAIRSTYLIST

"The Hairstylist" is disclaimed apart from the combination shown.
FOR COSMETICS—NAMELY, FACE CREAM, HAIR WAVING LOTIONS, LIQUID AND CREAM SHAMPOOS.
Claims use since Mar. 1, 1933.

Ser. No. 521,810. RICHARD HUDNUT, New York, N. Y. Filed May 3, 1947.

success-o-plan

FOR COSMETIC KITS CONTAINING ONE OR MORE OF THE FOLLOWING INGREDIENTS: CLEANSING CREAM, SKIN FRESHENER, FOUNDATION LOTION, FACE POWDER, AND LIPSTICK.
Claims use since Apr. 15, 1947.

CLASS 7

CORDAGE

Ser. No. 505,683. BRITISH ROPES LIMITED, Doncaster, England. Filed July 16, 1946.

BRYANISED

FOR WIRE ROPES (NON-ELECTRIC); CABLES (NON-ELECTRIC).
Claims use since May 1943.

CLASS 11

INKS AND INKING MATERIALS

Ser. No. 525,306. O. B. DISTRIBUTORS, South Gate, Calif. Filed July 1, 1947.

COL-R-FAC

The word "Col-R" is disclaimed apart from the mark shown.
FOR LITHOGRAPHING INKS.
Claims use since May 6, 1947.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 520,404. JOHNS-MANVILLE CORPORATION, New York, N. Y. Filed Apr. 9, 1947.

THERMOFLEX

FOR THERMAL INSULATING TAPE AND BLANKET CONSISTING OF A FIBROUS FILLER AND AN ENCLOSING SHEATH, FOR APPLICATION TO PIPE FITTINGS, TURBINES, AND OTHER EQUIPMENT SUBJECT TO HIGH TEMPERATURES.
Claims use since Feb. 5, 1947.

CLASS 15

OILS AND GREASES

Ser. No. 501,868. THE PERFECT CIRCLE COMPANY, Hagerstown, Ind., now by change of name Perfect Circle Corporation. Filed May 10, 1946.

PERFECT CIRCLE CARTONIC

The word "Perfect" is disclaimed apart from the mark.
FOR ADDITIVE HAVING BOTH CHEMICAL AND LUBRICATING PROPERTIES FOR LUBRICATING OILS AND LIQUID FUELS FOR USE PARTICULARLY DURING INTERNAL COMBUSTION MOTOR TUNE-UP OR BREAK-IN.
Claims use since Apr. 8, 1946.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 504,486. OSCAR HUGO GUTHEIL, Columbus, Ohio. Filed June 24, 1946.

MAGIAN

FOR PLAYING CARDS, FOR PERFORMING CARD TRICKS, AND PAPER FOLDED ENVELOPES SUITABLE FOR PERFORMING SLEIGHT-OF-HAND MAGIC.
Claims use since Apr. 1, 1946.

Ser. No. 508,600. HAUSEMANN & HÖTTE N. V., Amsterdam, Netherlands. Filed Sept. 6, 1946.

PROFILO

FOR MODELS OF SHIPS, BUILDINGS, MILLS, AEROPLANES, AND THE LIKE, MADE ACCORDING TO SCALE; AND NETS AND BALLS FOR TABLE TENNIS, ALL ARTICLES BEING USED AS TOYS.
Claims use since 1943.

Ser. No. 509,750. CHARLES V. WINTER, Chicago, Ill. Filed Sept. 25, 1946.

"MIRACLE"

FOR COMBINATION GOLF CLUB THAT WILL DRIVE, PITCH, AND PUTT.
Claims use since Sept. 14, 1943.

Ser. No. 512,303. JOHN J. WARSO, doing business as John J. Warso and Company, Youngstown, Ohio. Filed Nov. 8, 1946.

FLYING BOB

No claim is made to the word "Bob" apart from the mark.
FOR CHILDREN'S SLEDS.
Claims use since July 15, 1946.

Ser. No. 521,439. DAVE COOK SPORTING GOODS CO., Denver, Colo. Filed Apr. 28, 1947.

STREAM WING

FOR FISHING FLIES.
Claims use since spring of 1931.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 468,329. NEW PLASTIC CORPORATION, Los Angeles, Calif. Filed Mar. 15, 1944.

NUPLA

FOR PLASTIC HAMMERS AND PLASTIC HAMMER TIPS.
Claims use since Sept. 20, 1940.

Ser. No. 505,667. PHILLIPS PETROLEUM COMPANY, Bartlesville, Okla. Filed July 15, 1946.

PHILCRAFT

FOR LAWN MOWERS.
Claims use since May 22, 1946.

Ser. No. 507,044. DIAMOND CHAIN COMPANY, INC., Indianapolis, Ind. Filed Aug. 8, 1946.

DIAMOND

FOR POWER TRANSMISSION CHAINS AND PARTS THEREOF, INCLUDING BUT NOT LIMITED TO BICYCLE CHAINS AND MOTORCYCLE CHAINS, SPROCKETS AND SPROCKET WHEELS FOR USE WITH POWER TRANSMISSION CHAINS, CONVEYOR CHAINS AND PARTS THEREOF, AND CHAIN TYPE FLEXIBLE SHAFT-COUPLINGS, AND PARTS THEREOF.
Claims use since Apr. 15, 1896.

Ser. No. 507,045. DIAMOND CHAIN COMPANY, INC., Indianapolis, Ind. Filed Aug. 8, 1946.

DIAMOND

FOR POWER TRANSMISSION CHAINS AND PARTS THEREOF, INCLUDING BUT NOT LIMITED TO BICYCLE CHAINS AND MOTORCYCLE CHAINS, SPROCKETS AND SPROCKET WHEELS FOR USE WITH POWER TRANSMISSION CHAINS, CONVEYOR CHAINS AND PARTS THEREOF, AND CHAIN TYPE FLEXIBLE SHAFT-COUPLINGS, AND PARTS THEREOF.
Claims use since Apr. 15, 1896.

Ser. No. 510,423. CHISHOLM-MOORE HOIST CORPORATION, Tonawanda, N. Y. Filed Oct. 8, 1946.

CM

FOR HOISTS, WINCHES, AND LOAD-CARRYING OVERHEAD TROLLEYS, AND PARTS THEREOF.
Claims use since Dec. 1, 1928, on hoists and parts thereof; since Dec. 28, 1938, on winches and parts thereof; and since Oct. 22, 1930, on overhead trolleys and parts thereof.

Ser. No. 512,097. WHITE AIRCRAFT CORPORATION, Palmer, Mass. Filed Nov. 5, 1946.

WHITE

No claim is made to the word "White" nor to the pictorial representation of North and South America beneath the eagle, except in the association shown.
FOR CARPET SWEEPERS AND PARTS THEREOF.
Claims use since Sept. 30, 1946.

Ser. No. 518,234. THE WILLIAM H. LINGLE CORPORATION, Washington, D. C., assignor to William H. Lingle Company, Washington, D. C., a partnership. Filed Feb. 27, 1947.

SOIL SURGEON

No claim is made to the word "Soil" apart from the mark as shown.

FOR CULTIVATORS, HARROWS, AND PARTS THEREOF.

Claims use since Nov. 15, 1945.

Ser. No. 523,532. THE WM. POWELL COMPANY, Cincinnati, Ohio. Filed June 4, 1947.

SIGNAL

FOR GLASS BODY OIL CUPS.

Claims use since Oct. 1, 1888.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 511,103. OPTIKOTECHNA SOPLECNOST S R. O., Prerov, Czechoslovakia. Filed Oct. 18, 1946.

The representation of a doublet lens is disclaimed apart from the mark. The trade-mark consists of the letters "OP" drawn in a strongly styled manner, these letters being supported by a base resembling a lens.

FOR OPTICAL GLASS PRODUCTS — NAMELY, SIMPLE AND COMBINED LENSES, PRISMS, MIRRORS, FILTERS, FOCUS PLATES, AND PLANE-PARALLEL PLATES, REFLECTORS; PHOTOGRAPHIC APPARATUS, EQUIPMENT, AND ACCESSORIES—NAMELY, CAMERAS, ENLARGING CAMERAS, AERO-CAMERAS, PHOTOGRAMMETRIC AND PANORAMIC CAMERAS; STEREOSCOPES, STEREOSCOPIC COMPARATORS; PROJECTION APPARATUS EQUIPMENT AND ACCESSORIES—NAMELY, LANTERN, SLIDE, MOVING PICTURE, AND STILL PICTURE PROJECTORS, CINEMATOGRAPHS, EPISCOPES, EPIDIASCOPES, SEARCH LIGHTS; SOUND APPARATUS AND ADAPTERS FOR CINEMATOGRAPHS; SIGHTING AND AIMING INSTRUMENTS FOR MILITARY, AVIATION, AND NAVIGATION PURPOSES—NAMELY, OPTICAL AND/OR MECHANICAL SIGHTS FOR GUNS AND FIREARMS, TELESCOPIC SIGHTS, SIGHT ALINEMENT CORRECTORS, AIM-CHECKING INSTRUMENTS, BOMB SIGHTS, PREDICTORS; BALLISTIC INSTRUMENTS; COLLIMATORS; DECLINATORS; MEASURING, RECORDING, AND OBSERVATION INSTRUMENTS AND EQUIPMENT—NAMELY, TELESCOPES, PERISCOPES, THEODOLITES, LEVELS; FIELD GLASSES, SPEEDOMETERS; RANGE FINDERS; DEFLECTION FINDERS; ALTIMETERS; AEROTACHOMETERS; AEROCENTOGRAPHERS; PHOTOMETERS; CALORIMETERS; POLARIMETERS; POLARISCOPES; SPECTROMETERS; SPECTROGRAPHS; SPECTROSCOPES; SPHEROMETERS; X-RAY SPECTROMETERS; TELEMETERS; CHRONOGRAPHS; THERMOSTATS; REFRACTOMETERS; INTERFEROMETERS; TACHOGRAPHS; TACHOMETERS; COMPASSES, STEREOPLANIGRAPHS, TRIANGULATORS, GONIOMETERS; PHYSICAL AND LABORATORY APPARATUS AND INSTRUMENTS—NAMELY, MICROSCOPES, ALCOHOLOMETERS, TITRATION APPARATUS, THERMOMETERS.

Claims use since April 1941.

CLASS 27

HOROLOGICAL INSTRUMENTS

Ser. No. 525,248. EDWARD REES, Westmount, Ontario, Canada. Filed June 30, 1947.

MARMET

The drawing is lined for shading. The word "Marmet" is an artist-drawn lettering similar to shaded Roman Italic type, with the tail of the "M" extending and underlining the remainder of the name.

FOR WATCHES AND CLOCKS.

Claims use since Nov. 1, 1938.

CLASS 31

FILTERS AND REFRIGERATORS

Ser. No. 513,911. THE VITRON CORPORATION, Wilmington, Del. Filed Dec. 7, 1946.

Vitron

FOR LIQUID FILTERS CONTAINING GLASS FIBERS; MATS BONDED FROM GLASS FIBERS-CONTAINING MATERIALS FOR FILTRATION EQUIPMENT; FRAMES AND GASKETS FOR HOLDING SAID FILTERS; CLAMPS, FIXTURES AND PLUGS FOR MOUNTING SAID FILTERS; GLASS FILLERS AND GRIDS SOLD AS SUB-ASSEMBLIES OR REPLACEMENT PARTS OR PARTS TO BE USED IN FABRICATING SUCH AIR FILTERS BY LICENSEES OR THE LIKE; AND GLASS FIBERS-CONTAINING AIR FILTERS FOR USE IN WARM-AIR HEATING, VENTILATING, AND AIR-CONDITIONING SYSTEMS AND IN WINDOW VENTILATORS.

Claims use since Oct. 30, 1946.

CLASS 34

HEATING, LIGHTING, AND VENTILATING APPARATUS

Ser. No. 503,372. HEAT MASTER, INC., Long Island, N. Y. Filed June 6, 1946.

The drawing is lined to represent red color.

FOR HEAT CONSERVING APPARATUS FOR FURNACES IN THE FORM OF BAFFLE JACKETS BUILT AROUND STEAM AND WATER BOILERS.

Claims use since Nov. 21, 1943.

CLASS 35

BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES

Ser. No. 512,281. THE OHIO RUBBER COMPANY, Willoughby, Ohio. Filed Nov. 8, 1946.

AIR-KING

No claim is made to the word "Air" apart from the mark.

FOR CUSHION RUBBER TIRES FOR JUVENILE VEHICLES, HAND TRUCKS, AND THE LIKE.

Claims use since February 1940.

CLASS 38

PRINTS AND PUBLICATIONS

Ser. No. 510,710. MILDRED LITSTER, Gold Hill, Oreg. Filed Oct. 11, 1946.

THE OREGON VORTEX

The word "Oregon" is disclaimed.

FOR ORIGINAL AND SUBSEQUENT ISSUE OF BOOKS AND LEAFLETS RELATING TO THE STATE OF OREGON.

Claims use since May 20, 1944.

CLASS 42

KNITTED, NETTED, AND TEXTILE FABRICS, AND SUBSTITUTES THEREFOR

Ser. No. 474,780. CHOPAK-SOLOW CORPORATION, New York, N. Y. Filed Oct. 2, 1944.

CHARMLITE

FOR SATIN PIECE GOODS MADE OF COTTON AND RAYON FIBERS AND MIXTURES THEREOF.

Claims use since November 1940.

Ser. No. 486,880. TEXAS TEXTILE MILLS, Dallas, Tex. Filed Aug. 7, 1945.

a TEX★TEX Fabric

No claim is made to the exclusive use of the word "Fabric" apart from the mark.

FOR PIECE GOODS—NAMELY, DENIMS, COVERTS, WHIP-CORDS, TICKINGS, DRILLS, TWILLS, SHEETINGS, SUITINGS, WOVEN FROM COTTON, RAYON AND MIXED RAYON-COTTON FIBERS.

Claims use since Jan. 1, 1944.

Ser. No. 490,598. LEVINSOHN TEXTILE CO., New York, N. Y. Filed Oct. 27, 1945.

FOR READY-MADE PILLOW TICKS.
Claims use since Jan. 1, 1945.

Ser. No. 496,140. HOME CURTAIN CORP., Far Rockaway, N. Y. Filed Feb. 7, 1946.

Pekorol

FOR COMPLETELY FABRICATED WINDOW CURTAINS.
Claims use since Nov. 26, 1945.

Ser. No. 524,356. ST. PATRICK'S WOOLLEN MILLS (1942) LTD., Douglas, Eire. Filed June 17, 1947.

The exclusive use of the phrase "Made in Ireland" and the word "Tweed" is disclaimed apart from the mark shown.
FOR OVERCOATINGS AND OTHER PIECE GOODS MADE OF WOOL AND SOLD BY THE PIECE, YARD, OR BOLT.
Claims use since November 1945.

Ser. No. 524,503. WELLINGTON SEARS COMPANY, New York, N. Y. Filed June 19, 1947.

Wellardine

FOR COTTON PIECE GOODS.
Claims use since 1938.

CLASS 46

FOODS AND INGREDIENTS OF FOODS

Ser. No. 513,062. ANTHONY P. LEPORE, doing business as Salvo Products, Boston, Mass.

SALVO

FOR BLENDED VEGETABLE OIL FOR FOOD PURPOSES.
Claims use since Oct. 24, 1946.

Ser. No. 522,472. MCKEON CANNING CO., INC., Burbank, Calif. Filed May 16, 1947.

TESTA ROSSA

Applicant owns Reg. No. 183,350. The word "Rossa" is disclaimed apart from the mark.
FOR CANNED TOMATOES.
Claims use since 1934.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Ser. No. 520,184. SOCIETA ANONIMA E. ISOLABELLA & FIGLIO, Milan, Italy. Filed Apr. 4, 1947.

All wording with the exception of "Fior D'Alpe" is disclaimed apart from the mark.
FOR ALCOHOLIC LIQUEURS.
Claims use since January 1906.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Ser. No. 519,870. THE GATES RUBBER COMPANY, Denver, Colo. Filed Mar. 31, 1947.

GATEX

FOR AUTOMOBILE FLOOR MATS AND SHEETING MADE IN WHOLE OR IN PART FROM NATURAL OR SYNTHETIC RUBBER.
Claims use since Feb. 29, 1936.

ACT OF 1946

The following trade-marks are published in compliance with section 12(a) of the Trade-Mark Act of 1946. Notice of opposition under section 13 may be filed within thirty days of this publication. See Rules 20.1 to 20.5.
As provided by section 31 of said act, a fee of twenty-five dollars must accompany each notice of opposition.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Ser. No. 532,749. OLD BEN COAL CORPORATION, Chicago, Ill. Filed Aug. 28, 1947. Under section 2f of the act of 1946.

GLEN ROGERS

Applicant claims ownership of registrations Nos. 214,717 and 308,679.
FOR COAL.
Claims use since Sept. 1, 1920.

Ser. No. 534,628. J. M. HUBER CORPORATION, New York, N. Y., and Locust, N. J. Filed Sept. 16, 1947. Under section 2f of the act of 1946.

FOR FILLERS OR PIGMENTS—NAMELY, CARBON BLACKS AND CLAY, HAVING A VARIETY OF INDUSTRIAL USES, AND FOR TACKIFIERS MADE OF PINETREE GUMS AND USED IN COMPOUNDING RUBBER.
Claims use since October 1936.

Ser. No. 540,282. ISLAND CREEK COAL SALES COMPANY, Huntington, W. Va. Filed Nov. 6, 1947.

The exclusive use of the words "Guaranteed Genuine," "Coal," and "Pocahontas" are disclaimed apart from the mark.
FOR COAL.
Claims use since Apr. 1, 1935.

Ser. No. 542,312. HATTON COAL COMPANY, Columbus, Ohio. Filed Nov. 25, 1947. Under section 2f of the act of 1946.

BLUE RIDGE

Applicant claims ownership of registration No. 198,379.
FOR COAL.
Claims use since 1911.

Ser. No. 542,351. RAVEN COALS, INC., Beckley, W. Va. Filed Nov. 25, 1947.

The drawing is lined for the color red. The picture is fanciful.
FOR COAL.
Claims use since Oct. 22, 1947.

Ser. No. 542,353. RAVEN RED ASH COAL CO., INC., Beckley, W. Va. Filed Nov. 25, 1947.

RAVEN

FOR COAL.
Claims use since Feb. 10, 1907.

Ser. No. 546,072. UNIVERSAL ZONOLITE INSULATION COMPANY, Chicago, Ill., now by change of name Zonolite Company, a corporation of Montana. Filed Jan. 2, 1948.

ZONOLITE

Applicant claims ownership of registration No. 216,862.
FOR PERLITE.
Claims use since Dec. 3, 1947.

CLASS 2

RECEPTACLES

Ser. No. 536,349. CLARK GRAVE VAULT COMPANY, Columbus, Ohio. Filed Oct. 1, 1947. Under section 2f of the act of 1946.

CLARK

Applicant claims ownership of registration No. 310,644.
FOR GRAVE VAULTS.
Claims use since 1900.

Ser. No. 544,739. KALAMAZOO PAPER BOX COMPANY, Kalamazoo, Mich. Filed Dec. 18, 1947.

KAL-PAK

No claim is made to the word "Pak" apart from the mark.
FOR BOXES FORMED OF SHEET PLASTIC.
Claims use since Nov. 15, 1947.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 541,712. HARRY L. SINOFF, doing business as Club Funds Projects, Boston, Mass. Filed Nov. 19, 1947.

Poc-O-Pacs

Applicant disclaims right to the exclusive use of the word "Pacs."
FOR MEMO PAD CASES.
Claims use since Oct. 1, 1947.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 527,680. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio. Filed July 5, 1947. Under section 2f of the act of 1946.

NON-PAREIL

FOR SUDSING CLEANER, CLEANSER, AND DETERGENT.
Claims use since August 1938.

Ser. No. 527,729. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio. Filed July 5, 1947. CONCURRENT USE MARK. Under section 2f of the act of 1946.

LAUNETTE

Applicant claims ownership of registration No. 307,847.
FOR SUDSING CLEANER, CLEANSER, AND DETERGENT.
Claims use since July 1, 1932.

Ser. No. 527,735. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio. Filed July 5, 1947. Under section 2f of the act of 1946.

NO-EQUAL

FOR SUDSING CLEANER, CLEANSER, AND DETERGENT.
Claims use since July 1930.

Ser. No. 528,005. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio. Filed July 5, 1947. CONCURRENT USE MARK. Under section 2f of the act of 1946.

SARATOGA

FOR SUDSING CLEANER, CLEANSER, AND DETERGENT.
Claims use since December 1927.

Ser. No. 528,029. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio. Filed July 5, 1947. CONCURRENT USE MARK. Under section 2f of the act of 1946.

ORVUS

Applicant claims ownership of registration No. 304,885.
FOR SUDSING CLEANER, CLEANSER, AND DETERGENT.
Claims use since Nov. 4, 1932.

Ser. No. 540,953. WYANDOTTE CHEMICALS CORPORATION, Wyandotte, Mich. Filed Nov. 12, 1947.

ZORBALL

FOR LIQUID ABSORBENT AND FLOOR SWEEPING COMPOUND.
Claims use since June 3, 1947.

Ser. No. 542,364. JOHN C. STALFORT & SONS, INC., Baltimore, Md. Filed Nov. 25, 1947. Under section 2f of the act of 1946.

Stalfort's '68

FOR SHOE PASTE AND SHOE CLEANER.
Claims use since Dec. 31, 1926.

Ser. No. 544,456. JOHN J. O'CONNOR, INC., New York, N. Y. Filed Dec. 16, 1947.

MIRAMIDE

FOR ALL-PURPOSE CLEANER.
Claims use since Sept. 9, 1946.

Ser. No. 548,620. VIRGINIA-CAROLINA CHEMICAL CORPORATION, Richmond, Va. Filed Feb. 2, 1948.

VICAR STAR

FOR CLEANSER IN POWDER FORM FOR USE IN ELECTRIC DISHWASHING MACHINES.
Claims use since Jan. 7, 1948.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 516,937. MEAD JOHNSON & COMPANY, Evansville, Ind. Filed July 5, 1947.

NUTRAMIGEN

Applicant claims ownership of registrations Nos. 387,310 and 397,676.
FOR HYPO-ALLERGENIC PRODUCT COMPOSED OF A HYDROLYSATE OF PROTEIN, DEXTRIN, MALTOSE, MILK FAT, AND OTHER INGREDIENTS.
Claims use since Dec. 24, 1941.

Ser. No. 520,172. MEAT INDUSTRY SUPPLIERS, INC., Chicago, Ill. Filed Nov. 21, 1947.

FLAVAROMA

FOR CHEMICAL COMPOSITIONS FOR USE IN CURING MEATS.
Claims use since Mar. 14, 1947.

Ser. No. 524,071. E. C. MCKALLOR DRUG COMPANY, Binghamton, N. Y. Filed Sept. 19, 1947. Under section 2f of the act of 1946.

URIC-O

Applicant claims ownership of registration No. 61,454.
FOR REMEDY FOR RHEUMATIC PAINS, NEURALGIA, HEADACHES, AND MUSCULAR ACHES.
Claims use since Aug. 1, 1902.

Ser. No. 527,316. TABLE ROCK LABORATORIES, INC., Greenville, S. C. Filed July 5, 1947.

TABEROC

FOR PREPARATIONS FOR THE TREATMENT OF NEURITIS AND CHILOSCHISIS; VITAMIN B COMPLEX DEFICIENCIES—MALNUTRITION; POLYNEURITIS AND CARDIAC DISTURBANCE; THYROID DEFICIENCIES; ESSENTIAL HYPERTENSION; ANGINA PECTORIS; HYDROCHLORIC ACID DEFICIENCIES—HYPOCHLORHYDRIA; ARTHRITIS; RHEUMATISM AND GOUT; PRIMARY AND SECONDARY ANEMIA; FUNGUS INFECTIONS—EPIDERMIDOMY—AND A SOLUTION TINCTURE AND OINTMENT PREPARATION FOR THE TREATMENT OF BURNS AND FOR USE ON SURGICAL DRESSINGS.
Claims use since January 1939.

Ser. No. 528,544. VICTOR CHEMICAL WORKS, Chicago, Ill. Filed July 12, 1947.

VICTAWET

FOR WETTING AGENTS.
Claims use since January 1946.

Ser. No. 531,695. THE MIDY LABORATORIES, (INC.), New York, N. Y. Filed Aug. 18, 1947. Under section 2f of the act of 1946.

PIPERAZINE-MIDY

The word "Piperazine" is disclaimed except as shown.
Applicant claims ownership of registrations Nos. 371,332 and 184,371.
FOR PREPARATIONS FOR THE TREATMENT OF GRAVEL, STONE, AND OTHER MANIFESTATIONS OF THE URIC-ACID DIATHESIS, AND TO CONTROL THE FORMATION OF URATES AND FOR USE AS AN URINARY ANTISEPTIC.
Claims use since Dec. 1, 1907.

Ser. No. 532,680. BRUNSWICK LABORATORIES, INC., Chicago, Ill. Filed Aug. 28, 1947.

UNDELEX

FOR OINTMENT AND POWDER FOR ATHLETE'S FOOT.
Claims use since May 1947.

Ser. No. 533,577. E. F. HOUGHTON & Co., Philadelphia, Pa. Filed Sept. 5, 1947.

SOFTEX

FOR TEXTILE FINISHING AGENTS, BEING PLASTICIZING AGENTS (OR, SOFTENING AGENTS) FOR USE IN TEXTILE FINISHING BATHS HAVING THE APPEARANCE OF SOFT PASTES WHICH MAY BE SEMI-FLUID. THE PRODUCTS COMPRISE WATER, FATS, AND FATTY DERIVATIVES OF VARYING TYPES AND MAY INCLUDE WAXES ALSO. AMONG THE FATTY DERIVATIVES ARE SOAPS, SULFATED FATS, AND FATTY CONDENSATES WITH AMINES OR POLYHYDRIC ALCOHOLS AND GLYCOLS. THE PRODUCTS MAY BE EITHER CATIONIC, NONIONIC OR ANIONIC.
Claims use since Apr. 26, 1946.

Ser. No. 534,631. J. M. HUBER CORPORATION, Locust, N. J., and New York, N. Y. Filed Sept. 16, 1947. Under section 2f of the act of 1946.

HUBER

FOR CHEMICAL COMPOSITIONS FOR USE IN COMPOUNDING NATURAL OR SYNTHETIC RUBBER—NAMELY, A COMPOSITION FOR TACKIFYING THE SAME, A COMPOSITION FOR ACTIVATING VULCANIZATION ACCELERATORS AND A RESINOUS PLASTICIZING AND TACKIFYING MATERIAL PREPARED FROM PINE TREE GUMS.
Claims use since July 6, 1943.

Ser. No. 534,832. SUN OIL COMPANY, Philadelphia, Pa. Filed Sept. 17, 1947.

PETROFAC

FOR ORGANIC POLAR COMPOUND DERIVED FROM PETROLEUM USED AS AN INGREDIENT OF CUTTING OIL TO PROLONG LIFE AND HAVING A GENERAL USE IN INDUSTRY.
Claims use since July 16, 1947.

Ser. No. 536,097. THE KLENZOID CORPORATION, Philadelphia, Pa. Filed Sept. 29, 1947.

THE KLENZOID CORPORATION KONZOID PHILA. PENNA.

The words "Corporation," "Phila.," and "Penna." are disclaimed apart from the mark.
FOR CHEMICAL PREPARATION USED IN TREATING WATER TO ELIMINATE OXYGEN AND FOR THE REMOVAL AND PREVENTION OF SCALE, SLUDGE, AND OTHER HARMFUL ACCUMULATIONS OR GROWTHS IN CONDENSERS, AIR-CONDITIONING SYSTEMS, AND THE LIKE.
Claims use since May 24, 1946.

Ser. No. 539,949. FRIGID FLUID COMPANY, Chicago, Ill. Filed Nov. 3, 1947.

Frigid

FOR EMBALMING PREPARATIONS.
Claims use since Feb. 24, 1903.

Ser. No. 540,075. INTERNATIONAL RUSTPROOF CORPORATION, Cleveland, Ohio. Filed Nov. 4, 1947. Under section 2f of the act of 1946.

RUSTAREST

FOR CHEMICAL COMPOUNDS IN LIQUID FORM FOR USE AS A RUST PREVENTIVE AND AS A PROTECTIVE COATING FOR METAL.
Claims use since Mar. 15, 1931.

Ser. No. 546,189. COMMERCIAL AND INDUSTRIAL PRODUCTS Co., Childs, Pa. Filed Jan. 5, 1948.

CIPCO THE GLOW of PERFECTION

The lining in the drawing is to indicate shading only. Applicant disclaims the words "The Glow of Perfection."
FOR MOTH SPRAYS, DISINFECTANTS, AND INSECT KILLERS.
Claims use since Aug. 1, 1946.

Ser. No. 549,132. DAGGETT & RAMSDELL, New York, N. Y., assignor to Daggett and Ramsdell, Inc., New York, N. Y., a corporation of Delaware. Filed Feb. 9, 1948.

Gay Manhattan

Applicant claims ownership of registration No. 316,625.
FOR BUBBLE BATH, BATH (BOUDOIR) POWDER, DUSTING POWDER, AND PERFUME.
Claims use on dusting powder since Nov. 29, 1945; on perfume since Nov. 15, 1946; and on bubble bath and boudoir powder since Dec. 19, 1947.

Ser. No. 550,991. BUFFALO FIRE APPLIANCE CORPORATION, Dayton, Ohio. Filed Mar. 2, 1948.

BUFFALO better-built

Applicant claims ownership of registration No. 424,562.
FOR CHEMICAL KITS FOR RECHARGING FIRE EXTINGUISHERS—NAMELY, BICARBONATE OF SODA POWDER AND SULPHURIC ACID FOR SODA-ACID TYPE EXTINGUISHERS, ALUMINUM SULPHATE POWDER AND BICARBONATE OF SODA POWDER FOR FOAM-TYPE EXTINGUISHERS, AND CARBON TETRACHLORIDE FOR VAPORIZING LIQUID TYPE EXTINGUISHERS.
Claims use since July 1940.

Ser. No. 551,217. ELIZABETH ARDEN SALES CORPORATION, New York, N. Y. Filed Mar. 5, 1948.

VELVA COMPLEXION FILM

The words "Complexion Film" are disclaimed apart from the mark. Applicant claims ownership of registrations Nos. 136,514 and 311,948.
FOR FOUNDATION CREAMS AND LOTIONS.
Claims use since Jan. 20, 1948.

Ser. No. 552,897. SYNCO PRODUCTS COMPANY, INC., doing business as Synco Products, Chattanooga, Tenn. Filed Mar. 24, 1948.

scat

FOR ATMOSPHERIC DEODORANTS.
Claims use since Jan. 12, 1948.

Ser. No. 553,092. ENDO PRODUCTS INC., Richmond Hill, N. Y. Filed Mar. 26, 1948.

PERCODAN

FOR GENERAL ANALGESIC.
Claims use since Jan. 15, 1948.

Ser. No. 554,778. JACINTA FADEROGA, Oakland, Calif. Filed Apr. 16, 1948.

JACI

FOR MEDICINAL PREPARATION FOR TREATMENT OF SKIN ERUPTIONS AND OTHER SKIN AND BLOOD DISORDERS, AND FOR SEXUAL DISEASES, FOR INTERNAL USE.
Claims use since Jan. 1, 1944.

Ser. No. 556,217. PHILADELPHIA QUARTZ COMPANY, Philadelphia, Pa. Filed May 4, 1948.

METSO 99

Applicant claims ownership of registrations Nos. 280,440 and 295,751.
FOR SILICATE OF SODA.
Claims use since February 1934.

Ser. No. 557,161. SHARP & DOHME, INCORPORATED, Philadelphia, Pa. Filed May 15, 1948.

RUDELTIN

FOR PREPARATION USEFUL IN THE TREATMENT OF CONDITIONS OF THE VASCULAR SYSTEM, PARTICULARLY HYPERPIESIA, AND HAVING VASODILATOR AND/OR SEDATIVE PROPERTIES.
Claims use since Apr. 28, 1948.

Ser. No. 560,551. DIMITT'S, Oklahoma City, Okla. Filed July 1, 1948.

Magic Touch

FOR WITCH HAZEL CREAM.
Claims use since Oct. 1, 1926.

Ser. No. 562,609. THE GRIFFITH LABORATORIES, INC., Chicago, Ill. Filed July 31, 1948. Under section 2f of the act of 1946.

PÓ PRAGUE

No claim is made to the word "PO" apart from the mark as shown. Applicant claims ownership of registrations Nos. 326,877 and 326,878.

FOR SALT COMPOSITION FOR USE IN CURING MEATS AND LIKE ANIMAL PRODUCTS.

Claims use since Apr. 5, 1948.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Ser. No. 534,054. REMINGTON ARMS COMPANY, INC., Bridgeport, Conn. Filed Sept. 10, 1947. Under section 2f of the act of 1946.

HIGH VELOCITY

FOR AMMUNITION—PARTICULARLY, FIXED AMMUNITION FOR SMALL ARMS AND COMPONENTS THEREOF.

Claims use since Jan. 16, 1925.

Ser. No. 536,892. VERNOR GIPSON, Worth, Ill. Filed Oct. 6, 1947.

"WASP"

FOR SPORTING AND TARGET RIFLES, CARTRIDGE LOADING TOOLS DESIGNED FOR USE IN LOADING AND RELOADING AMMUNITION FOR THESE RIFLES: BULLET SEATING TOOLS AND THE FINISHED AMMUNITION TO FIT THESE RIFLES.

Claims use since July 15, 1939.

CLASS 12

CONSTRUCTION MATERIALS

Ser. No. 529,884. DOUGLAS CO., Waco, Tex. Filed July 29, 1947.

KURIT

FOR MAT USED AS A COVERING FOR CONCRETE DURING THE SEASONING THEREOF.

Claims use since Apr. 22, 1947.

Ser. No. 530,416. M. J. MERKIN PAINT CO., INC., New York, N. Y. Filed Aug. 4, 1947. Under section 2f of the act of 1946.

MERKIN

Applicant claims ownership of registrations Nos. 261,831 and 413,651.

FOR CAULKING COMPOUNDS AND PLASTIC ROOFING COATINGS, EACH COMPOSED ESSENTIALLY OF ASPHALT COMPOUNDS, ASBESTOS FIBRE, MINERAL FILLERS, AND VOLATILE SOLVENTS; AND WATER-RESISTANT COATINGS FOR EXTERIOR AND INTERIOR USE, COMPOSED ESSENTIALLY OF COVERING PIGMENTS, ASBESTOS COMPOUNDS, MINERAL FILLERS, COMPOUNDS OF DRYING AND SEMI-DRYING OILS, SYNTHETIC RESINS, METALLIC SOAPS, AND VOLATILE SOLVENTS.

Claims use since April 1922.

Ser. No. 530,564. PROTECTION PRODUCTS MANUFACTURING CO., Kalamazoo, Mich. Filed Aug. 5, 1947.

KALASEAL

FOR LIQUID WATER REPELLENT MATERIAL FOR APPLICATION TO BRICK, CONCRETE, AND OTHER MASONRY MATERIALS AND SURFACES.

Claims use since July 11, 1947.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 500,708. SPOTNAILS, INC., Evanston, Ill. Filed Oct. 23, 1947.

SPOTSTAPLES

FOR FASTENING ELEMENTS IN THE NATURE OF STAPLES.

Claims use since Feb. 7, 1946.

Ser. No. 529,719. SOUTH CHESTER CORPORATION, Chester, Pa. Filed July 26, 1947.

SOUTHCO

Applicant claims ownership of registration No. 423,069.

FOR ANCHOR NUTS, METAL FASTENERS CONSISTING OF A METAL SCREW AND SPEED NUT FOR FASTENING DOORS, COVERS, PANELS, AND THE LIKE, RIVETS, AND DOOR RETAINING SPRINGS.

Claims use since Dec. 18, 1945.

Ser. No. 531,707. WILLIAM E. PERSINGER, Burbank, Calif. Filed Aug. 18, 1947.

SHINE-BOY

The word "Shine" is disclaimed apart from the mark. Applicant claims ownership of registration No. 438,596.

FOR SHOE HOLDER OF STEEL DESIGNED TO SUPPORT AND TO HOLD STEADY A SHOE WHILE IT IS BEING SHINED.

Claims use since Feb. 8, 1946.

Ser. No. 533,536. CARROLLTON MANUFACTURING COMPANY, Carrollton, Ohio. Filed Sept. 5, 1947.

COOKCRAFT

FOR STAINLESS STEEL COOKING UTENSILS—NAMELY, SAUCE PANS, SAUCE POTS, STOCK POTS, DISH PANS, DOUBLE BOILERS, FRYING PANS, PUDDING PANS, SKILLETS, ROASTERS, MIXING BOWLS, CASSEROLES, COFFEE POTS, TEA KETTLES, PERCOLATORS, SERVERS, DUTCH OVENS, GRIDDLES, PITCHERS, COLANDERS, CAKE SAVERS, PIE PANS, CAKE PANS, INDIVIDUAL CASSEROLES, OBLONG SERVING TRAYS, ROUND BEVERAGE TRAYS, FOOTED BOWLS, DINNER PLATES, SOUP PLATES, SAUCERS, AND CUPS.

Claims use since April 1924.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Ser. No. 539,626. BADGER BRASS & ALUMINUM FOUNDRY CO., Milwaukee, Wis. Filed Oct. 31, 1947.

B A B

FOR ALUMINUM, ALUMINUM BRONZE, MANGANESE, BRONZE, AND COPPER CASTINGS AND EXTRUSIONS.

Claims use since Dec. 15, 1945.

Ser. No. 545,796. TITAN METAL MANUFACTURING COMPANY, Bellefonte, Pa. Filed Dec. 30, 1947.

TI-NIC-O-SIL

FOR CORROSION-RESISTANT NON-FERROUS ALLOY CONSISTING PRIMARILY OF COPPER, ZINC AND NICKEL AND SOLD IN THE FORM OF EXTRUDED AND COLD DRAWN RODS AND SPECIAL SHAPES.

Claims use since Oct. 12, 1932.

Ser. No. 547,147. POOR & COMPANY, Chicago, Ill. Filed Jan. 15, 1948.

Azed

FOR METAL PRODUCTS IN THE FORM OF WIRE, TAPE, OR SHEET PROVIDED WITH A METAL COATING PLATED OUT OF ACID ZINC AND ACID ZINC ALOY ELECTROLYTES BY CONTINUOUS ELECTRODEPOSITION PROCESSES.

Claims use since Jan. 5, 1948.

Ser. No. 550,178. SMALL STEEL CASTINGS, INC., Buffalo, N. Y. Filed Feb. 19, 1948.

SS

FOR LOW CARBON STEEL CASTINGS.

Claims use since Mar. 1, 1947.

CLASS 15

OILS AND GREASES

Ser. No. 526,821. THE PURE OIL COMPANY, Chicago, Ill. Filed July 5, 1947.

PURED

FOR LUBRICATING OILS.

Claims use since May 26, 1924.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 523,010. BURROUGHS ADDING MACHINE COMPANY, Detroit, Mich. Filed July 9, 1947. Under section 2f of the act of 1946.

Burroughs

Applicant claims ownership of registrations Nos. 264,908 and 333,110.

FOR ELECTRICAL APPLIANCES—NAMELY, ELECTRIC MOTORS, INTERFERENCE ELIMINATORS, RADIO FILTERS, CONDENSERS, CIRCUIT PROTECTORS, AND THE PARTS THEREOF.

Claims use since Mar. 19, 1947.

Ser. No. 530,860. SERVICE APPLIANCE CORP., Passaic, N. J. Filed Aug. 8, 1947.

PEELMASTER

FOR ELECTRICAL VEGETABLE PEELERS.

Claims use since Feb. 17, 1941.

Ser. No. 532,044. MILLER ELECTRIC CO., Pawtucket, R. I. Filed Aug. 21, 1947.

FOR ELECTRIC DECORATIVE LIGHTING SETS AND PARTS THEREFOR, ELECTRIC CORD SETS, ELECTRIC WIRE AND/OR CABLE, TAPS, CORD CONNECTORS, FUSES, PLUGS, FLUORESCENT BALLASTS, TRANSFORMERS.

Claims use since July 22, 1947.

Ser. No. 544,665. THE SHEPARD ELEVATOR COMPANY, Cincinnati, Ohio. Filed Oct. 23, 1947. Under section 2f of the act of 1946.

SHEPARD

Applicant claims ownership of registration No. 426,071.

FOR ELECTRICALLY OPERATED ELEVATORS FOR PASSENGERS AND FREIGHT.

Claims use since 1921.

Ser. No. 544,678. ADVANCE ELECTRIC AND RELAY CO., Los Angeles, Calif. Filed Dec. 18, 1947.

FOR RADIO RECEIVERS, ELECTRICAL FILTERS FOR RADIO RECEIVERS, LOUD SPEAKERS, AND ELECTRIC RELAYS INCLUDING BOTH ALTERNATING CURRENT RELAYS AND DIRECT CURRENT RELAYS, OF BOTH THE SINGLE-POLE AND MULTIPOLE TYPE.

Claims use since 1927.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Ser. No. 530,982. SPORT PRODUCTS, INC., Cincinnati, Ohio. Filed Aug. 9, 1947. Under section 2f of the act of 1946.

THE SNARE

FOR BASEMAN'S MITTS AND GLOVES.

Claims use since June 1, 1933.

Ser. No. 531,128. THE HETTRICK MANUFACTURING COMPANY, Toledo, Ohio. Filed Aug. 12, 1947. Under section 2f of the act of 1946.

HETTRICK

Applicant claims ownership of registration No. 276,358.

FOR PLAY POOLS, SAND BOXES, AND SKATE SAILS.

Claims use since Jan. 1, 1917.

Ser. No. 534,125. JAMES HEDDON'S SONS, Dowagiac, Mich. Filed Sept. 11, 1947. Under section 2f of the act of 1947.

Stanley

FOR FISHING RODS, HOOKS, PORK CHUNK, PORK STRIP, AND ARTIFICIAL BAITS.

Claims use since January 1923.

Ser. No. 543,225. QUAKER CITY GEAR WORKS, INC., Philadelphia, Pa. Filed Dec. 3, 1947.

Castomatic

FOR FISHING REELS.

Claims use since Jan. 23, 1946.

Ser. No. 546,009. THE METAL WARE CORPORATION, Two Rivers, Wis. Filed Jan. 2, 1948.

Little Lady

FOR CHILDREN'S TOYS—NAMELY, STOVES, ELECTRIC STOVES, KITCHEN UTENSILS, IRONS, SINKS, AND ELECTRIC IRONS.

Claims use since May 1939.

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 510,021. LINK-BELT COMPANY, Chicago, Ill. Filed Aug. 15, 1947. Under section 2f of the act of 1946.

TRU-TRAC

FOR CONVEYORS COMPRISING A SERIES OF WHEEL SUPPORTED CARS MOUNTED FOR TRAVELING OVER RAILS AND USED FOR THE TRANSPORTATION OF FOUNDRY MOLDS.

Claims use since Oct. 10, 1941.

Ser. No. 525,119. SMALLEY MANUFACTURING COMPANY, Manitowoc, Wis. Filed Nov. 14, 1947.

HATCHET MILL

Applicant disclaims the word "Mill" apart from the mark shown.

FOR HAMMER MILLS.

Claims use since April 1940.

Ser. No. 529,488. NORDBERG MANUFACTURING COMPANY, Milwaukee, Wis. Filed July 25, 1947.

BALLASTEX

FOR BALLAST EXCAVATORS—NAMELY, MACHINES TO EXCAVATE RAILWAY TRACKAGE BALLAST, FOR CLEANING OR REPLACING IT.

Claims use since June 6, 1947.

Ser. No. 531,867. THE HENRY G. THOMPSON & SON COMPANY, New Haven, Conn. Filed Aug. 19, 1947. Under section 2f of the act of 1946.

MILFORD

Applicant claims ownership of registrations Nos. 205,047 and 399,376.

FOR HACK SAW BLADES, BAND SAW BLADES, HACK SAW FRAMES, COMPASS SAW BLADES, AND TOOL BITS.

Claims use on hack saw blades since September 1905, on band saw blades since 1932, on hack saw frames since 1933, on compass saw blades since 1932, and on tool bits since January 1938.

Ser. No. 532,255. VIKING PUMP COMPANY, Cedar Falls, Iowa. Filed Aug. 23, 1947.

VIKING PUMPS

FIRST IN AMERICA

Applicant lays no claim to the words "Pumps" and "First In America" nor the representation of the goods apart from the mark. Applicant claims ownership of registrations Nos. 318,563 and 108,409.

FOR ROTARY PUMP STRUCTURE USEABLE AS BOTH A LIQUID PUMP OR A HYDRAULIC MOTOR AND PARTS FOR THE FOREGOING.

Claims use since Apr. 24, 1933.

Ser. No. 532,256. VIKING PUMP COMPANY, Cedar Falls, Iowa. Filed Aug. 23, 1947.

Straitline

The drawing is lined for shading purposes only. Applicant claims ownership of registration No. 315,377.

FOR ROTARY PUMP STRUCTURE USEABLE AS BOTH A LIQUID PUMP OR A HYDRAULIC MOTOR AND PARTS FOR THE FOREGOING.

Claims use since Dec. 19, 1931.

Ser. No. 532,257. VIKING PUMP COMPANY, Cedar Falls, Iowa. Filed Aug. 23, 1947.

VIKING

Applicant claims ownership of registrations Nos. 108,400 and 318,563.

FOR ROTARY PUMP STRUCTURE USEABLE AS BOTH A LIQUID PUMP OR A HYDRAULIC MOTOR AND PARTS FOR THE FOREGOING.

Claims use since Dec. 18, 1911.

Ser. No. 532,562. THE CLEVELAND TRENCHER COMPANY, Cleveland, Ohio. Filed Aug. 27, 1947.

FOR TRENCHING MACHINES, TAMPING MACHINES, BACKFILLING MACHINES, PIPE CRANES, AND PARTS THEREOF.

Claims use since July 1, 1947.

Ser. No. 537,493. NORTHWEST MARINE IRON WORKS, Portland, Oreg. Filed Oct. 10, 1947.

FOR LOGGING AND SAWMILL MACHINERY—NAMELY, LOG HAUL-IN MACHINES, COMBINED LOG HAUL-IN AND SAWING MACHINES, DECK SAWS, RESAWS, AND LOG TURNERS.

Claims use since June 22, 1946.

Ser. No. 540,598. AMERICAN MACHINERY CORPORATION, Orlando, Fla. Filed Aug. 8, 1947. Under section 2f of the act of 1946.

MAY-COBB

Applicant claims ownership of registrations Nos. 485,114 and 420,957.

FOR DISTRIBUTORS OR BROADCASTERS FOR FERTILIZERS, ROAD MATERIALS AND LIKE MATERIALS AND PARTS THEREOF.

Claims use since Jan. 10, 1934.

CLASS 25

LOCKS AND SAFES

Ser. No. 527,924. TALON, INC., Meadville, Pa. Filed July 5, 1947.

TALON

Applicant claims ownership of registrations Nos. 243,746, 250,113, 270,090, 270,773, 271,179, 271,679, 273,995, 319,009, and 415,418.

FOR LOCKS FOR SLIDE FASTENERS, AND MONEY BAGS.

Claims use since Feb. 10, 1928.

Ser. No. 534,443. INDEPENDENT LOCK COMPANY, Fitchburg, Mass. Filed Sept. 13, 1947.

1098 LA

FOR KEY BLANKS.

Claims use since 1935.

Ser. No. 534,444. INDEPENDENT LOCK COMPANY, Fitchburg, Mass. Filed Sept. 13, 1947.

1011

FOR KEY BLANKS.

Claims use since 1918.

Ser. No. 534,445. INDEPENDENT LOCK COMPANY, Fitchburg, Mass. Filed Sept. 13, 1947.

1001 EB

FOR KEY BLANKS.

Claims use since 1918.

Ser. No. 534,446. INDEPENDENT LOCK COMPANY, Fitchburg, Mass. Filed Sept. 13, 1947.

999

FOR KEY BLANKS.

Claims use since 1918.

Ser. No. 534,447. INDEPENDENT LOCK COMPANY, Fitchburg, Mass. Filed Sept. 13, 1947.

1022

FOR KEY BLANKS.

Claims use since 1918.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 536,373. CHARLES FOSTER & CO., INC., New York, N. Y. Filed Oct. 1, 1947.

CHEX

FOR OPTICAL GOODS—NAMELY, SPECTACLES, GOGGLES, LENSES, SUN GLASSES, FRAMES, MOUNTINGS, AND PARTS THEREOF.

Claims use since Jan. 10, 1947.

Ser. No. 547,512. BELL & HOWELL COMPANY, Chicago, Ill. Filed Jan. 20, 1948.

WIDOR

FOR PHOTOGRAPHIC LENSES.

Claims use since Sept. 3, 1947.

Ser. No. 549,582. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Feb. 12, 1948.

FOR BATHROOM SCALES.

Claims use since July 15, 1947.

Ser. No. 549,587. K. STENZEL & SONS, INC., New York, N. Y. Filed Feb. 12, 1948.

Glaminettes

FOR SPECTACLE FRAMES AND PARTS THEREOF.

Claims use since Jan. 7, 1948.

Ser. No. 549,738. KOLLMORGEN OPTICAL CORPORATION, Brooklyn, N. Y. Filed Feb. 14, 1948.

Monette

FOR PRISMATIC TELESCOPES.

Claims use since November 1947.

CLASS 27

HOROLOGICAL INSTRUMENTS

Ser. No. 527,045. EVKOB WATCH CO., New York, N. Y. Filed July 5, 1947. Under section 2f of the act of 1946.

MARMON

Applicant claims ownership of registration No. 235,394.
FOR WATCHES.
Claims use since Oct. 5, 1926.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Ser. No. 524,694. THE ELLMORE SILVER CO., INC., Meriden, Conn. Filed Jan. 13, 1948. Under section 2f of the act of 1946.

ORLEANS

FOR STERLING SILVER FLATWARE—NAMELY, FORKS, KNIVES, SPOONS, AND OTHER FLAT TABLE WARE.
Claims use since Sept. 7, 1939.

Ser. No. 529,065. THE LIQUID CARBONIC CORPORATION, Chicago, Ill. Filed July 21, 1947. Under section 2f of the act of 1946.

Gasweld

Applicant claims ownership of registration No. 402,889.
FOR WELDING TORCHES, CUTTING TORCHES, BRAZING TORCHES, AND PREHEATING TORCHES.
Claims use since Apr. 15, 1942.

Ser. No. 529,066. THE LIQUID CARBONIC CORPORATION, Chicago, Ill. Filed July 21, 1947. Under section 2f of the act of 1946.

Gasweld

Applicant claims ownership of registrations Nos. 400,001, 400,002, and 402,889.
FOR WELDING TORCHES, CUTTING TORCHES, BRAZING TORCHES, AND PREHEATING TORCHES.
Claims use since Apr. 15, 1942.

Ser. No. 529,475. KISCO BOILER & ENGINEERING CO., St. Louis, Mo. Filed July 25, 1947.

KISCO

FOR CABINET TYPE BOILERS; BOILER FEED SYSTEMS; EXHAUST FANS; RETURN SYSTEMS FOR USE IN STEAM BOILERS, AND UNIT HEATERS.
Claims use since May 1928.

Ser. No. 532,279. DETROIT-MICHIGAN STOVE COMPANY, Detroit, Mich. Filed August 25, 1947.

GARLAND

Applicant claims ownership of registrations Nos. 91,977 and 92,902.
FOR HEATING AND COOKING STOVES, FURNACES, AND RANGES USING COMBUSTIBLE MATERIAL.
Claims use since Dec. 10, 1882.

Ser. No. 533,434. CENTURY ENGINEERING CORPORATION, Cedar Rapids, Iowa. Filed July 5, 1947.

AQUA MASTER

Applicant claims ownership of registration No. 388,179.
FOR WATER HEATERS AND PARTS THEREOF, USING SOLID AND LIQUID FUELS.
Claims use since Feb. 16, 1938.

Ser. No. 533,435. CENTURY ENGINEERING CORPORATION, Cedar Rapids, Iowa. Filed July 5, 1947.

ZEPH OILATOR

Applicant claims ownership of registration No. 369,020.
FOR OIL AND GAS BURNING FURNACE UNITS.
Claims use since Jan. 11, 1939.

Ser. No. 533,439. CENTURY ENGINEERING CORPORATION, Cedar Rapids, Iowa. Filed July 5, 1947.

ZONE QUEEN

Applicant claims ownership of registration No. 363,856.
FOR GAS AND OIL BURNING FURNACES AND BOILERS.
Claims use since Aug. 3, 1938.

Ser. No. 533,779. ALBERT P. ROBINSON, Seattle, Wash. Filed Sept. 8, 1947.

TRISTOP

Applicant claims ownership of registrations Nos. 175,701 and 158,056.
FOR CAST IRON AND STEEL FIREPLACE THROAT FRAMES AND DAMPERS.
Claims use since Aug. 15, 1921.

Ser. No. 534,766. GENERAL MACHINE COMPANY, INC., Emmaus, Pa. Filed Sept. 17, 1947.

The word "Electric," the representation of a stoker retort and the representation of a label per se are disclaimed apart from the mark as shown. Applicant claims ownership of registrations Nos. 188,711 and 296,922.
FOR AUTOMATIC COAL BURNERS AND STOKERS.
Claims use since Jan. 12, 1924, on "Electric Furnace-Man"; and since Sept. 13, 1938, in the form shown.

Ser. No. 536,122. NICHOLS ENGINEERING & RESEARCH CORPORATION, New York, N. Y. Filed Sept. 29, 1947. Under section 2f of the act of 1946.

HERRESHOFF

Applicant claims ownership of registration No. 207,436.
FOR FURNACES FOR INCINERATION, ROASTING, CALCINING, AND DRYING PURPOSES, AND PARTS THEREFOR.
Claims use since 1896.

Ser. No. 537,494. THE NORWALK AIRCONDITIONING CORP., South Norwalk, Conn. Filed Oct. 10, 1947.

NORWALKER

FOR HOUSE AND BUILDING HEATING FURNACES FOR USE WITH COAL, GAS, AND OIL.
Claims use since Sept. 30, 1947.

Ser. No. 542,432. BARRIDON OIL BURNER CORPORATION, Hartford, Conn. Filed Nov. 26, 1947.

BARRIDON

FOR RANGE OIL BURNERS, WATER HEATERS, COOK STOVES, CIRCULATING HEATERS, AND RANGE BURNER ACCESSORIES—NAMELY, CONSTANT LEVEL VALVES, OIL TANKS, BURNERS, CAPS, AND LIGHTERS.
Claims use since Oct. 10, 1947.

CLASS 35

BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES

Ser. No. 511,974. ARROWHEAD RUBBER COMPANY, Vernon, Calif. Filed July 5, 1947.

ARROWHEAD

FOR THE FOLLOWING ITEMS, MADE WHOLLY OR IN PART FROM RUBBER OR RUBBER SUBSTITUTES OR FROM SYNTHETIC RESINS: NONMETALLIC WASHERS; NONMETALLIC FAUCET CUSHIONS; NONMETALLIC SPACERS FOR SPACING APART TWO OR MORE OBJECTS; GASKETS; GROMMETS; NONMETALLIC DIAPHRAGMS OF THE TYPE WHICH ARE MOVED OR EXPANDED BY FLUID PRESSURE; NONMETALLIC PLUGS FOR CLOSING OPENINGS; O RINGS, COMPRISING NONMETALLIC ANNULI FOR PACKING, FLUID SEALING, ETC.; BELTING; HOSE; WIRE WRAPPED HOSE; FLUID SEALING MEMBERS FOR PREVENTING PASSAGE OF FLUID BETWEEN TWO CHAMBERS ON EITHER SIDE OF THE SEALING MEMBERS, NONMETALLIC FITTINGS FOR JOINING TOGETHER, BLOCKING OFF, OR EXTENDING HOSE, FLEXIBLE DUCTS, ETC.; NONMETALLIC DUCTS FOR CONDUCTING FLUIDS; FLEXIBLE DUCTS FOR CONDUCTING FLUIDS; OIL WELL PACKERS AND SLEEVES; AND NONMETALLIC TIRES.

BEAUTYGLO

FOR SHAMPOO, TALCUM POWDER, FACE POWDER, TOOTH POWDER, TOOTH PASTE, FACE CREAM, HAIR TONIC, DANDRUFF SOLUTION, GENERAL MEDICINAL TONIC, WITCH HAZEL, SALVE, ECZEMA OINTMENT, RECTAL SUPPOSITORY, FEMALE SUPPOSITORY, DYSPEPSIA TABLETS, RHEUMATIC TABLETS, COUGH SYRUP, PILE OINTMENT, WORM WAFERS, LAXATIVES, NERVE PILLS, KIDNEY PILLS, AND PERFUME EXTRACTS.
Claims use since Aug. 1, 1914.

Reg. No. 344,545. Registered Mar. 30, 1937. MULFORD COLLOID LABORATORIES, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

Mangacol

FOR SOLUTION OF MANGANESE IN COLLOIDAL FORM, FOR USE IN FURUNCULOSIS SEBORRHOEIC, ECZEMA, FOLLOWING WOUND INFECTION AND IN THE TREATMENT OF BOILS AND ABSCESSES, AS WELL AS A PREPARATION FOR USE IN POISONING BY SULPHUR COMPOUNDS AND MUSTARD GAS (DICHLORETHYL SULPHIDE).
Claims use since on or before Sept. 1, 1921.

Reg. No. 344,767. Registered Apr. 6, 1937. MULFORD COLLOID LABORATORIES, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

IDOCOL

FOR SOLUTION OF IODINE IN COLLOIDAL FORM, COMPRISING A POWERFUL FUNGICIDE FOR USE IN ACUTE AND CHRONIC AFFECTIONS OF THE EYE, EAR, NOSE AND THROAT, SUPPURATIVE WOUNDS, ABSCESSES, SEPTICEMIA, GONORRHOEAL AND CHRONIC CYSTITIS, SEPTIC CONDITION OF THE MOUTH, RIGGS' DISEASE, TONSILLITUS, QUINSIES, LEUCORRHEA, GONORRHOEA, PROSTATIC GLEET, AND AS A PROPHYLACTIC AND CURATIVE IN INFLUENZA AND CATARRHAL OR PURULENT CONDITIONS OF THE MUCUOUS MEMBRANES.
Claims use since on or before Sept. 1, 1921.

Reg. No. 361,931. Registered Nov. 8, 1938. THE SHALER COMPANY, Waupun, Wis., a corporation of Delaware. Republished by registrant.

KAR-B-OUT

FOR MOTOR GUM SOLVENT.
Claims use since Apr. 1, 1937.

Reg. No. 371,288. Registered Sept. 19, 1939. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio, a corporation of Ohio. Republished by registrant.

DEHYDROL

FOR OILS USED IN THE MANUFACTURE OF PAINTS, VARNISH, LACQUERS, PRINTING INKS, LINOLEUM AND SYNTHETIC RESINS AND HAVING THEIR INDUSTRIAL USES.
Claims use since Feb. 8, 1939.

Reg. No. 374,854. Registered Jan. 30, 1940. THE HOUSE FOR MEN, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

HIS

FOR AFTER SHAVING LOTION, COLOGNE, HAIR TONIC, FACE LOTION, HAND LOTION, HAND STAIN REMOVER, TOOTH PASTE, HAIR CONTROL PASTE, AND TALCUM POWDER.
Claims use since Feb. 20, 1939.

Reg. No. 376,877. Registered Apr. 9, 1940. INLAND LABORATORIES, INCORPORATED, Indianapolis, Ind. Republished by The Barbasol Company, Indianapolis, Ind., a corporation of Delaware.

Charmaine

FOR PERFUME.
Claims use since Oct. 27, 1939.

Reg. No. 379,366. Registered July 9, 1940. BEACON CHEMICAL CORPORATION, Philadelphia, Pa. Republished by Hood Chemical Co., Inc., Pittsburgh, Pa., a corporation of New York.

Aunt Phoebe's

FOR AMMONIA FOR HOUSEHOLD USE AND BLUEING.
Claims use since Feb. 8, 1940.

Reg. No. 383,068. Registered Nov. 19, 1940. JACQUILINE COCHRAN, Roselle, N. J., and New York, N. Y. Republished by Jacqueline Cochran, Roselle, N. J., assignor to Jacqueline Cochran, Inc., Newark, N. J., a corporation of Delaware.

CAPTAIN'S CHOICE

FOR COSMETICS AND BEAUTY PREPARATIONS—NAMELY, LIPSTICKS, CREAM ROUGE, AND ROUGE COMPACTS.
Claims use since June 12, 1940.

Reg. No. 384,188. Registered Jan. 7, 1941. ANDERSON-STOLZ CORPORATION, Kansas City, Mo. Republished by Anderson-Stolz Pharmaceuticals, Inc., Kansas City, Mo., a corporation of Missouri.

Pomeio

FOR DEODORANT.
Claims use since Jan. 15, 1940.

Reg. No. 384,245. Registered Jan. 7, 1941. JACQUELINE COCHRAN, New York, N. Y., and Roselle, N. J. Republished by Jacqueline Cochran, Roselle, N. J., assignor to Jacqueline Cochran, Inc., Newark, N. J., a corporation of Delaware.

CHROMABLEND

FOR COSMETICS AND BEAUTY PREPARATIONS—NAMELY, FOUNDATION CREAM, CLEANSING CREAM, NIGHT CREAM, THROAT CREAM, HAND CREAM, EYE CREAM, EYE SHADOW, SKIN LOTION, HAND LOTION, SUNTAN LOTION, FOUNDATION LOTION, BATH BOUQUET, LIPSTICKS, CREAM ROUGE, ROUGE COMPACTS, FACE POWDER, DUSTING POWDER, AND FACIAL OIL.
Claims use since Aug. 21, 1940.

Reg. No. 395,668. Registered June 2, 1942. PRICE FLAVORING EXTRACT CO., Chicago, Ill. Republished by Price Flavoring Extract Company, Chicago, Ill., a corporation of Illinois.

RINCENE

FOR FOOD COLORS.
Claims use since Nov. 26, 1941.

Reg. No. 395,869. Registered June 16, 1942. JOHN H. BRECK, INC., Springfield, Mass., a corporation of Massachusetts. Republished by registrant.

RINCENE

FOR LIQUID MATERIAL FOR CLEANING THE HAIR, AFTER SHAMPOOING.
Claims use since Nov. 1, 1941.

Reg. No. 397,965. Registered Sept. 29, 1942. THE BARBASOL COMPANY, Indianapolis, Ind., a corporation of Delaware. Republished by registrant.

BUFF

FR DEODORANT CREAM.
Claims use since Oct. 17, 1941.

Reg. No. 403,828. Registered Oct. 19, 1943. ALEX KERR, BRO. & CO., INC., Philadelphia, Pa. Republished by Kerr Salt Company, Philadelphia, Pa., a corporation of Delaware.

KERROCK

FOR SALT FOR INDUSTRIAL PURPOSES.
Claims use since on or about Apr. 27, 1943.

Reg. No. 418,261. Registered Dec. 11, 1945. CRESCENT CHEMICAL CORPORATION, Philadelphia, Pa. Republished by Hood Chemical Co., Inc., Pittsburgh, Pa., a corporation of New York.

Germitex

FOR LAUNDRY SOUR.
Claims use since May 20, 1940.

Reg. No. 418,564. Registered Jan. 1, 1946. THE SOLVAY PROCESS COMPANY, New York, N. Y., a corporation of New York, now by merger Allied Chemical & Dye Corporation, a corporation of New York. Republished by registrant.

NYTRON

FOR SYNTHETIC ORGANIC MATERIALS FOR USE AS DYEING AIDS, AND FOR GENERAL APPLICATION AS WETTING, EMULSIFYING, DISPERSING AND PENETRATING AGENTS.
Claims use since Apr. 3, 1945.

Reg. No. 431,875. Registered Aug. 12, 1947. JOHN W. MURPHY, doing business as Murphy Laboratories, Upper Darby, Pa., assignor to Murphy Laboratories Inc. Republished by Murphy Laboratories, Inc., Clifton Heights, Pa., a corporation of Pennsylvania.

FOR SHAMPOO.
Claims use since April 1944.

Reg. No. 433,814. Registered Oct. 28, 1947. KELCO COMPANY, San Diego, Calif., a corporation of Delaware. Republished by registrant.

KELCOSOL

FOR AN ALGIN PRODUCT FOR USE AS A HYDROPHILIC COLLOID POSSESSING STABILIZING, BODYING, FILM-FORMING, SUSPENDING, EMULSIFYING, GEL-FORMING AND WATER HOLDING PROPERTIES IN COSMETIC PREPARATIONS SUCH AS CREAMS AND LOTIONS; PHARMACEUTICALS SUCH AS OINTMENTS, JELLIES, SUSPENSIONS, DENTIFRICES, PILLS AND EMULSIONS; TEXTILE SIZES AND PRINT PASTES; PAPER COATINGS; FINISHES FOR LEATHER; CERAMIC BODIES; IMPRESSION MATERIALS; CREAMING LATEX AND IN RUBBER COMPOSITIONS; ADHESIVES AND BINDERS; POLISHES; SEPARATING AND ANTISTICK COMPOUNDS; INSECTICIDES AND IN OTHER INDUSTRIAL USES.
Claims use since about Dec. 19, 1946.

CLASS 7

CORDAGE

Reg. No. 257,061. Registered May 28, 1929. FRANK W. WINNE & SON, INC., Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

A. A. A. DUTCH BINDER TWINE.

The words "Dutch Binder Twine" are disclaimed apart from the mark as shown.
FOR BINDER TWINE.
Claims use since April 1927.

CLASS 8

SMOKERS' ARTICLES, NOT INCLUDING TOBACCO PRODUCTS

Reg. No. 257,690. Registered June 18, 1929. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn. Republished by Chase Brass & Copper Co. Incorporated, Waterbury, Conn., a corporation of Connecticut.

FOR CIGARETTE HUMIDORS AND ASH TRAYS.
Claims use since Aug. 21, 1928.

CONSTRUCTION MATERIALS

Reg. No. 108,734. Registered Feb. 22, 1916. THE ARCO COMPANY, Cleveland, Ohio. Republished by The Arco Company (1934), Cleveland, Ohio, a corporation of Ohio.

DUM DUM

FOR PLASTIC COMPOUND FOR WATERPROOFING SURFACES.
Claims use since Aug. 25, 1915.

Reg. No. 231,409. Registered Aug. 16, 1927. THE FURMANITE CORPORATION, Newport News, Va. Republished by The Furmanite Company, Norfolk, Va., a firm.

FURMANITE

FOR PLASTIC LEAK-SEALING COMPOUND.
Claims use since Nov. 24, 1925.

Reg. No. 257,662. Registered June 18, 1929. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury Conn. Republished by Chase Brass & Copper Co. Incorporated, Waterbury, Conn., a corporation of Connecticut.

FOR SHEET-METAL ELBOWS FOR EAVES-TROUGH LEADERS.
Claims use since Oct. 1, 1928.

Reg. No. 261,810. Registered Sept. 24, 1929. VOLUNTEER PORTLAND CEMENT COMPANY, Wilmington, Del., and Knoxville, Tenn., a corporation of Delaware. Republished by registrant, present address Knoxville, Tenn.

VOLUNTEER

FOR PORTLAND CEMENT.
Claims use since on or about Mar. 13, 1929.

Reg. No. 261,811. Registered Sept. 24, 1929. VOLUNTEER PORTLAND CEMENT COMPANY, Wilmington, Del., and Knoxville, Tenn., a corporation of Delaware. Republished by registrant, present address Knoxville, Tenn.

VOLUNTEER

FOR PORTLAND CEMENT.
Claims use since on or about Mar. 13, 1929.

Reg. No. 277,117. Registered Nov. 4, 1930. HIEMA KUHLS, Executrix of the estate of Herman B. F. Kuhls, doing business as H. B. Fred Kuhls, Brooklyn, N. Y. Republished by registrant.

ELASTIC

FOR COMPOSITION FOR GLAZING, CAULKING, POINTING, AND FILLING IN SEAMS IN ANY KIND OF CONSTRUCTION, WHETHER OF WOOD, METAL, OR OTHER MATERIAL.
Claims use since about January 1890.

Reg. No. 333,800. Registered Apr. 7, 1936. THE BIRD-ARCHER COMPANY, New York, N. Y. Republished by The Bird-Archer Company, New York, N. Y., a corporation of New York.

BACAST

FOR CEMENT USED FOR BOILERS, THE FIRE BOXES OF FURNACES, AND ANALOGOUS USES.
Claims use since Nov. 9, 1931.

Reg. No. 373,918. Registered Dec. 26, 1939. AMERICAN HAIR & FELT COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

STREAMLITE

FOR THERMAL INSULATION BLANKET AND OTHER THERMAL INSULATION MATERIALS.
Claims use since July 7, 1939.

Reg. No. 381,986. Registered Oct. 15, 1940. ESTATE OF H. B. FRED KUHLS, Brooklyn, N. Y. Republished by registrant.

BEDLAST

FOR BEDDING COMPOSITION USED FOR BEDDING AND WATERPROOFING OF MOULDINGS, DECK HARDWARE, FOOT RAILS, DECK LIGHTS, DOUBLE PLANKING, AND FOR BEDDING OF ALL SCREW FASTENED JOINTS ETC., IN ALL TYPES OF CONSTRUCTION; ALSO USED FOR THE BEDDING AND WATERPROOFING OF CHINES IN ALL TYPES OF BOAT CONSTRUCTION.
Claims use since Mar. 1, 1940.

Reg. No. 410,597. Registered Dec. 5, 1944. PLUSWOOD INCORPORATED, Oshkosh, Wis., a corporation of Wisconsin. Republished by registrant.

PLUSWOOD
'A Wood Alloy'

The word "Wood" is disclaimed apart from the mark as shown.
FOR HIGH DENSITY RESIN-IMPREGNATED PLYWOOD.
Claims use since Mar. 30, 1944.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 228,603. Registered June 7, 1927. METAL TEXTILE CORPORATION, West Orange, N. J. Republished by Metal Textile Corporation, West Orange, N. J., a corporation of Delaware.

METEX

FOR KNITTED METALLIC FABRICS.
Claims use since about Feb. 8, 1926.

Reg. No. 256,346. Registered May 14, 1929. AMERICAN CHAIN COMPANY, INC., New York, N. Y., and Bridgeport, Conn. Republished by American Chain & Cable Company, Inc., Bridgeport, Conn., a corporation of New York.

ACCO

FOR BASE METAL CHAIN AND ALL THE OTHER ITEMS NAMED IN THE REGISTRATION, EXCEPT, TIRE-REPAIR CHAINS, BUMPER BARS, DEVICES FOR ATTACHING BUMPER BARS TO MOTOR CARS, CHAINS ADAPTED TO BE APPLIED TO HORSES' HOOFS.
Claims use since on or about Jan. 15, 1921.

Reg. No. 257,783. Registered June 18, 1929. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn. Republished by Chase Brass & Copper Co. Incorporated, Waterbury, Conn., a corporation of Connecticut.

FOR METALLIC CAPS AND SUSPENSION RINGS FOR WHISK BROOMS; FOR BRASS, COPPER, AND NONFERROUS ALLOY PIPE AND TUBING; AND SCREWS FOR ATTACHING SAW HANDLES AND BLADES TOGETHER, AND FORGED BRASS PARTS OF RADIATOR VALVES.
Claims use since Aug. 17, 1928.

Reg. No. 280,870. Registered Mar. 3, 1931. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn. Republished by Chase Brass & Copper Co. Incorporated, Waterbury, Conn., a corporation of Connecticut.

FOR CLOSET SCREWS FOR TOILET BOWLS, SINK PLUGS, PLUMBING TRAPS, SUPPLY PIPES, BASIN COCKS, RADIATOR AIR VALVES, WASTES AND OVERFLOWS, FAUCETS, ELBOWS, TEES, AND REDUCERS, ALL MADE OF METAL.
Claims use since June 13, 1928.

Reg. No. 319,456. Registered Nov. 27, 1934. VAN CAMP HARDWARE & IRON COMPANY, Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

BEN HUR

FOR BASE METAL WASH BASINS, DISH PANS, COMBINETS, AND STOCK POTS.
Claims use since on or about June 1, 1933.

Reg. No. 326,326. Registered July 23, 1935. VAN CAMP HARDWARE & IRON COMPANY, Indianapolis, Ind., a corporation of Indiana. Republished by registrant.

BEN HUR

FOR ENAMEL TEA KETTLES, ENAMEL PRESERVING KETTLES, ENAMEL DISH PANS, ENAMEL WASH BASINS, ENAMEL RICE BOILERS, ENAMEL COMBINETS, ENAMEL COFFEE POTS AND ENAMEL PERCOLATORS.
Claims use since on or about June 1, 1933.

Reg. No. 340,692. Registered Nov. 17, 1936. NORTON LASIER COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

The drawing is lined for the color silver. The representation of the spring forms no part of the trade-mark.
FOR DOOR CHECK AND DOOR CLOSER COIL SPRINGS.
Claims use since Feb. 4, 1936.

Reg. No. 354,803. Registered Feb. 22, 1938. CHISHOLM-RYDER CO., INC., Niagara Falls, N. Y., a corporation of New York. Republished by registrant.

PREMAX

FOR HOUSE NUMBERS AND LETTERS.
Claims use since Apr. 1, 1933.

Reg. No. 405,273. Registered Jan. 18, 1944. THE BLAKE & JOHNSON COMPANY, Waterbury, Conn., a corporation of Connecticut. Republished by registrant, present address Waterville, Conn.

TWINfast

The suffix "Fast" is disclaimed apart from the mark as shown. The drawing is lined to indicate the color orange.
FOR WOOD SCREWS AND SHEET METAL SCREWS.
Claims use since June 10, 1943.

Reg. No. 424,371. Registered Oct. 1, 1946. HANOVER WIRE CLOTH COMPANY, Hanover, Pa. Republished by Continental-United Industries Co., Inc., New York, N. Y., a corporation of Delaware.

The word "Brand" is disclaimed apart from the mark as shown.
FOR WIRE CLOTH.
Claims use since 1912.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 114,767. Registered Jan. 2, 1917. IMPERIAL TYPE METAL CO., Philadelphia, Pa. Republished by Imperial Type Metal Company, Philadelphia, Pa., a corporation of Pennsylvania.

The words "Best by Acid Test" are disclaimed apart from the mark as shown.
FOR TYPE-METAL.
Claims use since May 15, 1916.

Reg. No. 238,319. Registered Feb. 7, 1928. FIRTH-STERLING STEEL COMPANY, McKeesport, Pa. Republished by Firth Sterling Steel & Carbide Corp., McKeesport, Pa., a corporation of Pennsylvania.

FOR STEEL BARS OF DIFFERENT SHAPES AND SIZES OR FORGINGS, BLOCKS, DISKS, AND PIECES OF STEEL.
Claims use since Aug. 6, 1927.

Reg. No. 238,338. Registered Feb. 7, 1928. FIRTH-STERLING STEEL COMPANY, McKeesport, Pa. Republished by Firth Sterling Steel & Carbide Corp., McKeesport, Pa., a corporation of Pennsylvania.

BLUE CHIP

FOR STEEL BARS OF ALL SHAPES AND SIZES, BLOCKS, STEEL DISKS, FORGINGS, SHORT PIECES OF TOOL STEEL ADAPTED TO BE MADE UP INTO CUTTING BITS AND KNOWN TO THE TRADE AS TOOL BITS, PIECES OF STEEL, AND ON STEEL ALLOYS IN THE FOREGOING SHAPES OF THE TYPE COMMONLY KNOWN AS HIGH-SPEED STEELS.
Claims use since September 1901.

Reg. No. 257,679. Registered June 18, 1929. CHASE BRASS & COPPER CO. INCORPORATED, Waterbury, Conn. Republished by Chase Brass & Copper Co. Incorporated, Waterbury, Conn., a corporation of Connecticut.

FOR BRASS, COPPER, AND NONFERROUS ALLOY SHEETS, RODS, AND PLAIN WIRE; WASHBOARD BRASS SHEET METAL; AND SILVER SOLDER OF HIGH SILVER CONTENT, SPECIALLY SUITED FOR THE MANUFACTURE AND REPAIR OF DENTAL AND SURGICAL INSTRUMENTS.
Claims use since Aug. 18, 1928.

Reg. No. 262,962. Registered Oct. 29, 1929. DUQUESNE STEEL FOUNDRY COMPANY, Pittsburgh, Pa. Republished by Continental Foundry & Machine Company, East Chicago, Ind., a corporation of Delaware.

TEMPALLOY

FOR IRON AND STEEL CASTINGS.
Claims use since Dec. 20, 1927.

Reg. No. 299,936. Registered Jan. 3, 1933. IMPERIAL TYPE METAL COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

VITALLOY

FOR TYPE METAL ALLOYS.
Claims use since Aug. 20, 1932.

Reg. No. 316,538. Registered Aug. 28, 1934. THE GENERAL METALS POWDER COMPANY, Akron, Ohio, a corporation of Ohio. Republished by registrant.

GEMPCO

FOR POWDERED OR FINELY DIVIDED METALS, PARTICULARLY POWDERED COPPER MIXED WITH TIN AND LEAD AND A CERTAIN PERCENTAGE OF NON-METALLIC MATERIAL SUCH AS GRAPHITE, AND FORGINGS AND CASTINGS MADE THEREFROM.
Claims use since Jan. 5, 1934.

Reg. No. 433,797. Registered Oct. 28, 1947. THE AMERICAN METAL COMPANY (LIMITED), New York, N. Y., a corporation of New York. Republished by registrant.

DRW

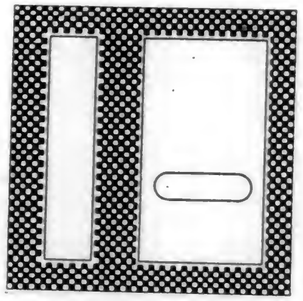
FOR METAL PRODUCTS—NAMELY, WIRE BARS, BARS, INGOT BARS, INGOTS AND CAKES OF GOLD, SILVER AND COPPER AND SOLDER.
Claims use since about 1904.

CLASS 15

OILS AND GREASES

Reg. No. 106,793. Registered Oct. 26, 1915. NEW YORK LUBRICATING OIL COMPANY, New York, N. Y., a corporation of New York. Republished by registrant.

NYLO



FOR LUBRICATING GREASES AND LUBRICATING OILS FOR MACHINERY, ENGINES, MOTORS, AND DYNAMOS.
Claims use since Sept. 18, 1895.

Reg. No. 265,920. Registered Jan. 7, 1930. STANDARD OIL COMPANY, Louisville, Ky., a corporation of Kentucky. Republished by registrant.

The words "Standard Gasoline Ky" are disclaimed apart from the mark as shown. The drawing is lined for red and blue.
FOR GASOLINE.
Claims use since May 7, 1929.

Reg. No. 271,991. Registered June 24, 1930. PANHARD OIL CORPORATION, New York, N. Y., a corporation of Delaware. Republished by registrant.

FOR LUBRICATING OILS AND GREASES.
Claims use since Nov. 15, 1928.

Reg. No. 328,951. Registered Oct. 8, 1935. PANHARD OIL CORPORATION, New York, N. Y., a corporation of Delaware. Republished by registrant.

PANHARD

FOR LUBRICATING OILS AND GREASES.
Claims use since 1904.

Reg. No. 340,285. Registered Nov. 3, 1936. THE SHALER COMPANY, Waupun, Wis., a corporation of Delaware. Republished by registrant.

RISLONE

FOR LUBRICATING OIL, MOTOR GUM SOLVENT AND COMPOUNDING MATERIAL FOR LUBRICATING OILS AND GREASES.
Claims use since June 1930.

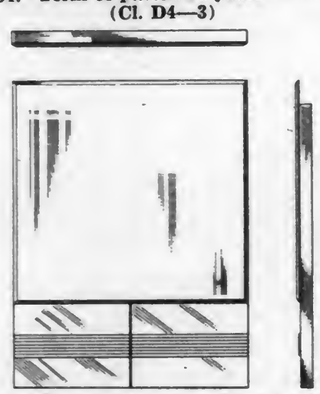
FOR CLOSET ACCESSORIES—NAMELY, CLOTHES HANGERS.
Claims use since Jan. 15, 1940.

REISSUES

DECEMBER 7, 1948

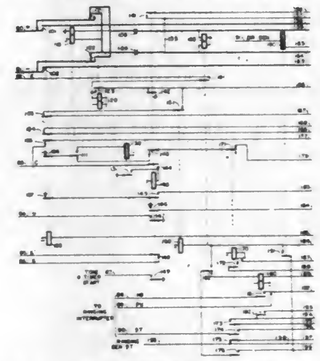
23,054
TELEPHONE EXCHANGE SYSTEM



Gerald Deakin, New York, N. Y., assignor to International Standard Electric Corporation, New York, N. Y., a corporation of Delaware
Original No. 2,385,968, dated October 2, 1945, Serial No. 489,883, June 7, 1943. Application for reissue August 19, 1947, Serial No. 769,333
43 Claims. (Cl. 179—6)

1. In a telephone exchange system, a plurality of numerically designated subscribers' lines, means including groups of selector switches for establishing a connection between a calling and a called line, a plurality of special line service circuits, means controlled over a line in accordance with a numerical digit for operating means including a selector to select a circuit, a first relay associated with each circuit and operable to establish a connection between said line and the selected circuit, a second relay controllable over said line, a locking circuit for the first relay controlled in a back contact of the second relay, and means in said selector for applying a signal to said line and for releasing the selector and other means employed in the selection of the circuit.

23,055
A FRONT FOR BATHROOM CABINET OR SIMILAR ARTICLE



Walter Fanelli, South Euclid, Ohio, and Carl A. Laystrom, Decatur, Ill., assignors to Faries Manufacturing Company, Decatur, Ill., a corporation of Illinois
Original No. 147,785, dated November 4, 1947, Serial No. 125,737, January 19, 1946, for 14 years. Application for reissue June 22, 1948, Serial No. 147,134. Term of patent 14 years
(Cl. D4—3)

The ornamental design for a front for bathroom cabinet or similar article, as shown.

23,056
RELAY AUTOMATIC TELEPHONE SYSTEM

John H. Voss, Rochester, N. Y., assignor to Automatic Electric Laboratories, Inc., Chicago, Ill., a corporation of Delaware
Original No. 2,431,850, dated December 2, 1947, Serial No. 634,555, December 12, 1945. Application for reissue July 1, 1948, Serial No. 36,387
19 Claims. (Cl. 179—18)

1. In a telephone system, a plurality of relay type connectors, a plurality of trunk groups accessible to said connectors and having the single digit call numbers "0," "9," "8" and "7" respectively, a plurality of trunk groups accessible to said connectors and having four-digit call numbers, a plurality of subscribers lines accessible to said connectors and having four-digit call numbers, from one to ten trunks in each of said trunk groups, and means for extending calls to at least two of said single-digit trunk groups, to one or more of said four-digit trunk groups, and to one or more of said subscribers lines simultaneously.

PLANT PATENTS

GRANTED DECEMBER 7, 1948

Owing to the fact that almost all of the illustrations of the plant patents are in colors, it is not practicable to print a cut of the drawing.

813

PEACH TREE

Lawrence Satterfield, deceased, late of Port Clinton, Ohio, by Luella Satterfield, administratrix, Port Clinton, Ohio

Continuation of application Serial No. 618,612, September 26, 1945. This application May 16, 1946, Serial No. 670,060

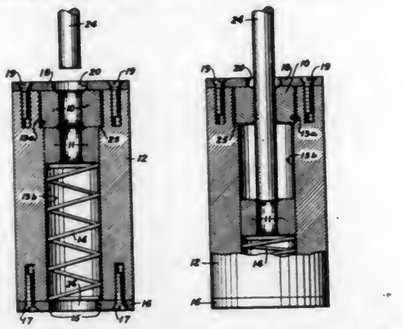
1 Claim. (Cl. 47—62)

The variety of peach tree herein described and shown, having a tree that resembles the J. H. Hale more nearly than it resembles any other hitherto known variety, but which differs from said J. H. Hale by being larger in size, more vigorous and upright in growth and hardier, having leaves somewhat shorter and broader, blooming about two days later with blossoms about three-fourths the size of those of the J. H. Hale, with petals shaped and colored substantially as shown; having substantially no "buttons," with fruit ripening two or three days later than the J. H. Hale with similar fruit but finer in texture, better flavored, and with equal halves that hold their shape firmly.

PATENTS

GRANTED DECEMBER 7, 1948

2,455,347



VARILENGTH TANDEM SELF-ALIGNING GAUGE

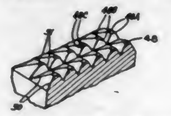
Theodore A. Anderer, Philadelphia, and Robert W. Tafel, Drexel Hill, Pa.

Application July 3, 1946, Serial No. 681,282

4 Claims. (Cl. 33—178B)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a device for checking the external diameter of cylindrical and other objects, the combination of a first or "go" gaging element having an internal diameter equal to a desired maximum dimension for the objects to be checked, a second or "no go" gaging element having an internal diameter equal to a desired minimum dimension for said objects, means in the form of a unitary frame for supporting said first and second elements in tandem and substantially coaxial relation with the second or "no go" element movably held in the rear portion of said frame so as to be free for axial movement therein and with the first or "go" element movably positioned in the frame's forward portion so as to be free for limited lateral shifting with respect to said second element, and resilient means in said frame behind said second element which is thereby urged forward to abut said first element when no object is being checked, but which is moved rearwardly within the limits of the frame upon being contacted by an object having a diameter sufficiently small to permit its passage through said first element although not small enough to enter the bore of said second element.



2,455,348

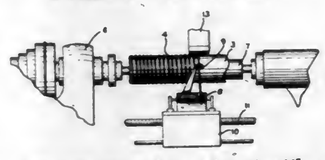
PROCESS OF MAKING SPARKING WHEELS

Carl A. Barstow, Anoka, Minn., assignor, by mesne assignments, to Argus, Incorporated, Ann Arbor, Mich., a corporation of Michigan

Application August 25, 1945, Serial No. 612,639

4 Claims. (Cl. 76—101)

1. In the making of spark wheels, the improved steps comprising turning a short cylinder having a plurality of circumferential ridges on its surface, then forcing the cylinder in an axial direction through a die having a cylindrical opening on which there are internal cutting teeth arranged around the inside of the cylindrical opening of the die, the maximum cutting diameter of said teeth being greater than the maximum diameter of the cylinder forced therethrough.



2,455,349

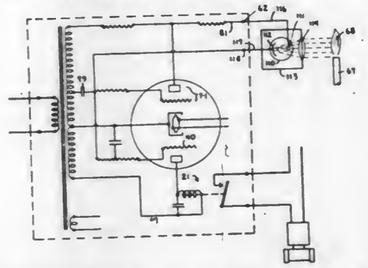
METHOD OF MAKING TEXTILE UNITS FOR FIBER DRAFTING

John W. Baymiller, Manheim Township, Lancaster County, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania

Application April 17, 1943, Serial No. 483,406

8 Claims. (Cl. 154—117)

5. In the method of making textile machine units for drafting fibers, the steps which comprise applying a solvent to the exterior surface of a synthetic rubber tube disposed about a mandrel to soften the same while wrapping about and embedding spaced convolutions of twine in the softened surface, simultaneously brushing the convolutions of twine and the exterior surface of the tube between said convolutions to cover the exterior surface of the twine with a coating formed from the softened surface of the tube, placing a wear-resistant layer thereover, and securing said tube, twine and layer together to form an integral unit.

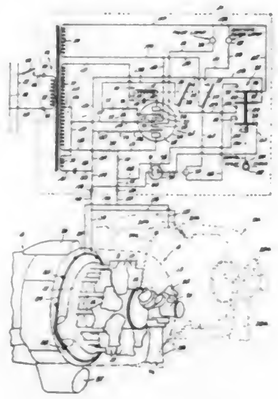


2,455,350

CONTROL DEVICE

Vilynn O. Beam, Minneapolis, Minn., assignor to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware

Application July 11, 1942, Serial No. 450,613

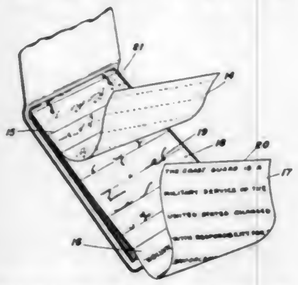


30 Claims. (Cl. 250—41.5)

2. In combination, a photoelectric cell, a current translating means, a space discharge amplifier having an anode, a cathode, and a control element, said amplifier controlling the energization of said current translating device and

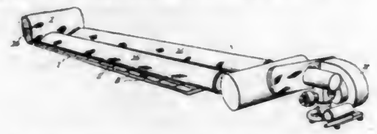
operative to cause either energization or effective deenergization of said device depending upon within which of two ranges of values said control element potential is maintained, a source of alternating potential connected to said amplifier, a connection including said photoelectric cell between said control element and a point on said source such that in the event of a low non-rectifying impedance bridging the cell, the connection tends to maintain said control element at an alternating potential within one of said two ranges of values, a condenser, means connecting said condenser between said connection and said source of potential in such a manner that when said cell is subjected to a beam of light so as to be rectifying, said condenser is charged with a voltage of a predetermined polarity, and means including a further space discharge amplifier associated with said condenser and effective when said condenser is so charged to maintain said control element at a potential within the other of said two ranges of values.

2,455,351
FIRE DETECTING APPARATUS
Vilynn O. Beam and John M. Wilson, Minneapolis, Minn., assignors to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Application January 25, 1943, Serial No. 473,514
12 Claims. (Cl. 177—355)



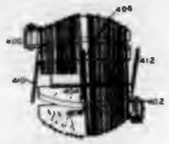
11. In combination with an enclosure normally free from flame, a fire detection system therefor comprising two spaced electrodes located within said enclosure, means for impressing an alternating potential difference of such character between said electrodes that when said electrodes are bridged by a flame a current flows between said electrodes having a unidirectional component of a predetermined polarity by reason of the rectifying properties of the flame, alarm means for warning of the presence of a flame, an electrical reactor connected to said electrodes, and circuit means including said reactor for causing operation of said alarm means upon a flame bridging said electrodes and producing a sufficient unidirectional voltage across said reactor and for preventing operation of said alarm means when said electrodes are bridged by a non-rectifying impedance of any value.

2,455,352
MACHINE GUN AMMUNITION BANDOLEER
John H. Beckman, Long, Md.
Application June 3, 1946, Serial No. 674,004
2 Claims. (Cl. 224—22)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



2. A bandoleer for a machine gun ammunition belt comprising a flexible tube permanently closed at one end and dimensioned to accommodate a folded belt of machine gun ammunition, manually operable means for closing the open end of the tube to retain an ammunition belt therein, a retaining loop in said tube adjacent the open end thereof and dimensioned to accommodate one thickness of a belt of machine gun ammunition to loosely retain one fold of said belt while permitting insertion of other folds of said belt into said tube, and a hook member adjacent the said open end for retaining the front end of said ammunition belt readily accessible when said bandoleer is opened.

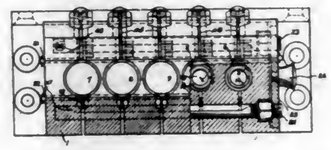
2,455,353
COPY AND PRACTICE BOOK
Stanley T. Bell, Washington, D. C.
Application May 8, 1944, Serial No. 534,657
17 Claims. (Cl. 283—45)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



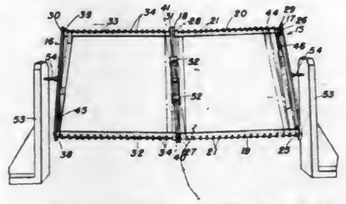
1. A combination text and practice book comprising a plurality of sets of sheets, each set comprising a semitransparent sheet for receiving written characters and a printed sheet, said printed sheet being approximately twice the length of said semitransparent sheet, the lower half of said printed sheet adapted to be folded against the upper half thereof, said printed sheet having copy printed on one side of one half thereof and a key printed on the other side of the other half, whereby either the printed copy or key may immediately underlie the said semitransparent sheet, and spaced lines to serve as guide lines for said written characters, the printed copy and printed key being correspondingly spaced a fraction of a space out of alignment with said spaced lines when in underlying relation to said semitransparent sheet.

2,455,354
MINE DESTROYER
James L. Bisch, United States Army
Application August 3, 1945, Serial No. 608,829
3 Claims. (Cl. 102—22)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

2. A mine destroying torpedo comprising a flexible strip of material including pockets, explosive elements secured to said material, cartridges mounted in said pockets, pneumatic tubes positioned on said strip of material, said strip with said explosive elements, cartridges and tubes adapted to be coiled into a roll, and means connected to inflate said tubes for unrolling said strip including said explosive elements and cartridges over a mine field.



2,455,355
METHOD OF MAKING SPHERICAL COILS FOR VARIOMETERS
Edward E. Combs, Long Branch, N. J.
Application September 24, 1945, Serial No. 618,382
1 Claim. (Cl. 29—155.57)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

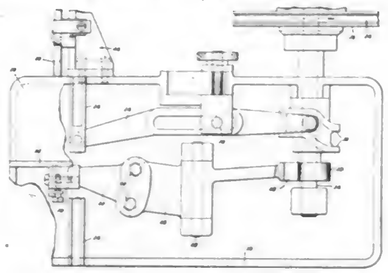


In a method of making a spherical radio coil, winding a wire, in the form of a coil, on a spherical form, fitting over said form, after the wire has been wound, two wire holders the interior holding surfaces of which are of spherical contour and of such a diameter that the wire can be expanded sufficiently to clear the ridges of the wire former, transferring said wire from said form onto said holders by cutting said wire approximately in the middle of the coil so as to obtain two approximately equal parts, allowing the wire to expand from said form into said holders, placing said wire holders over a spherical coil frame, transferring said wire from the holders onto said frame by clamping the outer ends of said wire against said frame and by pulling the cut ends of the wire until the entire length of said wire engages said frame, and joining the cut ends of the wire together.

2,455,356
SHOCK GAUGE
Charles E. Crede, Alexandria, Va.
Application July 4, 1944, Serial No. 543,484
3 Claims. (Cl. 73—12)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A shock gage for mounting on a body subjected to a shock, comprising a casing having a series of bores therein axially aligned with the direction of the shock force, a mass mounted for sliding movement in each bore, stops for said masses at the end of each bore, resilient means exerting different forces on the several masses for urging the masses against said stops in a direction opposing the displacement of the masses relative to said casing during said shock, means for catching and holding each mass at its maximum displacement having means for indicating the amounts of said displacement, and means to release said holding means and thus permit the resilient means to return all the masses to the positions they held prior to said shock.

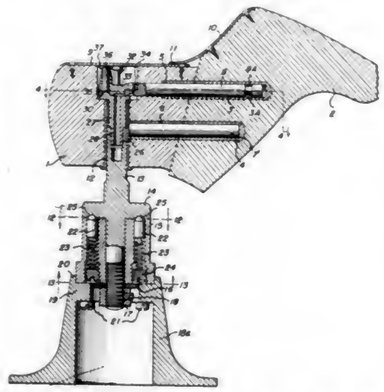
2,455,357
APPARATUS FOR PROCESSING FILM
Le Roy M. Dearing and Ira B. Current, United States Navy
Application September 24, 1945, Serial No. 618,380
4 Claims. (Cl. 242—77)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In apparatus for processing photographic film, rigid, rectangular, folding frames adapted to support film helically wound in loops thereon comprising side rails provided with aligned apertures on the transverse axis of the frame and with apertures near either end thereof, two hinge members on each side rail adapted to coact with the hinge members on an adjacent frame, a U-shaped pintle element adapted to connect the coacting hinge members, and spring biased locking means on the side rail of the adjacent frame adapted to hold the hinge members in cooperative relationship.

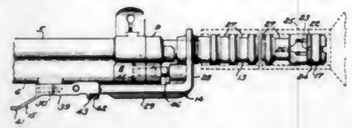
2,455,358
MANUFACTURE OF SYNTHETIC MINERAL PRODUCTS
Wladimir Diterichs, Paris, France; vested in the Attorney General of the United States
No Drawing. Application October 14, 1938, Serial No. 235,108. In Luxemburg October 30, 1937
5 Claims. (Cl. 106—39)

1. The method of making an agglomerate of a material consisting chiefly of rhombohedral alumina which comprises forming a binder by reacting a mixture the constituent ingredients of which are about 26 parts of 30° Bé. solution of magnesium chloride, about 13 parts of alumina hydrate, about 28 parts of 60° Bé. phosphoric acid, about 3 parts of 43° Bé. sodium silicate, about 6 parts water, about 21 parts of silica jel with 40% water and about 2 parts of boric anhydride, mixing said binder intimately and in a homogeneous manner with the material to be agglomerated,



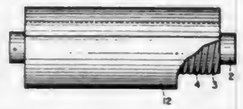
giving the mass thus obtained the desired shape, drying at a temperature below 300° C., then heating at a temperature above 600° C. and finally cooling.

2,455,359
MACHINE FOR APPLYING TAPE TO SHOE PARTS
Harry D. Elliott, Wenham, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application July 26, 1947, Serial No. 763,921
6 Claims. (Cl. 12—59.5)



1. In a machine for applying tape to shoe vamps, means for applying pieces of tape to a vamp, a gage engageable alternatively with two transversely spaced portions of the throat of a blucher vamp, and a support whereon said gage is movable between two operating positions in one of which it gages the vamp relatively to the tape applying means to insure the application of a piece of tape at a desired locality at one side of the vamp throat and in the other of which positions it gages the vamp relatively to the tape applying means to insure the application of a second piece of tape at a desired locality at the other side of the vamp throat.

2,455,360
SHOE LAST AND SUPPORT
Julius Farina, Keene, N. H., assignor to Princess Shoe Company, Keene, N. H., a corporation of New Hampshire
Application April 3, 1946, Serial No. 659,306
3 Claims. (Cl. 12—135)

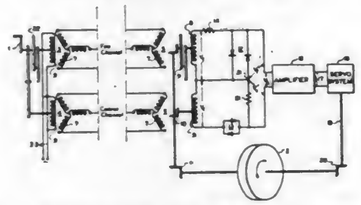


1. A shoe last including a heel-block, an adjustable toe-section mounted on the heel-block and mechanical connections mounted in the heel-block and co-acting with the toe-section for translating swivel movement of the heel-block into longitudinally reciprocal movement of the toe-section.

2,455,361
GRENADE LAUNCHER
John C. Garand, Springfield, Mass., assignor to the United States of America as represented by the Secretary of War
Application May 12, 1947, Serial No. 747,579
6 Claims. (Cl. 42—1)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a grenade launcher for a gas-operated firearm having a gas cylinder and resilient valve means included therein, the combination of, a tubular member adapted to slidably fit over the muzzle end of the firearm, a bracket secured at the rear end of said tubular member in laterally offset and longitudinally extending relation therewith, a stud on said bracket in alignment with and operable to open the valve means in the gas cylinder upon recoil of the launcher, latching means on said bracket constructed and arranged to engage a projecting part of the firearm, and a spring-pressed plunger at the rear end of said bracket adapted to contact the projecting part of the firearm when the launcher is mounted thereon, all adapted and arranged whereby said spring-pressed plunger is effective to cushion the recoil of the launcher and return the same to a pre-launching position.

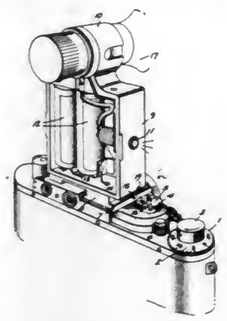
2,455,362
METHOD OF MAKING TEXTILE FIBER DRAFTING APRONS
Richard A. Garrett, Lancaster Township, Lancaster County, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania
Application July 1, 1947, Serial No. 758,252
4 Claims. (Cl. 154—117)



1. In a method of making a cord reinforced textile fiber drafting apron, the steps comprising positioning a base layer of flexible, resilient, wear-resistant, vulcanizable composition upon a forming surface, wetting a reinforcing cord with a migratory plasticizer for the composition, which plasticizer is nonvolatile at vulcanizing temperatures, disposing said treated cord as an open helical covering over said base layer under tension to embed said cord into said base layer upon softening of said composition by said plasticizer, permitting said plasticizer to migrate into said composition in the area between adjacent turns of said reinforcing cord to soften and tackify said composition in such areas, applying a facing layer of flexible, resilient, wear-resistant, vulcanizable composition over said base layer and cord while said cord is wet with said plasticizer and said base layer is in a soft and tackified condition, transferring plasticizer from said cord to said facing layer to soften said facing layer, applying pressure to said assembly to bring said base and facing layers into intimate contact, and vulcanizing said base layer and facing layer to form an integral structure with said facing and base layers joined to said cord and to each other in the spaces between adjacent turns of said cord.

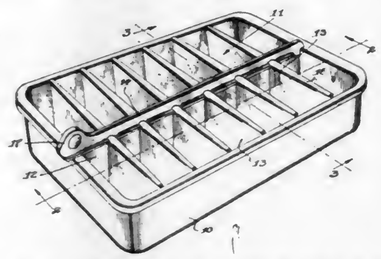
2,455,363
PROCESS OF MAKING SHORTENING
Arne Gudheim, Winchester, Mass., assignor to Lever Brothers Company, Cambridge, Mass., a corporation of Maine
No Drawing. Application May 4, 1944, Serial No. 534,152
2 Claims. (Cl. 99—122)

2. A method of preparing a substantially dry plastic edible shortening having a penetration of at least 175 at 21° C. so as to permit its use for general culinary purposes, comprising preparing a molten stock having a solid-to-liquid ratio of about 0.33 to 0.40 at a temperature within the range of 68° to 75° F., so as to be relatively free from weeping and bleeding at said temperature, rapidly cooling said stock to reduce the temperature thereof to at least as low as 15° C. and solidifying all of the components of the fat which are solid at said temperature by maintaining the cooled stock at a temperature of not above 15° C. until substantially all of the latent heat of crystallization has been liberated.



2,455,364
SELSYN-CONTROLLED SERVO SYSTEM
Robert F. Hays, Jr., Syosset, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application December 10, 1942, Serial No. 468,600
13 Claims. (Cl. 318—30)

12. In an electrical control system wherein two signal voltages are produced, the first of said voltages providing a proper signal over the major portion of the range of the system and the second of said voltages providing a highly accurate signal over the remaining critical range of the system, means for limiting said first voltage over said small critical range to a value negligible as compared to said second voltage, means for limiting said second voltage to a predetermined value, a voltage controlled servo system, and means for applying the series sum of said two limiting voltages to said servo system.



2,455,365
FLASH SYNCHRONIZER FOR CAMERAS WITH CURTAIN SHUTTERS
Myron S. Jenner, New York, N. Y.
Application April 11, 1945, Serial No. 587,821
3 Claims. (Cl. 95—11.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In combination with a camera having a movable focal plane shutter provided with an aperture, winder means for energizing the shutter, release means for the shutter, and control means for varying the size of the aperture in the shutter, said control means including a disc rotating in synchronization with the movement of the shutter and having indicia thereon for selecting an aperture of the desired size; said disc having a contacting means positioned thereon, said contacting means having a position locating means, and a contact fixed thereto a constant angular distance away from any selected indicia;

a contact mounted on the camera and non-rotatable with respect to the disc, means for mounting said last mentioned contact to engage the contact of the disc when the disc is rotated; a flash lamp mounted on said camera, and means interconnecting the contact and lamp for producing an electrical current through the lamp when the disc rotates to cause the contacting means to engage the contact and flash the lamp in positive synchronization with the movement of any selected shutter aperture.

2,455,366
ICE TRAY AND SLIP SURFACE FLEXIBLE GRID
Harley Y. Jennings, Clio, Mich., assignor to Copeman Laboratories Company, Flint, Mich., a corporation of Michigan
Application November 5, 1942, Serial No. 464,640
7 Claims. (Cl. 62—108.5)

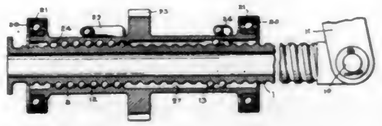
1. As a new article of manufacture, a sharp freezing container for substances to be frozen, and partitions for dividing the container into a plurality of ice cube molds, said partitions being formed of resilient easily distortable rubber which has incorporated therein a substance of such a nature that it will migrate to the surfaces of said partitions to form water-repellent, slippable surfaces for contact with the frozen substance in said container.

2,455,367

METHOD FOR DEPOSITING NONREFLECTIVE FILMS AND COMPOSITION THEREFOR

Peter King, Washington, D. C.

No Drawing. Application February 22, 1943, Serial No. 476,790
8 Claims. (Cl. 117—121)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



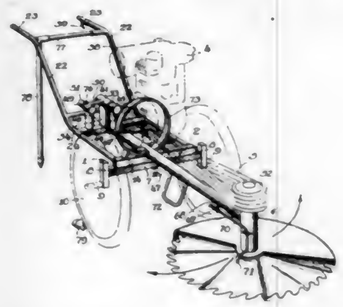
7. The method of depositing on a surface a strong adherent coating having low light reflecting properties which comprises preparing a colloidal dispersion of discrete colloidal particles of silica in water, incorporating said colloidal dispersion in a mixture of water miscible volatile organic solvents selected from the group consisting of alcohols, ketones and alcohol-ethers, with the solvents comprising more than 80% by volume of the resultant dispersion and being so selected that their boiling points are spread over a temperature range of approximately from 50° C. to 200° C., and adding thereto controlled amounts of alkyl silicate, controlling the proportions of water, organic solvents and alkyl silicate so as to maintain the alkyl silicate in part at least in an unhydrolyzed condition in the dispersion, applying said dispersion to the surface, and allowing the solvents to evaporate whereby a coating having low reflection characteristics results.

2,455,368

ANTIFRICTION SCREW AND NUT BEARING MECHANISM

Henry S. Hoffar, near Sidney, British Columbia, Canada, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio, a corporation of Ohio

Application May 19, 1945, Serial No. 594,654
9 Claims. (Cl. 74—459)



1. Antifriction screw mechanism comprising a screw having a helical groove in its periphery, a nut encircling said screw and having a helical groove in its inner periphery over a portion only of its length and an ungrooved section spaced a substantial distance lengthwise thereof from such groove, a plurality of turns of balls engaged in the helical groove of said nut and the adjacent helical groove of said screw, thus interconnecting said screw and said nut, a substantial number of balls in said set being operable simultaneously to transmit between said screw and nut both forces acting radially thereof and forces acting lengthwise thereof, by-pass means carried by said nut and communicating with portions of said nut's helical groove spaced lengthwise of the nut for recirculation of said balls therethrough, additional balls received in a portion of said screw groove adjacent to such ungrooved portion of said nut, adapted to bear radially against such ungrooved portion of said nut, at any given time a substantial number of said additional balls being operable to transmit between said screw and nut forces acting radially thereof but substantially all of said additional balls at any given time being inoperative to transmit between such members forces acting lengthwise thereof, and additional by-pass means carried by said nut and communicating with portions of said nut's ungrooved section spaced lengthwise of the nut for recirculation of said additional balls therethrough.

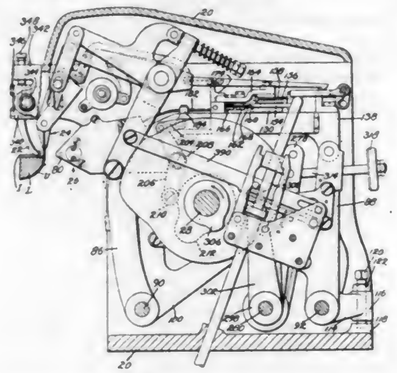
2,455,369

MANUALLY GUIDED TWO-WHEELED PORTABLE CIRCULAR POWER SAW

Bill Kuykendall, Buda, Tex.

Application April 12, 1946, Serial No. 661,765
4 Claims. (Cl. 143—43)

3. In a portable circular power saw, a pair of ground wheels, a primary frame mounted upon said wheels, a secondary frame pivoted to the primary frame for lateral swinging movement thereon, an engine, a saw supporting arm and a circular saw mounted on said secondary frame for movement therewith, said primary frame having an axle member upon which said wheels are supported, the axle member having a rearwardly extending member fixed thereto and having in its rear end a notch, the secondary frame having in its rear end a lateral slot in which the rear end portion of the rearwardly extending member is slidable, a swingable arm pivoted to the secondary frame, spring means for urging said swingable arm into said notch when in registry therewith, and means for forcibly moving the swingable arm out of the notch to free the secondary frame for swinging it laterally with relation to the primary frame.



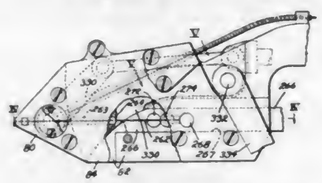
2,455,370

FASTENING INSERTING MACHINE

Robert H. Lawson, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey

Original application March 14, 1945, Serial No. 582,647. Divided and this application March 7, 1946, Serial No. 652,582
4 Claims. (Cl. 1—20)

1. In a fastening inserting machine, a throat member movable toward and from a work piece presented to the machine, a driver movable in the throat member to insert fastenings into the work, cam operated means for moving the throat member and the driver as a unit toward the work, spring operated means for actuating the driver to drive a fastening while the throat member is in engagement with the work, means for holding said spring operated means in a cocked position during movement of the throat member and the driver as a unit toward the work, means for releasing said holding means to actuate the driver, said cam operated means being adapted, after the actuation of the driver, to move said spring operated means back into its cocked position thereby to withdraw the driver and to return the throat member into its initial position.



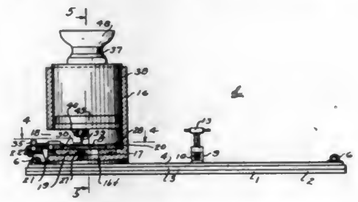
2,455,371

DRIVER GUARD FOR FASTENING INSERTING MACHINES

Robert H. Lawson, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey

Original application March 14, 1945, Serial No. 582,647. Divided and this application April 6, 1946, Serial No. 660,169
7 Claims. (Cl. 1—20)

1. In a fastening inserting machine, a throat member adapted to engage a workpiece presented to the machine, a thin driver movable in the throat member to insert fastenings into the workpiece, a driver actuating member considerably thicker than the driver, a recess in the throat member, in which recess the driver actuating member is movable, and a guard member secured to the throat member for angular movement so as to cover that portion of the driver which is located in said recess.



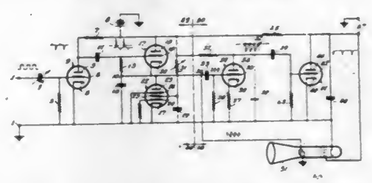
2,455,372

PORTABLE GUN SIGHT RETICULE PRODUCING APPARATUS

Sam P. Leeper, Mineola, Tex.

Application March 24, 1944, Serial No. 527,904
8 Claims. (Cl. 33—27)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a reticule producing apparatus of the class described, a reticule blank holding frame, a support therefor comprising a cylindrical guide member having a supporting base, open at one side to receive the reticule blank holding frame, securing means on said cylindrical guide member adjacent the said supporting base for securing the blank holding frame on the supporting base in said cylindrical guide member, said reticule blank holding frame comprising a circular plate-like member adapted to rest on the supporting base, interiorly of the cylindrical guide member, and having reticule mirror blank positioning and clamping means thereon for securing reticule mirror blanks in identical predetermined positions on said blank holding frame, cylindrical reticule cutter holding



means rotatably and axially movable within said cylindrical guide means, a needle holder radially adjustable thereon with respect to the longitudinal axis of the cylindrical reticule cutter holding means and extending toward said supporting base, adapted to receive a reticule cutting needle, and a handle member on the opposite end of the cutter holding member for rotating the same with the needle in contact with reticule blanks disposed in said blank holding frame.

2,455,373

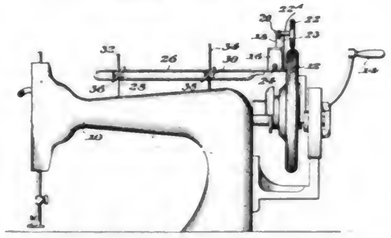
TIME BASE SWEEP AND INTENSIFIER PULSE GENERATOR

John M. Lester, Rockville Centre, N. Y., assignor to The Sperry Corporation, a corporation of Delaware

Application March 25, 1943, Serial No. 480,570
17 Claims. (Cl. 315—22)

10. The method of generating an intensifier pulse, comprising the steps of differentiating, clipping and amplifying a square wave to produce a sawtooth wave, inverting said sawtooth wave, and clipping, amplifying, and integrating the same.

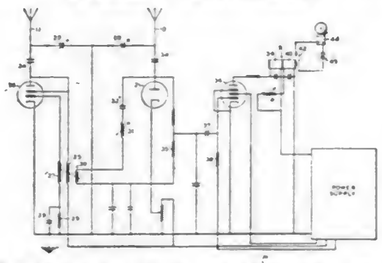
2,455,374



PROCESS OF RENDERING OLEAGINOUS TISSUE MATERIAL

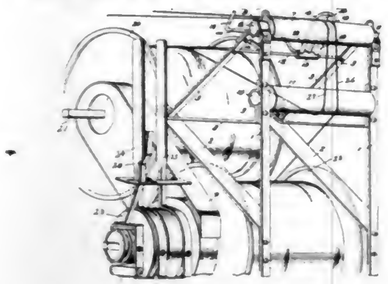
Louis H. Libby, Boston, and Lloyd F. Henderson, Reading, Mass., assignors to Lever Brothers Company, Cambridge, Mass., a corporation of Maine

No Drawing. Application April 26, 1945, Serial No. 590,526
11 Claims. (Cl. 260—412.7)



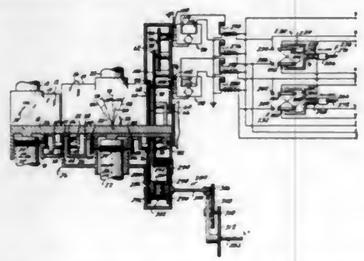
1. A method which comprises rendering oleaginous tissue material by heating it to a temperature which facilitates removal of fatty glyceride therefrom, in the presence of a small proportion of a substance supplying finely dispersed hydrated silica thereto, and separating the rendered fatty glyceride therefrom.

2,455,375
DRIVING MECHANISM FOR KNITTING NEEDLES
Jörgen P. Lindholm, Stockholm, Sweden, assignor to Lindan Electro, Inc., a corporation of New York
Application August 3, 1946, Serial No. 688,385
In Denmark August 22, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires August 22, 1962
2 Claims. (Cl. 66—1.5)



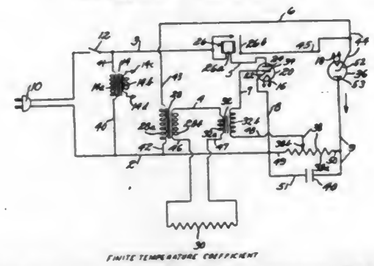
1. For use with a sewing machine having a balance wheel and one or more spool holders, a driving mechanism for knitting needles, comprising driving means adapted to co-operate with the periphery of the balance wheel, an arm adapted to extend along the upper side of said machine, and slidable clamping members on said arm adapted to be secured to the spool holders of the sewing machine.

2,455,376
CAPACITY ALARM SYSTEM
Maxwell H. A. Lindsay, Summit, N. J., assignor to American District Telegraph Company, Jersey City, N. J., a corporation of New Jersey
Application January 5, 1944, Serial No. 517,041
6 Claims. (Cl. 177—352.2)



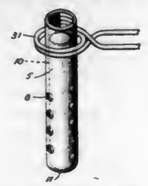
4. In a system of the type described, the combination of an oscillator, an antenna, connections whereby a change in capacity of the antenna varies the frequency of the oscillator, a tuning circuit linked to the output of said oscillator and being tuned substantially to the frequency of the oscillator, a second antenna, connections whereby a change in capacity of the second antenna changes the tuning of said tuning circuit, a control current path, and means whereby change of capacity of either of said antennae above a predetermined rate of change causes a change from normal in current flow in said path, current flow in said path remaining normal upon simultaneous uniform capacity change in said antennae, said oscillator being adjusted to a frequency slightly lower than the resonant frequency of said tuned circuit whereby equal capacity changes in either direction in either antenna cause substantially equal change in current flow in said path in either direction.

2,455,377
WIRE-WINDING DEVICE
Chauncey N. Maggiacomo, United States Army, Poughkeepsie, N. Y.
Application March 21, 1945, Serial No. 584,025
5 Claims. (Cl. 242—90)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



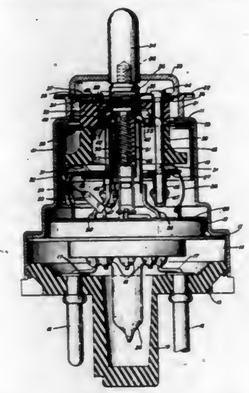
1. A device for recovering field wire comprising, a frame, a pair of reels mounted on the frame, means for driving said reels, an upper roller and a lower roller carried by the frame for tensioning wire passing to the reels, means for manually traversing the winding of the wire from one end of a reel to the other, a post on the frame, a cross arm at the upper end of the post, and swivelly mounted pulleys one at each end of the cross arm to guide wire to the rollers.

2,455,378
MECHANISM AND CONTROLS FOR CONTROLLABLE AIRCRAFT PROPELLERS; COMPLETE PROPELLER WITH AUTOMATIC CONTROLS
Howard M. McCoy, Patterson Field, Ohio
Application November 27, 1943, Serial No. 511,935
38 Claims. (Cl. 170—163)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



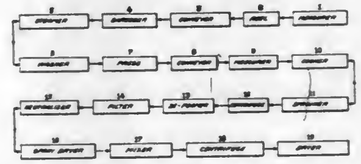
1. In an aircraft propeller, blades rotatable about their axes to change the pitch, means for changing the pitch whereby the airspeed may change in correspondence therewith, a differential gear-set comprising two differential gears, differential pinions for connecting said gears, and a carrier for revolving said pinions, means for connecting one of said gears to the pitch-change means, whereby rotatable displacement of said one gear is a function of pitch-change, an air-speed-responsive device for rotating said carrier as a function of air speed, and pitch-limit stop means connected to the other gear, whereby pitch-change is stopped when pitch is out of correspondence a predetermined amount with the air speed.

2,455,379
ELECTRONIC TEMPERATURE CONTROL
Miles A. McLennan, Dayton, Ohio
Application November 14, 1945, Serial No. 628,515
11 Claims. (Cl. 219—20)



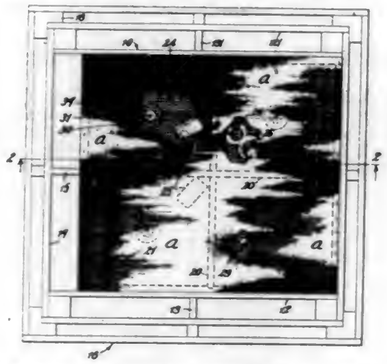
10. For use in a heating system having a source of electrical current and a heating element the resistance of which varies with temperature, a controller comprising, in combination, an electrical circuit for supplying electrical energy from said source to said heating element, an electrically operated switch for opening and closing said circuit, an electrical valve for passing current to operate said switch, said valve having control electrodes, a bias supply circuit applying a manually variable bias potential to at least one of said control electrodes, a voltage producing circuit applying a control potential (variable in response to current flow through said heating element and so to change of temperature of said heating element) to at least one of said control electrodes in opposition to said bias potential, to regulate the passage of current by said electrical valve in accordance with the relationship between the value of said control potential and the value of said bias potential, whereby said switch is normally held closed when the temperature of said heating element is below a predetermined value determined by said relationship and is opened when the temperature is above the predetermined value, and a cyclic controller for holding said electrically operated switch open for a predetermined interval of time following the opening of said electrical circuit and for closing said switch at the expiration of said interval, whereby the amount of current supplied to said heating element is regulated and said heating element is maintained at a substantially constant temperature dependent upon the adjustment of said manually variable bias potential.

2,455,380
METHOD OF MANUFACTURING PRIMERS
Leo T. Meister, Bradley Beach, N. J.
Application May 7, 1945, Serial No. 592,433
3 Claims. (Cl. 29—162)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



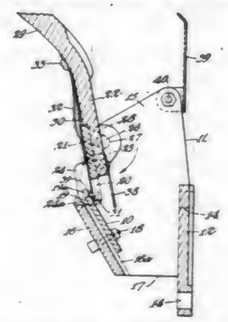
1. That method of manufacturing a primer comprising, positioning a thin-walled thimble of a lead-tin alloy soldering material having a soldering flux on its exterior, within a perforate metallic igniter charge tube having one end closed, expanding said thimble into snug fitting engagement with said tube, and heating said tube and thimble to bring at least the open end of said thimble and the adjacent portion of said tube to soldering temperature, whereby said thimble and tube are rigidly united.

2,455,381
CATHODE ASSEMBLY FOR ELECTRON DISCHARGE DEVICES
Jack A. Morton, Neshanic Station, N. J., and Lawrence J. Speck, Flushing, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 1, 1947, Serial No. 777,312
8 Claims. (Cl. 250—27.5)



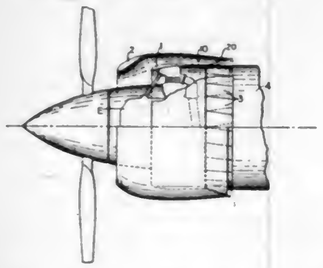
1. An electrode assembly for electron discharge devices, comprising a support member having an aperture therein and having also a plurality of grooves in one face thereof and extending outwardly from said aperture, a cathode extending through said aperture and having an electron emissive face parallel to said one face, and means supporting said cathode from said member, said means comprising arms affixed to said cathode and seated in said grooves.

2,455,382
METHOD OF MAKING A PECTIN PRODUCT
Richard Carl Nelson, Clearwater Beach, Fla., assignor, by mesne assignments, to Juice Industries, Inc., Dunedin, Fla., a corporation of Florida
Application August 18, 1943, Serial No. 499,088
12 Claims. (Cl. 260—209.5)



1. A method of making a pectin product comprising extracting from citrus fruit peel an aqueous pectin liquor having a relatively high pectin content, adjusting the pH of the liquor to between about 3.7 and 4.4, and spray drying the pH-adjusted liquor.

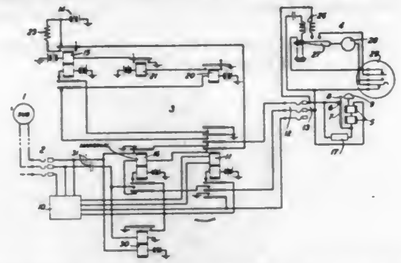
2,455,383
SCREEN FOR GYRATORY SIFTERS, SCREENS, OR BOLTING EQUIPMENT
Percy Pickard, London, Ontario, Canada, assignor to Richmond Manufacturing Company, Lockport, N. Y., a corporation of New York
Application September 16, 1947, Serial No. 774,368
6 Claims. (Cl. 209—323)



6. A screen for shake sifters and used in conjunction with a freely movable screen cleaner which is moved in engagement with the underside of the screening surface to keep the mesh thereof from blinding, comprising a screening surface, a foraminous cleaner carrier surface for said freely movable screen cleaner arranged below said screening surface, a plate arranged below said cleaner carrier surface, means confining the movement of said cleaner to a predetermined area of said screening surface and cleaner carrier surface, an abutment projecting upwardly from said cleaner carrier surface centrally of said area and adapted to engage said cleaner and drive it toward the outer parts of said area, spacing means below said abutment and interposed between said cleaner carrier surface and plate, and fastening means for said abutment extending through said cleaner carrier surface, spacing means and plate thereby to prevent said cleaner carrier surface from sagging.

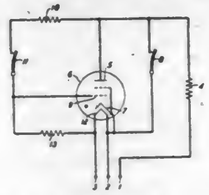
2,455,384
PUNCH SHEET RECORD
Worth G. Read, St. Paul, Minn.
Application August 9, 1946, Serial No. 689,492
11 Claims. (Cl. 164—114)

1. In apparatus for making punch sheet records identifying separate units, plates adapted to be fastened to the respective units, each plate carrying a group of sheet cutting members differing in their relative positions on the plate from those of the other plates; housings for the several plates carried by the separate units; a sheet holder adapted to be applied to the several plates and having complementary die members adapted to coact with the cutting members of either of said plates to cut groups of apertures in sheets corresponding in size, shape and relative positions to the groups of cutting members on the plates respectively; means for hingedly connecting the sheet holder to the several housings to permit cutting of sheets by arcuate movement of the holder relative to the cutting members of the several plates, and means for fastening sheets in predetermined fixed cutting position on the holder.



2,455,385
ALTERNATE PASSAGE DOUBLE RING COWL
George S. Schairer, Seattle, Wash., assignor to Boeing Airplane Company, a corporation of Delaware
Application February 10, 1943, Serial No. 475,399
9 Claims. (Cl. 244—57)

1. In an aircraft, cowling for a radial air-cooled engine subjected to flow of air thereover by flight of the aircraft, comprising an inner cowl ring closely encircling the outer ends of the engine cylinders, an outer cowl ring encircling said inner cowl ring and spaced outwardly therefrom to leave a passage therebetween by-passing the engine cylinders, and single flow control means operable compensatively to decrease the opening through such by-pass passage and to increase the opening through said inner cowl ring, or alternatively to decrease the opening through said inner cowl ring and to increase the opening through the by-pass passage, for maintaining substantially constant the composite opening through said outer cowl ring for all adjusted positions of said control means, thereby to maintain substantially constant the air flow conditions past the leading edge of said outer cowl ring.

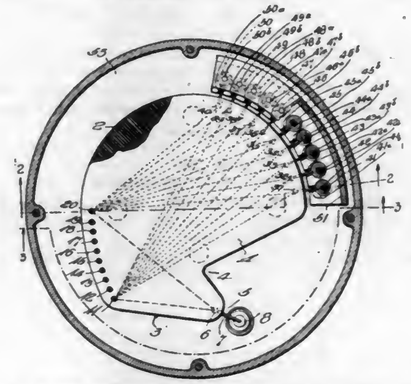


2,455,386
RINGER CIRCUIT
Oscar A. Shann, Short Hills, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application December 6, 1944, Serial No. 566,807
7 Claims. (Cl. 179—18)

1. In a telephone system, lines, subscriber's station apparatus connected thereto and including ringers having tap gongs, automatic switching means for establishing a connection from a calling station to a called station, impedance means effectively cooperative upon the seizure of one of said lines in operating the associated ringer to tap the gong once, and other impedance means effectively cooperative if the subscriber at the station of the called line does not answer within a certain interval thereafter in causing the first-

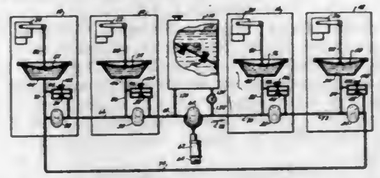
mentioned impedance means to automatically change its resistance value whereby the ringer is actuated to tap the gong repeatedly at shorter intervals.

2,455,387
THERMOSTAT-CONTROLLED HEATER CIRCUIT
Theodore E. Sippel, Valley Stream, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 2, 1946, Serial No. 700,704
5 Claims. (Cl. 219—20)



4. A device for controlling temperature comprising a heating element, an electron gas discharge device having an anode, control grid, and cathode, a thermostat connected between the anode and control grid, means to supply pulsating current to said heating element through said gas discharge device under control of said thermostat, an auxiliary thermostat in shunt with said discharge device initially operative to supply alternating current to said heating element in order to bring said heating element quickly into the range of control of said first thermostat, and means to render the tube non-conducting with both thermostats open and conducting when said first thermostat is closed and said auxiliary thermostat is open.

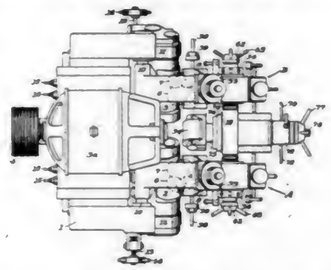
2,455,388
PREPARATION OF 2,2-BIS (P-CHLOROPHENYL) 1,1,1-TRICHLOROETHANE
Adrian C. Smith, Philadelphia, and Julian L. Staubly, Drexel Hill, Pa., assignors to The Pennsylvania Salt Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
No Drawing. Application July 14, 1944, Serial No. 545,002
8 Claims. (Cl. 260—649)



1. A method of producing DDT which comprises condensing chloral with chlorobenzene in the presence of hydrogen fluoride, the quantity of hydrogen fluoride being at least 10 times as great as the quantity of chloral, on a molar basis.

2,455,389
METHOD AND APPARATUS FOR SEPARATING AUDIO FREQUENCIES
Walter Soller, Cincinnati, Ohio, assignor of one-half to William H. Woodin, Jr., San Mateo, Calif.
Application February 14, 1944, Serial No. 522,344
11 Claims. (Cl. 178—44)

1. Apparatus for separating frequencies comprising a massive body of substantially circular contour recessed adjacent one side thereof forming a projecting portion on said massive body, a generator of complex frequencies connected with the projecting portion of said massive body, for setting up compressional waves therein a grating embedded in said massive body in the path of the compressional waves established therein for transmitting compressional waves of selected frequency and establishing individual vibrations at the said frequencies at intervals adjacent the peripheral edge of said massive body substantially opposite said grating, and means connected at spaced intervals with the peripheral edge of said body for reproducing the frequencies isolated from said complex frequencies.

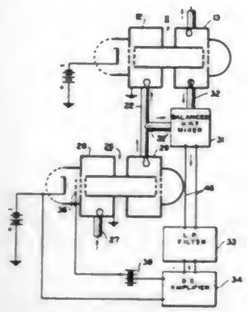


2,455,390
HYDRAULIC MECHANISM FOR SYNCHRONIZING A PLURALITY OF PRIME MOVERS WITH A MASTER PRIME MOVER
John A. Spanogle, Dayton, Ohio
Original application January 15, 1944, Serial No. 518,419, now Patent No. 2,381,934, dated August 14, 1945. Divided and this application May 5, 1945, Serial No. 592,160
1 Claim. (Cl. 60—97)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

In a synchronizing system which includes a plurality of power units, a reference unit, a pump drivably connected to each unit, and a mechanically operable speed control device on each unit, the improvement which comprises a series of hydraulic fluid containers each adapted for hydraulic connection to the intake side of a power

unit pump, a flexible diaphragm for each container forming a closure for one side thereof, mechanical linkage means adapted for connecting the diaphragms each to a speed control device for operating the speed control device, a gravity tank for holding reserve fluid for said pumps, said tank being hydraulically connected to both the intake and the discharge side of the reference unit pump, a partition intermediate the top and bottom of said tank, two check valves in said partition, one biased for downflow and the other biased for upflow through said partition, spring means for normally holding said valves closed, and a manually operable valve in the conduit connecting the tank to the discharge side of the reference unit pump.

2,455,391
ROUND STRAIGHTENER
John Blair Sutton, Bellefonte, Pa., assignor to Sutton Engineering Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application October 25, 1946, Serial No. 705,778
15 Claims. (Cl. 153—60)

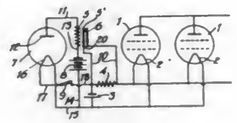


1. In a cross-roll straightening machine having plural three-roll passes and including at least one roll arranged to deflect stock from the passline of the machine; a pass assembly comprising a frame, a primary roll mounted in said frame, two roll-carrying arms pivotally mounted for swinging movement toward and away from each other, means for swinging the said arms, a roll yoke on each said roll-carrying arm, two secondary rolls carried by said roll yokes in opposition to each other and to the said primary roll to form with the primary roll a pass of regulable diameter for the reception of round stock therebetween, and means adjustably mounting each of the said roll yokes in its associated roll-carrying arm for movement of its associated roll toward and away from the center line of the pass independently of movement of the said swinging arm.

2,455,392
ADHESIVES
Eric John Gray Bailey, Welwyn Garden City, Francis M. Page, Newcastle under Lyme, and John C. McGowan, Muswell Hill, London, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application February 6, 1947, Serial No. 726,970. In Great Britain February 15, 1946
10 Claims. (Cl. 260—30.4)

1. In the process of preparing gap-filling adhesives containing a synthetic amido-formaldehyde resin which are subject to crazing on drying the step of adding thereto from 2% to 50% by weight based on the amido-formaldehyde condensation product of di(tetrahydrofurylethyl) carbinol.

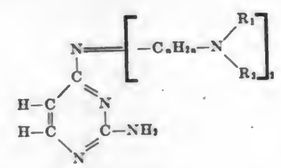
2,455,393
MODULATED WAVE MODIFYING APPARATUS
Russell H. Varian, Garden City, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application June 9, 1943, Serial No. 490,132
21 Claims. (Cl. 250—27)



1. Apparatus for removing the modulation of a modulated high frequency wave, comprising a velocity modulation electron discharge device having means for producing a stream of electrons, means energized by said wave for velocity grouping said electrons, and means for extracting high frequency energy from said velocity grouped stream whereby said device has an oscillating input versus output characteristic; and means for causing said extracted energy to have substantially zero percentage modulation, comprising means for adjusting the average amplitude of said modulated energizing wave to a value corresponding to a maximum or minimum of the input versus output characteristic of said device.

2,455,394
ACCELEROMETER
Hugh E. Webber, Williston Park, N. Y., assignor to The Sperry Corporation, a corporation of Delaware
Application June 29, 1943, Serial No. 492,771
16 Claims. (Cl. 201—63)

4. In an acceleration-sensitive instrument adapted to provide an electrical signal output in accordance with acceleration forces to which it is subjected, an acceleration-sensitive element comprising a closed envelope containing a fluid, an extremely fine electrical resistance element supported within said envelope and wholly immersed in said fluid and directly subjected only to self-generated heat, said resistance element being adapted for energization from a source of electrical energy and said fluid exhibiting sufficient inertia under external acceleration forces as to affect the resistance of said resistance element, and the size of the resistance element and the nature and amount of fluid within the envelope being so selected that movement of the fluid within the envelope caused solely by convection due to heat of the resistance element and by the effect of external forces on the mass of the fluid results in measurable changes in the resistance of the resistance element.



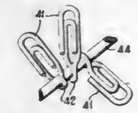
2,455,395
ELECTRONIC CIRCUIT CONTROL AND RELAY THEREFOR
Heinz Hermann Weichardt, New York, N. Y., assignor to Tung-Sol Lamp Works, Inc., Newark, N. J., a corporation of Delaware
Application December 8, 1943, Serial No. 513,453
15 Claims. (Cl. 315—101)

1. Means for testing a battery in circuit with one or more vacuum tube filaments and modifying said circuit in accordance therewith, comprising, a resistor in circuit with said battery when the battery is at full voltage, and relay control means responsive to the voltage of said battery for short-circuiting said resistor when the voltage of the battery drops to a predetermined lower value through the use thereof in heating the aforementioned filaments.

2,455,396
ORGANIC NITROGEN COMPOUNDS AND METHODS FOR OBTAINING SAME
Robert Raymond Adams and Harry Stone Mosher, State College, Pa., assignors to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan
No Drawing. Application July 19, 1943, Serial No. 495,354
11 Claims. (Cl. 260—251)

1. Compounds of the formula

where n is an integer less than 7, and where R_1 and R_2 are members of the class H, lower alkyl, lower hydroxy alkyl and together a residue constituting, with the nitrogen atom to which they are attached, the radical of an organic saturated 6 membered heterocyclic ring compound having said nitrogen atom in the ring.



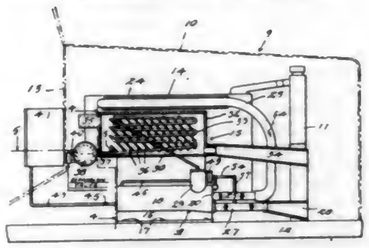
2,455,397
VITAMIN K-ACTIVE COMPOSITIONS
Erhard Fernholz, Princeton, and Stefan Ansbacher, Highland Park, N. J., assignors to E. R. Squibb & Sons, New York, N. Y., a corporation of New York
No Drawing. Application July 29, 1939, Serial No. 287,256
4 Claims. (Cl. 167—81)

1. As a medicinal agent for hemorrhagic conditions, a compound of the group consisting of 2-methyl - 1,4 - naphthoquinone, 2-methyl- 1,4-naphthohydroquinone and esters of the latter, in a fatty-oil medium.

2,455,398
MEDICINAL COMPOSITION FOR HEMORRHAGIC CONDITIONS
Stefan Ansbacher, Rockville Centre, N. Y., and Erhard Fernholz, deceased, late of Princeton, N. J., by Mary Briganti Fernholz, administratrix, New York, N. Y., assignors to E. R. Squibb & Sons, New York, N. Y., a corporation of New York
No Drawing. Original application July 29, 1939, Serial No. 287,256. Divided and this application December 6, 1945, Serial No. 633,257
5 Claims. (Cl. 167—81)

1. A medicinal composition for hemorrhagic conditions in dosage-unit form, comprising a carrier of the solid type and, as the added active medicament, about 1–4 mg. of an undissolved compound of the group consisting of 2-methyl-1,4-naphthoquinone, 2-methyl-1,4 - naphthohydroquinone, and esters of the latter.

2,455,399
PAPER CLIP
Hugh P. Botts, New York, N. Y., assignor of one-half to Lawrence G. Botts, New York, N. Y.
Application December 16, 1944, Serial No. 568,477
3 Claims. (Cl. 24—81)

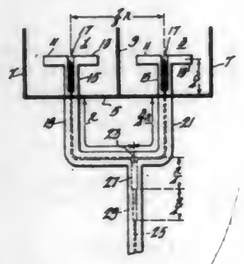


3. A clip device of the class described comprising a plurality of clips, each clip comprising a pair of elongated loops normally disposed one within the other in substantially the same plane, said loops being integrally joined at one end thereof by a third loop disposed in a plane substantially at right angles to the plane of said first named loops and yieldably supporting said first named loops in said plane, and said third loops of adjacent clips being interengaged in maintaining the clips in assemblage.

2,455,400
LAMINATED DRIVING BELT
Harry Brammer, Leeds, England
Application February 4, 1944, Serial No. 521,120
In Great Britain February 17, 1943
7 Claims. (Cl. 74—232)

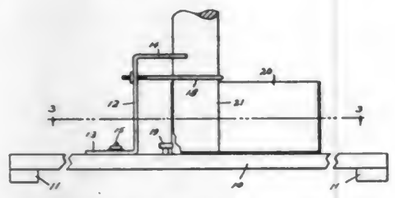
1. A preformed detachable fastener adapted to be associated with the links of a driving belt without deformation comprising integral shank, base and upturned end portions lying in the same plane, at least said shank and upturned end portions being of substantially the same size and cross-sectional shape, said base portion extending laterally from one end of said shank portion at an obtuse angle and said upturned end portion extending laterally from the end of said base portion remote from said shank portion and in the same general direction as said shank portion and a head on the other end of said shank portion having a surface adapted to bear against a link of the belt, said surface lying on the same side of the shank portion as said base portion, and lying in a plane at an acute angle to the shank portion.

2,455,401
REFRIGERATING UNIT FOR VEHICLES
Philip R. Brause, Casper, Wyo.
Application September 27, 1946, Serial No. 699,795
9 Claims. (Cl. 62—5)



1. In a refrigerating system for motor vehicles, a refrigerator box adapted to be mounted in a portion of the vehicle to be cooled and containing a cooling coil, a reservoir adapted to contain a condensed refrigerant and connected to one end of said cooling coil for supplying the refrigerant thereto, said system being provided with a pair of absorption units, automatically controlled means for alternately heating and cooling said absorption units, condensers disposed above each of the absorption units and in fluid communication therewith, said condensers being connected to said reservoir for supplying the condensed refrigerant thereto, and conduits, provided with check valves, connecting the cooling coil of the refrigerator box to said absorption units for supplying the vaporized refrigerant to the absorption unit being cooled and in which a low pressure area of the system exists, said absorption units being intermittently heated for vaporizing the condensed refrigerant therein for causing the refrigerant to be forced therefrom to the condenser which is connected thereto.

2,455,402
PROCESS FOR PREPARING AQUEOUS DISPERSIONS OF POLYVINYL BUTYRAL
William H. Bromley, Jr., Agawam, Mass., assignor to Shawinigan Resins Corporation, Springfield, Mass., a corporation of Massachusetts
No Drawing. Application October 7, 1947, Serial No. 778,473
7 Claims. (Cl. 260—34.2)

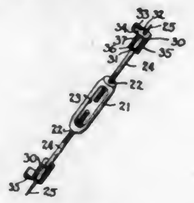


7. A process for preparing a stable aqueous dispersion of polyvinyl butyral resin which comprises reacting a polyvinyl alcohol with butyraldehyde in the presence of a volatile solvent for the polyvinyl butyral, a plasticizer for the polyvinyl butyral, a strong acid catalyst and an organic acid capable of forming a soap, adjusting the volatile solvent content of the resulting product so that not over 10 parts by weight of solvent are present for every 100 parts by weight of polyvinyl butyral and neutralizing the resulting product with an aqueous solution of a strong base to form a dispersion of water in plasticized polyvinyl butyral and finally adding sufficient water to cause the water-in-resin dispersion to invert to a dispersion of resin-in-water, said polyvinyl butyral containing, on a weight basis, not over 30% ester groups calculated as polyvinyl ester, not over 30% hydroxyl groups calculated as polyvinyl alcohol and the balance substantially butyraldehyde acetal, the initial reaction mixture containing at least 5% volatile solvent by weight and 5–80% plasticizer by weight based on the resulting polyvinyl butyral, sufficient organic acid in the range 0.5–30 parts by weight for every 100 parts by weight of polyvinyl butyral so that on neutralization there is sufficient salt thereof to cause the initial water-in-resin dispersion to invert to a resin-in-water dispersion on addition of water and not more than 2% by weight strong acid catalyst calculated as sulfuric acid based on the polyvinyl alcohol content.

2,455,403
ANTENNA
George H. Brown, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application January 20, 1945, Serial No. 573,724
4 Claims. (Cl. 250—33.65)

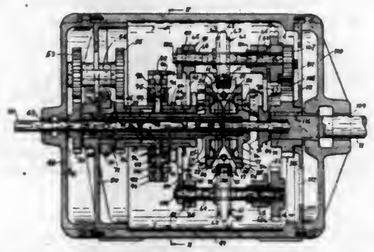
1. A directive antenna system including a pair of parallel radiator elements each provided with a plane reflector, a shield between said radiators whereby direct space coupling between said radiators is avoided, transmission lines coupled respectively to each of said antennas and to a common feed line, the lengths of said transmission lines differing by one quarter of the operating wavelength, one of said radiator elements and its associated reflector being spaced from the other along a line normal to the plane of said reflectors a distance such that the maximum response of said antenna system is along said line.

2,455,404
CHRISTMAS TREE HOLDER
William H. Brown and William S. Brown, Bedford, Ohio
Application April 10, 1947, Serial No. 740,616
5 Claims. (Cl. 248—42)



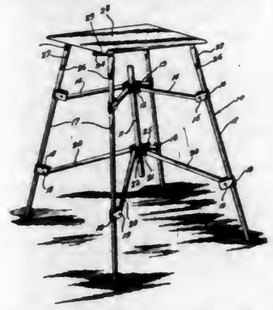
1. In a device of the character described, in combination, a base member having a substantially flat, substantially horizontal upper surface, lower abutment means carried by said base member and projecting above said upper surface, upper abutment means carried by said base member, being transversely and longitudinally adjustable with respect thereto and comprising a lower horizontally extending portion, an upwardly extending portion carried by said horizontally extending portion and an abutment portion carried by said upwardly extending portion and extending horizontally beyond one end of said lower horizontally extending portion, a receptacle supported by said upper surface of said base member and engaging said lower abutment means whereby a Christmas tree trunk or the like may be received in said receptacle and be supported on said upper surface of said base member through the bottom of said receptacle and may be limited in its horizontal motion by engagement against said upper abutment means and against the inner surface of said receptacle adjacent to a point of engagement thereof against said lower abutment means and gripping means carried by said upwardly extending portion of said upper abutment means adapted to engage against said Christmas tree trunk or the like at a point intermediate in height between said lower abutment means and said abutment portion of said upper abutment means to urge said Christmas tree trunk or the like toward said upper and lower abutment means whereby it is held in fixed upright position with respect to said base member and hold said receptacle between itself and said lower abutment means, said receptacle being of a height less than the distance of said gripping means above said base member.

2,455,405
PREPARATION OF MONOCHLOROACETIC ACID
Lawton A. Burrows, Mendenhall, Pa., and Mack F. Fuller, Woodbury, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 17, 1946, Serial No. 703,710
9 Claims. (Cl. 260—531)



1. A process for the manufacture of monochloroacetic acid, which comprises reacting ethylene chlorohydrin and nitric acid.

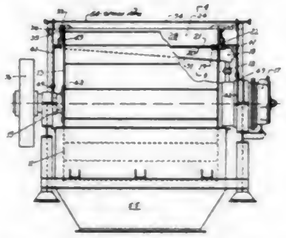
2,455,406
STOVEPIPE FASTENER
Earl L. Chadwick, Portland, Oreg.
Application October 18, 1945, Serial No. 623,065
2 Claims. (Cl. 126—318)



1. A fastener for stove pipes and flue thimbles including a turn buckle having right and left threads, a rod threaded to each end of said turn buckle, a point on each rod, said rod having a flat non-circular portion adjacent said point, and means to connect the pipe end and the flat non-circular portion of each rod to hold said rods against turning as said turn buckle is rotated to extend the rods to pierce the pipe and thimble, said means comprising a clip to fit over the pipe end, and having a bent strip extending radially inwardly therefrom and said bent strip which is rebent into a rectangular form having openings in the sides thereof through which said rod extends, one of said openings being non-circular and shaped to receive and limit the turning movement of said flat non-circular portion of said rod.

2,455,407
VARIABLE-SPEED TRANSMISSION
John Louis Christmann, Passaic, N. J.
Application February 21, 1947, Serial No. 729,977
19 Claims. (Cl. 74—286)

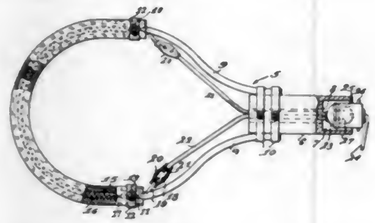
1. In a variable speed transmission having a driving and a driven shaft, a sprocket engaging endless member disposed around an axis and having elements for meshing with the teeth of a sprocket, support means having circumferences coaxial of said axis and of different diameters for supporting and holding sections of said endless member upon selected circumferences of selected diameters through said axis, a bracket rotative about said endless member and about said axis, drive means connecting said driving shaft and said bracket for rotating said bracket, clamp means on said bracket for engaging a section of said endless member against said support means at a selected diameter whereby rotations of said bracket will cause said clamp means to travel around said support means and engage all sections of said endless member progressively around said selected diameter, said clamp means having an axis spaced from said sections of said endless member at said selected diameter, means for adjusting said support means for selecting a circumference of said support means for said endless member, means for adjusting said bracket for causing said clamp means to maintain a section of said endless member against said support means for all adjusted positions of said support means, a driven sprocket mounted on said clamp means coaxial of said axis of said clamp means and engaging said endless member at said selected diameter, and drive means connecting said driven sprocket and said driven shaft.



2,455,408
PORTABLE PROJECTOR TABLE
Henry L. Daniels, Kell, Ill.
Application December 12, 1945, Serial No. 634,567
2 Claims. (Cl. 311—79)

1. A folding table comprising a table top, a group of legs having adjustable sockets at their

upper ends, a group of arms pivoted to the legs near the sockets, said arms lying along axes which lie in convergent planes, a center post pivoted adjacent its upper end to the convergent ends of the arms, a sleeve mounted on the center post to slide longitudinally thereof below the convergent ends of the arms, a second group of convergent arms pivoted at their convergent ends to the sleeve and at their divergent ends to the legs, said second group of arms being movable through arcs which lie in convergent planes coincident with the arcs in which the first group of arms move and spaced studs pivoted to the underside of the table top to swing in arcs which lie tangent to the center post, said studs being received in the sockets when the table is erected.

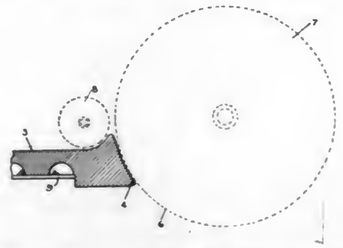


2,455,409
ROTARY FILTER
George D. Dickey, New York, N. Y., assignor of one-half to Henry M. Hunter, New York, N. Y.
Application September 21, 1945, Serial No. 617,770
11 Claims. (Cl. 210—199)

1. A continuous rotary hopper dewaterer of the vacuum type comprising: a rotatable drum to which vacuum is applied; a filter medium on the surface of the drum; end walls on the drum extending beyond the periphery thereof and cooperating therewith to define an annular outwardly open peripheral channel; a series of radial partitions extending across the channel at spaced peripheral intervals to divide it into a series of outwardly open hoppers, said partitions being mounted at opposite ends upon opposed walls for movement into and out of hopper forming engagement with the drum; yieldable means connecting each end of each partition to the adjacent end wall and yieldably urging the partitions toward and holding them in said hopper forming engagement; and means for moving the partitions out of said hopper forming engagement with the drum as they successively enter a predetermined zone in the cycle of drum rotation and for holding them out of such engagement over a predetermined angle of drum rotation.

7. A continuous rotary hopper dewaterer of the vacuum type wherein, during each rotation of the dewaterer, successive points of its periphery pass through feeding and vacuum application zones to form a filter cake and then through a filter cake removal zone, comprising: a squirrel cage arrangement of axially extending peripherally spaced cross bars connected together by peripherally extending axially spaced arcuate end bars, each adjacent pair of peripherally spaced cross bars and axially spaced end bars cooperating with each other to form a peripheral opening and being recessed to form a seat around the opening; an endless succession of arcuate screens engaging the bars and cooperating therewith to form a segmental filter drum, each screen being positioned on a seat to extend over the adjacent opening; a pair of radial end walls connected to the ends of the drum and cooperating therewith to form a drum assembly having outwardly open endless channel, the bight of which is formed by the periphery of the drum; a rotatable supporting mechanism for the drum assembly, the mechanism including means for enclosing the space underneath each drum segment to form a filter compartment which is arranged for connection to a suction line during its travel through the vacuum application zone; a sheet of filtering material wrapped around the bight of said channel; a pair of axially spaced end clamping bands encircling the wrapped filter material for sealing it along its opposite end margins and for removably clamping it to the drum; a series of radial partitions dividing the channel into a series of outwardly open hoppers, each partition being arranged between the adjacent ends of a pair of drum segments to extend from one end wall to the other in radial alignment with the adjacent cross bar so as to position one hopper over each screen.

2,455,410
ELECTRIC BRANDING IRON
Charles E. Farrar, Sidon, Ark.
Application October 17, 1947, Serial No. 780,321
1 Claim. (Cl. 219—30)



An electrical branding iron comprising a handle of electrical insulating material having supporting arms secured to and projecting from one end thereof, a hollow tube of a heat conducting material shaped to form a brand, clamping means for connecting spaced portions of said branding tube to said arms, remote from the handle, an electric resistance wire having a coiled portion disposed within said tube and having uncoiled end portions projecting from the ends thereof, an electric plug mounted in the outer end of said handle and electrically connected to the uncoiled ends of said resistance wire and adapted to be detachably connected to a source of electric current for energizing the resistance wire for heating said branding tube, and said handle being formed of wood and having a recessed outer end for accommodating said electric plug and a bore extending from its inner end to said recess, providing a conduit for an electrical conductor.

2,455,411
PROCESS FOR THE TREATMENT OF IRON IN ORDER TO OBTAIN A CLEAN METALLIC SURFACE
Francisco Ambrosio Ricardo Franchi, Villa Christa, La Rosiaz, near Lausanne, Switzerland
No Drawing. Application September 19, 1945, Serial No. 617,439. In Switzerland February 23, 1945
5 Claims. (Cl. 134—3)

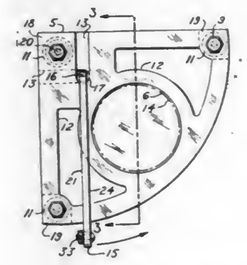
1. A process for the treatment of iron in order to obtain a clean metallic surface, in which the iron to be treated is reacted for 5 to 30 minutes in an acid bath composed of by weight 3 to 9 parts of nitric acid, 31 to 33 parts of muriatic acid, 10 to 20 parts of sulphuric acid, 5 to 12 parts of hydrogen sulphide, 1 to 7 parts of sodium acetate and 2 to 9 parts of a compound from the group consisting of potassium hydrogen phosphate (K_2HPO_4) and potassium ortho phosphate (K_3PO_4) for 100 parts of water, is then withdrawn from said acid bath and immersed in an alkaline bath.

2,455,412
FEED PLATE
John Lee Fonville and Alexander Edward Barneycastle, Burlington, N. C., assignors to Celanese Corporation of America, a corporation of Delaware
Application October 2, 1945, Serial No. 619,804
1 Claim. (Cl. 19—105)

A feed plate for a carding machine having a lickerin, said feed plate having an upper plane surface and a bottom surface adapted to be supported on the carding machine, and a nose on said feed plate extending above the upper plane surface thereof and below the bottom surface thereof, said nose having its entire surface adjacent to said lickerin substantially concentric with the latter, whereby accumulation of fibers between the nose and the lickerin is prevented.

2,455,413
CALCIUM PHOSPHATE PHOSPHOR
Herman C. Froelich and Joseph M. Margolis, Cleveland Heights, Ohio, assignors to General Electric Company, a corporation of New York
No Drawing. Application July 15, 1946, Serial No. 683,786
3 Claims. (Cl. 252—301.4)

1. A fluorescent material consisting of calcium phosphate activated by both cerium and thorium, and characterized by the emission of long wavelength ultraviolet radiations when excited by ultra-violet radiation of 2537 Å. wavelength, the cerium being present in an amount of approximately 1–20 per cent by weight of the calcium phosphate and the thorium in an amount of approximately .01–20 per cent by weight of the calcium phosphate.



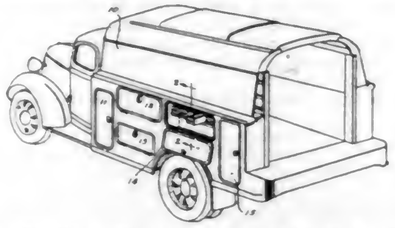
2,455,414
ALUMINUM PHOSPHATE PHOSPHOR
Herman C. Froelich and Joseph M. Margolis, Cleveland Heights, Ohio, assignors to General Electric Company, a corporation of New York
No Drawing. Application July 15, 1946, Serial No. 683,787
2 Claims. (Cl. 252—301.4)

1. A fluorescent material consisting of aluminum phosphate activated by both cerium and thorium, the cerium content being approximately 12–25% Ce_2O_3 and the thorium content being approximately 0.2–15% ThO_2 and characterized by the emission of longer wave length ultraviolet radiations when excited by ultraviolet radiation of 2537 Å. wave length.

2,455,415
ULTRAVIOLET EMITTING MAGNESIUM PYROPHOSPHATE PHOSPHOR
Herman C. Froelich, Cleveland Heights, Ohio, assignor to General Electric Company, a corporation of New York
No Drawing. Application April 15, 1947, Serial No. 741,692
3 Claims. (Cl. 252—301.4)

1. A phosphor consisting essentially of magnesium phosphate of pyrophosphate composition activated by both cerium and thorium in amounts of about .001–25% Ce_2O_3 and .001–15% ThO_2.

2,455,416
DEVICE FOR SLICING EGGS INTO LAYERS
Joseph W. Harbanoff, New York, N. Y.
Application February 3, 1947, Serial No. 726,151
1 Claim. (Cl. 146—147)



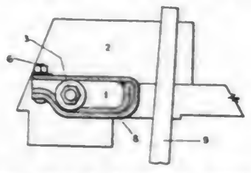
A food slicer comprising a plurality of plates of substantially the same form, each of said plates having a corner and two other corners equidistant therefrom, straight edges joining the first-mentioned corner with said two other corners and a circular edge joining said two other corners with each other, a plurality of spacers located at said corners and maintaining said plates uniformly spaced one directly above the other, bolts extending through said spacers and said corners of the plates, those of said plates which are located above the lowermost plate having a substantially central opening formed therein for receiving food to be sliced, each of said plates having a slot formed therein and extending close to the first-mentioned corner from one of said straight edges and parallel to the other straight edge, the location of at least one of said plates being reversed in relation to other plates so that the walls of the slot thereof extend transversely to the walls of the slots of said other plates, a cutting frame having a pivotal portion extending through said slots, an outer portion located beyond said circular edge and extending parallel to said pivotal portion, and transverse portions joining said pivotal and outer portions and extending on opposite sides of said plates, whereby said cutting frame is swingably mounted in said slots, and cutting elements carried by said pivotal and outer portions and moving between said superposed plates and across said central opening when said cutting frame is swung.

2,455,417

VEHICLE BODY TOOL COMPARTMENT CONSTRUCTION

James H. Holan, Rocky River, and Herman J. Troche, Cleveland Heights, Ohio, assignors to The American Coach & Body Company, Cleveland, Ohio, a corporation of Ohio

Application January 1, 1945, Serial No. 570,928
1 Claim. (Cl. 296—24)



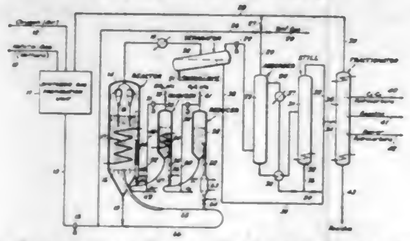
A vehicle body having a tool carrying compartment in the side wall thereof and an opening therein providing access to the compartment, a closure adapted to close the opening, said compartment having a top, bottom, back, and end walls, there being a front wall in which said opening is located, a substantially horizontal supporting member in the upper portion of the compartment extending between the end walls and forwardly from the back wall and terminating short of said opening, whereby substantially the full area of the opening is available for the passage of articles adapted to be held in said compartment below said horizontal member, said member having an upwardly extending flange extending across the forward edge thereof, and one or more containers adapted to be supported on said member and each held in place thereon by said flange, the distance between the top of the flange and the top wall of the compartment being greater than the depth of the container, whereby each container may be withdrawn through said opening when lifted over the flange, the length and height of each container being so proportioned with respect to the length of said supporting member and to the distance between the flange and the front of the compartment and to the distance between the flange and the top of the compartment that each container may be suspended in various tilted positions with a portion thereof disposed outside the opening into the compartment, while the topmost portion adjacent the inner end of the container engages the top of the compartment, whereby each container may be supported in a position accessible for the insertion of articles thereinto or removal of articles therefrom.

2,455,418

LOOM BUMPER

Mack Henry Holcombe, Scottdale, Ga.

Application February 18, 1946, Serial No. 648,317
1 Claim. (Cl. 139—166)



In a loom having a picker stick, a picker stick bumper comprising a cast iron body having top, bottom and end portions, a plurality of layers of leather carried by said body, at least one of said layers covering the top, bottom and one end portion, there being a plurality of layers covering said one end portion, the body being secured to the loom in such position that said one end portion is struck by the picker stick at the end of its inward movement.

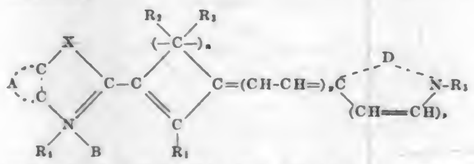
2,455,419

SYNTHESIS OF HYDROCARBONS AND REGENERATION OF SYNTHESIS CATALYST

Everett A. Johnson, Park Ridge, Ill., assignor to Standard Oil Company, Chicago, Ill., a corporation of Indiana

Application October 11, 1944, Serial No. 558,117
15 Claims. (Cl. 260—449.6)

1. In a process for synthesizing hydrocarbons from carbon monoxide and hydrogen the improved method of operation which comprises contacting a carbon monoxide-hydrogen mixture in a synthesis zone under synthesis conditions with an iron-type catalyst maintained in a dense turbulent suspended phase, withdrawing a portion of the iron catalyst directly from said dense phase and introducing said withdrawn catalyst to an oxidizing zone, passing an oxidizing gas upwardly in said oxidizing zone at such velocity as to maintain catalyst therein in dense turbulent suspended phase at a temperature of at least about 700° F. whereby oxidation is effected, removing catalyst from the dense phase in the oxidizing zone and introducing it into a reducing zone, passing a reducing gas upwardly through said reducing zone at such velocity as to maintain the catalyst in a dense turbulent suspended phase and at a temperature effective for reducing said catalyst and returning reduced catalyst from the dense phase in the reducing zone back to said synthesis zone.



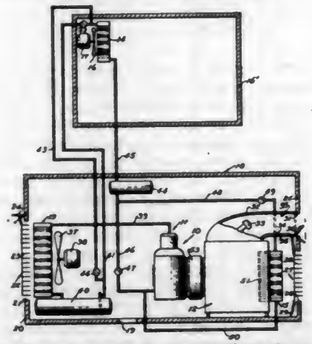
2,455,420

CYANINE DYESTUFF

John David Kendall, Harold Gordon Suggate, and Henry Walter Wood, Ilford, England, assignors to Ilford Limited, Ilford, England, a British company

No Drawing. Application January 8, 1942, Serial No. 426,098. In Great Britain January 17, 1941
12 Claims. (Cl. 260—240)

10. Unsymmetrical dyestuffs of the general formula:



wherein A constitutes the atoms necessary to complete a benzene ring with the two carbon atoms attached to the cyclic atoms X and N respectively, and form an aromatic hydrocarbon nucleus, and X is an atom selected from the class consisting of the oxygen, sulphur and selenium atoms, R_1, R_2 and R_3 are selected from the class consisting of hydrogen atoms and hydrocarbon groups and n is a small integer greater than 1, R_4 and R_5 are groups selected from the class consisting of alkyl and aralkyl groups, y is selected from the class consisting of nought and small positive integers, z is selected from the class consisting of nought and one, B is an acid residue and D is the residue of a heterocyclic nitrogen compound of the type used in cyanine dyes, the heterocyclic ring of which D forms a part being different from that of which x forms a part.

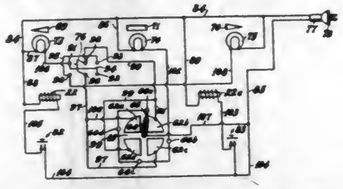
2,455,421

CONTROL MEANS FOR AIR CONDITIONING APPARATUS

Henry O. Kirkpatrick, Detroit, Mich., assignor to Advance Manufacturing, Inc., Detroit, Mich., a corporation of Michigan

Application June 3, 1946, Serial No. 673,991
8 Claims. (Cl. 62—6)

1. An electric control circuit for air conditioning apparatus having a refrigerant compressor, a condenser for the compressed refrigerant, a heat exchange unit having a fluid connection with the low pressure side of the compressor, an expansion valve in the fluid connection between the condenser and evaporator, means for forcing air through the condenser to condense the refrigerant passing therethrough, said means including a fan and an electric motor for operating the fan, a normally closed valve controlled bypass extending around the expansion valve, said control circuit comprising a switch for the motor, a solenoid operatively connected to the bypass valve, a master switch operable to energize the solenoid to open the bypass valve, and means for opening the fan motor switch in response to operation of the master switch to open the bypass valve.



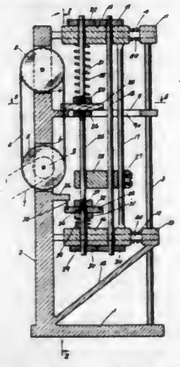
2,455,422

SCORING DEVICE FOR TABLE TENNIS

Howard H. Kucks, Rockville Centre, N. Y.

Application April 2, 1947, Serial No. 738,993
6 Claims. (Cl. 177—384)

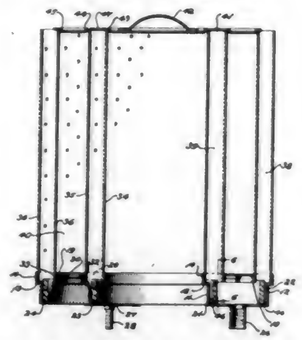
1. A scoring device comprising a housing including a front wall and having a shaft rotatably mounted therein, a pair of spaced shafts mounted in said housing parallel with said first shaft, means for selectively rotating said pair of shafts intermittently, means connecting said pair of shafts with said first shaft for imparting selective intermittent rotation of said pair of shafts, additively to said first shaft, said pair of shafts having pointers thereon, said housing having a pair of electric lamps therein, said housing having a support of insulating material mounted parallel with said front wall, said first shaft extending rotatably through said support, said supports having a metallic disc mounted thereon concentric with said first shaft, said disc being composed of four circumferentially spaced quadrants, said first shaft having a radial contact finger in frictional contact with said disc, a lead



in connector containing two conductors having one of said conductors connected to said first shaft, leads connecting the other of said conductors to one terminal of each of said lamps, leads connecting the other terminal of one of said lamps with one pair of diametrically opposed quadrants of said disc, and leads connecting the other terminal of the other of said lamps with the other pair of diametrically opposed quadrants of said disc, said lead in being adapted to be connected to an electric outlet.

2,455,423

AUTOMATIC BAND SAW MACHINE

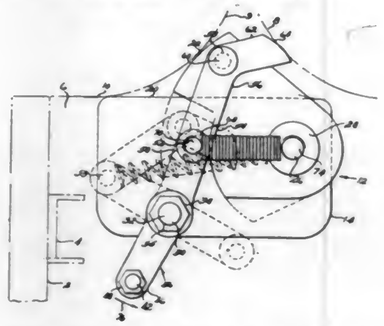


Charles B. Lansing, Geauga County, Ohio

Application March 14, 1945, Serial No. 582,657
9 Claims. (Cl. 144—145)

1. In a band saw machine, in combination, a supporting frame, a vertically disposed band saw mounted on the frame, a carrier carried by the frame and comprising an upper head and a lower head, horizontal guide members on the frame and engaging the said heads, means intermediate the carrier and frame normally urging the carrier to move in the direction of the saw, a vertical driving shaft mounted on and movable with the carrier, master cam and work holding complemental shaft means parallel to the driving shaft and supported to move with the carrier, a driving connection between the driving shaft and the complemental shaft means and a work guide member on the frame coacting with the master cam to move the complemental shaft means toward and from the saw during rotation of said last shaft means.

2,455,424
PERFORATED COMBUSTION TUBE DISTILLATE BURNER
Gabriel Z. Levine, West Hartford, Conn., assignor to Barridon Oil Burner Corporation, Hartford, Conn., a corporation of Connecticut
Application May 20, 1947, Serial No. 749,245
1 Claim. (Cl. 158—88)

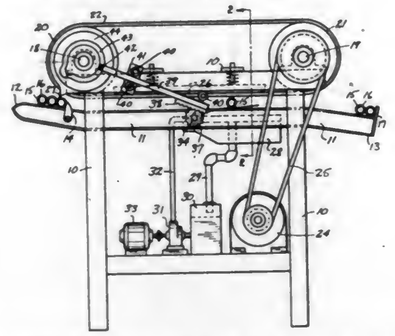


A distillate multiple burner including a one piece stamped steel base having a central opening and provided with inner and outer annular walls extending upwardly therefrom, said walls having laterally offset aligned shoulders and terminating in upwardly extending annular flanges, the bottom of the base between the inner and outer walls having circumferentially spaced raised arcuate portions provided with elongated chimney openings, each of said openings being enclosed by an upwardly extending flange spaced from the opposite sides of the top of its raised portion to form supporting shoulders in horizontal alignment with the shoulders on the inner and outer walls, said raised portions being spaced from the inner and outer walls to form with the bottom of the burner an inner annular groove and a concentric outer groove, the space between adjacent raised portions forming radial passages for communicating the inner and outer grooves with each other, the bottom of said radial passages being depressed to be positioned below the bottom of the grooves, wicks in said grooves and spaced from the bottom of said passages to allow the free flow of oil from the passages into the grooves, a removable cover plate spaced from said inner and outer annular walls and having spaced depending flanges overlapping and in vapor sealing engagement with the flanges on said raised portions, said plate extending over said radial passages to prevent escape of vapor therefrom and having arcuate slots provided with depending flanges in vapor sealing engagement with the inner side walls of said chimney openings, means for supplying oil to said base, and concentric spaced perforated shells mounted on said shoulders so as to be firmly supported to the base.

2,455,425
PRODUCTION OF NITROPARAFFINS
Norman Levy, Charles William Scaife, and Dorothy Shaw Turner Bryson, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application July 18, 1946, Serial No. 684,554. In Great Britain July 30, 1945
2 Claims. (Cl. 260—644)

1. A process for the production of 2,2-dinitropropane and 1,2-dinitro-isobutane which comprises heating at a temperature within the range 190°–300° C. isobutane with nitrogen dioxide in the vapour phase, the volumetric ratio of nitrogen dioxide to hydrocarbon in said gas being about 2:1.

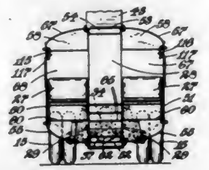
2,455,426
SAFETY STOP FOR BARRELS
Edmund C. Livingston, Rehoboth, Mass.
Application September 6, 1946, Serial No. 695,259
2 Claims. (Cl. 193—40)



1. A safety stop comprising a base plate adapted to be secured to a barrel track with no portion thereof extending above said track, a cam member pivoted on said base plate and having a stop portion thereof normally extending above said track to block passage of a barrel off said track, a pair of toggle levers pivotally connected to each other, the first lever being pivoted on said base plate and having an extended trip arm, the second lever being pivoted intermediate its ends on said cam member and having an extended release lever portion extending above said track for being engaged by a barrel being rolled onto said track, resilient means biasing said toggle levers into track blocking locked position, whereby a barrel being rolled onto said track will bear against said release lever portion, depressing it and rotating said toggle levers to unlocked position, whereby said cam member is carried to a position below said track to unblock the track, said extended trip arm of the first lever being adapted for being manually actuated to unblock the track when desired.

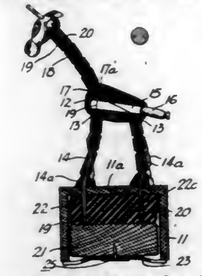
2,455,427
PROCESS FOR IMPREGNATING WOOD AND COMPOSITION THEREFOR
William Karl Loughborough, Madison, Wis., assignor to United States of America as represented by the Secretary of Agriculture
No Drawing. Application March 9, 1945, Serial No. 581,821
6 Claims. (Cl. 117—148)
(Granted under the Act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A process for seasoning refractory wood comprising soaking the wood in an aqueous solution containing urea and formaldehyde in the relative molal proportions of about 6 to 4, respectively, said solution being buffered to a pH in the range of about pH 8 to about pH 10.5, followed by drying the treated wood.



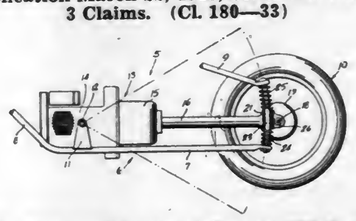
4. As a composition for the chemical seasoning of wood an aqueous solution of 40 to 60 percent by weight of a mixture of urea and formaldehyde in the relative molal proportions of substantially 6 to 4, respectively, said solution being buffered to a pH in the range of substantially pH 8 to 10.5.

2,455,428
COATING MACHINE
Fred W. Love, Youngstown, and Clarence E. McCormick, Poland, Ohio, assignors to Lee Rubber & Tire Corporation, Youngstown, Ohio, a corporation of New York
Application June 25, 1946, Serial No. 679,146
3 Claims. (Cl. 91—18)



1. In a device for applying an adhesive coating to the outer edge of a wire wound on a mandrel and including tracks over which the mandrel may be rolled, a pan disposed between the tracks and at least one pair of pulleys and a belt trained thereover for engaging the said mandrel and rolling it along said tracks, a supply of adhesive in the said pan and a rotatable shaft positioned transversely of said pan, a plurality of relatively long thin flexible reeds affixed to said shaft and extending outwardly therefrom and means for rotating the said shaft first in one direction and then the other so as to move the reeds into the said adhesive for coating the same and for elevating the said coated reeds for partial draining and maintaining the said flexible reeds in elevated position while the wire wound mandrel is moved thereover by the said track and belt.

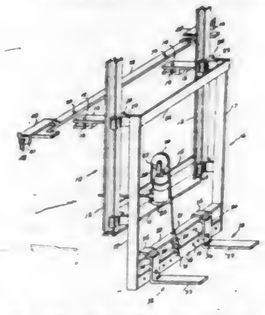
2,455,429
VEHICLE BODY
René Lucien, Farnham Common, England
Application May 11, 1944, Serial No. 535,128
In Great Britain March 15, 1943
3 Claims. (Cl. 296—28)



1. A wheeled road vehicle having an elongated body shell constructed of sheet metal and comprising a main beam-like structural member in the form of a tube of cruciform cross-section for substantially its entire length, the supporting means for said body disposed adjacent the ends thereof leaving the long intermediate portion of the body unsupported except by the self-sustaining beam structure of the body itself, the vertical arms of the cruciform cross-section of the body enclosing a central passageway for the vehicle, and the laterally extending arms providing space for the pay load, the top and bottom walls of the central space provided by the vertical arm of the cruciform cross-section of the body being hollow and box-like in section to provide spaces extending substantially the length of the vehicle.

2,455,430
ANIMATED TOY
Christopher Luckhaupt, Jamaica, N. Y.
Application April 6, 1946, Serial No. 660,217
1 Claim. (Cl. 46—119)

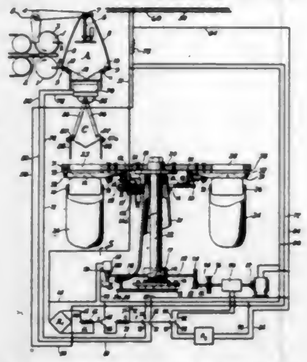
A toy comprising a figure having a plurality of articulated engaging elements provided with communicating perforations; a hollow base supporting said figure on its top, said base having perforations in its top communicating with the element perforations and having an open bottom; a block of non-yielding material having lesser horizontal dimension than the interior of the base whereby it is displaceable and tiltable therein; a member of flexible material secured at its periphery adjacent the open bottom of said base; means for attaching said flexible member centrally to said block of non-yielding material; an elastic member of sponge rubber interposed between said block and the inner face of the top of said base; said member having vertical perforations aligned with the perforations of the top of the base and having horizontal dimensions such that it substantially fills the base; and string means having one end thereof secured to said block and extending through the perforations of said sponge rubber member and of the top of said base and thence through the perforations of the articulated elements and having its other end fixedly secured to an upper portion of said figure, said sponge rubber member normally tensioning said string means, and said block being operative to vary the tension of said string means.



2,455,431
ENGINE MOUNTING AND DRIVE WHEEL SUSPENSION FOR MOTORCYCLES
Robert A. MacGregor, Olney, Ill.
Application March 22, 1946, Serial No. 656,252
3 Claims. (Cl. 180—33)

1. A motorcycle, comprising an upper and a lower frame member, a unitary power plant including a drive wheel having its axis positioned between said frame members adjacent the rear ends of said frame members, an engine having a drive shaft extending therefrom and gear means directly connecting the outer end of the drive

shaft with said drive wheel, a housing carrying said drive wheel and enclosing said engine, drive shaft, and gear means, and holding said engine, drive shaft, gear means, and drive wheel rigidly relative to one another, a horizontal transverse pivot in the same horizontal plane as the drive shaft and connected to said power plant at a point remote from the outer end of the drive shaft whereby said power plant can swing as a unit in a vertical plane relative to the motorcycle frame, and a guide connected between the said upper and lower frame members adjacent the rear ends thereof and effectively connected to said housing, for guiding and cushioning the movement of said power plant on the axis of said pivot as said drive wheel rises and falls in response to inequalities in a road surface.

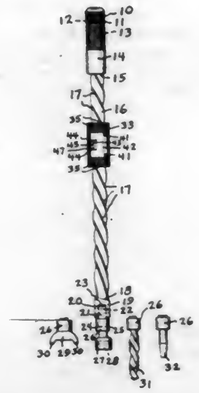


2,455,432
TRACTOR TIRE LIFT
Melvin B. Martin, Piqua, Ohio
Application February 7, 1947, Serial No. 727,084
4 Claims. (Cl. 214—113)

1. A tire lift including a main frame and a lifting frame slidably supported by the main frame, the main frame comprising a bottom bar, a pair of eye beams secured to and extending upwardly from the ends of the bottom bar, and a stiffener bar secured to both eye beams, the lifting frame comprising C-shaped guide members slidably engaging the rear flanges of the eye beams of the main frame, two side bars to which the C-shaped guide members are secured, a top stiffener bar secured to the top ends of the side bars, a lifting bar secured to the lower ends of the side bars and a slide bar secured to the side bars at a distance above the lifting bar, a jack securely mounted on the bottom bar of the main frame, a sheave rotatably mounted in the bifurcated upper end of the ram of the jack, a cable trained over the sheave, one end of the cable secured to the bottom bar of the main frame and the other cable end secured to the lifting bar, and a pair of angular lifting arms having open guideways formed on its upwardly extending portions adapted to engage the slide bar slidably, the rearwardly extending portions being adapted to receive and support tires thereon.

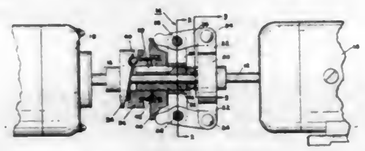
2,455,433
LOADING AND PACKAGING DEVICE
Morris Matsen, Wilmington, Del., and Earl R. Jones, Philadelphia, Pa., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application December 22, 1944, Serial No. 569,342
7 Claims. (Cl. 249—55)

7. A loading device which comprises a pedestal; a rotatable table supported by said pedestal having openings therein; a motor and means for operatively connecting the motor and table; means for suspending a packaging receptacle beneath each of said openings in the table comprising scale arms to which said receptacles are attached, said scale arms being carried by said table and being mounted to rotate therewith; a pilot circuit connected to a source of power; a normally open pilot switch in said circuit; means on said scale arms for operating the pilot switch when a scale arm and its attached receptacle are in loading position and the receptacle is loaded; a pair of movable contact members which are carried by said table and are normally in said pilot circuit when a receptacle is in loading



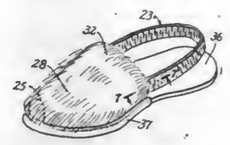
position; a pair of fixed contact members carried by said pedestal normally in said pilot circuit when a receptacle is in loading position; a normally open motor circuit connecting the motor and a source of power; means for temporarily interrupting the delivery of objects to packaging receptacles when an unloaded receptacle is being brought into loading position; electro-magnetic means for operating said temporary interrupting means; a circuit for connecting said electro-magnetically operated means to a source of power; and means activated when the pilot switch is closed for closing the motor circuit and the circuit to said electro-magnetically operated means; and means for opening said circuits when a receptacle is brought into loading position.

2,455,434
UNIVERSAL SPEED WRENCH
Nordal Mikelson, Yankton, S. Dak.
Application March 24, 1947, Serial No. 736,878
1 Claim. (Cl. 74—127)



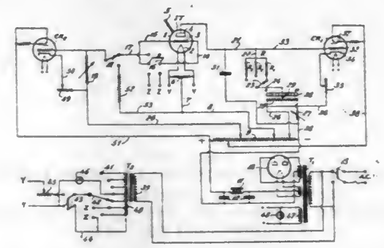
A tool of the character described, comprising a handle, a lengthened rod having a spiral thread thereon, a further handle engaged with said spiral thread adapted to move said rod in selected direction during reciprocating motion thereof along said rod, said further handle including means for controlling direction of power applied to said rod including a pair of stationary ratchet members attached to said further handle, a rotatable ratchet member received in said further handle member, said spiral thread engaged with said rotatable ratchet member, means for locking said rotatable ratchet member with either of said stationary ratchet members as desired to provide selected direction of rotation of the tool, including a guide plate engaged with said rotatable ratchet member, said further handle including notches, said guide plate including an extended pin received in any of said notches, end notches providing means for securing said rotatable

ratchet against either of said stationary ratchets, one of said notches providing a neutral notch, said neutral notch providing means for maintaining said rotatable ratchet out of engagement with either of said stationary ratchets, means for securing said normally rotatable ratchet against



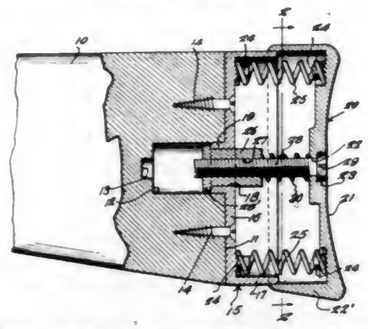
rotation to provide rotation in both directions of the tool during reciprocating action of said further handle, said means including a spring clip adapted to snugly receive said further handle member, a pin attached to said spring clip, openings in said further handle and said normally rotatable ratchet for receiving said pin.

2,455,435
TORQUE AND SPEED RESPONSIVE MECHANISM
Joseph Nader and Joseph F. Mailander, Glen Ellyn, Ill.
Continuation of application Serial No. 500,958, September 2, 1943. This application April 4, 1945, Serial No. 586,508
9 Claims. (Cl. 192—54)



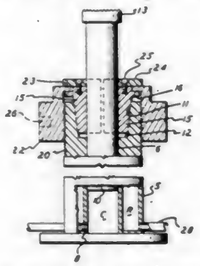
1. A torque and speed responsive mechanism comprising a driving shaft, a driven shaft, a drum supported by said driving shaft, a cam member secured to the driven shaft and having a cam face at an oblique angle to the axis of said shaft, a sleeve supported by said driven shaft, a second cam member secured to said sleeve and having an oblique face cooperating with the first said cam face, a yoke extending radially from said sleeve, levers pivotally supported by said yoke, shoes mounted at the ends of said levers for engagement with said drum, a conical shaped cam member secured to said sleeve in engagement with the other ends of said levers, and means intermediate the second named cam member and the conical shaped cam member for urging said shoes into firmer contact with said drum.

2,455,436
FUR-COVERED SHOE VAMP
George Naidor, Gouldsboro, Pa.
Application June 28, 1947, Serial No. 757,849
1 Claim. (Cl. 36—45)



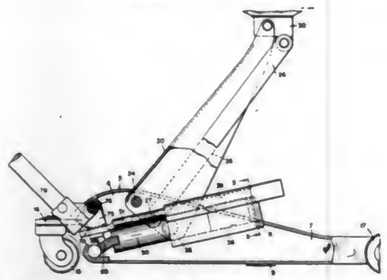
A fur-covered shoe vamp comprising a base of vamp shape having a transverse rear edge, a crescent-shaped piece of fur secured to said base with its concave edge facing rearwardly and spaced appreciably forwardly of said transverse rear edge, the fur hairs concealing the front and side edges of said base, and a complementary substantially straight strip of fur having the fur side of one longitudinal edge secured to the underside of said transverse rear edge substantially throughout the length thereof, said strip extending forwardly to overlap at least the pointed end regions of said crescent-shaped piece and to overlie the rear part of said base, the fur hairs of said fur piece and fur strip merging with each other transversely across the vamp.

2,455,437
IONIZATION GAUGE CIRCUITS
Gerhard R. Nagel and Merriam E. Johnson, Rochester, N. Y., assignors to Distillation Products, Inc., Rochester, N. Y., a corporation of Delaware
Application November 13, 1943, Serial No. 510,186
1 Claim. (Cl. 175—183)



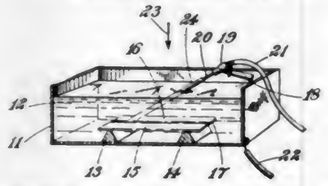
In a system of the type described, in combination, an ionization tube having a cathode, an anode and a positive ion collector plate, an anode circuit connecting said anode and said cathode and including a resistor and a source of unidirectional potential, means for varying the flow of current in said anode circuit, a positive ion current circuit connecting said collector plate and said cathode and including in series a resistance unit, a variable source of unidirectional potential having a polarity opposite to that of the voltage generated across said resistance unit by the flow of positive ion current therethrough, two cathode ray tubes each having a grid circuit, means for connecting the grid circuit of one of said cathode ray tubes across the resistor in said anode circuit and means for connecting the grid circuit of the other of said cathode ray tubes across the portion of said positive ion current circuit including said resistance unit and said variable source of unidirectional potential.

2,455,438
RECOIL ABSORBER FOR FIREARMS
Harry Edward Oppold, Sterling, Ill.
Application August 26, 1946, Serial No. 693,047
1 Claim. (Cl. 42—74)



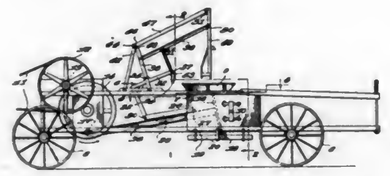
A butt plate for a gun stock comprising a base plate, a perpendicular guide flange on said plate at its perimeter, said base plate having a centrally located rectangular opening extending therethrough, a rectangular internally screw threaded bushing slidably mounted in said rectangular opening, a stop flange on the bushing adjacent the face of the base plate remote from the guide flange, a shoulder plate, a perpendicular guide flange on the shoulder plate at its perimeter, said flange on the shoulder plate telescopically receiving the flange on the base plate to form a chamber between the plates, compression coil springs within the chamber bearing on the plates yieldingly to urge said plates apart, a headed screw extending through the center of the shoulder plate and threadedly engaging the threads in the bushing to hold the plates together against the effort of the springs, a compression coil spring surrounding the screw and bearing at one end on the inside of the shoulder plate and at its opposite end on the end of the bushing remote from the stop flange yieldingly to hold the bushing and shoulder plate in spaced relation and means detachably to hold the butt plate on a gun stock.

2,455,439
FLUID JACK WITH RAM LOCKING MEANS
Herbert E. Page, Alhambra, Calif.
Application February 17, 1945, Serial No. 578,505
2 Claims. (Cl. 121—46)



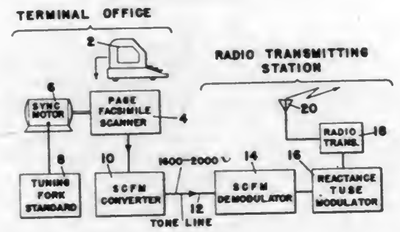
1. In a jack having an externally threaded annular body presenting a bore having a tapered outer end and a ram reciprocably mounted in the bore; means for locking the ram against axial movement inwardly of the bore, comprising a wedge-shaped chuck adapted to be axially movably mounted between the ram and the tapered outer end portion of said bore for wedging engagement therewith and an internally threaded nut for threaded engagement with the body, said nut and chuck having interengaging flange and socket means whereby rotation of the nut relative to the body moves the chuck axially.

2,455,440
HYDRAULIC JACK
Herbert E. Page, Alhambra, Calif.
Application March 10, 1945, Serial No. 582,032
4 Claims. (Cl. 254—2)



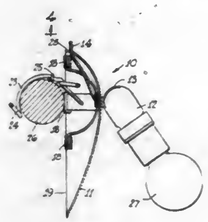
4. In a hydraulic jack having a frame, a lifting arm pivotally mounted on the frame to swing relative thereto, a hydraulic pressure actuated unit pivoted as hereinafter defined and having a body pivotally secured to the arm to swing therewith relative to the frame about its pivot in the same direction and in a corresponding positioned arc as said arm, said body presenting a pair of parallel piston chambers and a fluid reservoir, a work piston reciprocably mounted in the first of said chambers, the outer end of the work piston rigidly carrying a bracket and being pivotally secured to the frame, a pressure generating piston reciprocably mounted in the second of said chambers, actuating means pivotally carried by the bracket and having operative connection to the pressure generating piston, valve controlled means in the body operative in response to actuation of the pressure generating piston to pass fluid from the reservoir into the second chamber and thence under pressure to the first chamber, and valve controlled means for releasing fluid from the first chamber to the reservoir.

2,455,441
ARC WELDING WITHIN HYDROCARBON OIL
Paul Peillon, Cairo, Egypt, assignor to Salvage & Marine Company of Egypt S. A. E., Cairo, Egypt, an Egyptian company
Application August 16, 1944, Serial No. 549,651
In Great Britain December 31, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires December 31, 1962
5 Claims. (Cl. 219—10)



1. A process of electric arc welding wherein metal pieces to be welded are immersed in a hydrocarbon oil with a seam between the pieces in proper relative position, an electrode is employed, covered with a flux, to stabilise the arc, the flux is rendered impervious to the hydrocarbon oil by impregnation with a protective compound and the weld is effected by striking an arc between the electrode and the work so as to deposit molten metal from the arc on to the pieces to be welded and form a seam along the joint thereof.

2,455,442
BALING PRESS AND BALING METHOD
Samuel Straughan Robinson, Jr., United States Army, Albany, Ga., assignor to Lilliston Implement Company, Albany, Ga., a corporation of Georgia
Original application June 9, 1941, Serial No. 397,315, now Patent No. 2,366,426, dated January 2, 1945. Divided and this application November 23, 1944, Serial No. 564,781
4 Claims. (Cl. 100—3)

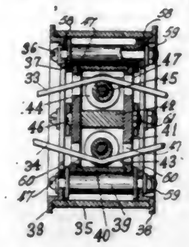


1. In a baling press, a baling chamber having a bottom provided therein, a baler head mounted in said chamber, a pitman arm rigidly fastened at one end to said baler head, a roller mounted on said baler head, a track carried by said baling chamber adapted to support said roller in such a manner as to prevent any part of said baler head from dragging along the bottom of said baling chamber, means pivotally supporting said pitman arm at its other end, and means adapted to move said pitman arm in such a manner as to impart a forward movement and rearward tilt to the baler head on the compression stroke of said baler head and a rearward movement and forward tilt to said baler head on the return stroke of said baler head.

2,455,443
SECRET RADIO SIGNALING SYSTEM
David Sarnoff, New York, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application October 12, 1945, Serial No. 622,043
2 Claims. (Cl. 178—22)

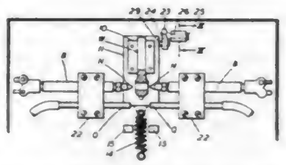
1. Secret signaling apparatus comprising means for printing on a tape a message in the form of secret symbols, markings on different symbols being arranged in accordance with an equal time interval multi-unit code, different markings representing different units of intelligence to be transmitted, means for transmitting the symbols by facsimile over an alternating current circuit to a distant receiving point, means at the receiving point for reproducing a facsimile copy of the secret symbols from the received currents, means for photoelectrically producing electrical current impulses from the facsimile copy, the impulses being arranged in equal time intervals in accordance with the multi-unit code used during transmission, thereby circumventing errors introduced by the alternating current circuit, a shutter so dimensioned, positioned and actuated as to operate said photoelectric means in such a way as to provide in between character current impulses and means for utilizing the impulses so produced to cause printing of the message in normal type.

2,455,444
CLAMP
Nathan Rodney Schwartz, New York, N. Y.
Application September 30, 1947, Serial No. 776,891
3 Claims. (Cl. 248—226)



2. A clamp comprising a pair of cross-wise positioned brackets, the ends of each of said brackets terminating in a raised tip, a rocking arm, said rocking arm anchored at its ends in the raised tips of one of said brackets, a second rocking arm secured to said first rocking arm, said second rocking arm provided with an offset, and spring means normally urging said second rocking arm against the other of said brackets.

2,455,445
GEL CATALYST
Melvin J. See and James C. Bailie, Chicago, Ill., assignors to Standard Oil Company, Chicago, Ill., a corporation of Indiana
No Drawing. Application July 22, 1944, Serial No. 546,231
11 Claims. (Cl. 252—259)



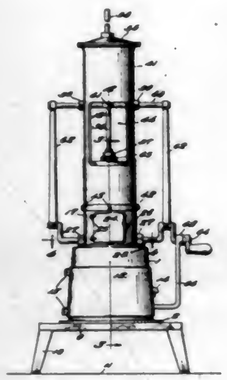
1. The method of drying gels in the form of discrete unblemished spheroidal particles by abstraction of water from spheroidal particles of an inorganic hydrogel having a strong tendency toward agglomeration which comprises dispersing said hydrogel particles in an organic deglomerating liquid consisting essentially of neutral organic solvent having a dissolving power for water to the extent of at least 1 per cent at 20° C., removing the hydrogel from the liquid after about 5 to 15 per cent of water has been abstracted therefrom by said liquid, and before any substantial degenerating diffusion of said liquid into said gel has occurred and thereafter completing the drying of said gel by evaporation of water therefrom substantially without agglomeration.

2,455,446
CLOTHESLINE STRUCTURE
Mary E. Seymour, Union Star, Mo.
Application February 6, 1947, Serial No. 726,905
1 Claim. (Cl. 211—119.13)

In a separating element of the class described, for use with a plurality of twisted lines, a rectangular frame, means on the frame to manipulate the element, a pair of depressed plates for each side of the frame, and rollers rotatably mounted internally of the frame adjacent the respective corners of the frame, an inner ring-like element rotatably carried by the rollers, said ring-like element having connected plates to close each side thereof, and grooved pulleys mounted on shafts between the plates each adapted to receive its respective line as opening means for the twists of the line.

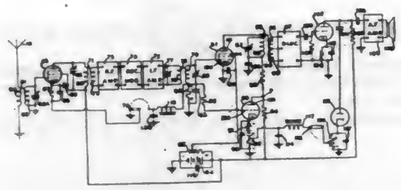
2,455,447
FLAME TREATMENT OF SUBSTANTIALLY CYLINDRICAL INTERNAL SURFACES SUCH AS BORES
Albert Edward Shorter, Sheffield, England, assignor to The Linde Air Products Company, New York, N. Y., a corporation of Ohio
Application April 19, 1944, Serial No. 531,787
In Great Britain May 13, 1943
8 Claims. (Cl. 148—13)

1. Method of flame treating internal surfaces such as bores which comprises directing heating flames longitudinally into the bore from the opposite ends thereof so that the flames meet intermediate the ends of the bore and are thereby mutually deflected laterally to impinge upon the surface to be heated.



2,455,448
ADJUSTABLE CLOTHESLINE PROP
Joseph E. Swalinkavich, Jr., Robbinsdale, and John T. Donovan, Minneapolis, Minn.; said Donovan assignor to said Swalinkavich, Jr.
Application October 4, 1945, Serial No. 620,292
4 Claims. (Cl. 248—353)

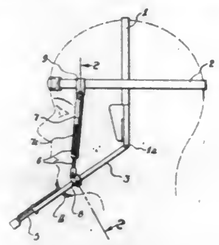
2. A prop of the class described comprising upper and lower overlapping sections, means rigid on the upper end of the lower section for biting engagement with the upper section when the two sections are substantially parallel, said upper section being free for tilting movement over the upper end of the lower section to release the same from the biting of said means, and means co-



operating with the first noted means for holding the sections substantially parallel.

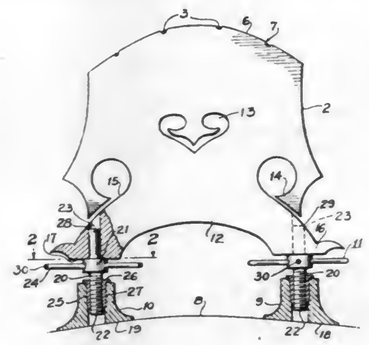
2,455,449
MACHINE FOR SHEARING GREEN CORN FROM THE COB, INCLUDING AN ANNULAR ROTARY CUTTER
Frank C. Thames, San Antonio, Tex.
Application February 23, 1946, Serial No. 649,708
6 Claims. (Cl. 130—9)

1. A green corn shearing machine including a main housing being formed with oppositely disposed vertical slots, a gear operated rotary head thereon, toothed rotary cutting members resiliently supported on said head, an expansible ear guiding chute disposed above said cutting member, a cross head mounted through the slots in said housing, a reciprocating pusher head connected with said crosshead for pushing ears of corn through said guide chute and cutting members, and a crank, gearing and pitman operating means connected with said crosshead for simultaneously operating said pusher head and for rotating said toothed cutting member.



2,455,450
RADIO RECEIVER NOISE SUPPRESSION CIRCUIT
Robert T. Thompson, Oak Park, Ill., assignor to Zenith Radio Corporation, a corporation of Illinois
Application January 13, 1944, Serial No. 518,063
3 Claims. (Cl. 250—20)

1. A frequency deviation responsive device including a source of frequency modulated carrier waves of varying amplitudes and various mean frequencies, means for selectively amplifying a carrier wave from said source, a frequency modulation signal detector of the resonant type having a principal linear frequency response region and adjacent non-linear frequency response regions, said amplifying means having a frequency selectivity characteristic with substantially more attenuation in said non-linear regions than in said principal linear region, an electron discharge device having a control electrode, anode and cathode, an input circuit connected between said control electrode and cathode including means for producing self-bias voltage in response to a carrier wave impressed on said control electrode, means for impressing a selected carrier wave from said amplifying means on said input circuit, an output circuit connected between said anode and cathode and coupled to said detector, said device and circuits being arranged to limit to a predetermined maximum amplitude any carrier wave impressed thereon, a second electron discharge device having a control electrode, anode, and cathode, means for impressing self-bias voltage from the control electrode of said first discharge device on the control electrode of said second device negatively with respect to the cathode of said first device, and means for connecting the anode and cathode of said second device to said output circuit effectively in shunt with the anode and cathode of said first device, said second device having sufficient transconductance with said circuits adjusted for satisfactory signal detection in said principal linear region that substantially no signal detection takes place in said adjacent regions.

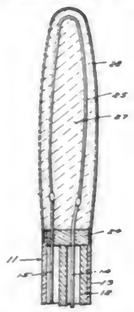


2,455,451
CONDYLE POSITION INDICATING APPARATUS
Charles F. Tully, San Diego, Calif.
Application August 5, 1946, Serial No. 688,561
6 Claims. (Cl. 33—174)

3. In a condyle position indicating apparatus of the class described, the combination of head band means adapted to engage the head of a patient and arranged to extend over the top thereof and around the upper portion of a patient's head and having a bearing portion substantially aligning with the pivotal axis of a patient's jaws, a pivoted arm pivotally connected to said bearing portion of said head band means and extending forwardly toward the chin of a patient wearing said head band means, and reciprocable scale means interconnecting said head band

means and said pivoted arm forwardly of the pivotal axis of said pivoted arm.

2,455,452
BRIDGE
George Van Eps, North Hollywood, Calif.
Application June 29, 1946, Serial No. 680,382
5 Claims. (Cl. 84—309)



1. In a device of the character disclosed, a bridge, a pair of feet adapted to rest on the deck of a bass violin, and an elevating means between each foot and said bridge; said elevating means in each instance having a shaft, one portion of which is threaded and a second portion of which is unthreaded, said bridge formed with bores to tightly receive the unthreaded portion of a shaft, and a threaded bushing positioned in each foot for receiving the threaded portion of a shaft.

2,455,453
HEATING INSTRUMENT
Victor V. Varnum, Tama, Iowa
Application November 23, 1945, Serial No. 630,324
2 Claims. (Cl. 219—29)

1. An instrument for burning rubber out of a valve stem which includes, a shaft comprising a tubular core of flexible, heat-resistant, non-conducting material, a conductor enclosed by and extending throughout the length of the core, a tubular casing of flexible, heat-resistant non-conducting material coextensive with and enclosing said core, a conductor coextensive with the first mentioned conductor between the exterior of the core and the interior of the casing, a heat generating filament bridging the conductors at one end of the shaft, a handle at the opposite

end of the shaft and means to supply electrical energy to the conductors to heat the filament

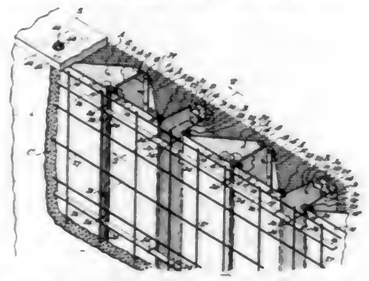
to incandescence, and a body of ceramic material reinforcing said filament.

2,455,454

METHOD OF MAKING A FIRE RESISTANT LAMINATED FABRIC

Zachary T. Walter, Los Angeles, Calif.

No Drawing. Application August 4, 1944, Serial No. 548,148
4 Claims. (Cl. 154—140)



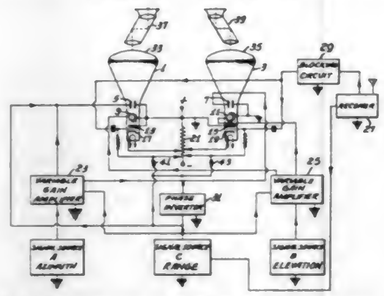
1. The method of producing a fire-resistant laminated article which comprises impregnating porous fabric sheets with chlorinated paraffine dissolved in a solvent, drying the sheets, then successively combining them in superimposed relation by coating each successive sheet with a volatile solution having cellulose acetate as its base and carrying a solvent for the chlorinated paraffine, and laying the next successive sheet thereon while said coating is wet.

2,455,455

PREFABRICATED CONCRETE FORM

Paul B. West, Newark, N. J.

Application December 12, 1946, Serial No. 715,839
12 Claims. (Cl. 72—48)



1. A prefabricated form structure for the purposes described comprising an assembly of hollow form wall units made of folded sheet material, certain of said units being of substantially right triangular cross section and other of said units being of substantially U-shaped cross section, said right triangular units being arranged in pairs with their oblique panels rearwardly presented and their end panels abutted whereby to forwardly present their remaining or front panels in a common plane, a U-shaped unit being disposed intermediate adjacent pairs of thus arranged right triangular units with its open face disposed in the plane of said front panels of the latter units, marginal portions of said thus adjoining units being folded, interengaged and secured together to provide uniting joint structures, lock bars extending across the front of the thus assembled units, said units having means to couple the same to said lock bars, an inner wall medium disposed across the rear of the thus assembled units, and said units having means for securing said inner wall medium thereto.

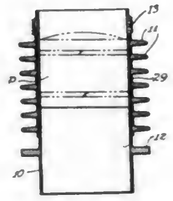
2,455,456

THREE-DIMENSIONAL OSCILLOGRAPH SYSTEM

James L. Whittaker, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware

Application February 20, 1948, Serial No. 9,783
10 Claims. (Cl. 315—9)

6. A stereoscopic oscillographic system for three variables including a pair of cathode ray oscilloscopes having cathode ray generating means, vertical and horizontal ray deflecting elements and a ray intensity control element, means including separate variable gain amplifiers responsive to two of said variables connected respectively to said deflecting elements for establishing similar indications on corresponding coordinates of both of said oscilloscopes as functions of two of said variables, means for deriving oppositely phased signals in response to the third of said variables, means for applying said oppositely phased signals to corresponding ones of said deflecting elements on each of said oscilloscopes for varying simultaneously in opposite sense said indications on the same coordinate of both of said oscilloscopes as a function of the third of said variables, means including said variable gain amplifiers for varying in the same sense said indications on both coordinates of both of said oscilloscopes as an inverse function of said third of said variables, and means including said ray intensity control element for varying the intensity of said indications as an inverse function of said third of said variables to provide indications of said variables having stereoscopic characteristics.



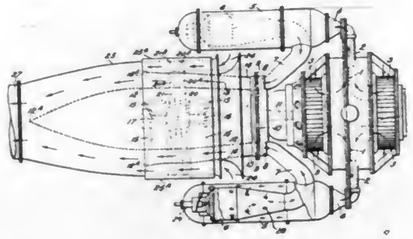
2,455,457

COATED METAL ARTICLE

Marshall G. Whitfield and Victor Sheshunoff, Garden City, N. Y., assignors, by mesne assignments, to Fairchild Engine and Airplane Corporation, New York, N. Y., a corporation of Maryland

Original application October 24, 1941, Serial No. 416,328, now Patent No. 2,396,730, dated March 19, 1946. Divided and this application July 24, 1945, Serial No. 606,855
3 Claims. (Cl. 309—2)

1. An article of manufacture comprising an annular steel cylinder, a relatively thick annular casting of an aluminum-containing metal on an exterior portion of said cylinder, and a ferro-aluminum alloy film at the interface between said cylinder and the casting forming a bond uniting the two metals permanently, whereby a continu-



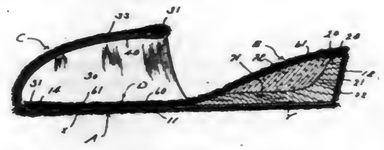
ous heat-conducting path is formed through the steel cylinder, the ferro-aluminum bond and the aluminum-containing casting, said casting having a thickness materially in excess of said ferro-aluminum alloy film.

2,455,458

THRUST AUGMENTING DEVICE FOR A SYSTEM FOR DEVELOPING PROPULSIVE THRUST

Frank Whittle, Rugby, England, assignor to Power Jets (Research and Development) Limited, London, England

Application October 23, 1942, Serial No. 463,139
In Great Britain March 2, 1940
3 Claims. (Cl. 60—35.6)



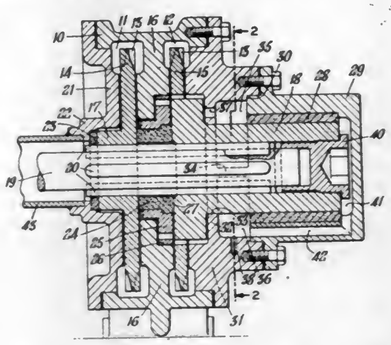
1. In a system for developing propulsive thrust by the reaction of a flow of energized fluid, the combination of a compressor for air, fuel burning means for the compressed air and a gas turbine using part of the energy of the resultant gases and arranged co-axially with the compressor upon a main axis corresponding to the intended line of thrust, exhaust ducting to confine the gas leaving said turbine and extending co-axially therefrom to form a first annular duct, further turbine means comprising a rotor arranged co-axially with respect to said first annular duct to be driven by the gas flowing therein, means forming a second annular duct co-axial with the first to confine separately a second independent stream of fluid received at a lower energy level than the said gas, and impeller means associated with the second duct so as to operate upon the second stream, said impeller means comprising the same rotor as the said further turbine means, the whole being arranged as of substantially circular form about the said main axis.

2,455,459

SLIPPER WITH CHENILLE SURFACING

Isadore B. Witlin, Los Angeles, Calif.; William B. Naythons, administrator of the Estate of said Isadore B. Witlin, deceased, assignor to Philip C. Raykoff, Los Angeles, Calif.

Application June 10, 1944, Serial No. 539,621
4 Claims. (Cl. 36—9)

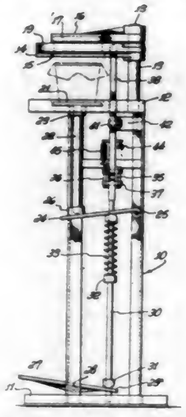


1. A slipper comprising a vamp, an insole, an outsole and a rigid heel wedge disposed between the insole and outsole at the rear portion of the slipper and terminating in the shank portion, the outsole at its rear end having a portion overlying the sides and extending over the top of the heel wedge, the outer portion of the vamp, insole and outsole having a chenille finish only over those portions which are outwardly disposed in the finished slipper whereby the edges of the parts which do not have a chenille finish may lie in a compact relation.

2,455,460

ROTARY PUMP FOR LIQUEFIED GASES

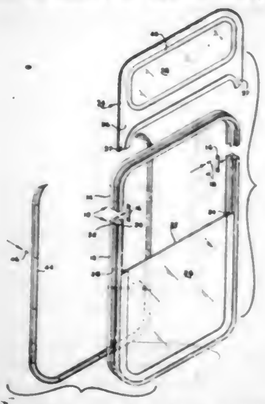
George H. Zenner, Kenmore, N. Y., assignor to The Linde Air Products Company, a corporation of Ohio



Application February 1, 1947, Serial No. 725,784
6 Claims. (Cl. 103—112)

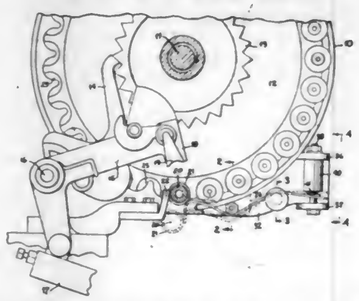
1. In a rotary pump having a casing with an annular pumping channel, a rotary impeller operating in said pumping channel, and a drive shaft for said impeller, the pumping action causing an increasing fluid pressure in said channel from the inlet to the outlet thereof, which pressure increase produces a net radial force acting on said impeller in a certain direction; a radial bearing in said casing for the inboard end of said shaft; and means for balancing said radial force comprising a cylindrical surface rotatable with said shaft, chambers in said casing about said cylindrical surface, said chambers being substantially on opposite sides and extending peripherally about said cylindrical surface for a portion only of the circumference, a fluid passage connecting one of said chambers to a lower pressure region of said pumping channel, and

a passage connecting the other of said chambers to a region of higher fluid pressure in the casing adjacent said impeller, the areas of said surface exposed in the chambers and the relation of such areas being correlated with the pressures in the chambers to provide a resultant radial force substantially balancing said net radial force acting on the impeller.



2,455,461
INDIVIDUAL CONTAINER SEALER
Edward E. Anderson, Loma Linda, Calif.
Application March 30, 1945, Serial No. 585,637
1 Claim. (Cl. 226—86)

An individual container sealing machine comprising: a work table, a lifting plate in said work table, an annulus provided above the lifting plate, a circular plate provided with a downwardly extending lip at its outer edge positioned above the annulus and in alignment therewith; a pair of opposing semi-circular heating elements movable toward and away from each other in a zone between said annulus and plate to grasp and release a container whose top extends through the annulus; a vertically extending reciprocatable energizing member, means for moving said member, a toggle linkage between said member and said heating elements for imparting simultaneous and opposing movement thereto, lever means for raising and lowering the lifting plate; and means connecting the energizing member with said lever for moving the lifting plate, said means including a spring whereby the lifting plate is maintained in yielding contact with a container while the energizing member continues to move.

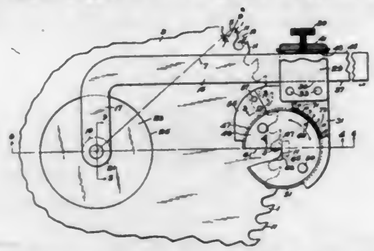


2,455,462
WINDOW CONSTRUCTION
Harry J. Bader and Walter C. Daniel, Troy, Ohio, assignors to The Troy Sunshade Company, Troy, Ohio, a corporation of Ohio
Application December 26, 1946, Serial No. 718,328
9 Claims. (Cl. 296—44)

1. In a vehicle having a window opening recessed inwardly from the outside of the vehicle; a window frame closely fitting said opening and having a lower sash slidably guided therein, said frame having an outwardly opening peripheral groove around at least the upper end thereof; an upper stationary sash carried by said frame and having a lip engaging said groove whereby said stationary sash is retained on said frame by the edge of said opening; a member fitting around the periphery of said opening on the in-

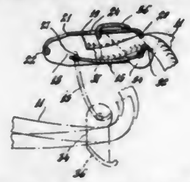
side of the vehicle; and fastening means rigidly connecting said frame and member.

2,455,463
BOBBIN CONTROL FOR BATTERY LOOMS
George F. Bahan, Charlotte, N. C.
Application November 5, 1946, Serial No. 707,840
5 Claims. (Cl. 139—251)



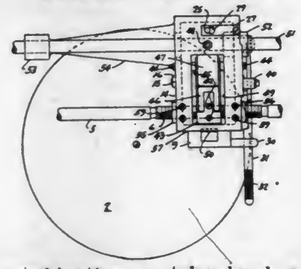
2. A bobbin control and guide for a battery loom having a hopper and a rotary disc mounted therein and provided with a plurality of cavities for holding the butt end of bobbins, a bracket secured to the hopper and having a pair of outwardly projecting bolts therein, a leaf spring member mounted above one of the bolts and disposed below the other of the bolts, one end of the leaf spring member being downturned and adapted to engage the butt end of a bobbin about to be transferred from the battery of the loom, resilient means for exerting downward pressure on the other end of the leaf spring member to thereby resiliently urge the first-named end into engagement with the bobbin about to be transferred to resiliently press it into its pocket and to resiliently guide and control the bobbin during a transfer operation.

2,455,464
SAW GAUGE
Ernest J. Bartell, Rome, N. Y.
Application August 15, 1944, Serial No. 549,541
6 Claims. (Cl. 33—202)



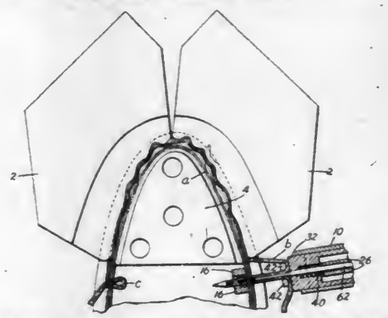
6. A gauge for measuring the angles of clearance and rake of the teeth of a circular saw having, in combination, an arm carrying a projecting pin adapting the arm to be mounted on

the saw for rotation about the axis of the latter; a member slidably carried by said arm for adjustment radially of the saw; a disk-like part rotatably carried by said member; a stop on said disk-like part having a flat surface which includes the axial line of said part, which surface is adapted to be brought into contact with the point of a saw tooth by so sliding said member on said arm; said disk-like part having an opening presenting two edges at right angles to each other intersecting each other at the axial line of said part, one of which edges is in the plane of said flat sur-



face, whereby when said arm is so mounted on the saw and said surface of said stop contacts the point of a saw tooth at the axial line of said disk-like part one of said edges by rotation of said part may be brought into coincidence with the clearance line of the saw tooth and the other into coincidence with the rake line of such tooth; and means for indicating the angular position of said disk-like part relative to said member in each of opposite directions from a position which would correspond to zero angles of clearance and rake of a saw tooth.

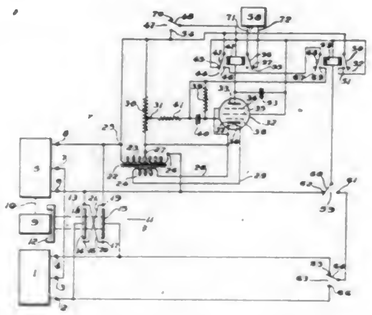
2,455,465
STRAP-END ATTACHING CLASP
Abraham Blumstein, Forest Hills, N. Y.
Application January 12, 1945, Serial No. 572,537
5 Claims. (Cl. 24—265)



5. A clasp for the ends of cords and the like, comprising a channel member open at the bottom and at one end thereof to receive the ends of the cords, a gripper member having one end pivoted to the side walls of said channel member at a point remote from the open end thereof, said gripper member having an open and a clamping position, said gripper member extends substantially to said open end along the bottom of the channel member to close said bottom when in said clamping position, serrations projecting upwardly at the free end of the gripper member for gripping the cords without penetrating therein in cooperation with downwardly projecting serrations provided in said open end of said channel member when said gripper member is in said clamping position thereof, a clamping member having an operative and an inoperative position, said clamping member embodying an end portion juxtaposed to the top wall of the channel member when said clamping member is in said operative position and integral spaced legs projecting from said end portion at an angle therewith and pivotally connected to the sides of the gripper member adjacent the free end thereof, said legs extending in juxtaposition to the side walls of the channel member externally thereof and maintaining the gripper member in said clamping position thereof when the clamping member is in said operative position thereof, and means for releasably locking the end portion of the clamping member to the top wall of the channel member.

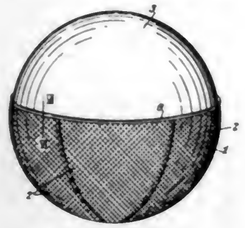
2,455,466
COMBINATION PHONOGRAPH RECORDING AND REPRODUCING MECHANISM
George P. Brubaker, Los Angeles, Calif., assignor, by mesne assignments, to Dictaphone Corporation, New York, N. Y., a corporation of New York
Application July 17, 1943, Serial No. 495,175
9 Claims. (Cl. 274—24)

1. In combination, a stylus head, a resilient arm for supporting the head and urging the stylus toward a record member, an adjustable supporting structure, mounting means for the arm on said adjustable structure, said mounting means providing freedom of motion for the arm with respect to said structure in a direction transverse to the axis of the stylus for permitting lateral compliance of the head with the record member, means for adjusting said structure, and means including elements respectively carried by the head and by said structure, co-operating when the structure is in a definite adjusted position, for restraining said head against said freedom of motion.



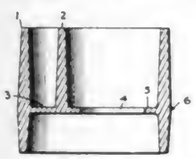
2,455,467
METHOD FOR USE IN LASTING SHOES
Philip E. Burby, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application April 30, 1947, Serial No. 744,955
8 Claims. (Cl. 12—145)

1. That improvement in methods of lasting shoes which consists in working an end portion of



an upper on a last into lasted position, applying about the end of the upper an upper-holding binder of elastic material in a stretched condition, and fastening the binder to the shoe to hold it in its stretched condition by forcing it through portions of the shoe materials at the opposite sides of the shoe bottom.

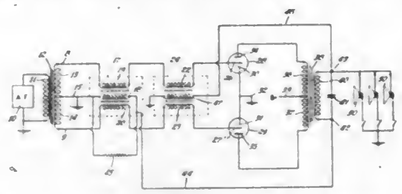
2,455,468
ELECTRONIC TIMING DEVICE
Phillip J. Cade, Sharon, Mass., assignor to Photoswitch, Incorporated, Cambridge, Mass., a corporation of Massachusetts
Application November 1, 1946, Serial No. 707,167
7 Claims. (Cl. 318—283)



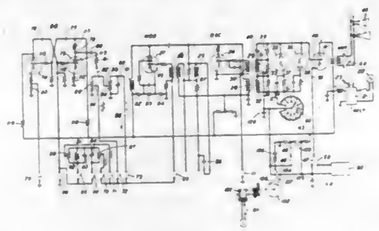
7. An electronic timing device for use with a machine having an oscillating work table operated by a three phase reversible motor, which comprises: first and second source terminals connected to a source of 3 phase electric power; first and second motor terminals connected to said motor; a reversing switch, actuated by said table and adapted to make and maintain connections between said source and motor terminals and to reverse said connections upon said table reaching either of its extreme positions; a voltage divider connected across said motor terminals; an electron discharge device having at least an anode, cathode, and a control electrode, said cathode being connected to said first motor terminal; an energy storage and dissipation means connected between said control electrode and a point on said voltage divider; a first current responsive operator means, bridged by a capacitor, connected between said anode and a terminal point; a second current responsive operator means connected between said terminal point and a first hand-operated switch adapted to make connection with said first motor terminal or with a second hand-operated switch to make contact to either of said source terminals; a first relay switch adapted to maintain connection between said second motor terminal and said terminal point, except when said first operator means is energized, and then to make connections between said second motor terminal and a second relay switch adapted to make a connection with said energy storage and dissipation means when said second operator means is energized; a third relay switch adapted to make a connection between said second motor terminal and said terminal point when said second operator means is energized; a third hand-operated switch adapted to make a connection between said second motor terminal and said terminal point; and control means actuated by said first operator means.

2,455,469
METEOROLOGICAL BALLOON
Frank Albert Caspar, Tiverton, England, assignor to Pak Parachute Company Limited, Tiverton, England
Application October 1, 1946, Serial No. 700,544
In Great Britain October 11, 1945
4 Claims. (Cl. 244—24)

1. A self-retaining metallic or metallised open mesh cover for meteorological balloons of a size and shape such that it will enclose the balloon over a little more than half its peripheral surface, the mouth of the cover being so constructed that its maximum diameter is a little less than the maximum diameter of the balloon so as to bite into the balloon surface and form temporarily a peripheral channel or recess therein on the diameter of the balloon increasing as a result of an increase in height.



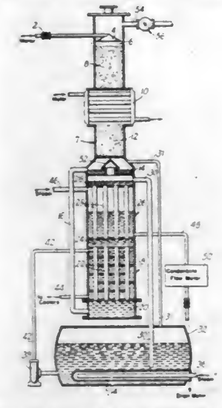
2,455,470
SOIL PIPE REDUCER
William James Collison, Costa Mesa, Calif.
Application August 28, 1947, Serial No. 771,005
4 Claims. (Cl. 285—198)



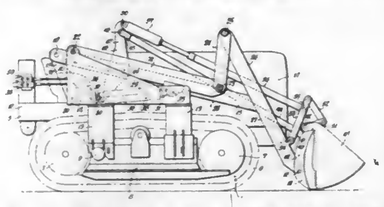
1. In a single piece soil pipe reducer device, the combination of a primary cylinder having its upper and lower ends in the same vertical plane, an auxiliary cylinder in said primary cylinder and integral throughout its height at one side with said primary cylinder, and said primary and auxiliary cylinders having their upper ends in the same horizontal plane.

2,455,471
ELECTRICAL APPARATUS FOR LOUDSPEAKER SYSTEMS
Webster O. Crane, St. Charles, Ill., assignor to Operadio Manufacturing Co., St. Charles, Ill., a corporation of Illinois
Application March 28, 1946, Serial No. 657,881
9 Claims. (Cl. 179—1)

1. A speaker system comprising a driver transformer having a primary adapted to be energized with audio frequency potentials and having a secondary, a vacuum tube amplifier having input and output circuits, a feedback transformer having primary and secondary windings, means for connecting the secondary windings of said driver and feedback transformers in series in said amplifier input circuit, an output transformer having primary and secondary, said output primary being connected in said output amplifier circuit, a plurality of parallel connected speakers forming a load, means for connecting said load, feedback primary and output secondary in series, said feedback windings being so phased as to provide regenerative action whereby the potential across said speaker load is maintained substantially constant in spite of load variations.



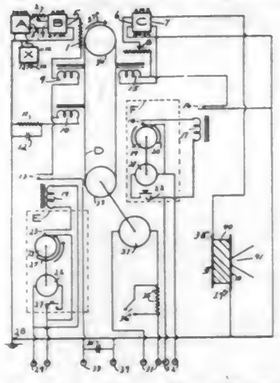
2,455,472
METHOD AND SYSTEM FOR ELECTRONICALLY GENERATING COMPLEX SIGNALS
Herbert C. Curl, Jackson Heights, N. Y., and James D. Kleinkauf, East Orange, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 10, 1945, Serial No. 587,562
6 Claims. (Cl. 179—171.5)



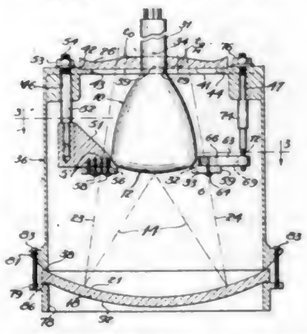
3. In a signal generator, the combination with a variable frequency oscillator for generating signal frequencies and a harmonic generator comprising means for generating and adding to the output of said oscillator a third harmonic component substantially equal in magnitude to the fundamental of each signal frequency generated by said oscillator, of means for controlling the relative phase of said fundamentals and harmonic components to produce a complex single wave without substantially increasing the peak factor of the signal.

2,455,473
PROCESS FOR REGENERATING SPENT AMMONIACAL CUPROUS SOLUTION
Josef G. Dely, Queens Village, N. Y.
Application February 7, 1945, Serial No. 576,535
4 Claims. (Cl. 252—188)

1. A process for regenerating a spent ammoniacal cuprous solution that has been used for absorbing carbon oxides from the feed gases to an ammonia synthesis unit comprising the steps of, causing a substantially continuous stream of said spent solution to flow downwardly along a gas-liquid contact path from the top to the bottom thereof, causing the solution leaving said contact path to flow successively through a first regenerating zone and a second regenerating zone, heating said solution in both said first and second regenerating zones to liberate a mixture of carbon oxides and ammonia therefrom, causing the thus liberated mixtures of carbon oxides and ammonia from both said first and second regenerating zones to flow to the bottom of said contact path and upwardly along said path to cause ammonia from said mixture to be preferentially absorbed by said stream of solution in said contact path, cooling said spent solution in said path to increase the solubility of ammonia therein, removing at the top of said contact path gases not absorbed by said solution in said path, causing regenerated solution from said second regenerating zone to flow in heat-exchange relationship with the spent solution in said first regenerating zone to supply to said spent solution heat required to liberate said mixture of carbon oxides and ammonia therefrom, and maintaining a back pressure on said contact path and said regenerating zone to produce a desired cupric-cuprous ratio in the regenerated solution while minimizing reduction of cuprous copper to elemental copper.

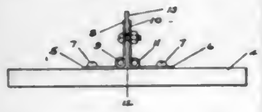


2,455,474
EXCAVATOR
Edward A. Drott and Joseph H. Kerber, Milwaukee, Wis., assignors to Hi-Way Service Corporation, Milwaukee, Wis., a corporation of Wisconsin
Application February 5, 1945, Serial No. 576,286
12 Claims. (Cl. 214—131)



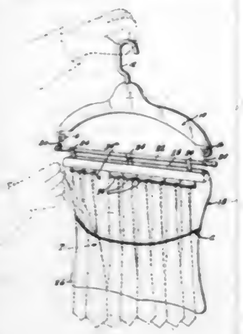
1. In an excavator, the combination with a movable support, of a digging bucket, a supporting structure for said bucket mounted to float relative to said support, and raising and lowering means for said supporting structure comprising arms pivoted at a fixed point on said support and operatively connected to an intermediate portion of said supporting structure and hydraulically operated cylinders operatively connected with said arms.

2,455,475
METHOD OF ULTRASONIC PULSE SIGNALING
Stanley D. Eilenberger, Kenosha, Wis., assignor, by mesne assignments, to Chicago Coin Machine Co., a corporation of Illinois
Application September 15, 1943, Serial No. 502,528
2 Claims. (Cl. 179—100.2)



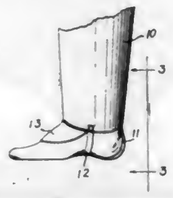
1. The method of signaling, which comprises the steps of recording within a limited time period the intelligence to be transmitted on a magnetic sound track moving at relatively slow recording speed, reproducing said recorded signal at relatively high magnetic sound track speed to produce a signal pulse of brief duration, converting said signal pulse into a pulse of ultrasonic energy, generating a control pulse, simultaneously transmitting said signal pulse and said control pulse to a receiver, causing said control pulse to render said receiver operative to record the received pulse on a magnetic sound track moving at a speed approximating said reproducing sound track speed at the transmitter, reproducing the pulse of energy so recorded and filtering the product of reproduction to recover the original intelligence.

2,455,476
MOUNTING SYSTEM FOR ELEMENTS OF TELEVISION PROJECTORS
David W. Epstein, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application July 20, 1945, Serial No. 606,215
11 Claims. (Cl. 178—7.5)



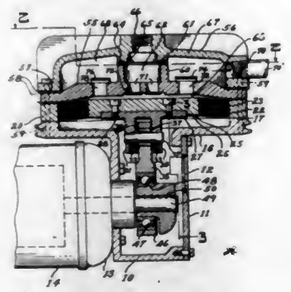
6. The combination with an electron image tube having a surface exposing a target area, of an optical light receiving element having a substantially spherical surface, a member having means defining a circle resting on said spherical surface whereby the center of curvature of said spherical surface lies on the axis of both said member and said circle, a correcting plate, supporting means for said correcting plate fixed to be coaxial with said member, means for supporting said tube by contacting its target exposing surface, said member having an end opposite to said circle defining means, said end being provided with a circular recess coaxial with the circle defined by said circle defining means, a pair of diametrically positioned rods depending from said end, said tube supporting means being substantially rigidly carried by one of said rods, and the other of said rods serving as a guide to position said tube supporting means coaxial with the axis of said member.

2,455,477
KNIFE SHARPENING KIT
Wilfrid J. Girard, San Francisco, Calif.
Application January 2, 1948, Serial No. 209
3 Claims. (Cl. 76—82)



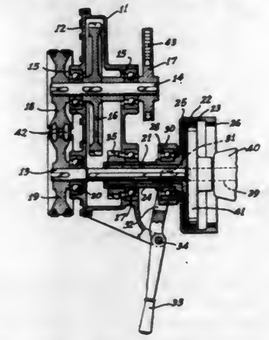
1. In combination with a base, a pair of knife sharpening serrated blade supports positioned on the base, the said supports being spaced apart and angularly positioned relative to each other, and fastening means for securing the supports on the base.

2,455,478
COMBINED COAT HANGER AND NECKTIE RACK
Watson R. Grant, Elgin, Ill.
Application December 19, 1946, Serial No. 717,244
4 Claims. (Cl. 223—85)



1. The combination with a garment hanger having hook portions at its ends of S-shaped clips connected thereto for supporting a cross-rod, a rigid panel pivotally suspended below said cross-rod, a bar at the upper end of said panel, slots in said bar, a horizontal groove at the upper ends of said slots, and a plurality of individual hanger members connected in said slots to said bar.

2,455,479
SKI PANTS
Paul Haberfeld, Portland, Oreg., assignor to Jantzen Knitting Mills, a corporation of Oregon
Application October 11, 1946, Serial No. 702,801
2 Claims. (Cl. 2—232)

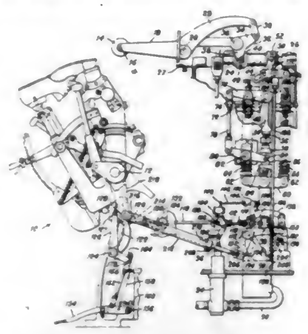


1. A pair of trousers of the class described, the legs thereof being adapted to fit relatively loosely about the legs of the wearer, the lower ends of said legs terminating in a substantially horizontal plane between the ankle and the heel of the wearer, the leg ends being adapted to be placed within the shoes of the wearer, a stirrup strap extending transversely across the bottom of each of said legs and adapted to lie under the arch of the foot of the wearer, a heelpiece extending longitudinally from the rear edge of each of said legs and attached to said strap substantially at its lowermost extremity, said heelpiece being adapted to hold in place within the shoe said rear edge of each of said legs, and an apron extending longitudinally from the front edge of each of said legs and reaching laterally substantially to the terminal portions of said strap, said apron being adapted to cover and protect the forepart of the foot of the wearer.

2,455,480
DIAPHRAGM PUMP
Harold F. Hadley, Defiance, Ohio, assignor to Dapco Products, Inc., a corporation of Ohio
Application November 6, 1944, Serial No. 562,163
4 Claims. (Cl. 253—170)

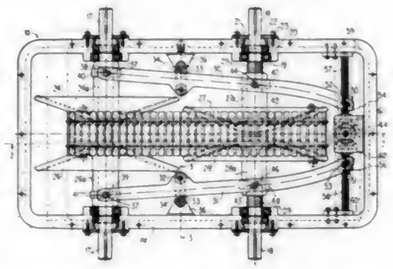
1. In combination, a compressor including a housing, a plate in said housing, valved ports in said plate; a compressor head; a diaphragm construction in said housing and forming with said plate a compression chamber; said diaphragm construction including a metal ring removably secured to said housing; a disc-like member in said housing; an imperforate stretchable diaphragm of uniform thickness bonded to said ring and said disc; and mechanical means associated with said disc-like member for positively effecting successive suction and pumping strokes of said member and stretchable diaphragm, said metal ring, diaphragm and disc being of substantially the same thickness.

2,455,481
REVERSE GEAR
Ford W. Harris, Los Angeles, Calif., assignor, by mesne assignments, to The Calpat Corporation, Los Angeles, Calif., a corporation of California
Application December 26, 1944, Serial No. 569,674
6 Claims. (Cl. 74—355)



1. In a power transmission used to transmit the power of an internal combustion engine to a driven shaft and so constructed that the driven shaft may be rotated in either a forward or reverse direction without a reversal of the direction of rotation of the engine shaft, the combination of: a centrifugal clutch driven by the engine and adapted to be expanded whenever said engine rotates at a speed above a critical value; a forward drum having a forward surface adapted to be engaged by said clutch when said clutch is so expanded, said forward surface being concentric with the axis about which the clutch rotates; a reverse drum having a reverse surface adapted to be engaged by said clutch when said clutch is so expanded, said reverse surface being also concentric with the axis about which the clutch rotates; means by which said clutch can be caused to engage either said forward surface and thus drive the forward drum or the reverse surface and thus drive the reverse drum, said selective engagement being caused by a change, along said axis, of the position of said drums with relation to said clutch; means by which the forward drum drives said driven shaft in the same rotative direction as that of the engine shaft; and means by which the reverse drum drives the driven shaft in the opposite rotative direction to that of the engine shaft.

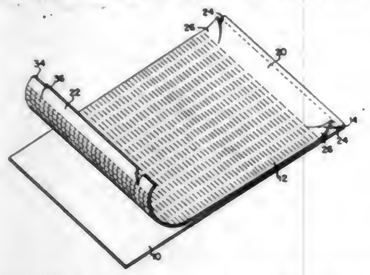
2,455,482
LEVELING MACHINE
Fred V. Hart, Lynn, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application September 5, 1947, Serial No. 772,271
6 Claims. (Cl. 12—34)



1. In a leveling machine, a shoe support, a leveling roll, means mounting said support for movement in directions lengthwise of a shoe thereon to cause the leveling roll to operate progressively along the shoe bottom, spring means for pressing the leveling roll against the bottom of the shoe, means operative in response to forward movement of the shoe support to carry the shoe out of operative relation to the roll for lifting said roll against

the action of said spring means, and means controlled by said shoe support for locking the roll

in its elevated position with the shoe support located forwardly of the roll.

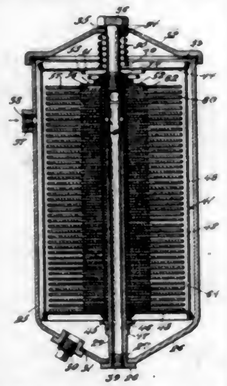


2,455,483
VARIABLE-SPEED TRANSMISSION
Geoffrey M. Harry, Oak Park, Ill.
Application September 25, 1946, Serial No. 699,215
17 Claims. (Cl. 74—217)

1. A variable speed transmission comprising a rotary driving shaft, a rotary driven shaft, a pair of rotary members mounted in spaced relation on each of said shafts for rotation therewith and extending radially therefrom, a plurality of pairs of sprockets carried in spaced relation by and between said respective pairs of rotary members and adapted for free rotative movement and for movement radially of said rotary members toward and from said respective shafts, means for each pair of sprockets operably connected therewith for transmitting rotary movement of one sprocket in one direction to the other sprocket for rotary movement in the other direction, and an endless chain adapted to be interengaged with the respective pairs of sprockets of said rotary members.

2,455,484
CARBON SET FORM
Frank J. Hauer, Dayton, Ohio
Application December 8, 1945, Serial No. 633,727
3 Claims. (Cl. 282—22)

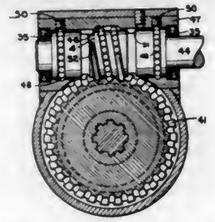
1. In a set form including a paper sheet and a carbon sheet of substantially the same size; adhesive means securing said sheets together along the upper edges; uncoated marginal portions at the top and bottom of said carbon sheet extending completely across the width thereof; and diagonal incisions at each side of each of said uncoated marginal portions for facilitating



the severing of said adhesive connection and the separating of the sheets.

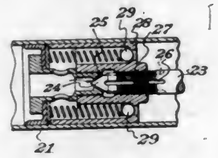
2,455,485
AUSTENITIC STAINLESS STEEL
Joye C. Haun, San Francisco, Calif., and Randolph Simpson, Portland, Oreg., assignors to Electric Steel Foundry, Portland, Oreg., a corporation of Oregon
No Drawing. Application April 26, 1945, Serial No. 590,510
2 Claims. (Cl. 75—128)

1. An austenitic stainless steel, characterized by great resistance to corrosion under reducing conditions and additionally characterized by its rollability, including a chromium content of from 16% to 20%, a nickel content of from 7% to 14%, a molybdenum content of from 1.5% to 2.5%, a boron content of from .001% to .006%, and the balance iron and impurities.



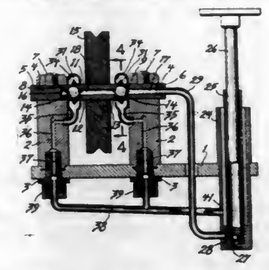
2,455,486
LIQUID FILTRATION
Richard V. Hicks, East Providence, R. I., assignor to Fram Corporation, a corporation of Rhode Island
Application July 10, 1943, Serial No. 494,223
30 Claims. (Cl. 210—169)

1. A liquid filtering unit comprising only two shape members, there being wall members separated by spacer members, both of sheet material and in surface to surface contact, one of said members being permeable to transmit filtrate therethrough, each of said members having an opening located inwardly from its periphery, and said openings registering sufficiently to provide an internal drainage passage for liquid from said



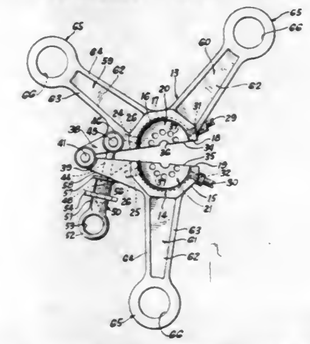
members, the spacer members having a skeleton structure with wall supporting arms presenting surface contact areas less than the areas of the surfaces of the wall members with which they contact and spaced to provide between them an access for the entering liquid to be filtered whereby to reduce the path of travel of the liquid when flowing in the direction of the contact surfaces and to provide inter-wall cells in which sludge material may collect.

2,455,487
ANTIFRICTION WORM GEARING
Henry S. Hoffar, Vancouver, British Columbia, Canada, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio, a corporation of Ohio
Application January 12, 1944, Serial No. 517,927
2 Claims. (Cl. 74—458)



1. Antifriction mechanism comprising complemental members having cooperating helical grooves therein, a plurality of balls interconnecting said members by engagement in the helical grooves thereof, one of said members having a by-pass passage therethrough extending between spaced portions of the helical groove in such member, and a resilient clip embracing and resiliently gripping the member having such by-pass over a peripheral extent exceeding one half of the circumference of such member, one end of said clip being disposed adjacent to an end of such by-pass and shaped to guide balls engaged thereby for movement between the adjacent end of the by-pass and the portion of the helical groove into which such by-pass opens.

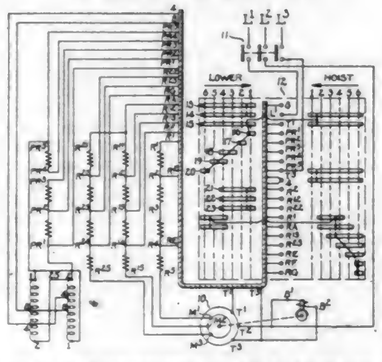
2,455,488
DOOR CHECK
James W. Holman, Tulsa, Okla.
Application August 24, 1945, Serial No. 612,369
2 Claims. (Cl. 16—63)



1. A door check comprising a cylinder hingedly connected to a door frame, a reciprocating piston within said cylinder, a piston rod carried by said piston and having its outer end anchored to a hinged door, check valve means carried by the piston and through which fluid within the cylinder passes to opposite sides of the piston, a constantly open port through the piston, said constantly open port being formed by a valve carried by the piston rod and cooperating with a valve seat and longitudinally extending ports carried by the valve end of the piston rod.

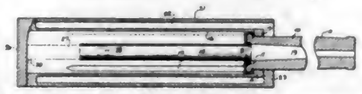
2,455,489
BEARING
Albert S. Howell, Culver, Ind., assignor to The Bell & Howell Company, Chicago, Ill., a corporation of Illinois
Application September 28, 1944, Serial No. 556,175
4 Claims. (Cl. 308—122)

1. In a bearing, the combination of support and rotatable members provided with bearing surfaces of concave part spherical character and opposing axially of the rotational axis of said rotatable member, a bearing member of convex spherical character disposed between and having opposite bearing engagement with said surfaces, said support and rotatable members being provided with lubricant bores coaxial with said rotational axis and said bearing member being provided with a lubricant bore extending diametrically therethrough, and a longitudinally fluted limiting pin extending and secured in said bore of said bearing member and extending into and loosely engaging in said bores of said support and rotatable members and operative to permit limited angular movement of said bearing member transversely of said rotational axis within a range maintaining communication between said lubricant bores.



2,455,490
TOOL FOR APPLYING ARMOR RODS TO ENERGIZED CONDUCTORS
David C. Hubbard, Centralia, Mo., assignor to A. B. Chance Company, Centralia, Mo., a corporation of Missouri
Application February 12, 1947, Serial No. 728,121
14 Claims. (Cl. 57—10)

3. In a tool for applying armor rods to energized conductors, the combination of a pair of die halves, each die half being formed with a half circular central groove adapted to form a central aperture when the die halves are closed against each other, the said dies having a plurality of armor rod holes arranged in a circle about said

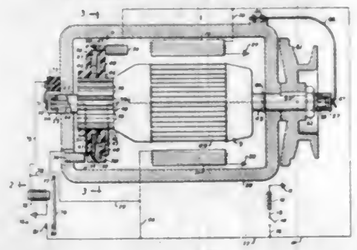


central aperture, a supporting frame for each of said die halves, said frame being provided with a pair of half annular grooves, each groove supporting a die half, means for fixedly securing the die half in each of said grooves, means for mounting each of said frames in a unit on a clamp stick, and means projecting from said frames and adapted to be engaged by an insulated stick for holding the frame in fixed position or for effecting a rotation of the frame to wind armor rods on an energized conductor, said latter means comprising three metal arms extending substantially radially and provided with eyes at their ends.

2,455,491
CONTROL OF ALTERNATING CURRENT MOTORS
Richard B. Hunter, Shorewood, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application April 28, 1944, Serial No. 533,147
14 Claims. (Cl. 318—203)

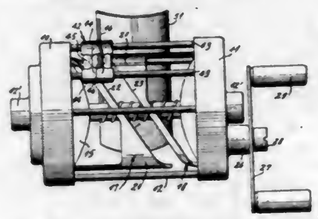
5. In a braking system for an alternating current motor, the combination with means comprising an auto-transformer to supply power to the motor primary with voltage unbalance of the motor primary for high braking action of the motor, of impedance and means to subject the motor primary while under the influence of said auto-transformer to influence by said impedance to reduce the braking action of the motor to different degrees selectively, all such braking actions of the motor being characterized by some torque of the motor at zero speed, the torque for the high braking action being the reverse of that for the reducing braking actions, and the zero speed torque for reduced braking actions being graduated according to the reduced braking action selected.

2,455,492
CIGARETTE HOLDER
William L. Jackson, Greenville, S. C.
Application February 23, 1945, Serial No. 579,411
2 Claims. (Cl. 131—175)



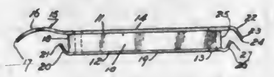
1. A cigarette holder comprising a mouthpiece having a passageway therethrough, into one end of which one end of a cigarette is adapted to be placed, said mouthpiece having a peripheral shoulder on the end which receives the end of the cigarette, a shield member comprising an inner tubular member open at one end and having an inwardly projecting shoulder at its other end slidably mounted on the mouthpiece to prevent separation of the mouthpiece from the tubular member when the two parts are in extended position, said tubular member having joined to each end thereof, and in spaced relation thereto, by end walls, an outer member which is rectangular in cross section, the end wall adjacent the mouthpiece having openings therein, the side walls of the outer member having longitudinally extending slots therein and the inner tubular member having longitudinal slots therein disposed substantially 180° apart and in non-registering position with the slots in the outer member, the peripheral shoulder on the mouthpiece having secured therein a screw which projects through one of the slots in the tubular member to guide the mouthpiece relative to the tubular member when the mouthpiece is telescoped within the tubular member, and a pivoted closure member mounted on the shield member for closing the open end of the tubular member.

2,455,493
EXHAUST MANIFOLD
Harold Jacobs, Clayton, Mo.
Application August 7, 1946, Serial No. 688,861
26 Claims. (Cl. 285—210)



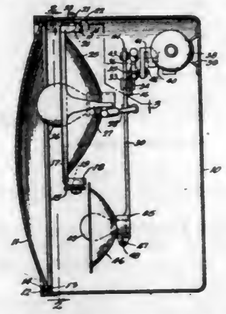
1. An exhaust manifold for a multi-cylinder internal combustion engine comprising a plurality of separate conduits disposed side by side and closed at one end of said manifold and open at the other or discharge end thereof, each of said conduits having a plurality of inlet branches, each inlet branch being adapted for connection with the exhaust port of one of a selected group of cylinders of said engine.

2,455,494
ELECTRICALLY OPERATED GENERATOR
Hal B. Jaynes, Lenoir, N. C.
Application November 24, 1947, Serial No. 787,719
2 Claims. (Cl. 171—228)



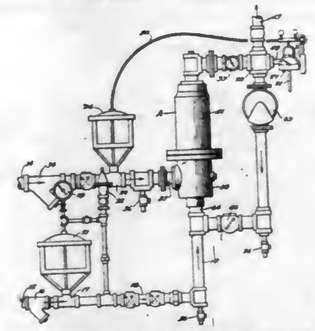
1. In an electrical generator having a housing and a driven rotor mounted in said housing and a plurality of field coils disposed in spaced relation to the rotor, said rotor having a commutator thereon provided with a plurality of spaced commutator bars insulated from each other, an insulation ring mounted on the commutator bars and having a closed cavity extending entirely therearound, a pair of conducting rings mounted on opposed sides of said cavity, a plurality of metallic fingers mounted in said ring and having the outer ends thereof disposed between the two conducting rings and having their inner ends in engagement with the commutator bars, the commutator and rotor being mounted on a shaft, said shaft having a longitudinally extending bore therethrough, a wire connected to one of the metallic rings and extending longitudinally in the bore of the said shaft to one end of the shaft and a brush contacting the end of the wire and grounded to the housing, a second wire connected to the other ring and extending in the opposite direction in said bore in said shaft to the other end of said shaft and having a brush contacting the same, a source of energy connected to the two field coils, a pair of magnetic coils disposed 180 degrees apart and on opposed sides of said ring mounted on the commutator and said source of current being connected to said last-named coils and being grounded after passing through the coils, a vibrator coil secured to the last-named brush and having its other end grounded and an oscillatable member also connected to the last-named wire and having a contact on its free end and a fixed contact disposed adjacent the last-named contact and connected to said source of energy, whereby upon rotation being imparted to the rotor and commutator, two oppositely directed metallic fingers will be attracted simultaneously by said coils located 180 degrees apart to alternately contact their free ends against the said metallic rings disposed within said insulating ring.

2,455,495
CASTING REEL
Kristen Jellum, Spooner, Wis.
Application April 5, 1945, Serial No. 586,704
9 Claims. (Cl. 242—84.4)



1. A casting reel comprising a supporting frame and a spool journaled thereon, a cylindrical guide structure mounted on said frame concentric with and surrounding said spool, said guide structure having an endless camway disposed in a plane at an angle with its axis through which passageway the line on the reel passes to be moved back and forth between the spool ends with uniform motion to be thereby guided for even winding on or unwinding from the spool.

2,455,496
CAN AND BOTTLE OPENER
Thomas Kaskouras, Chicago, Ill.
Application November 5, 1947, Serial No. 784,227
1 Claim. (Cl. 30—16)



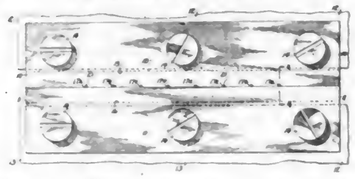
A receptacle opener comprising a thick plastic body member, an upper metal member attached to said body member and extending therebeyond with downwardly extending cutting edges and penetrating points, and a lower metal member attached to said body member and extending therebeyond with upwardly extending hook portions.

2,455,497
OSCILLATING WARNING LIGHT FOR VEHICLES
Jeremiah D. Kennelly, Oak Park, Ill.
Application November 2, 1945, Serial No. 626,358
3 Claims. (Cl. 177—329)

1. In light-signal apparatus, a casing open at one end, a reflector mounted in said frame for lateral movement, a light bulb supported in said reflector, a pendulum arm suspended from the top portion of said casing, a motor-driven means for swinging said pendulum arm, a reflector carried by the lower end of said pendulum arm and facing toward the open end of said casing, a light bulb supported within said reflector, means for supplying current to said light bulbs and to said motor, and a connecting member between said pendulum arm and said first mentioned reflector to produce simultaneous movement of said reflector with the pendulum arm.

2,455,498
STEAM INJECTION TYPE WATER HEATER
Clarence T. Kern, Milwaukee, Wis., assignor to Pick Manufacturing Company, West Bend, Wis., a corporation of Delaware
Application January 11, 1945, Serial No. 572,369
13 Claims. (Cl. 261—36)

8. A steam injection type water heater including an upright casing, an injector tube arranged within and extending longitudinally of the casing in spaced relation with the walls thereof to form an injection chamber for the passage of water to be heated, said tube being provided with orifices arranged to inject jets of steam



into water passing through the injection chamber, means including a conduit connected to the lower end of the injector tube for introducing steam into the injector tube and for automatically regulating the flow of the steam to supply the amount of steam required to accomplish the desired heating of the water, a water inlet communicating with the injection chamber, a hot water outlet for the discharge of heated water from the injection chamber, and a re-circulation pump connected with the hot water outlet and the water inlet having a circulation capacity less than the hot water outlet and adapted to re-circulate water through the injection chamber for increasing flow through said chamber when the flow of water past the injector tube in response to demand falls below a predetermined quantity and the delivery of steam to the injector tube is correspondingly reduced.

2,455,499

APPLICATOR FOR APPLYING INSULATION TO WIRE

Philip V. Kessler, Phillipsdale, and John B. Moss, Providence, R. I., assignors to Kennecott Wire and Cable Company, Phillipsdale, R. I., a corporation of Rhode Island

Application March 30, 1946, Serial No. 658,544
5 Claims. (Cl. 91—53)

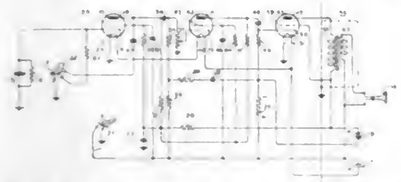
1. An applicator for applying viscous insulating material to wire, including in combination: a first portion having an inner edge and a notch-like wire-receiving passage formed in the said inner edge; and a second portion separable from the said first portion and having an inner edge abutting against the said inner edge of the first member and extending uninterruptedly across the open side of the notch-like passage therein and closing the same; the said wire-receiving passage having a wall directed generally toward the abutting inner edge of the said second portion and formed with a compensating-passage communicating laterally with the said wire-receiving passage.

2,455,500

SHOE SOLE

Hans C. Knellwolf, Zurich, Switzerland

Application August 18, 1943, Serial No. 499,298
In Switzerland July 11, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires July 11, 1962
2 Claims. (Cl. 36—25)



1. A shoe sole having at least one bar of a rigid material located inside of said sole, said bar extending at an angle relative to the longitudinal foot axis from the front portion of the small toe side towards the approximate center portion of the big toe side.

2,455,501

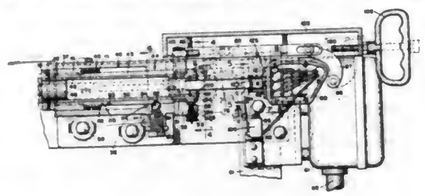
HIGH GAIN AMPLIFIER

Cosler Donald Knight, Chicago, Ill., assignor to Zenith Radio Corporation, a corporation of Illinois

Application June 3, 1944, Serial No. 538,602
2 Claims. (Cl. 179—171)

1. In an amplifying circuit, a first discharge device having an input circuit, a screen electrode, an output anode, a cathode, and an output circuit, a second discharge device having an input circuit coupled to the output of said first discharge device and having an output circuit, a third discharge device having a control grid and having an output circuit, a control circuit including said control grid coupled with the output circuit of said second device, a pair of serially connected impedances in the last mentioned output circuit whereby signals applied to the input circuit of said first device appear across said serially connected impedances in amplified form, a voltage source having a positive terminal arranged to supply continuous space current to each of said output circuits and to said screen electrode through one of said serially connected impedances, said one impedance being connected in said control circuit and arranged so that continuous space current flowing therethrough determines the continuous operating potential of said control grid, means arranged to couple an amplified signal voltage appearing across said one impedance to the input circuit of said second discharge device in regenerative relationship, and means arranged to prevent the transfer of signal voltage from said one impedance to said screen electrode of said first device, said last means including a common current limiting resistor serially connected in a common circuit from said positive terminal to said screen electrode and said anode, and two condensers serially connected between said output anode and said screen electrode, the junction point of said serially connected condensers being connected to said cathode thereby to utilize said current limiting resistor in a circuit doubly decoupling said screen electrode from said positive terminal.

2,455,502



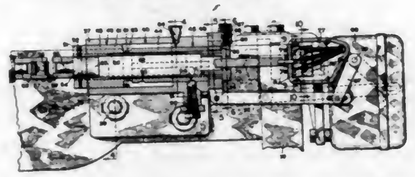
DRIVING CONTROL FOR AXMINSTER LOOMS

Clarence R. Kronoff and Victor F. Sepavich, Worcester, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts

Original application May 1, 1947, Serial No. 745,350. Divided and this application January 24, 1948, Serial No. 4,098
9 Claims. (Cl. 139—1)

1. In shipper mechanism for an Axminster loom having a variable speed driving motor, rotary electric speed control means for the motor, a fixed bearing, a rotary member in the bearing, shipper means operatively connected to the member to rotate the same, a bar operatively connected to said speed control means and extending into the rotary member, and bar moving means on said rotary member having a slot therein larger

than the bar and through which the latter extends, said bar moving means transmitting a



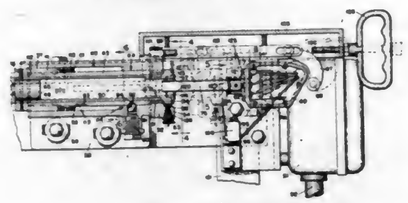
rotary force from the rotary member to the bar to cause rotation thereof and of said speed control means.

2,455,503

DRIVING CONTROL FOR AXMINSTER LOOMS

Clarence R. Kronoff and Victor F. Sepavich, Worcester, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts

Application August 9, 1946, Serial No. 689,405
14 Claims. (Cl. 139—1)



1. In an Axminster loom having tube frame transporting, weft beat-up, tuft cutting, and weft laying mechanisms all operated by a shaft forming part of the loom, an electric motor operatively connected to said shaft, electric circuit means for the motor including a switch and speed controlling resistance means, a shipper bar mounted on the loom for angular and longitudinal movement, and connections between the bar and said switch to control the latter by longitudinal movements of the bar and control the resistance means by angular movement of the bar.

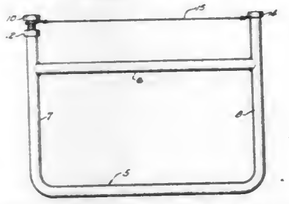
2,455,504

DRIVING CONTROL FOR AXMINSTER LOOMS

Clarence R. Kronoff and Victor F. Sepavich, Worcester, Mass., assignors to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts

Application May 1, 1947, Serial No. 745,350
8 Claims. (Cl. 139—1)

1. In shipper control mechanism for the driving motor of an Axminster loom, fixed bearing means, a member slidable in said means but held against rotation relatively thereto, a cylinder



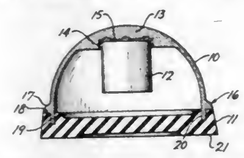
moving longitudinally with and rotatable within the member, a shipper bar operatively connected to the cylinder capable of longitudinal and rotary movements to cause longitudinal and rotary movements of the cylinder, rotary electric speed control means for the motor controlled by the cylinder, and an auxiliary handle connected to the member to cause longitudinal movement of the latter and the shipper bar for any angular position of the cylinder with respect to the member.

2,455,505

FLESHING TOOL

Arthur C. Lamy, Milwaukee, Wis.

Application December 20, 1947, Serial No. 792,926
3 Claims. (Cl. 69—20)



1. A fleshing tool comprising an extent of wire, a U-shaped frame having spaced arms, means for connecting one end of the wire to one of said arms, a bolt threaded in the other of said arms, means on said bolt to which the other end of the wire may be connected so that when the bolt is turned the wire is placed under tension, means for releasably locking the bolt in tension applying condition, and a reinforcing bar extending from one of said arms to the other and located sufficiently close to the outer ends of the arms to prevent inward deflection of the arms when the wire is under tension.

2,455,506

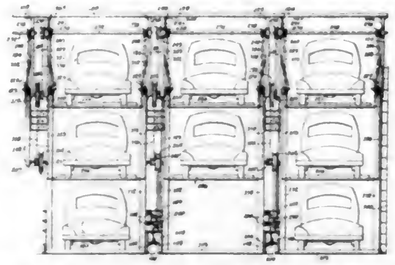
PIN PICKUP AND HOLDER

Myrl M. Leslie, Detroit, Mich.

Application February 15, 1946, Serial No. 647,706
5 Claims. (Cl. 223—109)

5. A pick-up and holder for pins or the like comprising a non-metallic non-magnetic dome, a permanent magnet secured centrally within the said dome and positioned nearer the top than the bottom thereof, and a non-magnetic closure at the bottom of the said dome, the said magnet being of such strength in proportion to the extent of the said dome that pins will be picked up and held firmly only to the upper portion of the said dome.

2,455,507



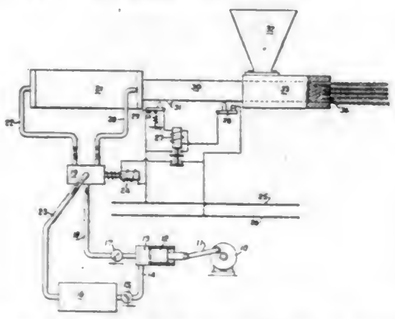
STORAGE RACK

Oliver A. Light, East Orange, N. J.

Application February 21, 1945, Serial No. 578,982
15 Claims. (Cl. 254—144)

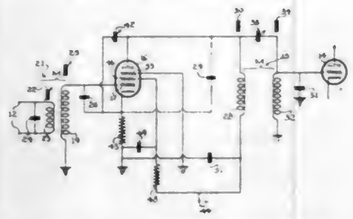
1. A storage rack comprising a self-sustaining master unit and an adjacent unit thereto, each of said units having a four-post chassis at cor-

responding sides thereof, said adjacent unit being attached to and having support at its side



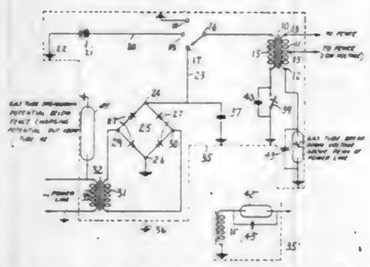
toward the master unit wholly from the chassis of the said master unit.

2,455,508
FOOD PRODUCT
Eugene Lilly, Colorado Springs, Colo.
No Drawing. Application December 7, 1945, Serial No. 633,531
1 Claim. (Cl. 99—111)



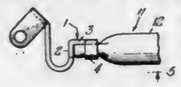
A method of making and packaging an edible paste food product from smoked meat of rainbow trout, which comprises grinding said meat; adding for each 12 pounds of meat about 5½ pounds of butter, 1½ pounds of corn flour, and flavoring during grinding; then adding about 4½ pounds of whole whipped eggs for each 12 pounds of meat during continued grinding to form an intimate intermixture thereof; packing the intimate intermixture in a container; exhausting and then sealing each said container; and then heating each said container for about 45 minutes, the corn flour being an absorbent for the butter and preventing settling out of the same.

2,455,509
METHOD OF EXTRUDING IRREGULARLY SHAPED CARBON RODS
Enrique L. Luáces, Dayton, Ohio, assignor to Chemical Developments Corporation, Dayton, Ohio, a corporation of Ohio
Original application May 26, 1943, Serial No. 488,533. Divided and this application December 13, 1943, Serial No. 514,036
4 Claims. (Cl. 18—55)



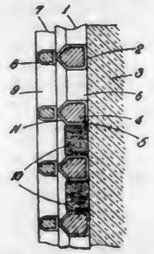
1. The method of making a contact mass of carbon comprising discrete granules each having a substantially globular portion of greater girth flanked by cylindrical portions of lesser girth, which comprises applying pulsating pressure to a confined mass of plastic material comprising carbon powder and binding material to thereby cause said material to pass through an extrusion die of uniform predetermined contour in a wall of the confining means.

2,455,510
BAND-PASS AMPLIFIER
James H. Ludwig, Collingswood, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 10, 1944, Serial No. 539,663
2 Claims. (Cl. 179—171)



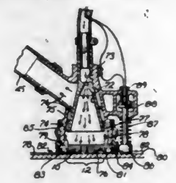
1. A band-pass amplifier comprising an input transformer having a tuned primary and a tuned secondary, said primary serving as the input means for the amplifier, a vacuum tube, means for connecting said secondary to the input electrode of said vacuum tube, an output transformer having a tuned primary and a tuned secondary, means for connecting said primary of the output transformer to the output electrode of said vacuum tube, a cathode resistor, means including the cathode resistor for returning said secondary of said input transformer to the cathode of said tube, means including a capacitance for returning said primary of said output transformer to the cathode of said vacuum tube, said cathode resistor providing a degenerative effect, and a regenerative connection including a variable capacitance from said output electrode connection means to the cathode of said tube.

2,455,511
ELECTRICAL FENCE CHARGER
Elmer K. Malme, Chicago, Ill., assignor to Guard-It Manufacturing Co., Chicago, Ill., a corporation of Illinois
Application December 10, 1945, Serial No. 634,060
3 Claims. (Cl. 171—97)



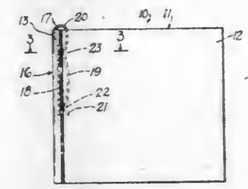
1. A fence charger comprising voltage transformer means having an input winding for energization from an alternating current power line at normal potential for domestic use, said power line having one side thereof grounded, said transformer means having a high potential output winding for providing a fence charging potential of an order substantially greater than any normal power line potential, a casing including a metallic portion for enclosing said fence charger elements, said metallic portion constituting one fence charger terminal, a second fence charger terminal adapted to be connected to a fence to be charged, said metallic casing portion being adapted to be connected to earth for providing a return circuit for fence charging, and a gas tube connected between said input winding and said case, said gas tube being conducting for potentials below fence charging potentials but above any normal potential in the in-put winding whereby, if said connection between earth and said metallic casing becomes impaired, a fence charging circuit may be completed through said gas tube without impairing normal insulation.

2,455,512
BOURDON TUBE END CAP
Edward A. McCoy, Eau Claire, Wis., assignor, by mesne assignments, to Jas. P. Marsh Corporation, Skokie, Ill., a corporation of Illinois
Application September 20, 1946, Serial No. 698,349
5 Claims. (Cl. 73—418)



3. A Bourdon tube closure and connection comprising the end of a Bourdon tube of oblong cross section having a flattened extremity and a fitting comprising a body portion on one side of the flattened portion of said tube, said body portion having an extension providing an element of a pivotal connection and having an intermediate shoulder abutting the extreme end of the tube, there being lateral arms on said body portion embracing the flattened portion and holding the fitting fixedly upon the end of the tube, said fitting and tube end being further united by solder and the end of the tube being sealed with solder.

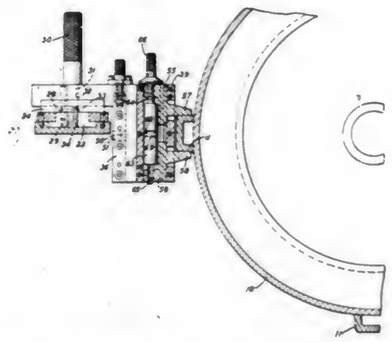
2,455,513
MANUFACTURE OF MOSAIC SCREENS
James Dwyer McGee, London, England, assignor to Electric & Musical Industries Limited, Hayes, England, a company of Great Britain
Application December 6, 1946, Serial No. 714,634
In Great Britain October 6, 1945
Section 1, Public Law 690, August 8, 1946
Patent expires October 6, 1965
7 Claims. (Cl. 117—33.2)



1. A method of manufacturing a double-sided mosaic screen from an insulated conducting mesh, said method comprising the steps of, covering one side of said insulated mesh by a further mesh, leaving the interstices in the insulated mesh exposed, covering the other side of said insulated mesh by a backing means to close the interstices of said insulated mesh, evaporating metal through said further mesh to deposit conducting elements of the metal in the interstices of said insulated mesh, removing said further mesh and backing means from said insulated mesh to leave said conducting elements in said insulated mesh and insulated from one another.

2,455,514
SURFACE TREATING METHOD AND APPARATUS
William H. Mead, Oakland, Calif.
Application August 2, 1945, Serial No. 608,386
12 Claims. (Cl. 51—8)

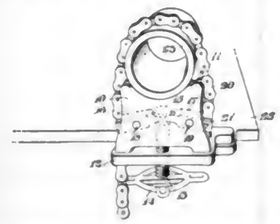
4. Apparatus for treating a surface and for collecting loose material from such treatment and preventing it from flying about, which comprises a casing having an open end spaced slightly above said surface, air-pervious deflector means secured around said end and adapted to rest on said surface to fill the space between said open end and said surface, suction means connected to said casing, jet means projecting within the said casing past said suction means connection toward said open end and terminating short thereof, said deflector means forming a maze-like passage to impede exit of treating material and permit entrance of air, and means to supply air laden with treating material to said jet.



2,455,515
REINFORCEMENT AND SPRING CLIP CONSTRUCTION FOR BILLFOLDS
Samuel Miller, Kew Gardens, N. Y.
Substituted for abandoned application Serial No. 429,590, February 5, 1942. This application November 6, 1945, Serial No. 626,925
1 Claim. (Cl. 150—38)

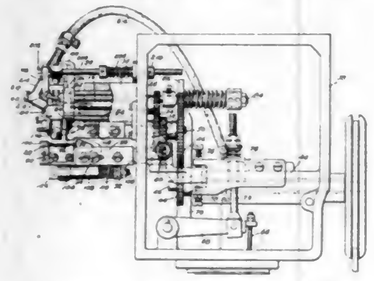
A billfold having a plurality of separate leaves of pliable material, a one-piece binder tube of rigid material extending substantially the full length of the leaves and being split from end to end thereof to provide uniformly spaced free-edge jaws, the leaves having sections thereof permanently clamped between said jaws, these sections having portions projecting inward of the tube beyond the jaws and providing a flexible body in the tube, and a U-shaped spring clip having a crotch portion at an end of the split tube, one arm of the clip being external of the tube and lying freely exposed between the leaves so as to be adapted to be sprung over bills disposed in the billfold, the other arm of the clip being housed in the tube in overlying relation to said flexible body and being thus retained by the

tube in cooperation with the external portions of the leaves between which the outer arm lies, the said flexible body extending substantially from end to end of the split tube and the clip being movable at least partially longitudinally of the tube in snug, frictional engagement with the said flexible body to prevent accidental removal of the clip.



2,455,516
GAUGE FOR CHECKING THE CENTER LINE OF ELONGATE PARTS
Earl C. Moss, Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application July 10, 1946, Serial No. 682,675
5 Claims. (Cl. 33—174)

2. A gage for checking the centerline of an elongate part with respect to the centerline of a cylindrical article upon the periphery of which the part is mounted, the gage comprising an arm, means to support the arm for movement in a guided path parallel with the centerline of the article, a floating element, means fixed to the arm to support the element and allow it to move freely in a fixed path at an angle with respect to the centerline of the article, the floating element having a gaging surface, jaws carried by the floating element to grip the part and cause movement of the element and its gaging surface relative to the arm, and a gaging element carried by the arm and having spaced gaging surfaces cooperating with the gaging surface of the floating element to indicate whether or not the centerline of the part at the portion being gaged is within predetermined limits of a given position relative to the centerline of the article.

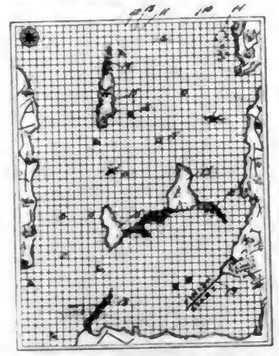


2,455,517
DOUBLE-ACTING CHAIN-TYPE PIPE VISE
Morgan L. Nielson, Richmond, Calif.
Application September 26, 1945, Serial No. 618,741
1 Claim. (Cl. 81—19)

In a pipe vise, a frame comprising a base and a pair of spaced upwardly extending pipe supporting jaws rigidly secured to said base having pipe centering cradling means in their upper sides, said base having a threaded bearing passage centrally between said jaws and in vertical line with the axis of a pipe supported in said jaws, a vertical screw threaded in said bearing passage, a pair of equal-length levers pivoted to said frame between said jaws at each side of said screw for swinging movement about horizontal axes, pivotal connection means between the inner ends of said levers and the upper end of said screw whereby rotation of said screw pivotally moves said levers, and a flexible pipe holding member connected to the outer ends of said levers

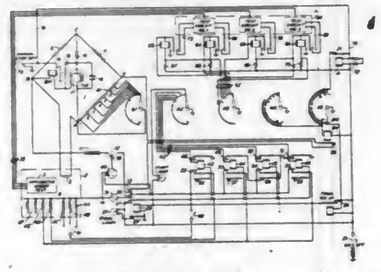
at equi-distant points from the axis of said screw, at least one connection thereof being adjustable lengthwise of said holding member.

2,455,518
INSOLE RIB CEMENTER
Hans C. Paulsen, Medford, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application August 30, 1946, Serial No. 693,854
8 Claims. (Cl. 12—80)



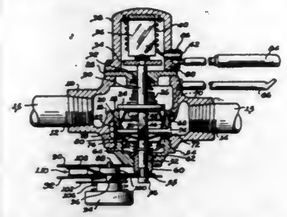
1. In a machine for coating soles having an upstanding rib and an adjacent channel, an upright driven roll for coating one face of said rib and an adjacent channel, means for supporting a sole with its rib in contact with the periphery of the roll and with said channel facing the end of the roll, said roll having grooves extending axially of the periphery thereof and an annular groove in its end face, said roll also having passages from said annular groove to some of the grooves on the periphery of the roll to permit coating material on the periphery to flow into the annular groove, and means for supplying coating material to said periphery above the lower end thereof.

2,455,519
SAILING GAME
James C. Powers, Jr., Barrington, R. I.
Application February 27, 1946, Serial No. 650,505
2 Claims. (Cl. 273—134)



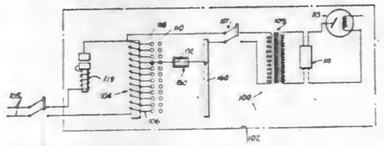
1. A game apparatus for use with playing pieces simulating sailing vessels comprising a game board having a playing area with right angularly intersecting lines forming paths with relation to which said playing pieces are movable over the playing area, said area being marked to indicate the wind direction relative to said paths so that said lines will indicate running, reaching and tacking paths of travel, and playing pieces in the form of sailing vessels movable over said board

and each having a sail shiftable with relation to the vessel as the vessel changes its direction of



travel over said playing area whereby said sail is set to cooperate with the wind direction indicated.

2,455,520
TEMPERATURE CONTROLLED TEST SYSTEM
Glenn L. Prudhon, Plainfield, and Russell W. Spikula, Newark, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application March 24, 1944, Serial No. 528,012
11 Claims. (Cl. 175—183)

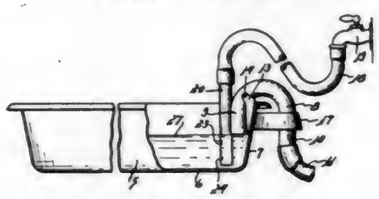


1. A control system for automatically controlling test circuits throughout a predetermined temperature range of an object under test, comprising in combination test circuits to be controlled for testing said object, a thermally responsive circuit control means having at least one temperature sensitive element arranged to be placed in thermal proximity to said object so as to be operated in response to a first predetermined temperature thereof, said means including an electric current control device controlled by said temperature sensitive element, a switching means connected to said current control device to be operated thereby in response to the operation of said temperature sensitive element, a plurality of switch controlled circuits connected to and controlled by said switching means, an adjusting means in said thermally responsive circuit control means for adjusting a circuit element thereof to adjust the temperature at which said circuit control means responds, circuits connecting said adjusting means to one of said switch controlled circuits whereby upon operation of said switching means the temperature at which said circuit control means responds is changed from said first predetermined temperature to a second predetermined temperature, and other circuits including others of said switch controlled circuits connected to the test circuits whereby the operation thereof is controlled by the switching means and consequently in accordance with predetermined temperature limits of said object under test.

2,455,521
SAFETY CONTROL FOR GASEOUS FUEL BURNERS
Harold W. Rice, Los Angeles, and George B. Solovieff, South Gate, Calif., assignors to Robertshaw-Fulton Controls Company, a corporation of Delaware
Application April 26, 1945, Serial No. 590,470
16 Claims. (Cl. 158—117.1)

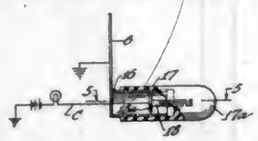
14. A safety control for fuel burners comprising means movable between positions for controlling the flow of fuel, an electromagnetic device having an armature operable for retentively positioning said controlling means when said device is energized, means for resetting said armature in engagement with said electromagnet device including a reciprocable stem for operating said armature and controlling means, means carried by said stem for limited slidable movement thereon, rotatable means offset from said stem and adapted for forward and reverse rotation, an element carried by said rotatable means for movement into and out of engagement with said slidable means for effecting said limited slidable movement followed by operation of said stem during said forward rotation, an arcuate slotted portion on said element having an enlargement terminating intermediate the ends thereof, and a head on said stem movable into operative engagement with said enlargement by said stem operation for limiting the rotation of said rotatable means in reverse direction to substantially one-half the rotation in forward direction when said armature is reset.

2,455,522
X-RAY APPARATUS
Irving Ringler, New York, N. Y.
Application April 8, 1944, Serial No. 530,163
10 Claims. (Cl. 250—95)



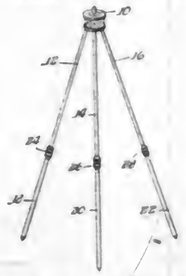
1. A calculating device for use in controlling the operation of X-ray apparatus, comprising a pair of spaced apart, fixedly related scale-carrying members, one of the members carrying a scale graduated in terms of the densities of the parts to be X-rayed, the other member carrying a scale graduated in terms of X-ray radiation necessary, and a plurality of members movable between the two relatively fixed members, one

movable member being contiguous to the fixed member carrying the scale of density of the part, said one movable member carrying a scale calibrated in terms of the product of the time of exposure and the current necessary for heating the filament of the X-ray tube and another scale calibrated in terms of the distance of the part to be X-rayed to the X-ray tube of the X-ray apparatus, and the other movable member carrying a scale graduated in terms of the thickness of the part to be X-rayed, said one movable member being adjusted to associate a selected graduation of said product of time and current necessary for filament heating with the graduation for density of the part to be X-rayed, said other movable member being adjusted between the said one movable member and the scale of X-ray radiation to associate a scale graduation on the other movable member with the scale on said one movable member for a distance between part and X-ray tube to determine from the resultant association of the graduation for the thickness of the part to be X-rayed with a graduation on the scale of X-ray radiation the X-ray radiation necessary to effect an X-ray for the part involved.



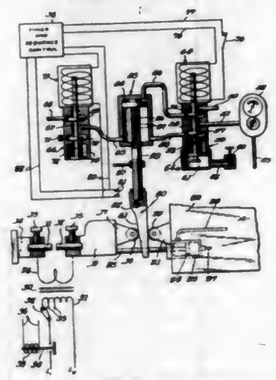
4. X-ray apparatus including an X-ray tube, and means for supplying an electrical potential to the X-ray tube, the supplying means including a circuit member, and means for controlling the member for imposing on the X-ray tube the proper potential for the production of the required X-ray radiation; said controlling means including a scale-carrying member substantially fixedly related to the circuit member, the scale-carrying member including a scale graduated in terms of the densities of the parts to be X-rayed, the circuit member having means for producing calibratedly varied potentials at its various positions in relation to the scale of the scale-carrying member, and a plurality of members movable between the scale-carrying and circuit members, one movable member being contiguous to the circuit member, said one movable member having a scale calibrated to superimpose on the fixed relationship between the scale-carrying and circuit members for each graduation on the fixed scale-carrying member a factor in terms of the thickness of the part to be X-rayed, the movable members also providing means for superimposing upon said fixed relationship a factor in terms of the distance between the object to be X-rayed and the X-ray tube, to determine from the resultant association of factors on the movable members with said fixed relationship the potential necessary to produce the radiation required for the X-ray of the part involved.

2,455,523
TRAY SIPHON AND AGITATOR
James Rodack, Detroit, Mich., assignor to Robar Research, Inc., Detroit, Mich., a corporation of Michigan
Application September 11, 1946, Serial No. 696,255
3 Claims. (Cl. 95—97)



1. In a tray siphon and agitator of the class described a U-shaped siphon tube adapted for mounting on a wall of a tray having a bottom; a swingably mounted wedge on one end of said tube engageable with the inner face of said wall for maintaining said end of said tube directed vertically to the bottom of said tray; and a wedge member slidably mounted on the other end of said tube and engageable with the outer face of said wall for securing said wedge in wedging position.

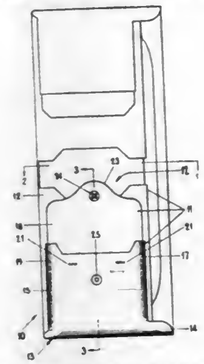
2,455,524
TIRE DEFLATION INDICATOR
Anthony J. Schultz, St. Paul, Minn., assignor of one-half to Edward Crosby, St. Paul, Minn.
Application July 16, 1945, Serial No. 605,399
2 Claims. (Cl. 200—58)



2. In tire deflation signalling apparatus, a depending, substantially rigid arm adapted to be secured to a vehicle substantially radially of a wheel thereof with the lower end thereof opposed to the side wall of a pneumatic tire, a tubular, conductive member secured to the lower portion of said arm and extending laterally thereof and perpendicularly to the adjacent side wall of the associated tire, a rubber nipple attached to the outer end of said tubular member and disposed concentrically thereof and having a deflectible free end adapted to be engaged by said wall when the associated tire is deflated below a predetermined pressure, said nipple internally carrying an axially disposed electrical contact member, said member extending into said tubular conductive member being normally disposed in spaced relation thereof, means for restraining said arm against oscillation axially of the associated wheel and threadedly adjustable means for varying the normal spaced relation of the lower end of said arm and the extermity of said nipple with respect to the adjacent side wall of the associated tire.

2,455,525
TRIPOD
Herman Schulz, Chicago, Ill.
Application September 14, 1945, Serial No. 616,310
6 Claims. (Cl. 248—191)

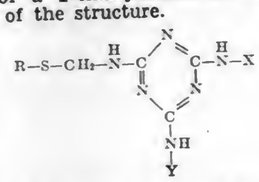
1. The combination comprising two coaxially arranged elongated cylindrical members interconnected by a connection, said connection comprising a slidably mounted housing, a multipart tapered gripping member slidably mounted on the inner cylindrical member and movable within said housing, means for causing said gripping member to resist telescopic movement of said cylindrical members, and manually operable means for moving said gripping member out of engagement with said latter means to permit telescopic movement of said cylindrical members.



2,455,526
WELDING APPARATUS
David Sciaky, Chicago, Ill., assignor to Welding Research, Inc., Chicago, Ill., a corporation of Illinois
Application September 10, 1945, Serial No. 615,269
7 Claims. (Cl. 219—4)

1. In welding apparatus, in combination, electrodes for holding workpieces to be welded, a movable slide supporting one electrode and mounting the same for reciprocating movement toward and from the other electrode, a taper cam member adapted to reciprocate in a direction normal to the direction of movement of said slide for moving said slide, said cam member having a cam surface of characteristic contour for imparting predetermined movement to said slide, a pressure cylinder for reciprocating the cam member, and control means for said pressure cylinder including control valves for selectively admitting a pressure medium to the respective ends of said cylinder and for venting a pressure medium from at least one end of the cylinder at a controlled progressively increasing rate of discharge to thereby regulate travel of the piston toward said end.

2,455,527
STITCHLESS COMBINED BILLFOLD AND COIN PURSE
Louis Seamon, Brooklyn, N. Y., assignor to A. & L. Seamon, Brooklyn, N. Y., a firm
Application February 11, 1946, Serial No. 646,772
1 Claim. (Cl. 150—35)

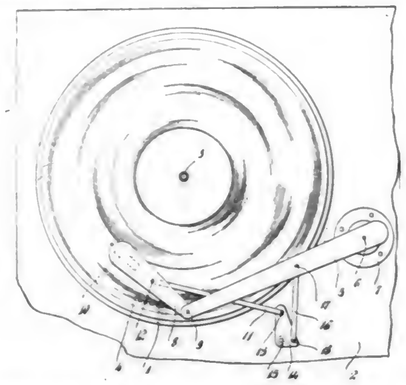


In a stitchless combined billfold and coin purse, said coin purse having its inner and outer walls lying flat against said billfold, a billfold body having a pocket and a continuation of the billfold material providing a front wall for said coin purse, said front wall having a crease defining a rearwardly foldable portion at one side edge thereof, said foldable portion being of a size providing an entire back wall for said coin purse, the other side edge of said front wall having a crease defining a strip rearwardly foldable into lapped relation about a side edge of said back wall, means passing through said back wall and said strip and through said billfold pocket material securing the central portion of said back wall to said pocket material, substantial side edge portions of said coin purse being unsecured to said billfold pocket material, said back wall having a continuation, said strip being positioned at the rear of said back wall to permit said continuation to form a flap closure for said coin purse coextensive with the width of said back wall, said unsecured side

edge portions being foldable inwardly of said coin purse up to said points of securement to open said coin purse, thereby simulating a bellows effect, permitting entrance to the full cross-sectional area of said coin purse.

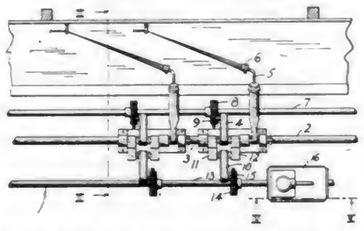
2,455,528
ACCELERATING VULCANIZATION OF RUBBER
Raymond B. Seymour, Dayton, Ohio, assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application July 11, 1945, Serial No. 604,505
8 Claims. (Cl. 260—784)

1. The process of vulcanizing a rubber which comprises heating a rubber and sulfur in the presence of a 2-thiazylthiomethyl substituted melamine of the structure.



where R is a 2-thiazyl group and X and Y represent a material of the group consisting of hydrogen and —CH_2—S—R groups.

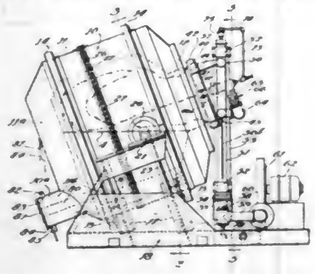
2,455,529
PHONOGRAPHIC DEVICE
Hubert L. Shortt, White Plains, N. Y., assignor to Polytron Corp., White Plains, N. Y., a corporation of New York
Application March 15, 1946, Serial No. 654,655
4 Claims. (Cl. 274—23)



1. In a phonograph, in combination with a frame a grooved record rotatable on said frame and a stylus-mounting sound reproducing device, wherein said sound reproducing device is mounted on a kinematic chain in such position that at every point of the trajectory of the stylus it mounts said reproducing device tangent to the record groove engaged by said stylus a receiver arm carrying said sound reproducing device, a driver arm pivotally anchored to said frame and pivotally connected to said receiver arm, a link member pivotally anchored to said frame, a first connecting member pivotally connected to said

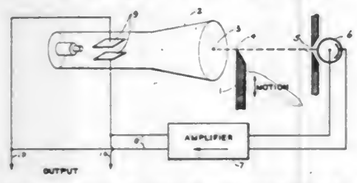
link member and to said receiver arm at a point intermediate the ends of this latter, and a second

connecting member pivotally connected to said link member and to said driver arm at a point intermediate the ends of this latter.



2,455,530
APPARATUS FOR THE PRODUCTION OF ARTIFICIAL FILAMENTS
Richard W. Stanley, Drexel Hill, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application May 10, 1944, Serial No. 534,870
13 Claims. (Cl. 18—8)

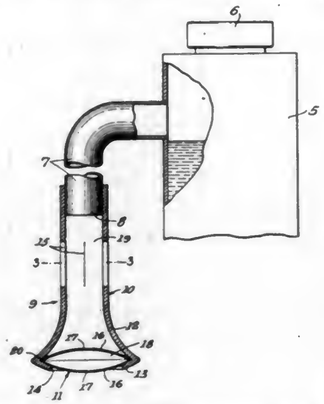
1. Apparatus for producing artificial filaments of varying denier comprising a spinneret, a feed line for the material to be spun, a spinning pump having a constant volume discharge rate connected on its suction side to the feed line and on its discharge side to the spinneret, means for driving the pump at constant speed, an auxiliary rotary pump connected on its suction side to the feed line and on its discharge side to the spinneret, a reciprocatory hydraulic motor, a rotary hydraulic motor, and means for selectively connecting each of said motors to said auxiliary rotary pump for intermittently driving the auxiliary pump.



2,455,531
METAL FURNACE
Jack L. Stroman, Elmwood Park, Ill., assignor to The Petersen Oven Company, Chicago, Ill., a corporation of Illinois
Application October 6, 1944, Serial No. 557,453
3 Claims. (Cl. 266—33)

1. A metal melting furnace comprising a rotatable chamber having a refractory lining, the rear-end of said chamber being closed and the forward end being provided with a centrally located port for charging and firing the chamber and serving as a passageway for exhaust gases, a door including a refractory panel mounted independently of said chamber on a vertical axis for movement toward and away from the forward end of the chamber, said panel having a central opening adapted to register with said port, fluid fuel feeding apparatus mounted on said door and including a nozzle disposed in registration with

said opening, said mounting for the door being correlated to the end of the chamber whereby said panel may be disposed in closed position in a predetermined spaced apart relation to the forward end of the chamber to provide a passageway for exhaust gases discharging through the outer morginal portions of said port, means for guiding and supporting the chamber during rotation, and means for rotating said chamber.



2,455,532
LIGHT RESPONSIVE DISPLACEMENT INDICATOR
David E. Sunstein, Elkins Park, Pa., assignor to Philco Corporation, a corporation of Pennsylvania
Application May 24, 1945, Serial No. 595,579
8 Claims. (Cl. 177—351)

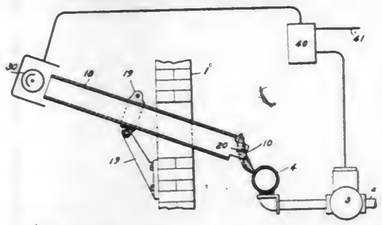
1. In a system for indicating mechanical movements of an object, a cathode ray tube capable of emitting a cathode ray, deflecting means for deflecting said ray, a luminous screen in said cathode ray tube, a light responsive device exposed to light from said screen, said object being interposed in the path between said screen and light responsive device, means for varying the light impinged on said light responsive device in accordance with a mechanical movement to be indicated, means for controlling the deflecting means of said cathode ray beam in accordance with the variation of light impinged on said light responsive device to restore a state of equilibrium, and means for indicating the electrical conditions necessary to restore the equilibrium.

2,455,533
COMBINED SAFETY AND SOUND-PRODUCING DEVICE FOR RADIATORS
John A. Swindle, Norwalk, Calif.
Application January 26, 1948, Serial No. 4,323
3 Claims. (Cl. 116—67)

1. The combination with a conventional water-cooling radiator having an overflow tube, of a sound producing device carried by the end of said tube and having an opening for passing water overflowing in said tube and also passing steam generated in the radiator, said device comprising oppositely curved relatively thin disc-like elements that define a chamber therebetween in

communication with said opening, and a resilient tubular member connecting the overflow tube and the sound producing device, the latter member having self-closing slits formed therein and adapted to open under excessive pressure of steam to relieve said pressure and thereby reduce the period during which the device sounds.

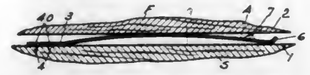
2,455,534
RETICULATED STRUCTURE AND METHOD OF MAKING THE SAME
Anselm Talalay, New Haven, Conn., assignor to The Sponge Rubber Products Company, Shelton, Conn., a corporation
No Drawing. Application January 26, 1946, Serial No. 643,822
4 Claims. (Cl. 154—101)



1. The method of making a stereoreticulate structure which comprises applying an aqueous dispersion of an elastomer to coat and bind to one another at their crossing positions the fibers of a three-dimensionally open-mesh, unwoven and unfelted web of fibrous material having substantially the fiber size and kink characteristics of wool, and plying up and adhering to one another a multiplicity of laminations of the so treated web material, the resulting structure being thus brought to its final condition of internal structure while in open-mesh, net-work form in all of the three dimensions, the coating and binding being effected by first spraying the web with the said dispersion and drying it, and then dipping it in the said dispersion and drying it, and adhesion of the laminations being effected by applying an adhesive to the sprayed, dipped and dried web material, the product by steps defined, being given a final ratio of elastomer to fiber greater than 2 to 1 by weight.

2. A stereoreticulate structure comprising a mass of unwoven and unfelted fibrous material having substantially the fiber size and kink characteristics of wool, the fibers being individually coated and bonded to one another at their crossing positions by a substance having substantially the resilient deformability of soft-rubber, the structure in its final condition being of substantially the same net-work form in all of the three dimensions, and the coating and bonding substance being distributed with substantial uniformity upon the fibers and the ratio of the coating and bonding substance to the fiber being more than 2 to 1 by weight.

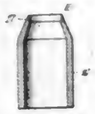
2,455,535
ESTROGENIC SUBSTANCES
Ralph C. Tallman, Morristown, N. J., and Alfred H. Stuart, New York, N. Y., assignors to Schieffelin & Co., New York, N. Y., a corporation of New York
No Drawing. Original application May 30, 1944, Serial No. 538,089. Divided and this application November 10, 1945, Serial No. 627,972
4 Claims. (Cl. 260—613)



1. Alpha,gamma - di(alkoxyphenyl) propanes in which all of the propane carbon atoms are substituted by alkyl groups of less than six carbon atoms, and in which the alkoxy groups have less than six carbon atoms.

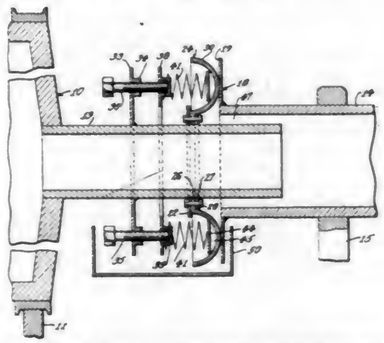
2,455,536
APPARATUS FOR SUPERVISING HEAT GENERATING MEANS
E. Craig Thomson, Boston, Mass., assignor to Combustion Control Corporation, Cambridge, Mass., a corporation of Massachusetts
Application March 15, 1944, Serial No. 526,637
5 Claims. (Cl. 158—117.1)

2. Apparatus for supervising a heat generating means, comprising said heat generating means which radiates light of a comparatively low intensity, a light responsive device arranged for supervising said heat generating means, and a body arranged to be heated by said heating means and adapted to radiate light of a comparatively high intensity when heated by said heating means, the said body comprising an incandescible member imbedded in a transparent heat conducting envelope located in said energy source.



2,455,537
ANTIRATTLE DEVICE FOR WINDOWS
Joseph F. Vinciguerra, Methuen, and William C. Ford, Andover, Mass.
Application September 24, 1945, Serial No. 618,126
3 Claims. (Cl. 292—76)

1. An anti-rattle device for windows comprising a metal spring body of bowed-form, the convex side of the bow being of smooth, durable material unaffected by rubbing, and including a relatively straight holding end having two rows of angular holding teeth in groups of three, said teeth being punched from the material so as to project in the direction of the concave side of the bowed spring, the other end being slightly turned



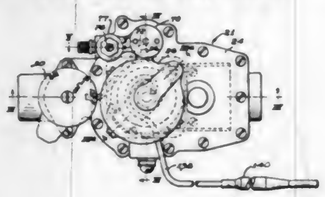
up in the direction of the convex side of the bowed spring and there being two or more relatively smooth faced bosses pressed from the material outwardly towards the said convex side of the bowed spring to a greater distance than the turned up end.

2,455,538
METHOD OF MAKING CUTTING TOOLS
Frank Wagner, Chicago, Ill., assignor to J. F. Helmold & Bro., Inc., Chicago, Ill., a corporation of Illinois
Application January 8, 1945, Serial No. 571,877
3 Claims. (Cl. 76—101)

2. The method of making a cutting tool of hollow tubular cross section, comprising radially constricting a hollow cylindrical tube at a predetermined nose section substantially coincident with the intended cutting extremity of the tool by spinning said tube sufficiently to substantially reduce the inner circumference of said nose section as compared to the normal inner circumference of the remainder of the tube, internally sharpening the portion of said restricted nose section which immediately adjoins the cutting extremity, thereby to define an annular cutting edge, and terminating said internal sharpening of said internally reduced nose section at a zone rearwardly adjoining said sharpened portion and disposed inwardly of said normal inner tube circumference.

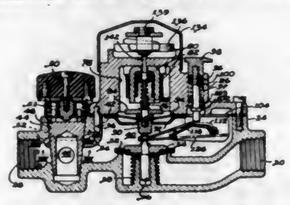
2,455,539
JOINT CONSTRUCTION
Eugene A. Wahl, New York, N. Y., assignor to Allied Chemical & Dye Corporation, a corporation of New York
Application December 29, 1944, Serial No. 570,344
4 Claims. (Cl. 285—97.1)

1. A pipe joint comprising communicating pipe sections having adjacent end disposed in non-gas tight relation and arranged to facilitate passage of a gas stream from one section into the other, at least one of said sections being rotatable about its axis, a diaphragm associated in gas tight relation with one of said sections and having a sealing face, a flexible membrane associated in gas tight relation with the other section and having a convex sealing face adapted to contact said first named face to form a gas seal, and resilient means for maintaining said sealing faces in gas tight contact whereby egress of gas from and ingress of gas to said gas stream is prevented.



2,455,540
FLEXIBLE WRINKLE FINISH AND PROCESS OF MAKING
William A. Waldie, Oakwood, Ohio, assignor to New Wrinkle, Inc., Wilmington, Del., a corporation of Delaware
No Drawing. Application December 11, 1944, Serial No. 567,791
13 Claims. (Cl. 117—41)

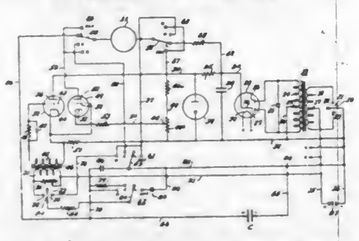
10. A method of producing a resin-free wrinkle finish oil cloth material consisting in heating a mixture of raw castor oil and at least the equal amount of dehydrated castor oil to a temperature of from 410 to 480° F.; adding drier catalyst; raising the temperature to 520 to 570° F. and maintaining it there until the desired viscosity is obtained; mixing a pigment paste and applying said material obtained on a fabric base; and thereafter allowing said fabric to air-dry for 10 to 30 minutes; and then subjecting it to infrared heat.



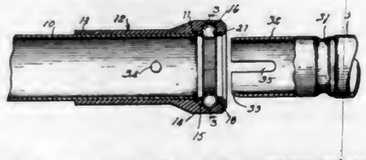
2,455,541
AIR DRY WRINKLE FINISH
William Allshire Waldie, Oakwood, Ohio, assignor to New Wrinkle, Inc., Wilmington, Del., a corporation of Delaware
No Drawing. Application March 15, 1945, Serial No. 583,001
7 Claims. (Cl. 260—19)

4. An air drying wrinkle finish coating composition consisting of a mixture of 100 parts by volume of short oil varnish and 30 to 130 parts by volume of an oil drier; said short oil varnish being obtained by heating to from 500° to 540° F. until homogeneous from 2 to 15 gallons of conjugated double-bonded drying oil selected from the group consisting of tung oil and oiticica oil with 100 lbs. of oil-soluble rosin-modified phenol formaldehyde resin; and said oil drier being obtained by heat reacting at approximately 500° F. until homogeneous a mixture of 4 pounds of lead resinate and 5 pounds of cobalt resinate with from 10 to 20 gallons of said conjugated double-bonded drying oil and by then adding hydrocarbon thinner at 350° F.

2,455,542
SAFETY DEVICE FOR FUEL BURNERS
Victor Weber, Greensburg, and Russell F. Garner, Youngwood, Pa., assignors to Robertshaw-Fulton Controls Company, a corporation of Delaware
Application April 1, 1944, Serial No. 529,201
8 Claims. (Cl. 158—117.1)

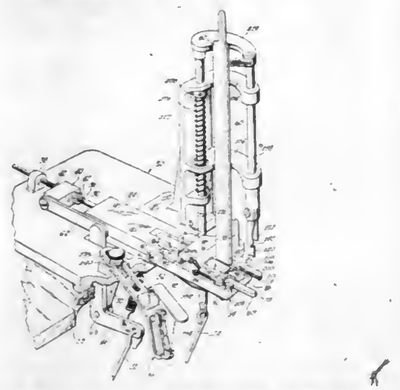


1. An electromagnetic device comprising an electromagnet member and an armature member movable relatively thereto between attracted and released positions, means for establishing magnetic force between said members sufficient to maintain said attracted position, and an expansible element operatively engageable with one of said members and being movable therewith rela-



tive to the other said member upon expansion of said element to exert a force on said one of said members sufficient to overcome said magnetic force and cause movement to said released position.

2,455,543
CAPACITOR TESTING INSTRUMENT
Alan C. Williams, Minneapolis, Minn., assignor to Franklin Transformer Manufacturing Company, Minneapolis, Minn., a copartnership
Application August 20, 1947, Serial No. 769,633
4 Claims. (Cl. 175—183)

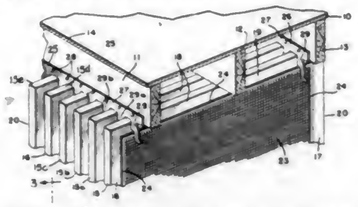


1. In a system for measuring the series resistance of an electrostatic capacitor, a charging circuit including a source of current of constant voltage in series with said capacitor, a resistor included in said circuit in series with said capacitor, a discharge circuit for said capacitor, a two-way switch continuously operating to open and close said circuits alternately, a transformer having a primary winding and a secondary winding, said primary winding being connected across said resistor, a grid-leak triode detector having its input electrodes connected across said secondary winding, and a meter responsive to the plate-cathode current through said detector.

2,455,544
PIPE COUPLING
John L. Yonkers, Northbrook, Ill.
Application July 26, 1947, Serial No. 763,851
6 Claims. (Cl. 285—169)

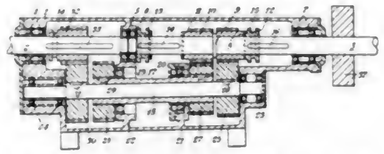
1. A pipe coupling for suction cleaners and the like comprising one pipe portion having a free end, a flexible sleeve disposed over said pipe portion and having a part extending beyond the free end of the pipe, said sleeve part having an annular channel therein, said channel having opposed lips at the inside sleeve face for defining an annular throat connecting said channel and the space enclosed by said sleeve portion, a metal garter spring in said channel adapted for circumferential expansion, said ring when freely contracted having an annular part beyond the throat, said freely contracted garter ring having an inside diameter smaller than the inside diameter of said one pipe portion and crowding said lips toward the sleeve axis, said sleeve having sufficient body so that the lips hug said spring at all times, a second cooperating pipe portion having an outside diameter less than the inside diameter of the first pipe portion for telescoping therewith, said second pipe portion having an annular groove formed on the outside thereof at a distance from the end thereof, the ouside diameter of said second pipe portion being greater than the inside diameter of the freely contracted garter spring so that said ring is expanded when around the ungrooved part of the pipe with said lips substantially clearing said second pipe surface, said garter spring contracting at the grooved portion of said pipe to maintain the coupling in locked position with said lips being pressed against the pipe material to form seals.

2,455,545
STRAP ASSEMBLING APPARATUS
Harry Alfandre, Jamaica, N. Y.
Application August 27, 1946, Serial No. 693,347
18 Claims. (Cl. 223—49)



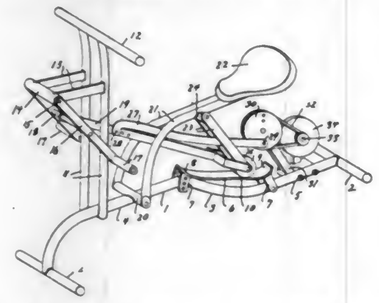
1. In buckle-and-strap assembling apparatus having a track leading to an assembly station and means for advancing a buckle in said track to said assembly station, a retractible stop normally projecting into said track in such close proximity to said assembly station as to back a buckle at said station and thereby prevent retraction of said buckle in said track from said station.

2,455,546
SASH HANGER
Eugene F. Barber, Minneapolis, Minn.
Application August 11, 1947, Serial No. 767,881
5 Claims. (Cl. 211—13)



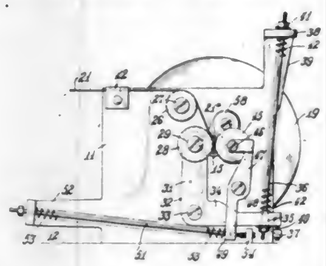
2. A sash hanger comprising a support, a supporting member depending therefrom, a second supporting member depending from said support and spaced from said first named supporting member to form an opening therebetween for the reception of a rail of a sash, a rest extending from the lower end of said first named supporting

member and into said opening and adapted to engage the under surface of the rail of the sash, an abutment on the second named supporting member at the upper end of the same and adapted to engage the sash to hold the same applied to said rest, a stop on said first named supporting member adapted to engage the lower portion of the rail of the sash adjacent said rest and to



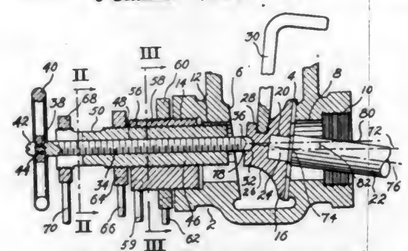
limit movement of said sash along said rest in one direction, said first-named supporting member above said stop receding from said stop, the rail engaging surfaces of said stop and abutment being substantially vertical, the distance between said surfaces being greater than the thickness of the rail of the sash and greater than the distance between the end of the rest and the line of said abutment.

2,455,547
REVERSING GEAR
Guy Barrett, Bosham, near Chichester, England, assignor to Wycliffe Foundry & Engineering Company Limited, Lutterworth, Leicestershire, England
Application January 30, 1946, Serial No. 644,313
In Great Britain November 8, 1944
7 Claims. (Cl. 74—377)



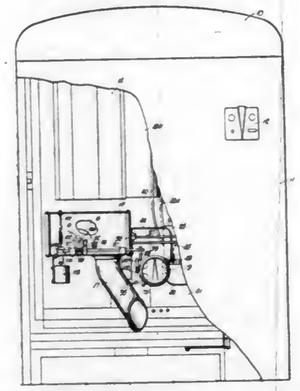
1. A reversing gear comprising a driving and a driven shaft arranged coaxially and end to end, a pinion rotatably mounted on the driven shaft but secured from axial motion with respect thereto, a second pinion also rotatably mounted on the driven shaft but secured from axial motion with respect thereto and in permanent driving connection with each of these pinions and secured from axial motion a dog clutch element, with each of which an axially displaceable dog clutch element rotatable with the driven shaft is associated to establish a driving connection between its related pinion and the driven shaft, two lay shafts each furnished with a toothed wheel, one in permanent and direct engagement with the first-mentioned pinion and the other through an idler wheel with the second-mentioned pinion, and on each of such lay shafts a toothed wheel positioned so that the one or the other of such wheels may be engaged by a pinion slidably mounted on the driving shaft but secured from rotation relative thereto and means adapted to secure simultaneous axial displacement of the pinion slidably mounted on the driving shaft and the dog clutch elements slidably mounted on the driven shaft to secure in changing from "forward" to "reverse" the following operations in the sequence stated: disengagement of the slidable dog clutch element co-operating with the dog clutch element of the first-mentioned pinion rotatably mounted on the driven shaft prior to the engagement of the other slidably mounted dog clutch element with the second-mentioned pinion mounted on the driven shaft and prior to the disengagement of the pinion slidably mounted on the driving shaft from the toothed wheel mounted on the lay shaft which is in permanent driving connection with the first-mentioned pinion and conversely in changing from "reverse" to "forward."

2,455,548
EXERCISING MACHINE
Joseph D. Bell, San Francisco, Calif.
Application July 22, 1948, Serial No. 40,045
11 Claims. (Cl. 272—79)



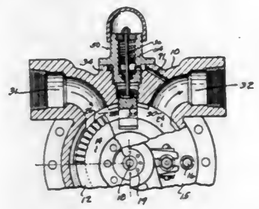
9. An exercising machine comprising an elongated main frame having a hand-grip post at its front end and elevating means rearwardly thereof, a pedal yoke swingably connected to the post, an auxiliary frame having one end connected to the main frame for swinging up and down movement and having a seat on the other end, a lift link swingably connected to the auxiliary frame intermediate its two ends and in cooperative relation with the elevating means, and a rod having one end connected to the pedal yoke and the other end to the lift link, the elevating means serving to raise the seat end of the auxiliary frame when the yoke swings forward.

2,455,549
SPRING WINDING MACHINE
Allen Benjamin, Chicago, Ill.
Application January 5, 1946, Serial No. 639,195
10 Claims. (Cl. 153—64)



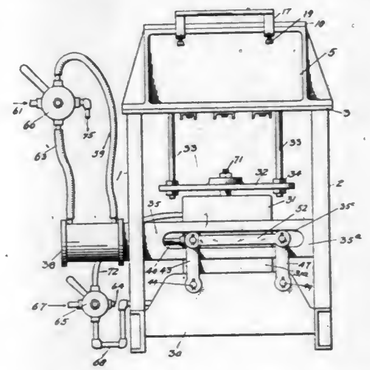
1. In an apparatus for winding a substantially flat coil ribbon having concave faces, in combination, a rotatable arbor including spaced eccentrics about both of which a shape-retaining strand is adapted to be progressively wound to produce elongated loops, and yieldable pressure applying means operatively associated with said rotatable arbor and being in continuous engagement with the loops to deform the reaches of said loops extending between the eccentrics inwardly.

2,455,550
VALVE RESEATING TOOL
Bruce H. Black, Gary, Ind.
Application August 13, 1945, Serial No. 610,609
6 Claims. (Cl. 90—12.5)



1. A tool for reseating a gate valve which has a threaded axial opening extending from each valve seat to the outside of the valve comprising a cutter, a rotatable shaft detachably connected to said cutter and extending through the opening adjacent the seat being cut, a spherical seat in the cutter on the side opposite the rotatable shaft, a feed screw, said feed screw having a spherical end for engaging the spherical seat of the cutter with the center of curvature of the spherical seat being at the point of intersection of the feed screw center line and the cutter center line, a bushing having a threaded opening therein for receiving the feed screw, and means for supporting the bushing with the feed screw extending into the axial opening in the valve on the side remote from the seat being cut.

2,455,551
DRINK VENDING MACHINE
Jack J. Booth, Dallas, Tex.
Application November 5, 1947, Serial No. 784,177
5 Claims. (Cl. 222—2)



1. A flavoring syrup selector and carbonated water mixer comprising a body having a plurality of passageways, one of said passageways adapted to be connected with a source of carbonated water, each of the others to a separate source of flavoring syrup, a discharge spout from the valve, a selector plate in the valve with separate ducts individually registrable with one of the flavoring syrup passageways, the carbonated water passageway and the discharge spout, said selector plate movable to a plurality of positions in each of which a preselected syrup passageway is connected with the carbonated water passageway and to the discharge spout.

2,455,552
TURBINE PUMP
Clark D. Bower, Pomona, Calif., assignor to Fairbanks, Morse & Co., Chicago, Ill., a corporation of Illinois
Application September 20, 1946, Serial No. 698,229
4 Claims. (Cl. 103—97)

1. In a rotary pump, a casing assembly providing a circular pressure developing channel therein and relatively adjacent fluid inlet and outlet passages open to the channel, a rotor having marginal buckets operative in the channel, stop means adapted for embracing the periphery and sides of the rotor and being selectively positionable relative to the channel and rotor in the casing zone between the inlet and outlet passages, said stop means being effective in one position for diverting fluid from the channel to the outlet passage, and in a second position for permitting channel by-pass of fluid between the inlet and outlet passages, and means normally urging the stop means to said one position, operable responsively to abnormal pressure in one of said passages for effecting said second position of the stop means.

2,455,553
BLOCK MOLDING MACHINE
James W. Briscoe, Los Angeles, Calif.
Application December 19, 1945, Serial No. 635,958
5 Claims. (Cl. 25—84)

1. In a concrete block molding machine, a stand, a mold on said stand open at the top to

receive a concrete mixture, a compression member seatable on the bottom of said mold, a plate below the mold parallel with said member, studs rising from said plate to the underside of the member, a casing vertically movable within the stand, transverse guides on said casing, a slide movable within said guides, a cylinder on one end of said guides, a piston in said cylinder rigidly connected with said slide, arms hung on the stand and pivotally connected with the slide, and means carrying pressure fluid to said cylinder to move said piston and slide thereby to swing said arms and so to move the casing and plate vertically.

2,455,554

ELECTRODEPOSITION OF COPPER

Henry Brown, Detroit, Mich., assignor to The Udylite Corporation, Detroit, Mich., a corporation of Delaware

No Drawing. Application January 5, 1946, Serial No. 639,412
6 Claims. (Cl. 204—52)

1. A bath for electrodepositing bright copper comprising an aqueous acid copper solution comprising essentially a material selected from the group of materials consisting of copper fluoborate, a mixture of copper sulfate and sulfuric acid, a mixture of copper sulfate, ammonium sulfate and sulfuric acid, a mixture of copper fluoborate and hydrofluoboric acid, and a mixture of copper fluoborate, ammonium fluoborate and hydrofluoboric acid, said aqueous acid copper solution also having dissolved therein acetyl cyanamide in a concentration ranging from about .1 to .7 gram per liter, said bath having a temperature falling within a range of from about 50° F. to about 100° F. and containing a greater molar concentration of copper salt than of acid.

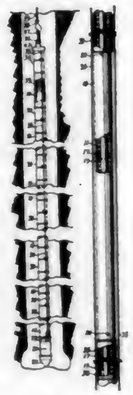
2,455,555

ELECTRODEPOSITION OF NICKEL FROM AN ACID BATH

Henry Brown, Detroit, Mich., assignor to The Udylite Corporation, Detroit, Mich., a corporation of Delaware

No Drawing. Application May 1, 1946, Serial No. 666,508
2 Claims. (Cl. 204—49)

1. A bath for electrodepositing bright nickel comprising an aqueous acid solution of a material selected from the group consisting of nickel chloride, nickel sulfate, a mixture of nickel sulfate and nickel chloride, a mixture of nickel fluoborate and nickel chloride, a mixture of nickel fluoborate and nickel sulfate, and a mixture of nickel sulfate, nickel chloride, and nickel fluoborate, said solution having dissolved therein 2-nitrovinyl benzene sulfonic acid in an amount falling within a range of from about .3 gram per liter to saturation, said bath having a pH falling within a range of from 2 to 6.



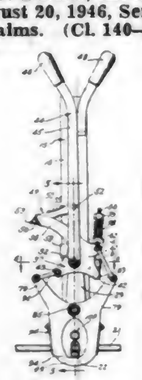
2,455,556

WELL TREATING APPARATUS

Julius G. Burch, Borger, Tex.

Application September 25, 1944, Serial No. 555,626
8 Claims. (Cl. 102—20)

1. A shell for treating wells including, a tubular enclosure, an explosive charge extending longitudinally of and disposed concentrically within and spaced from the enclosure so as to provide a substantially annular space therebetween, a substantially annular column of projectiles within said space, and means confining the projectiles within said space, each projectile having a substantially spherical body of frangible material



adapted to burst and disintegrate upon penetration of a well wall.

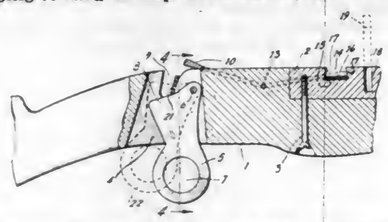
2,455,557

ROD CLAMP TOOL

Bingham F. Burner, Arlington, Va.

Application August 20, 1946, Serial No. 691,684
28 Claims. (Cl. 140—55)

1. An implement for securing to concrete reenforcing rods, fastening clips of substantially U-form and having spaced bendable legs; comprising a relatively long hollow body forming a magazine and having an outlet end, the magazine being formed at said outlet end to receive a rod and facilitating positioning the magazine substantially perpendicular to the rod for the discharge of a clip into straddling position on the rod, a lever pivotally mounted on the body, movable means carried by the body for engaging the legs of a discharged clip and bending the legs in crossed relation across the rod, and coupling means between the lever and said movable means for actuating the movable means.



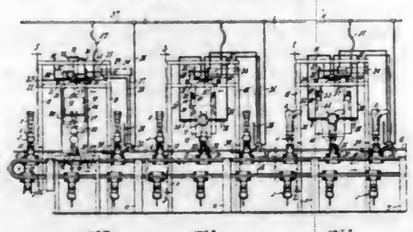
2,455,558

ELASTIC BAND PROJECTOR AND CAP EXPLODER

Thomas Fulton Burton, Brentwood, Mo.

Application January 7, 1946, Serial No. 639,542
6 Claims. (Cl. 124—2)

1. A toy gun comprising a stock having a breech and a simulated barrel secured thereto, said stock having a vertically extending slot adjacent the breech, a transverse recess at the upper end of said slot, a trigger pivoted to the stock within said slot and having a projecting shoulder which moves partially into said recess upon pivotal movement of said trigger, a U-shaped hammer having legs and a web portion, said legs being pivotally secured to said stock in front of the recess and said web resting on said stock adjacent said recess, an inturned portion at the free end of each of said legs forming a part of the pivotal connection between said legs and said stock, said stock having a transverse aperture therethrough accommodating said inturned portions, said barrel having a notch in the upper side thereof adjacent its breech and opening through the side walls of the barrel, the walls of said notch converging toward the top of the barrel, said hammer



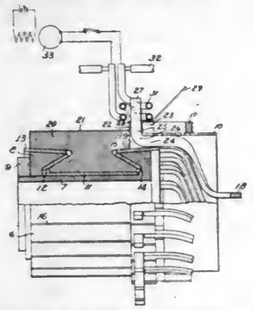
web portion resting on said stock between said recess and said notch, an impact plate on the bottom of said notch for receiving an explosive cap removably thereon, said barrel having a concave forward end, said recess and said concave end adapted to have a stretched elastic band seated therein, said projecting shoulder adapted to disengage the stretched elastic band from the lower portion of said recess upon pivotal movement of said trigger, the web of the hammer resting on the stock between said recess and said notch so as to be in the path of an elastic band released from the recess by movement of the trigger, said notch being positioned a proper distance from the pivot point of said hammer so as to receive said web when said hammer is swung forwardly.

2,455,559

APPARATUS FOR PRESSING FOOTWEAR AS IT IS CONVEYED

Edward H. Clark, Mishawaka, Ind., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey

Application October 10, 1945, Serial No. 621,427
13 Claims. (Cl. 12—1)



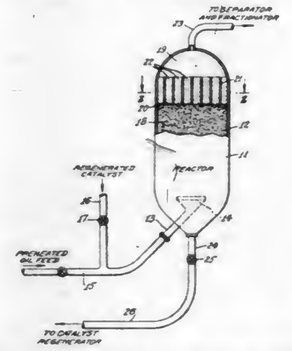
1. In a machine of the class described, in combination, a power driven conveyor adapted to advance a series of lasted shoes along a predetermined path, a carriage supported to travel a short distance along said path with one shoe and then move in the opposite direction into position to travel with the next shoe, a yielding member on said carriage for exerting pressure upon a shoe, and pneumatic means for moving said member laterally to the conveyor into and out of engagement with an advancing shoe so that the laterally applied force pressing the member against the shoe is pneumatically applied.

2,455,560

METHOD OF ARRANGING AND BRAZING SUPERPOSED COMMUTATOR LEADS

Carroll F. Cobb, Silverton, Ohio, Edward F. Brill, Milwaukee, Wis., and John R. Guenther, Chicago, Ill., assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware

Application August 6, 1945, Serial No. 609,186
7 Claims. (Cl. 219—12)

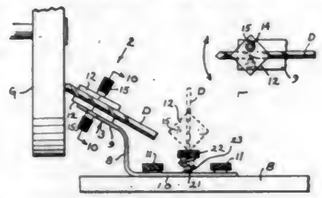


1. The method of making a commutator comprising the steps of providing a lower lead with a bent end portion, embedding said lower lead in the slot of a commutator bar with said end portion extending at least to the outer surface of said commutator bar, embedding an upper lead end portion in the portion of said slot extending between said lower lead and said surface, applying flux and fusible metal to said lead end portions, and heating said lead end portions and the adjacent portions of said commutator bar above the fusion temperature of said metal.

2,455,561

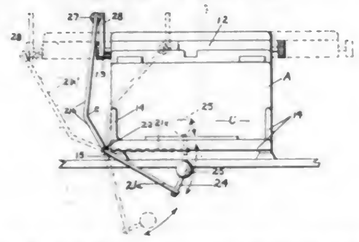
REDUCING DISENGAGING HEIGHT IN FLUIDIZED POWDER SYSTEMS

George D. Creelman, Cleveland Heights, Ohio, assignor to The M. W. Kellogg Company, New York, N. Y., a corporation of Delaware



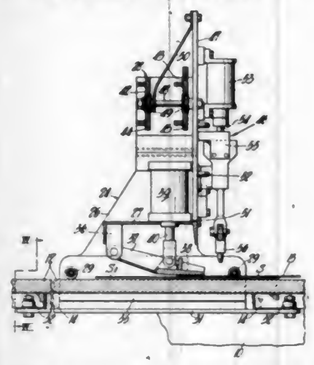
Application June 28, 1946, Serial No. 679,898
3 Claims. (Cl. 23—1)

1. A process for effecting contact between a finely divided solid contact material and a gas



which comprises introducing the finely divided material into a contact zone, passing the gas upwardly through the finely divided material at a velocity adapted to maintain two distinct zones of concentration of the finely divided material in said contact zone, said zones being a lower dense phase of pseudo-liquid characteristics and an upper dispersed phase, passing the gas exiting from the top of the dense phase directly through a multiplicity of elongated vertical confined passageways extending upwardly through said second phase, and withdrawing the gas from the contact zone at an upper portion thereof.

2,455,562
DEVICE FOR REPOINTING TWIST DRILLS
David Crowther, Minneapolis, Minn.
Application November 12, 1946, Serial No. 709,191
3 Claims. (Cl. 51—219)

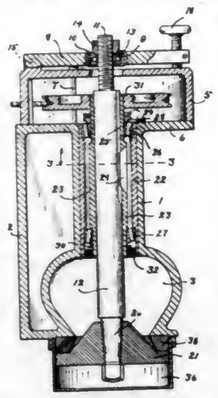


1. In a device for re-pointing twist drills, the combination of a drill clamping holder embodying two clamping plates having opposed longitudinal grooves in their surfaces for receiving a drill between them, said plates containing holes equally spaced laterally from said grooves, a clamping bolt secured to each of said plates and extending in opposite directions through the hole of the associated plate, and a support for said holder containing an opening in which either one of said bolts may be placed to serve as a pivot for swinging back and forth lateral movement of said holder with relation to the face of a grinding wheel.

2,455,563
TYPEWRITER CARRIAGE RETRACTOR DEVICE
Silas R. Dague, Wichita, Kans.
Application May 7, 1945, Serial No. 592,458
4 Claims. (Cl. 197—65)

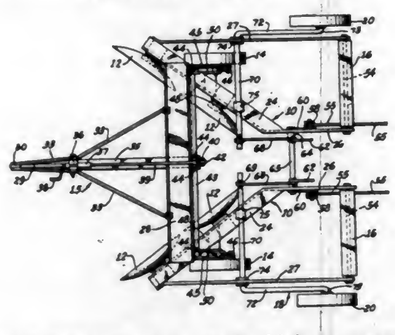
1. In a typewriter carriage retractor and line spacing lever operating device of the kind described; the combination of a lever positioned in front of the keyboard of a typewriter, a shaft, said shaft being revolvably carried in bearing means that is detachably attached to the left side frame of the typewriter and holds the shaft in close proximity to and in parallelism with the said frame, said lever being carried by one end of said shaft, a second lever, said second lever being carried on the other end of the said shaft, said second lever having a bend therein whereby the lower end of the second said lever may assume a carriage retracting position substantially parallel with the vertical side of the typewriter side frame and the upper end of the second said lever will be positioned at a point between the sides of the typewriter, and means intermediate the upper end of the second said lever and the typewriting spacing lever for engagement therewith to operate the said spacing lever and to retract the typewriter carriage.

2,455,564
SPOT WELDING APPARATUS
William H. Dailey, Jr., Library, Pa., assignor to Carnegie-Illinois Steel Corporation, a corporation of New Jersey
Application May 26, 1948, Serial No. 29,337
8 Claims. (Cl. 219—4)



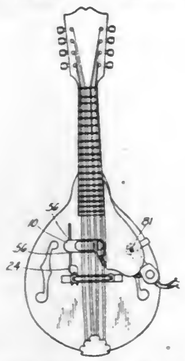
1. A welding apparatus for joining ends of metal strips comprising a support having a flat surface along which the strips may pass, a transverse frame bridging said support and being mounted thereon for longitudinal adjustment, a clamping device carried by said frame and having a lowered position in which it is adapted to engage and hold strips on said support and a raised position in which it clears the strips, motive means on said frame operatively connected with said clamping device for moving the latter, and a welding carriage carried by said frame for transverse adjustment and having a vertically movable welding device engageable with strips on said support.

2,455,565
VERTICAL AXIS CONE AND SHELL MILL
Robert F. Davis, Hibbing, Minn.
Application May 6, 1946, Serial No. 667,558
2 Claims. (Cl. 241—258)



1. As a new article of manufacture an ore grinding mill comprising a main housing having an upright hollow cylindrical portion and a lower material receiving chamber, said chamber having an opening in one side thereof for insertion of material to be ground, a bearing sleeve within said cylindrical portion of said housing and being of substantially the same length as said cylindrical portion, a pair of roller bearings carried one at each end of said sleeve, a second bearing sleeve rotatably carried intermediate of said roller bearings, said second sleeve extending upwardly beyond said first mentioned sleeve, a key fixed to said second sleeve and extending inwardly within the bore thereof, an arbor carried within said second sleeve and having a portion thereof extending outwardly therefrom at both

ends, a keyway in said arbor leading from the upper end thereof downwardly to engage said key, a pulley fixed at the upper end of said second sleeve, said second sleeve and arbor being rotatable by said pulley, a grinding ring carried at the lower end of said housing, a grinding plate

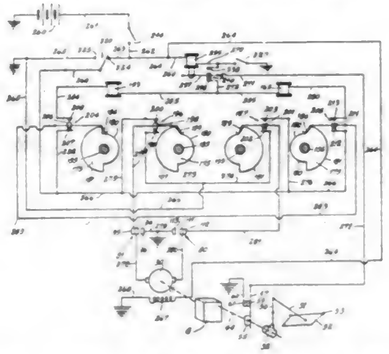


carried by said arbor at the lower end thereof and being rotatable therewith, said plate being cooperative with said ring to grind said material, a pan carried by the lower end of said housing to catch the ground material, and means for adjustably supporting said arbor within said second sleeve.

2,455,566
APPARATUS FOR FORMING IRRIGATION MOUNDS
Grover C. Deakins, Orange, Calif., assignor of one-half to Lester Arthur Baker, Anaheim, Calif.
Application July 28, 1944, Serial No. 546,965
4 Claims. (Cl. 97—55)

1. In combination in earth ridging apparatus: a framework adapted to be moved forward; means carried by a forward portion of said framework adapted to loosen earth; earth moving means movably carried by a rearward portion of said framework and adapted to move to and from earth moving position and to move loosened earth into ridge formation; a retainer to hold said earth moving means in earth moving position; a bell crank comprising an arm swingingly mounted on said framework; a contour follower carried by the swinging end of said arm in a position beyond the path of travel of and substantially in line with said earth moving means and an operative connection between said bell crank and said retainer for releasing said retainer from said earth moving means upon predetermined elevation of said contour follower so that said earth moving means will leave loose earth in said ridge formation.

2,455,567
MICROPHONE PICKUP AND VOLUME CONTROL
Harry De Armond, Toledo, Ohio, assignor to Rowe Industries, Toledo, Ohio
Application November 14, 1946, Serial No. 709,864
2 Claims. (Cl. 84—1.16)



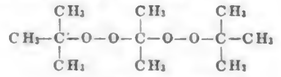
1. An electronic pick up device for stringed instruments adapted to be located between the strings of said instrument and the front face thereof, said device including a relatively thin electromagnetic pick up unit including a core comprising a plurality of vertically arranged individual magnets and a body of plastic insulation having a flat top and bottom into which said magnets are inserted; a winding surrounding said core; a casing therefor comprising an elongated base having a bottom plate; means in said bottom plate to locate said plastic mold in the casing, said base having a cover therefor, said cover having an elongated opening beneath some of the strings of the instrument between the same and said magnets and a connecting bridge across said opening, said bridge adapted to be located between certain other of said strings and the corresponding magnet.

2,455,568
REMOTE CONTROL FOR DISPLACEABLE OBJECTS
Clinton H. Dederick, Brentwood, Mo., assignor to The Emerson Electric Mfg. Company, St. Louis, Mo., a corporation of Missouri
Application April 21, 1943, Serial No. 483,903
28 Claims. (Cl. 318—32)

1. In a mechanism of the kind described, a driven shaft, a motor for driving said shaft, and means to determine the number of rotations of the shaft by controlling the number of rotations of the motor, said means comprising a control shaft adapted for movement toward and from a starting position, means to displace the shaft from starting position, a stepping magnet, an armature operated thereby, and means moved by movement of the armature to displace the shaft, for operating the control shaft in a return direction, means operated upon displacement of the control shaft away from starting position to effect energization of the motor, means likewise operated by displacement of the control shaft

away from starting position for effecting a circuit for the stepping magnet, and means operated by the motor to make and break the stepping magnet circuit to effect periodical operation

thereof to return the shaft to starting position, and said motor and said stepping magnet circuit being deenergized when the control shaft returns to starting position.



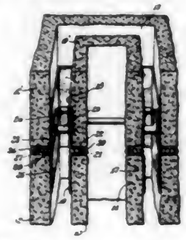
2,455,569

REACTION PRODUCTS OF TERTIARY ORGANIC HYDROPEROXIDES WITH ALDEHYDES OR KETONES

Frank H. Dickey, Pasadena, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application July 20, 1948, Serial No. 39,796
12 Claims. (Cl. 260—610)

1. Ditertiary butyl isopropylidene peroxide having the structural formula

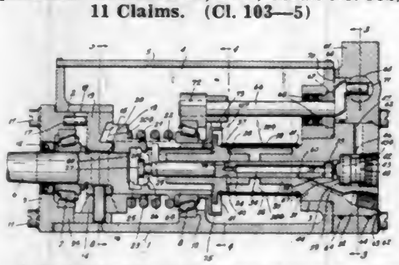


2,455,570

CHIMNEY CONSTRUCTION

Carl C. Droeger, Greenfield, Ind.

Application May 1, 1946, Serial No. 666,388
5 Claims. (Cl. 72—94)



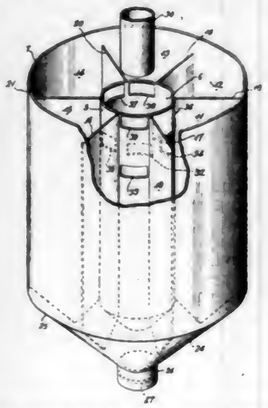
3. A chimney construction comprising a column of superposed tubular elements, a perimetrally-continuous member having a portion resting upon the upper end of one of said elements, the superjacent element resting upon said member portion and clamping the same in place, and a second column of superposed tubular elements surrounding and perimetrally spaced from, but enclosing, said first column, said member having a portion resting upon the upper end of one of the elements of said second column, and the superjacent element of said second column resting upon said last-named member portion and clamping the same in place, said member further perimetrally engaging a section of each of said columns.

2,455,571

FUEL INJECTION PUMP

Herbert C. Edwards, Massillon, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a corporation of Ohio

Application November 11, 1944, Serial No. 562,962
11 Claims. (Cl. 103—5)



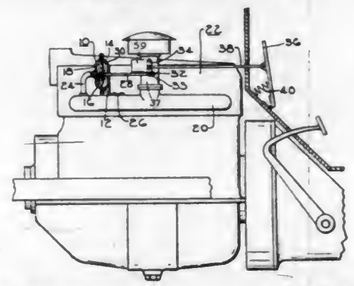
1. A fuel injection pump comprising a cylinder having a pump chamber with a fuel inlet passageway and a fuel discharge passageway, a plunger reciprocable in said cylinder and forming therewith said pump chamber, said plunger having a fuel by-pass port in communication with said pump chamber, said pump having a fuel by-pass conduit, a fuel control sleeve slidable on said plunger and having a fuel by-pass port in continuous communication with said by-pass conduit and adapted to communicate with the by-pass port of said plunger during the pressure stroke of the latter, and means operable by variation in the pressure of the fuel in said by-pass conduit for shifting said sleeve to bring the by-pass port thereof into communication with the by-pass port in said plunger at different points in the pressure stroke of the latter to thereby vary the quantity of fuel delivered through said discharge passageway.

2,455,572

GRAIN BLENDER

Earl R. Evans, Urbana, Ill.

Application July 8, 1948, Serial No. 37,591
7 Claims. (Cl. 259—180)



1. A blending device for fluent material comprising a compartment for receiving fluent material of varying character, a plurality of bins positioned around and adjacent said receiving compartment, said compartment and said bins being open at their lower ends, a downwardly tapered hopper positioned beneath said receiving compartment and said bins and forming a closure for the lower end of said device, there being openings at different elevations in the wall of said compartment communicating with different of said bins to permit fluent material in said compartment to discharge into different bins as the level of such material rises in said compartment, the arrangement of said openings being such that all of said bins do not receive material simultaneously from said compartment through said openings, a discharge outlet in the lower end of said hopper, and means for controlling discharge through said outlet.

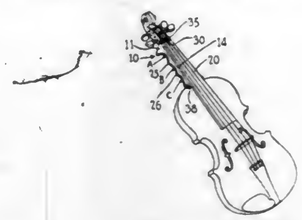
2,455,573

SIGNAL MECHANISM

William J. Fant, Jr., South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware

Application July 7, 1945, Serial No. 603,666
3 Claims. (Cl. 123—198)

2. In an automotive vehicle provided with an internal combustion engine including an intake manifold, an accelerator and a carburetor mechanism comprising a throttle valve and an economizer jet, means for advising the operator of the engine when the gaseous pressure within said manifold reaches the critical value which results in an operation of the economizer jet, said means including a pressure differential and spring operated motor unit comprising a casing, a power element within the casing and a spring housed within the casing, said spring, by virtue of its expanding operation, serving to subject the power element to a certain load when the motor is deenergized; fluid transmitting means interconnecting the motor unit and manifold and force transmitting means interconnecting the power element, throttle valve and accelerator, said force transmitting means being so constructed and arranged and so operative that when the power element is loaded by the spring, that is when the motor unit is de-energized, then the operator of the engine is advised, by virtue of said spring loading and the consequent resistance to motion of the accelerator, of the existence of the aforementioned critical gaseous pressure.



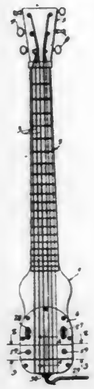
2,455,574

ATTACHMENT FOR VIOLINS AND ANALOGOUS INSTRUMENTS

Harry Allen Feldman, New York, N. Y.

Application September 13, 1945, Serial No. 615,982
8 Claims. (Cl. 84—314)

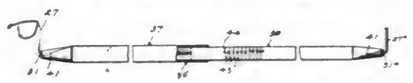
1. An attachment device of the character described for a musical instrument such as a violin, viola, cello, string bass or the like, comprising a substantially flat main body member having a free inner longitudinal edge and a free outer longitudinal edge, said outer longitudinal edge being of wavy contour to provide a plurality of indented areas adjacently disposed along the length thereof and adapted to receive a thumb of the player therein, the said member being



adapted, when in effective position, to be disposed with said inner longitudinal edge in abutting relationship with and adjacent to the neck of the instrument and with the said outer longitudinal edge containing the indented areas more remote from said neck, and means for removably maintaining said member in said effective position on said instrument.

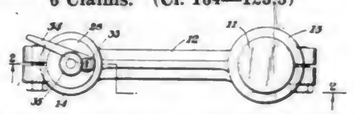
2,455,575

PICKUP UNIT FOR STRINGED INSTRUMENTS



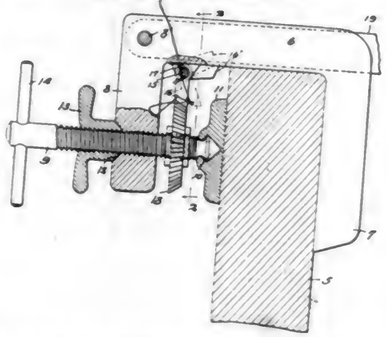
Clarence Leo Fender and Clayton Orr Kauffman, Fullerton, Calif.

Application September 26, 1944, Serial No. 555,818
13 Claims. (Cl. 84—1.15)



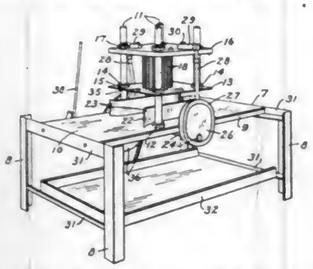
4. A pick-up device for stringed instruments, comprising: a series of tuned magnetic musical strings; a pair of channel-shaped pole pieces adapted to be disposed on opposite sides of said strings with their flange portions in confronting relation and forming sets of pole tips, the portions of said strings between said sets of pole tips forming armatures; magnet means connecting said pole pieces to form magnetic circuits through said pole tips and their respective musical string armatures the polarity of the tips of each pole piece being similar to each other but opposite from the corresponding tips of the other pole piece; and pick-up coil means disposed in said magnetic circuits and electrically influenced by vibrations of said musical string armatures.

2,455,576
CURTAIN AND DRAPE MOUNTING
Vitantonio Fiorentino, Long Island City, N. Y.
Application December 13, 1946, Serial No. 715,945
2 Claims. (Cl. 211—105.3)



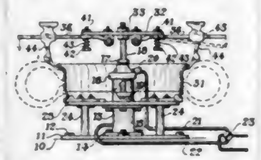
1. A curtain or drape supporting rod having tapered ends provided with supporting arm receiving openings, said rod being formed of hollow telescopic sections each of triangular cross section, and the outer end of each rod section being tapered and terminating in an inturned rolled edge forming the supporting arm receiving opening thereof.

2,455,577
CENTER PUNCH
Emil F. Hager, Queens Village, N. Y.
Application April 5, 1945, Serial No. 586,677
6 Claims. (Cl. 164—123.5)



1. A center punch comprising a hollow body, means resiliently supporting an impression forming tool at the lower end of said body, a hammer disposed in said hollow body, a stem extending upwardly from said hammer and protruding out of the upper end of said body by which said hammer may be lifted to a cocking position for release to produce a hammer blow on said tool proportional to the elevated position of said hammer, and means for selecting different predetermined elevated positions from which said hammer may be released, said body, said hammer and said lifting means having clearance for vertical movement of said stem and hammer to minimize transmission of the lifting force to said body.

2,455,578
OUTBOARD MOTOR CLAMP
Pearl M. Haller, Bay City, Mich.
Application March 27, 1947, Serial No. 737,445
4 Claims. (Cl. 248—4)

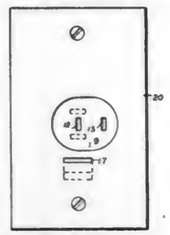


1. A device for removably clamping a motor to a boat, comprising a U-shaped main clamping member including an arm having a threaded opening, said main clamping member adapted to fit over a beam of a boat, a screw operating through the threaded opening of the arm, a clamp mounted on the inner end of the screw and adapted to clamp the beam of the boat, a pivoted arm mounted on the main clamping member to which the motor is secured, a gear secured to the screw, and a finger operated by the movement of the motor supporting arm, adapted to engage the gear, preventing rotary movement of the screw.

2,455,579
APPARATUS FOR TREATING CHEESE
Otto F. Hensel, Hustisford, Wis.
Application August 21, 1944, Serial No. 550,347
3 Claims. (Cl. 31—46)

1. In combination, a support having rigid upright posts and a group of holes therein between said posts, a lower plate resting upon said support and having a group of holes registering with said support holes, said lower plate resting by gravity upon said support and being maintained in position by said posts, guides coacting with said plate and said posts to hold successive cheese blocks in position over said holes, a medial plate secured to said posts and having a group of openings in alinement with said holes, an upper plate slidable along said posts toward and away from said medial and lower plates, a group of parallel perforating pins carried by said upper plate and being reciprocable within said openings and across the space between said lower and medial plates, and means for periodically reciprocating said upper plate along said posts.

2,455,580
AXIALLY SHIFTING TYPE, PEDESTAL MOUNTED TIRE REMOVING MACHINE
Ivan N. Hewitt, Medicine Lodge, Kans.
Application May 26, 1945, Serial No. 596,043
2 Claims. (Cl. 157—6)

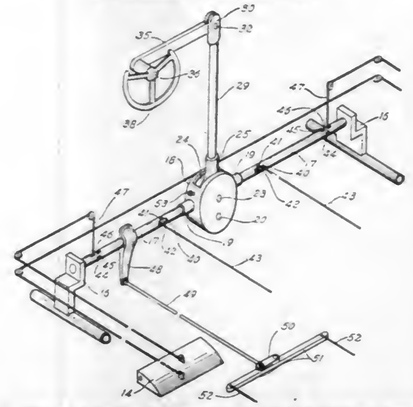


1. A tire removing and replacing device of the type described, having a base adapted to rest on and be secured to a floor, a rim supporting table positioned above the base and supported by the latter, a pressure jack mechanism secured to the base and extending to a point above the table, said jack mechanism having two relatively movable members one of which is attached to the base and the other movable vertically, a pressure plate secured to the upper end of the movable jack member, a plurality of pressure bars secured to the under surface of the pressure plate in radial position, the inner ends of said bars being connected for vertical pivotal movement, the pressure plate having an opening for each pressure bar, bolts extending through the openings and through the bars, a resilient means associated with the bolts and bars for exerting forces tending to raise the bars and hold them against the under surface of the plate while permitting downward pivotal movement in response to hammer blows, and downwardly extending pressure fingers mounted on the pressure bars for radial adjustment.

2,455,581
STABILIZED CELLULOSE ESTER COMPOSITIONS
Richard M. Hitchens, Webster Groves, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application March 14, 1946, Serial No. 654,515
5 Claims. (Cl. 106—178)

1. A composition of matter possessing increased light resistance to the influences of light and weather comprising a cellulose derivative selected from the group consisting of cellulose esters of lower fatty acids and nitrocellulose, a plasticizer for said cellulose derivative and from 1 to 5 parts of benzyl benzoate per 100 parts of said cellulose derivative.

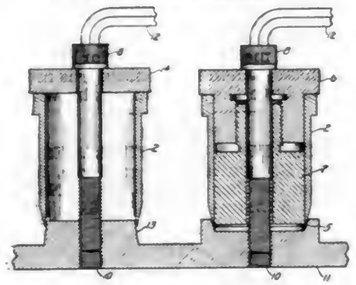
2,455,582
SAFETY ELECTRIC WALL PLATE
Carl L. Hoessel, Wauwatosa, Wis.
Application October 18, 1946, Serial No. 704,235
1 Claim. (Cl. 173—330)



In an electrical wall outlet, the combination of an insulating block, a plurality of prong sockets lying in a common plane in said block and adapted to receive the pair of prongs of a plug, an elongated recess in said block, a cam slot in said block having an arcuate groove portion and a linear groove portion extending therefrom, a disk on said block and having prong holes lying in a common plane for receiving the prongs of the plug and initially positioned offset from the plane containing said prong sockets, said disk being angularly movable in said recess and bodily shiftable therein along the longitudinal axis thereof, a bushing secured to said disk and slidable in said cam slot whereby upon movement of said disk along the longitudinal axis of said recess said disk will be first rotated, placing the prong holes in the same plane as said prong sockets, and then shifted in the direction of said recess axis, causing the prong holes to register with said prong sockets, thereby allowing the plug prongs to pass from said prong holes into said prong sockets, and spring means anchored to said bushing and said block whereby upon withdrawal of the plug prongs from the sockets said disk is returned to initial position to block the entrance of the plug prongs into said prong sockets.

2,455,583
COMBINED SMOKING PIPE AND LIGHTER
Paul Truman Ireson, East Detroit, Mich.
Application June 27, 1946, Serial No. 679,831
2 Claims. (Cl. 131—185)

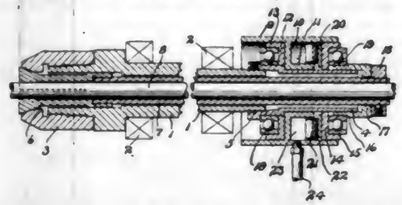
1. A smoking pipe of the kind described, comprising a tobacco bowl, a supporting ear projecting from the exterior of the bowl away from the same, a lighting fluid container slidably fitted to the ear for movements toward and away from the bowl, a lighting wick exposed by the container, a movable cap for concealing and exposing the wick and carried by the container, means on the ear for automatically moving the cap to concealing position on shifting of the container in one direction, and effecting the opening of said cap when the container moves in a reverse direction, means for automatically moving the container in the said one direction, flint sparking means on the container, and means on the ear for operating the sparking means when the container is moved in a direction to have the cap expose the wick.



2,455,584
CONTROL FOR AIRPLANES
Charles R. Jamison, Morgantown, W. Va.
Application October 26, 1945, Serial No. 624,709
5 Claims. (Cl. 244—83)

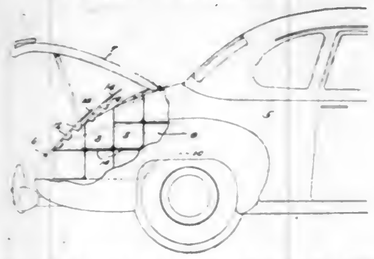
1. In an airplane having flight controlling units comprising a rudder, an elevator and ailerons, a relatively long tubular member supported upon the airplane to extend transversely thereof and for turning on its long axis, said tubular member including a housing intermediate its ends, a normally upright column having one end extended into said housing, a pivotal connection between the said one end of the column and the housing by which the column may be swung in a plane extending transversely of the airplane, turning movement being imparted to said member by swinging movement of the column in a plane extending longitudinally of the airplane, a pair of wheels rotatably supported within the housing, an operative connection between one of the wheels and the lower end of said column by which turning movement is imparted to the said one of the wheels upon swinging of the column on its pivot in the plane extending transversely of the airplane, an operative coupling between the

said one of the wheels and one of the flight controlling units for the actuation of the latter upon the turning of said one of the wheels, an operative coupling between the other one of the wheels and another one of the flight controlling units for the operation of the last mentioned unit upon the turning of the said other wheel, means carried by the column for effecting the turning of the said other wheel, and an operative coupling between the said member and the third one of the flight controlling units by which the last mentioned one of the units is actuated upon turning of the member on its long axis.



2,455,585
DEVICE FOR TRUING AND SHARPENING DOUGH CUTTERS
Sidney C. Kenyon, Lansing, Mich., assignor of one-half to Lawrence A. Gauss and Eugene S. Gauss, both of Lansing, Mich.
Application August 12, 1946, Serial No. 689,958
1 Claim. (Cl. 76—89.2)

A device for truing and sharpening dough cutters comprising a block provided with a boss, the said boss having a depression in the top thereof, the said depression having a slightly sloping inside wall, a threaded hole, the said hole being centrally located in the said block, an upper section, a lower section, each of the said sections having a hole located centrally therethrough, a bottom portion of the said lower section being positioned substantially in the depression of the said boss, the said upper section being positioned directly upon and above the said lower section, and the two sections being threadedly connected to each other, a threaded bolt, the said bolt having a round knurled head and a hexagonal depression for turning the same by means of a hexagonal wrench, the said bolt passing through the hole in the said upper section, passing through the hole in the said lower section and being threaded in the hole in the said block, and the said device adapted for placing a cutter therearound the said upper section, therearound the said lower section, and placing the cutting edge of the cutter therebetween a portion of the said lower section and the said sloping inside wall of the depression in the said boss, for truing the cutting portion of the said device.

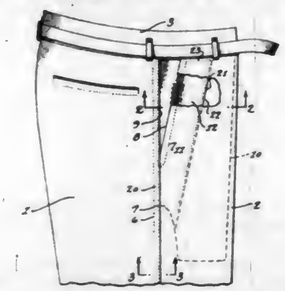


2,455,586
AIR COLLET CLOSER
Charles Kooima, Grand Rapids, Mich.
Application September 9, 1946, Serial No. 695,681
2 Claims. (Cl. 279—4)

1. The combination with a rotatably mounted spindle having a chuck at one end and a tube extending through the spindle and projecting from the end opposite the chuck, said tube being connected to said chuck to operate the same by longitudinal movement, of a sleeve connected to the spindle and rotatable therewith, a stationary cylinder having an in-turned flange between its ends surrounding said sleeve, a piston within the cylinder, a cup slidably mounted at the end of

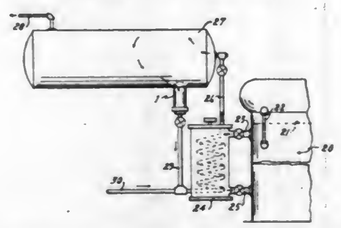
the sleeve, means for connecting the cup to said tube, anti-friction bearing means between the cup and the piston; anti-friction bearing means between the sleeve and the cylinder, and means for injecting fluid under pressure between said in-turned flange and said piston.

2,455,587
MOTOR VEHICLE CARRYING CASE
Alexander Konrad, Cleveland, Ohio
Application December 23, 1947, Serial No. 793,338
2 Claims. (Cl. 224—42.42)



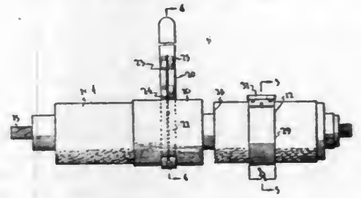
1. Carrying cases for positioning in the luggage carrier of a motor vehicle having a curved closure, comprising a plurality of case units adapted for fitting within the luggage carrier one upon another completely filling the luggage carrier space, an extension of the casing of each unit forming a retaining flap, certain of said retaining flaps being positioned between adjacent units holding the units against movement with respect to each other.

2,455,588
GARMENT
Tobias Kotzin, Los Angeles, Calif.
Application August 7, 1945, Serial No. 609,438
2 Claims. (Cl. 2—248)



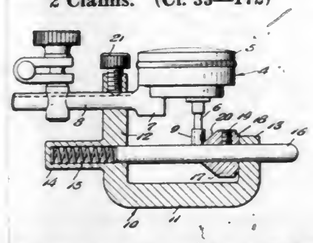
2. In a garment: a layer of material; a patch pocket on said layer; and an eyelet extending through each upper corner of the pocket and through said layer of material, each of said eyelets forming an aperture extending entirely through the upper corner of said pocket and said layer of material; a gimp on the eyelet around said aperture; and threads sewed over the gimp and through the marginal portions of the eyelet, said threads passing through the pocket and layer of material for securing said layer, pocket, eyelet and gimp firmly together.

2,455,589
TROUSERS
Tobias Kotzin, Los Angeles, Calif.
Application August 27, 1945, Serial No. 612,797
4 Claims. (Cl. 2—227)



1. In a trouser: pieces forming, respectively, the front and back of the trouser leg, the back piece overlapping the outer face of the front piece; and said front piece having an upper portion defining one edge of a pocket opening, said portion being unattached to the back piece, the front and back pieces being otherwise sewed together at the side of the leg; and means forming a pocket having an opening, said means at one side of the opening being attached to said upper portion, and at the other side of the opening being attached to the back piece by one or more rows of stitching along the side of the leg, said pocket means at the other side of the opening being disposed within said back piece.

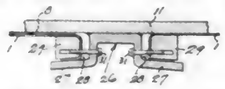
2,455,590
TEMPERATURE LIMITING HOT-WATER SYSTEM SUPPLY
Herbert Krauss, Woodside, N. Y.
Application June 18, 1946, Serial No. 677,606
1 Claim. (Cl. 236—19)



In a water heater, in combination with a storage tank, a first and second water pipe, a water outlet pipe connected to said storage tank, said first water pipe connected at one end with said storage tank to deliver water to the interior of said tank, the second water pipe connected at one end with said tank to draw the cooled water from said tank, said first water pipe provided with a heat exchanger connected to a heating source, said second water pipe provided with a thermostatic valve to open or close said water pipe depending upon a pre-determined temperature for operation of said thermostatic valve, said first and second water pipes connected at their opposite ends to a common water supply, means to replenish said storage tank through said first water pipe with hot water from said heat exchanger whenever water is withdrawn from said storage tank, and means to withdraw water from said storage tank to be circulated through said heat exchanger and restored to said storage tank when the temperature of said water drops below a pre-determined temperature.

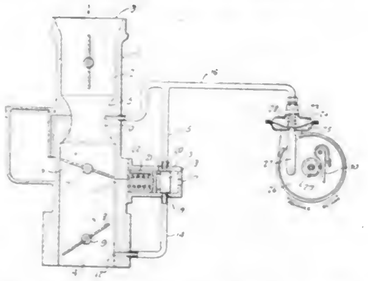
2,455,591
INSULATION CUTTING TOOL
William S. Lindsay, Harriman, Tenn., assignor, by mesne assignments, to the United States of America as represented by the United States Atomic Energy Commission
Application December 4, 1944, Serial No. 566,584
2 Claims. (Cl. 30—95)

1. A cable insulation cutting device of the character described comprising an elongated cylindrical sleeve for disposition about the insulation of a cable, a slot extending transversely across the body of said sleeve, a handle mounted on said sleeve adjacent one end for pivotal movement about said mounting, and a cutter on said handle for movement into said slot radially of the sleeve for cutting the insulation of the cable as the sleeve is rotated thereon.



2,455,592
ADAPTER ATTACHMENT FOR INDICATOR DIALS
John F. Lively, Mount Vernon, Ohio
Application August 9, 1944, Serial No. 548,769
2 Claims. (Cl. 33—172)

2. An adapter attachment for a dial test indicator comprising a substantially U-shaped frame embodying a bight portion and a pair of complemental arms, said arms being substantially parallel to one another, one arm having a guide opening for accommodation and passage of a sliding contact finger, the remaining arm being provided with a bore and a socket aligned with said bore, said socket extending outwardly beyond the arm and being in alignment with the opening in

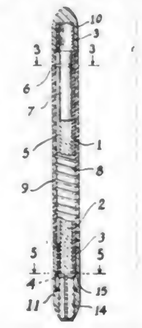


said first-named arm, a coiled spring located and confined in said socket, a work-contact finger having one end slidable in said bore and the opposite end passing through the opening in said first-named arm and projecting beyond said arm, the upper end of said second-named arm being apertured and provided with a set-screw projecting into said aperture to accommodate an arm on a dial indicator, and an annulus mounted on said contact finger inwardly of said first-named arm, said annulus being provided with a conical cam for coaction with the usual actuating rod provided on said indicator.

2,455,593
ARRANGEMENT FOR COVERING SHIP HULLS
Ernst Loewenstein, San Francisco, Calif.
Application February 28, 1944, Serial No. 524,187
2 Claims. (Cl. 114—84)

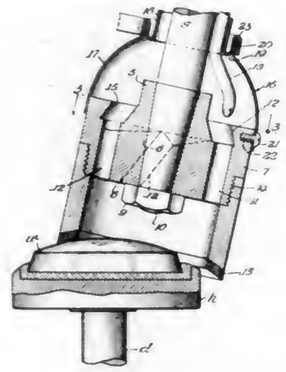
1. A protective covering for the outside surface of the underwater portion of a ship, comprising a plurality of water resistant sheets of smooth outer surface laid on said surface to cover the same, and securing elements on the side of the ship and along the edges of the respective sheets to tightly hold said sheets and seal said edges thereof, said securing means including a system of flanges on the sides of said ship forming a system of channels of tapering cross section, and clamp elements holding the respective edges of said sheets wrapped around the sides of the clamp element in contact with said channel and being wedged into the respective channels.

2,455,594
IGNITION SYSTEM FOR INTERNAL-COMBUSTION ENGINES
Marion Mallory, Detroit, Mich.
Application May 7, 1945, Serial No. 592,364
3 Claims. (Cl. 123—117)



1. An ignition system for an internal combustion engine comprising an ignition timer, an intake passageway, a throttle valve in said intake passageway, a governor valve in said intake passageway on the engine side of said throttle valve, a device actuated by changes in pressure in the intake passageway for controlling the said timer to advance and retard the spark, an orifice in the intake passageway on the engine side of said governor valve, a conduit connecting said orifice with said pressure actuated device, a second orifice in said intake passageway on the engine side of said throttle valve when in idle position and on the atmosphere side of said throttle valve when partly open, a valve actuated by changes in pressure in the intake passageway for controlling fluid flow through said first mentioned conduit, said pressure actuated valve being subjected on one side to atmospheric pressure and on the other side to the pressure obtaining at said second orifice, a housing for said valve in communication with said second orifice whereby when the throttle valve is closed the intake passageway suction acts through said second orifice to close said valve and shut off communication between the first orifice and the pressure actuated device to retard the spark timing and a venturi in said intake passageway positioned on the atmosphere side of the throttle valve, a third orifice in the venturi and a conduit connecting the third orifice and said pressure actuated device whereby when said throttle valve is open said valve opens communication between the first orifice and the pressure actuated device so that the intake passageway pressures on the engine side of the governor valve as modified by the pressure obtaining at said third orifice are utilized to control the ignition timer.

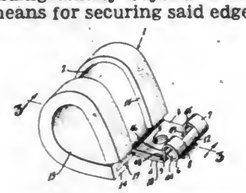
2,455,595
PROCESS OF MANUFACTURING POTASSIUM TETRABORATE AND SODIUM TETRABORATE
Frank Henderson May, Trona, Calif., assignor to American Potash & Chemical Corporation, Trona, Calif., a corporation of Delaware
No Drawing. Application January 22, 1944, Serial No. 519,340
8 Claims. (Cl. 23—59)



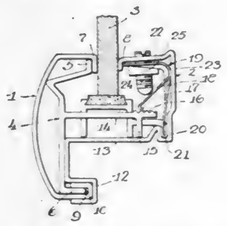
1. A process of manufacturing potassium tetraborate tetrahydrate, which comprises heating and reacting potassium pentaborate and a sodium compound from the group consisting of hydroxide, carbonate and bicarbonate to form sodium and potassium tetraborate in solution, thereafter cooling the solution to a point sufficient to crystallize borax from the solution while the potassium tetraborate remains dissolved in the solution, removing the crystallized borax from the solution, and thereafter inducing crystallization of the potassium tetraborate to cause it to precipitate as potassium tetraborate tetrahydrate $K_2B_4O_7.4H_2O$.

2,455,596
MECHANICAL PENCIL
Wilbur D. Mease, Berkeley, Calif.
Application March 28, 1945, Serial No. 585,231
4 Claims. (Cl. 120—18)

1. A mechanical pencil comprising a lead-receiving barrel, a tip on the barrel from the outer end of which the lead projects for writing, means in the barrel to advance the lead through the tip, a lead gripping member in the tip, said member comprising a longitudinally split spring sleeve tending to contract and normally gripping the lead, an outwardly facing flared element on the sleeve, and a cooperating flared shoulder in the tip to engage said element and cause the element to spread upon advancing longitudinal movement of the sleeve.



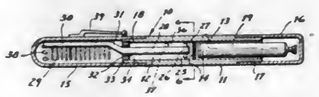
2,455,597
GRINDING WHEEL
Leopold H. Metzger and Wilson B. Muse, Chicago, Ill., and Fred J. Pease, Wauwatosa, Wis., assignors, by mesne assignments, to Super-Cut, Inc., Chicago, Ill., a corporation of Illinois
Application December 7, 1945, Serial No. 633,334
4 Claims. (Cl. 51—209)



1. A grinding wheel adapted to be driven about its axis in one direction and comprising a hub, a web connected to and extending outwards from the hub, and a cylindrical rim having one portion thereof extending around and connected to the outer marginal portion of the web and in addition having one of its end portions projecting in one direction beyond one exposed surface of the web and provided on its outer extremity with abrasive material, said web having extending completely therethrough an elongated straight duct for conducting to the inner periphery of said one end portion of the rim a coolant that is supplied to the other exposed surface of the web, said duct having the receiving and discharge ends thereof spaced substantially equidistantly from the axis of the wheel, being inclined from the receiving end thereof to its discharge end in a direction opposite to the direction of drive of the wheel, and having at its said receiving end means forming a scoop facing in the direction of drive of said wheel and shaped and arranged so that during drive of the wheel it serves positively to direct into the receiving end of the duct the coolant that is supplied to said other exposed surface of the web.

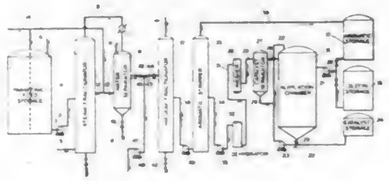
2,455,598
CLAMP
Andrew B. Michalenko, Los Angeles, Calif.
Application July 12, 1947, Serial No. 760,624
2 Claims. (Cl. 248—74)

1. A clamp having a hollow body adapted to receive wires, tubing or the like, said body having a bolt receiving end, said body having an overhang extending axially beyond one edge of said end, and means for securing said edge of said end against a support with said overhang overlying and supported by the edge of said support.



2,455,599
GLASS HOLDING DEVICE
James T. Miller, Niles, Mich., assignor to The Kawneer Company, Niles, Mich., a corporation of Michigan
Application June 22, 1944, Serial No. 541,596
7 Claims. (Cl. 20—56.4)

1. In a glass holding device including an inner sash member held in fixed position and an outer sash member removable and adjustable with relation to the inner sash member, and means for adjustably and detachably mounting the outer sash member in assembled relation in which it engages and retains a pane of glass, said means comprising a lug carried by the outer sash member, a spring clip anchored in the inner sash member, spaced serrations provided on the lug, a resilient depending tongue on the clip provided with a rearwardly and downwardly projecting end and an adjusting screw adapted to bear on the tongue and to depress the end of the tongue into locking engagement with one of the serrations depending upon the thickness of the glass to be retained.

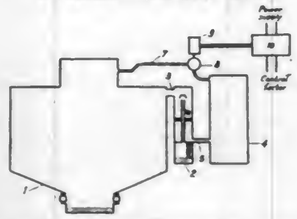


2,455,600
POCKET PROPHYLAXIS DENTAL UNIT
Matthew J. Molumby and Leon F. Molumby, West Union, Iowa
Application December 21, 1945, Serial No. 636,468
3 Claims. (Cl. 132—84)

1. The described device comprising a barrel having a compartment and a tooth-brush having a square shank telescopically operating in said compartment, said shank being centrally positioned in the compartment, means for centering the shank in the barrel, said means including an apertured disc plugging an end of the barrel, said

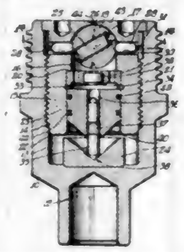
shank being held from turning in the disc, means for holding the shank extended, said last mentioned means consisting of a slot extending from the hole in the disc and a slide pin in the shank adapted to pass through the slot into the compartment with the shank and acting upon the disc to prevent inward movement of the brush and shank when extended.

2,455,601
PRODUCTION OF SOLVENTS
Lloyd C. Morris, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware
Application June 6, 1946, Serial No. 674,701
6 Claims. (Cl. 260—671)



1. A process for producing a solvent having low odor intensity and controlled solvent power which comprises: fractionating the product resulting from hydrofluoric acid alkylation of a low-boiling isoparaffin with a short chain olefin; withdrawing a fraction boiling above 300° F.; removing dissolved oxygen from said fraction by blowing an inert odorless gas therethrough; steam distilling said fraction with air-free steam; maintaining non-oxidizing conditions in sucn distillation by injecting inert odorless gas; withdrawing an overhead product comprising water and hydrocarbons; introducing said overhead product and inert, odorless gas into a settling zone and separating the liquids therein into a substantially odorless hydrocarbon layer and a water layer; withdrawing said hydrocarbon layer; concomitantly alkylating benzene with a high-boiling olefin concentrate from a process for catalytically cracking high-boiling naphtha in the presence of a catalyst comprising boron fluoride; separating residual benzene and catalyst from the resulting aromatic alkylate; distilling said aromatic alkylate under vacuum in a fractionation zone; withdrawing a fraction of aromatic alkylate; blending said fraction of aromatic alkylate with said substantially odorless hydrocarbon layer withdrawn from said settling zone; and controlling the solvent power of the resulting solvent by controlling the percentage of aromatic alkylate added thereto.

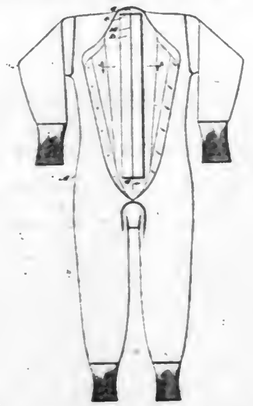
6. A solvent having high solvent power and low odor, consisting of a highly branched paraffinic HF alkylate boiling above 300° F. in admixture with an alkylated benzene wherein the alkyl group contains at least 7 and not more than 18 carbon atoms, said solvent having the following properties:



Boiling range, ° F.	350–450
API gravity (60° F.)	38.6
Index of refraction (20° C.)	1.475
Bromine number	Zero
Kauri-butanol value, cc.	80
Flash point, ° F.	130
Odor	Good
Analine point, °F.	25

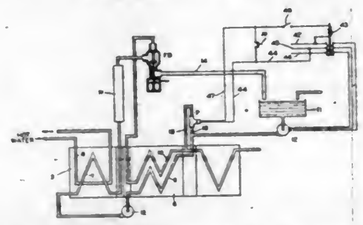
2,455,602
MERCURY-VAPOR ELECTRIC CONVERTER
Roger Neirynck, Mont-sur-Marchienne, Belgium, assignor to Societe anonyme dite: Ateliers de Constructions Electriques de Charlerol, Brussels, Belgium, a company of Belgium
Application February 24, 1948, Serial No. 10,325
In France March 29, 1943
Section 1, Public Law 690, August 8, 1946
Patent expires March 29, 1963
5 Claims. (Cl. 250—27.5)

1. A mercury vapor converter comprising a rectifier, a reservoir for excess gas, a high vacuum pump interposed between said rectifier and said reservoir for withdrawing excess gas from said rectifier and forcing said gas into said reservoir and means for returning said gas from said reservoir to said rectifier operable during periods of normal operation of said rectifier.



2,455,603
FUSE
Harry James Nichols, New York, N. Y.
Application April 14, 1943, Serial No. 483,028
5 Claims. (Cl. 102—79)

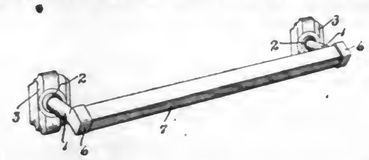
1. In a base detonating fuse for explosive armor-piercing projectiles for rifled guns, in combination, a cylindrical fuse body having an axial bore; and detonating mechanism therein comprising a substantially spherical centrifugally armed rotor mounted on the axis of the fuse at the forward end of said body, a detonator carried by said rotor in normal safe position, means for retaining said rotor in unarmed position, a percussion plunger carrying a firing pin and mounted axially slidable, a holder carrying a primer for igniting said detonator mounted between said rotor and said plunger, and transversely movable means mounted rearwardly of said plunger and having a wedging relation thereto for forcing said firing pin into exploding relation to said primer upon oblique impact with a target.



2,455,604
UNDERGARMENT
Henry Virgil Oldham, McRoberts, Ky.
Application February 4, 1947, Serial No. 726,371
6 Claims. (Cl. 2—78)

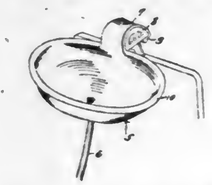
1. A protective pad for the spine adapted to be applied to the inner face of the back of an undergarment intermediate the width thereof and to extend longitudinally thereof to cover the spinal column, said pad comprising a strip of fabric

provided at opposite sides of its longitudinal medial line with a plurality of longitudinal folds forming a plurality of layers of fabric extending from its side edges to the medial line of the pad.



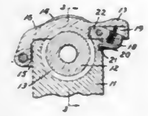
2,455,605
PASTEURIZING SYSTEM
Raymond E. Olson, Pittsford, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a corporation of New York
Application February 7, 1947, Serial No. 727,086
3 Claims. (Cl. 257—2)

1. In a pasteurizing system, a heating unit provided with a primary passage for a heating liquid and with a secondary passage for a liquid to be heated, said passages being in heat exchange relation with each other, means for causing said heating liquid to flow through said primary passage at a given pressure, and means for causing the liquid to be heated to flow through said secondary passage at a pressure normally lower than said given pressure, and means responsive to a change in the normal pressure relation between the liquids in said passages for stopping the flow of liquid through said secondary passages.



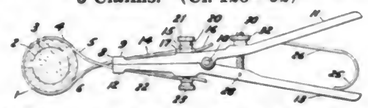
2,455,606
CONCEALED POST SUPPORT
Walter H. Pleiss, Ludington, Mich.
Application October 27, 1945, Serial No. 624,991
1 Claim. (Cl. 248—225)

A fixture support comprising a base plate adapted to be attached to a wall, a post rigidly attached to said plate and extending outwardly from one side thereof, a spring clip attached to said plate at the base of said post, a tubular support snugly surrounding said post and extending outwardly therefrom, a detent on said support engaging said spring clip, and an ornamental



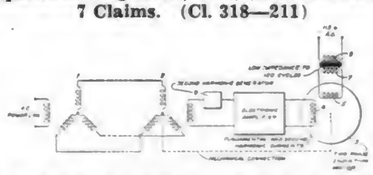
cover on said support lying over and concealing said base plate, spring clip and detent, said detent being releasable from said spring clip by strong outward pull on said support.

2,455,607
PORTABLE HAIR-RINSING BASIN
Ervin C. Price, Washington, D. C.
Application March 10, 1947, Serial No. 733,645
1 Claim. (Cl. 4—159)



The combination with the head rest of a barber's chair, of a removable rinsing basin constructed of plastic material, an extension formed at one side of the basin, said extension being curved and having an inwardly extended end adapted to fit under the head rest of the barber's chair with which the device is used, and a bead cooperating with the inwardly extended end of the clamp, in clamping the removable basin to the head rest.

2,455,608
BARREL LOCK
Orvar E. Rosengren. Hamden, Conn.
Application August 31, 1945, Serial No. 613,867
2 Claims. (Cl. 42—75)



1. In a gun, a barrel having an exterior circumferential groove extending completely around said barrel near the breech end thereof, a receiver having a chamber within which the part of said barrel having the said circumferential groove fits, said receiver having a slot transversely across the top thereof and so positioned as to register with said groove when the barrel is fitted with said chamber, a strap adapted to fit within said slot and groove when they register with each other, said strap at one end being pivoted to said receiver adjacent one end of said slot, a latching means at the other end of said strap, and means on said receiver near the other end of said slot with which said latch coacts to secure said strap in locked position in said groove and slot.

2,455,609
WIRE APPLYING FORCEPS
Burton V. Scheib, Toledo, Ohio
Application June 20, 1945, Serial No. 600,449
3 Claims. (Cl. 128—92)

1. For initiating and adjusting a line loop to a desired completion, a two member tool body, a pivot connection between the members for the members to provide diverging handle portions extending one way from the connection and jaw portions the other way from the connection, each of said jaw portions terminating in an edge with a face one way therefrom toward the connection and an outward face from the edge having a port therethru for the line to be looped in its extent outward from the jaws away from the connection, a leaf spring fixed to one handle portion remote from the connection and having a bow portion therefrom to a free end having a slide connection with the adjacent side of the other handle portion and thereby to coact to spread the handle portions and cause the jaw edges to approach abutting relation, an adjusting device coacting between the handle sections to limit the effective spread action of the spring, there being on each jaw spaced from the port, a flat seat for a hump of a reach of the line from the loop to lodge flatwise thereagainst, and a clamp to pinch the flat portion of the hump toward the seat and thereby effecting each direction locking of the line.

2,455,610
HARMONIC TWO-PHASE MOTOR DAMPING CIRCUITS
Ernest Henry Schmidt, Jr., Williamstown, Mass., assignor, by mesne assignments, to Remco Electronic, Inc., New York, N. Y., a corporation of New York
Application August 25, 1944, Serial No. 551,199
7 Claims. (Cl. 318—211)

1. A follow-up device employing an alternating current error signal and including a two phase induction motor in which both windings of the motor are supplied with current of the power frequency displaced in phase, and means for supplying one winding with current of the second harmonic of the power frequency, the other winding being short-circuited for said second harmonic.

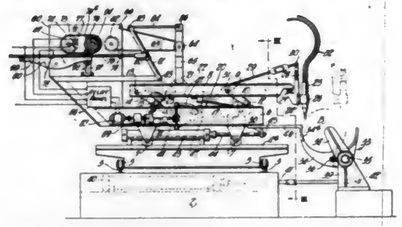
2,455,611
COMPOSITIONS COMPRISING A POLYVINYL CHLORIDE RESIN STABILIZED WITH ORTHO-SULFOBENZIMIDE
Russell H. Schlattman, Richmond Heights, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application July 19, 1947, Serial No. 762,207
4 Claims. (Cl. 260—88)

1. A polymerized vinyl chloride composition characterized by improved heat stability and being comprised of a polymerized vinyl resin containing at least 85% of combined vinyl chloride, from 0.5 to 10% by weight of a basic lead salt heat stabilizer and from 0.5 to 10% by weight of ortho-sulfobenzimide.

2,455,612
COMPOSITIONS COMPRISING A POLYVINYL CHLORIDE RESIN STABILIZED WITH THE ALKALI METAL SALTS AND THE ALKALINE EARTH METAL SALTS OF ORTHO-SULFOBENZIMIDE
Russell H. Schlattman, Richmond Heights, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application July 19, 1947, Serial No. 762,208
4 Claims. (Cl. 260—88)

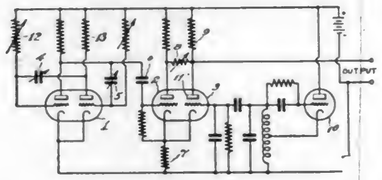
1. A polymerized vinyl chloride composition characterized by improved heat stability and being comprised of a polymerized vinyl resin containing at least 85% of combined vinyl chloride and from 0.5 to 10% by weight of a compound selected from the alkali metal salts and the alkaline earth metal salts of ortho-sulfobenzimide.

2,455,613
COMPOSITIONS COMPRISING A POLYVINYL CHLORIDE RESIN STABILIZED WITH THE DIALKYL TIN SALTS OF ORTHO-SULFOBENZIMIDE
Russell H. Schlattman, Richmond Heights, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application July 19, 1947, Serial No. 762,209
6 Claims. (Cl. 260—88)



1. A polymerized vinyl chloride composition characterized by improved heat stability and being comprised of a polymerized vinyl resin containing at least 85% of combined vinyl chloride and from 0.5 to 10% by weight of a dialkyl tin salt of ortho-sulfobenzimide wherein each of the alkyl substituents has at least 1 and not more than 8 carbon atoms.

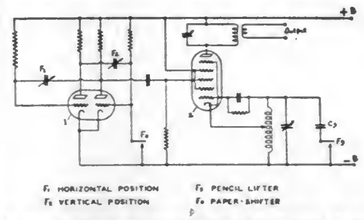
2,455,614
COMPOSITIONS COMPRISING A POLYVINYL CHLORIDE RESIN STABILIZED WITH THE LEAD SALT OF ORTHO-SULFOBENZIMIDE
Russell H. Schlattman, Richmond Heights, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware
No Drawing. Application July 19, 1947, Serial No. 762 210
5 Claims. (Cl. 260—88)



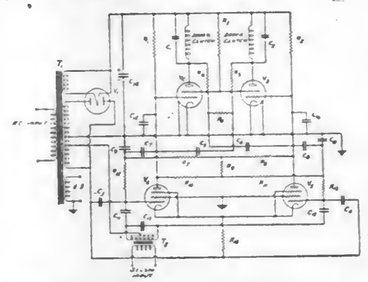
1. A polymerized vinyl chloride composition characterized by improved heat stability and being comprised of a polymerized vinyl resin containing at least 85 percent of combined vinyl chloride and from 0.5 to 10 percent by weight of the lead salt of ortho-sulfobenzimide.

2,455,615
MACHINE FOR AND METHOD OF CUTTING BLOOMS AND THE LIKE
Royal J. Scovill, Jr., Middletown, Pa.
Original application February 18, 1943, Serial No. 476,346. Divided and this application March 7, 1946, Serial No. 652,757
5 Claims. (Cl. 148—9.6)

3. A method of torch cutting cylindrical billets wherein the torch is moved in an arcuate path at a spaced distance from the billet characterized by the angularity of the torch being changed from an inclination towards the billet at the beginning of the cut toward a vertical position during the first part of the cut and is inclined away from the billet during the latter portion of the cutting stroke said latter inclination being in the same direction as the inclination at the beginning of the cutting stroke.



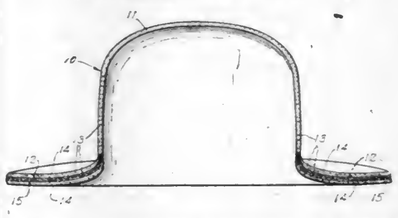
2,455,616
TRANSIENTLESS MODULATOR SYSTEM FOR KEYING
Francis H. Shepard, Jr., Madison, N. J., assignor, by mesne assignments, to Remco Electronic, Inc., New York, N. Y., a corporation of New York
Application November 15, 1944, Serial No. 563,568
10 Claims. (Cl. 179—171.5)



1. The transientless modulator system of keying comprising a signal generator for producing a square signal wave, an oscillation generator, means for supplying said signal wave and the output of said oscillation generator to a modulator, means whereby said modulator passes current of oscillation frequency only during negative half cycles of said signal wave, and means for eliminating transients in the output of said modulator during positive half cycles of said signal wave.

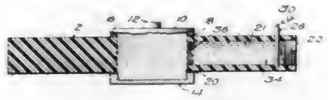
2,455,617
TELESCRIBER SYSTEM UTILIZING CARRIER TRANSMISSION OF FOUR INTELLIGENCES
Francis H. Shepard, Jr., Madison, N. J., assignor, by mesne assignments, to Remco Electronic, Inc., New York, N. Y., a corporation of New York
Application November 15, 1944, Serial No. 563,569
5 Claims. (Cl. 178—19)

1. The method of transmitting four intelligences which comprises translating two of said intelligences into a signal having alternately a marking nature and a spacing nature in which the lengths of the marking state and the spacing state are varied respectively according to said intelligences, translating a third intelligence into a signal indicated by frequency, translating a fourth intelligence into a signal indicated by the absence of the first signal, producing a signal in which the intelligences are merged, transmitting said signal, and detecting and translating said signal to produce separate signals which are functions of the intelligences transmitted.



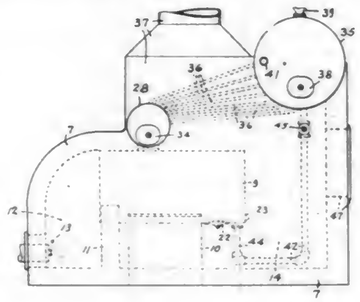
2,455,618
DAMPING FOLLOW-UP MECHANISM BY DEGENERATIVE DERIVATIVE
Francis H. Shepard, Jr., Madison, N. J., assignor, by mesne assignments, to Remco Electronic, Inc., New York, N. Y., a corporation of New York
Application January 10, 1945, Serial No. 572,209
4 Claims. (Cl. 250—27)

1. An electronic amplifier comprising an amplifier tube, an input circuit and an output circuit for said tube, whereby a signal applied to said input circuit produces an output proportional thereto, regenerative means for modifying said output in proportion to time rate of change in amplitude of said signal, and degenerative means for modifying said output in proportion to the time rate of change of the time rate of change in amplitude of said signal.



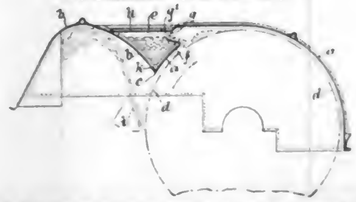
2,455,619
HAT
Hymen Shrager and Barney Shinberg, Westerly, R. I., assignors to American Felt Company, Glenville, Conn., a corporation of Massachusetts
Application March 29, 1946, Serial No. 658,086
8 Claims. (Cl. 2—194)

8. A hat construction consisting of crown and brim parts formed of a single thickness of true felt material, synthetic resin fibers of a copolymer



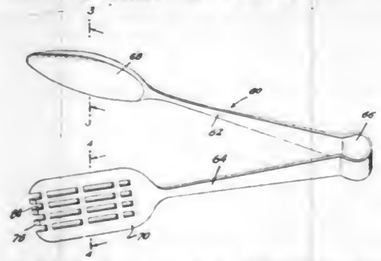
of vinyl chloride and vinyl acetate incorporated in one of said parts, and the said fibers in the said one part being concentrated in a stratum lying between and spaced from the surfaces of the said one part, said stratum being a non-separable but identifiable portion of the single thickness of true felt.

2,455,620
CENTRIFUGAL SWITCH
Jules H. Sreb, Silver Spring, Md., assignor to the United States of America as represented by the Secretary of War
Application September 12, 1944, Serial No. 553,733
9 Claims. (Cl. 102—70.2)



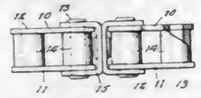
1. A switch of the character described comprising a body, a chamber within said body, contact pins mounted in the chamber, and a plurality of granules of electrical conducting material in the chamber and suspended in a fluid, said granules being adapted to be shifted by centrifugal force for connecting the contact pins electrically with each other.

2,455,621
FIRE AND WATER TUBE BOILER
Charles F. R. Stallbaum, Everett, Wash., assignor to Charles Williams as trustee of thirty-two and one-third per cent for himself, thirty-three and one-third per cent for Victor L. Tore, and thirty-four and one-third per cent for said Stallbaum
Application July 1, 1946, Serial No. 680,711
4 Claims. (Cl. 122—43)



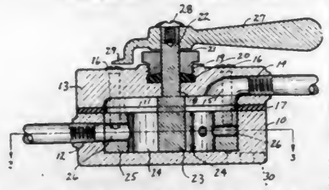
1. A steam generator comprising a horizontal fire tube boiler having passageways therethrough and therearound; combustion type heating means at one end of said boiler; means at the other end of said boiler providing an outlet passageway for heated combustion gases that have passed through and around said boiler; a hot water drum extending across the top of said boiler at one side of said gas outlet passageway and communicating with said boiler; a steam drum positioned substantially parallel with and above the level of said hot water drum and at the opposite side of said gas outlet passageway; and a plurality of conduits of relatively small diameter communicatively connecting said two drums and extending across said gas outlet passageway.

2,455,622
BEATING ENGINE AND THE LIKE
Andrew George Stewart, Edinburgh, Scotland
Application June 4, 1945, Serial No. 597,563
In Great Britain June 17, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires June 17, 1964
4 Claims. (Cl. 92—22)



4. A beating engine comprising in combination, a roll rotatable on a horizontal axis in a certain direction to have an upwardly rising side and a downwardly descending side, a cover construction having a central horizontal portion disposed above the rising side of said roll and a portion extending therefrom around the descending side of the roll, an inner wall member at the rising side of the roll and spaced therefrom having lower and upper edges and extending upwardly from said lower to upper edge substantially parallel to an adjacent peripheral portion of the roll and said upper edge terminating below the plane of said horizontal portion of the cover, an outer wall member having a lower edge secured to the lower edge of said inner wall member and extending upwardly away therefrom in diverging relation forming a V therewith and then over at a point substantially on a plane parallel to that of the horizontal portion of the cover and then outwardly and downwardly, end plates secured to opposite ends of adjacent portions of said inner and outer walls forming therewith a V-shaped trough open at its upper side below the horizontal portion of the cover, the lower secured together edges of said wall members forming a doctor and the upper edge of said inner wall providing a weir portion, the upper weir providing edge of the inner wall extending inwardly of said trough and away from said roll, and a longitudinal member extending downwardly from said cover towards said weir and spaced therefrom and forming therewith a continuous slot for the passage of liquid from said trough onto said roll, and a filter in said cover over said trough.

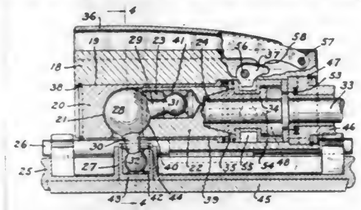
2,455,623
COMBINATION SERVING, STRAINING, AND CARVING IMPLEMENT
Sam H. Stone, New York, N. Y.
Application May 6, 1947, Serial No. 746,225
3 Claims. (Cl. 30—123)



1. A combination serving implement consisting of a pair of shanks integrally and resiliently secured together, said securing means biasing them apart, said shanks terminating in a spoon portion and a combined strainer and fork portion, the tines of the fork being beveled to a knife edge to provide a spearing and cutting edge, transverse means separating the fork from the strainer, each portion including knife edges to provide cutting means and said spoon and combined strainer and fork portion being of equal length.

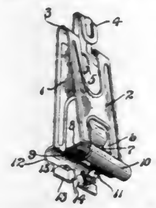
2,455,624
DRIVE OR SPROCKET CHAIN
Vincent J. Tenety, Jersey City, N. J., assignor to East Coast Ship Yards, Cliffside Park, N. J., a corporation of New Jersey
Application April 2, 1946, Serial No. 658,997
3 Claims. (Cl. 74—246)

1. A drive chain for transmitting movement from a sprocket in one plane to a sprocket in a different plane, said chain comprising a plurality of links each link having a U-shaped member across each end thereof, each said U-shaped member being provided with a bore therethrough at the center of its base, and pivot means extending through said portions whereby each said link may rotate relatively to the adjacent links.



2,455,625
HYDRAULIC CONTROL VALVE
Jacob Trantin, Jr., Youngstown, Ohio
Application February 17, 1945, Serial No. 578,518
4 Claims. (Cl. 138—46)

1. A hydraulic control valve consisting of a body having a circular depression formed therein, a cap for said body, an outlet orifice in the side of said body and an inlet orifice in said cap, a cylindrical rotor positioned in the said circular depression in the body, said rotor having a hub spaced by a plurality of webs, an extension formed on said hub, an opening in said cap, the said hub extension extending through said opening in said cap and terminating outside of said body, means affixed to said hub extension for turning the said rotor thereby, a gland formed in said cap about said hub-like extension, and a plurality of openings formed in the rotor and adapted to register individually with the outlet orifice in the said body.

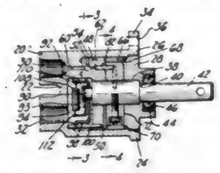


2,455,626
MECHANICAL MOVEMENT FOR CONVERTING ROTARY MOTION INTO RECIPROCATING MOVEMENT
William A. Traut, Wauwatosa, Wis., assignor to Blackhawk Mfg. Co., Milwaukee, Wis., a corporation of Wisconsin
Application June 24, 1944, Serial No. 541,946
8 Claims. (Cl. 74—45)

1. In a mechanism for converting rotary motion into reciprocating movement, a body having a bore, a reaction block having a spherical zone socket disposed coaxial with said bore, a knuckle having a pivot sphere oscillatable within said socket and being provided with a pair of rigid arms each having a spherical swinging end, one of said arms projecting laterally away from said

bore and the other projecting longitudinally into said bore and away from said block, means for positively confining said laterally projecting arm to swinging motion in a plane, and an eccentric confined within said bore and rotatable about the bore axis and coacting with the other of said arms to gyrate the same.

2,455,627
FILM HOLDING CLIP
Hubert J. Uhlmann, Grand Rapids, Mich.
Application June 10, 1946, Serial No. 675,517
1 Claim. (Cl. 24—150)



A clip comprising two sides adapted to be suspended in a generally vertical position and connected at their upper ends, said sides normally springing apart at their lower ends, means for releasably holding said sides with their lower ends brought closer together, the lower end portion of one of said sides having a transverse horizontal bead at the free lower edge of which, and between its ends, a pointed projection extends toward the other side, said other side at its lower end portion having two spaced apart tongues lying in vertical planes approximately perpendicular to the plane of said side, said tongues when the two sides are held against separation at their lower ends being located one at each side of said pointed projection.

2,455,628
SNAP ACTION VALVE MECHANISM FOR EXPANSIBLE CHAMBER MOTORS WITH OSCILLATING PISTONS
Bernhard Ulrich, Jr., South Bend, Ind., assignor to Bendix Aviation Corporation, South Bend, Ind., a corporation of Delaware
Application October 3, 1945, Serial No. 620,087
2 Claims. (Cl. 121—97)

1. A fluid motor comprising a housing having inlet and exhaust ports therein, a shaft in the housing and carried thereby, a member located in said housing and carried by the shaft, said member being oscillatable between two preselected positions in the housing and having sides spaced apart for subjecting said member to pres-

sure differential to cause the member to oscillate, means communicating the inlet and exhaust ports with the sides of the member and including a valve to be operated when the member reaches any one of the two preselected positions to reverse the application of the fluid pressure acting on the sides of the member to reverse said member, means for operating the valve including a cam fixed to the shaft to rotate therewith, a valve actuator pivotally carried by the housing and con-

structed and arranged to engage the valve to operate the same, and over-center spring means connecting the cam to the valve actuator for imparting a valve operating force to said valve actuator in response to rotation of the cam, said cam having an annular rib thereon and said valve actuator being equipped with a lug which engages with said rib during rotation of the cam to defer operation of the valve until the member has reached one of its preselected positions at which time the lug is disengaged.

2,455,629

FENDER BRACE

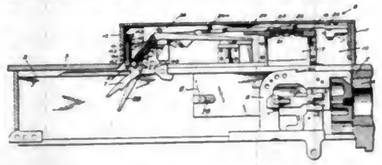
Robert J. Van Stone, Rocky River, Ohio

Application August 6, 1947, Serial No. 766,761

3 Claims. (Cl. 280—154)

1. As a new article of manufacture, an adjustable brace comprising complemental sections each having an attaching portion at its outer end, each section being made of a strip of sheet metal having a body portion, from a point adjacent said attaching portion to a point adjacent the other end thereof, bent into a hollow shape with the side edge portions of the metal strip exposed, the hollow portion of one section fitting into that of the other section for relative sliding to adjusted positions to determine the length of the brace with the said exposed edge portions of each section disposed side by side, and weld means applied at said edge portions to rigidly unite the sections together in predetermined positions.

2,455,630



FEEDING MECHANISM

Andrew K. Watt and Albert B. Hays, Lansing, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Application September 14, 1945, Serial No. 616,330

5 Claims. (Cl. 89—33)

2. In a machine gun having a recoiling member and a feed slide mounted on the gun for reciprocating movement, the improvement comprising, in combination, an operating member pivotally mounted on the gun, a handle portion on said operating member projecting out of the gun, means interconnecting said operating member with said feed slide whereby pivoting of said handle portion actuates said feed slide, a stop

member normally disposed in the path of movement of said operating member to prevent movement thereof, and means responsive to the position of said recoiling member for moving said stop member out of the path of said operating member.

2,455,631

PROCESS FOR PRODUCING DIACETYL

Oliver J. Weinkauff, St. Louis, Mo., assignor to Monsanto Chemical Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Application June 30, 1945, Serial No. 602,689

4 Claims. (Cl. 260—596)

3. A process for preparing diacetyl comprising slowly adding 2,3-butanediol to a suspension of copper chromite catalyst in a liquid medium maintained at a temperature in the range of 250–300° C. and recovering diacetyl from the vapors evolved, said liquid medium consisting of an organic substance having the liquid form at temperatures in the range of 250–300° C., having a boiling point above approximately 250° C. and being substantially inert in the presence of the catalyst and reactants under the reaction conditions.

2,455,632

SILICON ELECTRICAL STEEL

Alvin R. Williams, Cleveland, Ohio, assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey

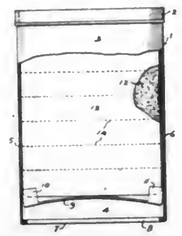
No Drawing. Application December 17, 1946, Serial No. 716,889

1 Claim. (Cl. 148—12.5)

A method of making aluminized silicon steel electrical strip or sheet; said method comprising the steps of producing an aluminized silicon steel with a composition suitable for said product and containing from 1% to 5% silicon, from .10% to 1.00% aluminum and substantially more than about .02% carbon; working said steel to strip or sheet, and continuously annealing said strip or sheet in a decarburizing atmosphere at temperatures of from 1500° F. to 1750° F. to reduce the carbon to less than .02%, said atmosphere being oxidizing to a degree regulated to cause the formation of a thin, tightly adherent oxide film on said strip or sheet without the production of a heavy, loose scale and consisting of from 8% to 15% carbon dioxide with the balance mainly nitrogen and sufficient water to saturate said atmosphere with water vapor at from 50° to 85° F.

2,455,633

TOBACCO CAN



George V. Wilson and Samuel P. Darkins, Homestead, Pa.

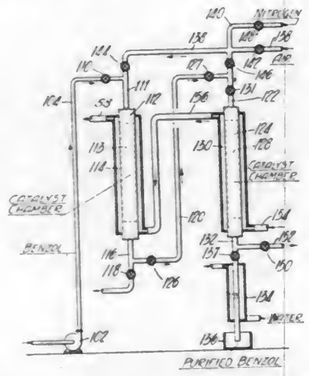
Application July 23, 1945, Serial No. 606,642

1 Claim. (Cl. 206—41.1)

The combination with a tobacco can including a pair of side walls, of a shiftable resilient

bottom mounted in the can, said bottom being bowed longitudinally with the convex curvature thereof being disposed upwardly, an upwardly disposed retaining flange carried at each end of

said bottom, the free top edge portion of each of said flanges frictionally engaging the inner surface of respective side walls, and the lower attached end of each of said flanges being spaced from the inner surface of respective side walls.



2,455,634

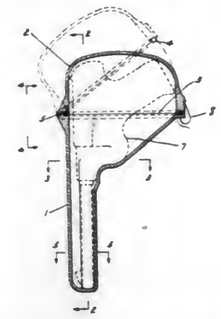
PROCESSES OF REFINING AROMATIC HYDROCARBONS

Philip J. Wilson, Jr., Joseph H. Wells, and Charles R. Liebel, Pittsburgh, Pa., assignors to Carnegie-Illinois Steel Corporation, a corporation of New Jersey

Application September 11, 1945, Serial No. 615,516

3 Claims. (Cl. 260—674)

1. The process of purifying aromatic hydrocarbons containing not more than approximately five per cent of impurities including paraffinic, naphthenic, and sulphur compounds together with, possibly, unsaturated hydrocarbons, which comprises passing the hydrocarbon to be purified through successive catalytic environments, one of which contains a dehydrogenating catalyst and another contains a cracking catalyst, maintaining dehydrogenating catalyst at a temperature of from approximately 500° C. to approximately 540° C. and at substantially atmospheric pressure, with the cracking catalyst maintained at a temperature of from approximately 250° C. to approximately 500° C. and at substantially atmospheric pressure, thereby converting the said impurities into a condition readily removable from the aromatic hydrocarbon while leaving the aromatic hydrocarbon substantially unaffected.



2,455,635

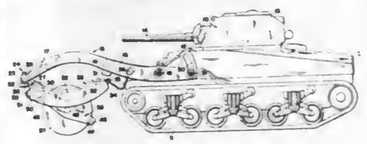
WATERPROOF PISTOL HOLSTER

Byron V. Witte, Birmingham, Ala.

Application September 13, 1946, Serial No. 696,684

1 Claim. (Cl. 224—2)

In a pistol holster comprising: a case having a narrow interior portion adapted for the barrel of a pistol to fit therein, a larger interior portion integral with the barrel portion and adapted for the main body and handle of a pistol to fit therein, said larger interior divided transverse to the barrel into two divisions with one half of the large interior portion hinged to the other portion; a water tight gasket embedded in the edge of the portion of the case having the barrel portion integral therewith, a snap spring fastener attached to the free end of the hinged portion; said hinged portion adapted to fit tight upon the gasket in the other portion and there be held by the said snap spring fastener to form a water tight joint between the hinged portion and the other part of the case.

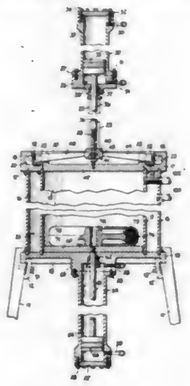


2,455,636

MINE EXPLODER

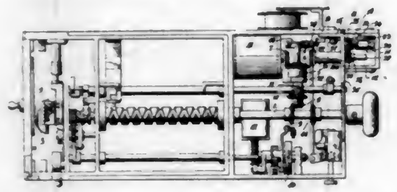
Harry T. Woolson, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware

Application July 3, 1945, Serial No. 602,972



6 Claims. (Cl. 89—1)

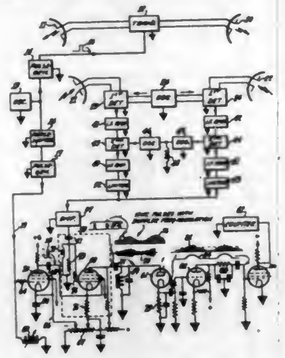
1. A mine exploder comprising a boom member, means for pivotally mounting said boom member at a rearward portion thereof to a forward part of a vehicle, a hollow frame located beneath said boom member and including front, rear and side sections, universal coupling means pivotally connecting said frame at said front section thereof to the forward end of said boom member, means between said rear section of said frame and said boom member for limiting downward movement of said frame, a plurality of arms extending longitudinally of said frame beneath the latter, said arms being spaced transversely of said frame, each of said arms being independently pivotally connected at the forward end thereof to said front section of said frame, and a plurality of independently suspended mine exploding wheels spaced trans-



versely of said frame, each of said wheels being independently and rotatably mounted in one of said arms rearwardly of the pivotal connection of said arm to said frame.

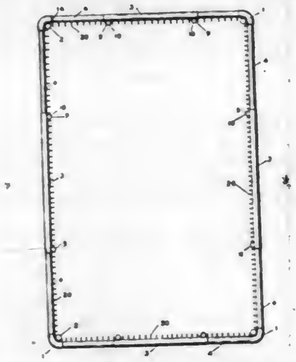
2,455,637
VULCANIZING APPARATUS
William C. Wright, Daniel G. Rowe, Jr., and Elmer Ford Roberts, Hickory, N. C.
Application January 2, 1946, Serial No. 638,602
2 Claims. (Cl. 18—6)

1. Vulcanizing apparatus comprising a base member, inner and outer cylinders of different dimensions having their lower ends welded to the upper surface of the base member and forming an annular space therebetween, an annular member having its lower surface welded to the upper ends of the two cylinders and having a groove extending around its inside surface and having an annular recess in the lower wall of said groove, a gasket disposed in said annular recess, a plate slidably mounted in the lower portion of the inner cylinder and having a piston rod extending downwardly therefrom through the base member, a cylinder secured to the lower surface of the base member and into which the piston rod projects, a piston on the lower end of the piston rod, a closure member adapted to fit into the annular member secured on the upper ends of the two cylinders and to rest on the gasket, the closure member having a plurality of radially disposed levers slidably and pivotally mounted therein intermediate their ends, a second piston rod and means for pivotally securing the other ends of the levers to the second piston rod, a frame secured to the annular member and extending upwardly, an upper cylinder mounted on the frame and having a second piston slidably mounted therein and connected to the second piston rod projecting upwardly from the closure member, a pin secured to and rising upwardly from the closure member, and the last named piston rod having a bore therein slidably fitting over the pin, a plurality of molds being adapted to rest on the plate associated with the lower cylinder, means for admitting compressed air into the upper end of the upper cylinder to force the closure member downwardly and to force the pivoted ends of the levers downwardly to cause their free ends to slide outwardly and upwardly into the groove in the annular member, to lock the closure member in position, means for forcing compressed air into the lower end of the lower cylinder for forcing the plate associated therewith upwardly in the inner cylinder to compress the molds with suitable objects to be vulcanized therein against the closure member, means for admitting steam into the inner cylinder and other means for admitting steam into the space between the inner and outer cylinders, means for returning the steam from the lower portions of the inner cylinder and space between the inner and outer cylinders and back to the source of steam, means for forcing compressed air into the lower end of the upper cylinder and venting air from the upper end of the upper cylinder to raise the piston in the upper cylinder to withdraw the pivoted levers from the groove in the annular member and to raise the closure member, and means for forcing compressed air into the upper end of the lower cylinder and exhausting the air from the lower end thereof to lower the plate in the lower portion of the inner cylinder.



2,455,638
BOBBIN WINDER FOR SEWING MACHINES
Solomon Adler, Kew Gardens, N. Y.
Application August 30, 1946, Serial No. 693,915
12 Claims. (Cl. 112—218)

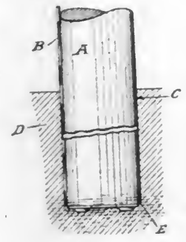
1. In a sewing machine, an automatic bobbin winder comprising in combination, a carrier member shiftably secured to the frame of the machine, a shaft mounted in said carrier member and adapted to hold the bobbin, a drive shaft for transmitting motion to said bobbin shaft, a disengageable connection between said two shafts adapted to be actuated by shifting of said carrier member, a closure for covering the bobbin holding end of the bobbin shaft, the closure being pivoted to the frame of the machine, and a linkage connection between the said closure and the said carrier member whereby the latter member is shifted upon moving of the closure so as to bring the said two shafts into relative engagement and disengagement.



2,455,639
GROUND SPEED INDICATOR UTILIZING DOPPLER EFFECT
Earl I. Anderson, Manhasset, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application October 26, 1943, Serial No. 507,741
1 Claim. (Cl. 343—8)

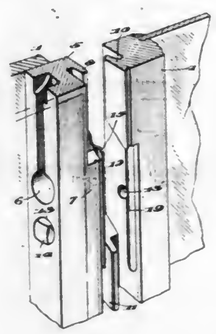
In a system for determining the speed of an object with respect to a reflecting surface, means for radiating pulses of radio energy from said object in two directions, means for receiving in two separate channels the pulses received from said two directions after reflection from said surface, a detector in each of said channels, means for supplying heterodyning signals of like frequency to said detectors in the two channels for producing intermediate-frequency signals in said two channels, means for mixing said two intermediate-frequency signals to obtain pulses modulated by their beat frequency, a circuit which is resonant at the pulse repetition rate, means for applying said modulated pulses to said resonant circuit whereby a beat-frequency modu-

lated sine wave signal is obtained, and means for rectifying said sine wave signal to obtain pulses recurring at the beat frequency.



2,455,640
CURTAIN STRETCHER
Clair F. Ashbaugh, Portland, Oreg.
Application February 20, 1947, Serial No. 729,699
2 Claims. (Cl. 45—24)

1. A rectangular curtain frame made up of telescoping slotted tubular members with slotted elbows and slotted clamps at telescope points intermediate the elbows, a spiral spring disposed within each tubular member, a plurality of hooks, each made rigid with a separate spiral of said spring and projecting through said slots to the inside area of the frame, and means for clamping the said tubular members and the said slotted elbows together rigidly without collapsing the said slots to interfere with free movement of said hooks.

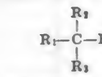


2,455,641
GROUNDING POLE PLATE
Carroll A. Badeau, Westfield, and Jerome B. Clapp, North Plainfield, N. J., assignors to The Thomas & Betts Co., Elizabeth, N. J., a corporation of New Jersey
Application November 28, 1945, Serial No. 631,350
2 Claims. (Cl. 174—6)

1. A sheet metal ground plate for the bottom of a pole, said plate having a flat portion providing an upper surface fashioned for engagement with the bottom of the pole, said plate provided with a plurality of semi-spherical embossments circularly spaced apart radially of the center of the plate, each of said embossments projecting downwardly from the flat portion, forming at its center a downwardly facing semi-

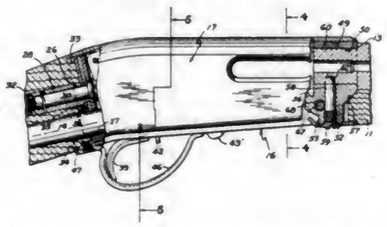
spherical cup forming an arched dome outlined by an annular upwardly facing rim, each of said rims being surrounded by a part of the flat portion of the plate, each embossment being continuous across its entire area and thus free of openings therethrough, and said plate at its flat pole-engaging portion provided with means for securing the plate to the pole.

2,455,642
WINDOW SASH CONSTRUCTION
Samuel Irvin Baer, Youngstown, Ohio
Application May 24, 1945, Serial No. 595,536
8 Claims. (Cl. 20—49)



1. A window sash construction comprising spaced supporting members and an intermediate sash member pivoted thereto, said supports and the stiles of said sash member having opposed interlocking grooved ribs extending from opposite ends thereof to a point short of the center thereof to provide therebetween a pivot section surrounding the point of pivotal support, a sheet metal plate mounted in said pivot section and having a single thickness longitudinal flange along one edge thereof embedded in one of said pivoted members and an opposed laterally offset portion along an opposite edge thereof adapted to be pressed within the marginal sides of the other of said pivoted members when the sash is in closed position relative to the supporting member.

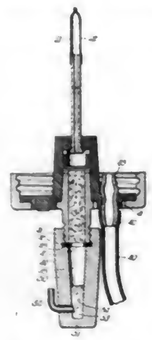
2,455,643
CONDENSATION PRODUCTS FROM KETONES AND ARALKYL ORGANIC COMPOUNDS AND METHOD FOR PRODUCING THE SAME
Arthur B. Bakalar, San Francisco, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application March 25, 1944, Serial No. 528,148
5 Claims. (Cl. 260—649)



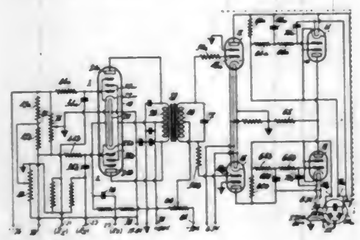
4. The process which comprises condensing an aralkyl organic compound of the group consisting of the aralkyl hydrocarbons and the halogenated aralkyl hydrocarbons containing at least one hydrogen atom linked to a nuclear carbon atom with a ketone of the group consisting of the aliphatic ketones and the halogenated aliphatic ketones in the presence of a condensation catalyst selected from the group consisting of sulfuric acid, phosphoric acids and sulfonic acids.

5. The compounds of the general formula

wherein R_1 is a radical of the group consisting of the aralkyl hydrocarbon radicals and the halogenated aralkyl hydrocarbon radicals, and R_2 and R_3 are radicals of the group consisting of the alkyl hydrocarbon radicals and the halogenated alkyl hydrocarbon radicals.



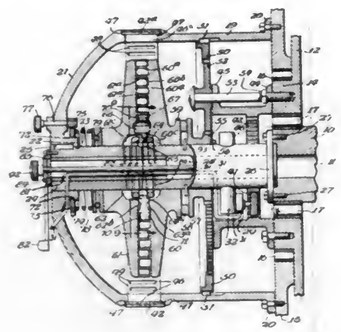
2,455,644
FIREARM RECEIVER
Charles H. Barnes, Bridgeport, Conn., assignor to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware
Original application June 13, 1944, Serial No. 540,015. Divided and this application May 7, 1946, Serial No. 667,929
6 Claims. (Cl. 42—75)



1. In a firearm, a receiver comprising in combination a sheet metal frame channel substantially U-shaped in cross-section; a laminar rear wall for said frame including overlapping portions of the side walls of said channel; a barrel receiving lug secured between the side walls of said channel frame at the forward end thereof; a sheet metal cover having depending side walls telescoping over the side walls of said frame; and interlocking means for securing said cover in assembled relation to said frame.

2,455,645
CLOSURE
Raymond W. Barton, Evansville, Ind., assignor to Mead Johnson and Company, Evansville, Ind., a corporation of Indiana
Application April 3, 1946, Serial No. 659,387
15 Claims. (Cl. 128—214)

1. A dispensing set for sterile liquid containers comprising, in combination, a closure body having means for engaging and sealing a container, a filter holder formed as an integral part of said body, projecting outwardly from both sides of said body and having a passage therethrough, said passage containing means for filtering air, a resilient liner substantially covering the side of said closure body associated with said container when said container is engaged, a tube associated with the end of said passage enclosed by the said liner, said tube extending through said liner, means associated with said tube and passage preventing said liquid from entering said passage, means for dispensing said liquid from said container through said closure body, and means for measuring the rate of flow of air into said container as said liquid is dispensed.

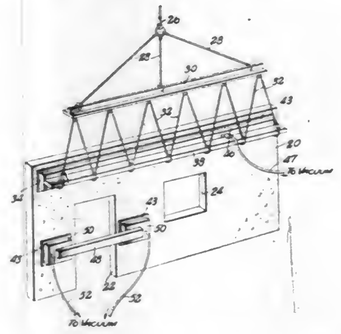


2,455,646
PHASE RESPONSIVE CONTROL CIRCUIT
Joseph G. Beard, Haddonfield, and Robert W. Harralson, Masonville, N. J., and Alexander Kreithen, Philadelphia, Pa., assignors to Radio Corporation of America, a corporation of Delaware
Application December 30, 1944, Serial No. 570,707
9 Claims. (Cl. 318—28)

4. A phase control comprising the combination of a circuit for deriving a pair of balanced alternating voltages from two signals in phase quadrature, a network responsive to an unbalance in said voltages for producing a full wave of alternating current, said network being constituted by a circuit which includes two gas tubes energized by an alternating supply of the same frequency and phase as one of the voltages of said pair and by another circuit which includes two gas tubes energized by an alternating supply of the same frequency and phase as the other of the voltages of said pair, and a motor actuated by said alternating current for returning said signals to phase quadrature.

2,455,647
ENGINE CONSTRUCTION
Leslie W. Beaven, Chicago, Ill.
Original application July 29, 1942, Serial No. 452,740. Divided and this application March 13, 1944, Serial No. 526,212
4 Claims. (Cl. 123—119)

1. An internal combustion engine embodying a hollow shaft, about which the engine casing and cylinders revolve, a stationary housing adjacent the engine casing concentric to said shaft, a hollow extension forming a continuation of said shaft, said extension provided with a series of transverse apertures, the bores of said shaft and said extension constituting a fuel passageway discharging into the engine casing, an impeller in the housing and rotatably mounted on said extension adapted to centripetally create air-pressure and discharge the same through said apertures into said passageway and thence into the engine casing, means also in the housing for feeding fuel and air mixture into said passageway, a driving connection between the rotatable engine casing and the said impeller, a clutch included in said connection, and yielding means tending normally to render said impeller active with respect to said clutch, said connection, clutch and yielding means being disposed within the housing.



2,455,648
METHOD OF PRODUCING AN ALKALINE DETERGENT
Wallis R. Bennett, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application January 5, 1946, Serial No. 639,419
2 Claims. (Cl. 252—135)

1. The method of making a detergent composition which comprises adding a material selected from the class consisting of zinc oxide and sodium zincate to approximately 76 percent aqueous sodium hydroxide and heating the resulting solution at an elevated temperature over 700° F. but below 830° F. to vaporize substantially all the water therefrom, mixing disodium orthophosphate into the heated solution, and then converting the entire mixture to the solid state, the said ingredients being in such relative proportions that the final composition contains at least 75 per cent by weight of sodium hydroxide and from 2 to 10 per cent by weight each of sodium zincate and trisodium orthophosphate.

2,455,649
SOLIDIFIED OILS AND METHODS OF MANUFACTURE
Alan Beerbower, Westfield, and Harold A. Ricards, Jr., Cranford, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application August 29, 1944, Serial No. 551,772
11 Claims. (Cl. 252—42)

1. A stabilized, solidified mineral oil consisting essentially of a mineral oil gelled by a soap formed in situ from free saturated fatty acids, and stabilized by the saponification in situ of a fatty oil rich in esters selected from the group consisting of esters of saturated fatty acids and esters of hydroxylated unsaturated acids, said fatty oil being added to the initial mixture in the proportion of ⅓ to ⅔ of the said free saturated fatty acids.

2,455,650
HANDLING APPARATUS
Karl P. Billner, Philadelphia, Pa., assignor to Vacuum Concrete, Inc., a corporation of Pennsylvania
Application March 10, 1947, Serial No. 733,639
12 Claims. (Cl. 294—65)

9. A mat adapted for handling a preformed concrete body of substantial size comprising a substantially rigid frame having a compressible cellular resilient gasket secured to one surface thereof defining an open chamber, said gasket projecting beyond rigid portions of said frame under all conditions of operation, a compressible cellular resilient supporting element carried by said frame within said gasket and in substantially coplanar relationship with respect to said gasket for engagement with said body, a limp flap carried by said frame and extending beyond said gasket to establish a preliminary seal between said mat and body, and means communicating with said chamber for exhausting the same.

2,455,651
PREPARATION OF NITRILES
Newman M. Bortnick, Philadelphia, Pa., assignor to Rohm & Haas Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application December 18, 1947, Serial No. 792,595
16 Claims. (Cl. 260—345)

1. A process for converting aldoximes to nitriles which comprises contacting aldoximes with amine salts at temperatures of 120° C. to 350° C.

2,455,652

NUCLEAR HALOGENATED 4,4'-BIS-(ALKENYL CARBONATO) DIPHENYL ALKANES AND POLYMERS THEREOF

James A. Bralley, Akron, and Frank B. Pope, Cuyahoga Falls, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. Application February 21, 1945, Serial No. 579,163
14 Claims. (Cl. 260—77.5)

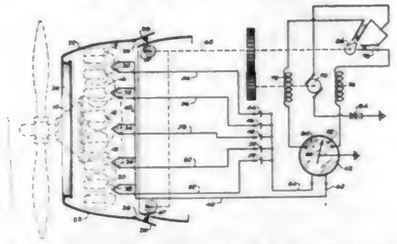
1. A nuclear chlorinated 4,4'-bis-(allyl carbonato) diphenyl alkane in which from 1 to 4 chlorine atoms are attached to each phenyl group and each phenyl group is attached to the same carbon atom of the alkane, the alkane being one containing no more than 7 carbon atoms.

2,455,653

DI(ALKENYL CARBONATO) AROMATIC COMPOUNDS AND POLYMERS THEREOF

James A. Bralley, Akron, and Frank B. Pope, Cuyahoga Falls, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. Application February 21, 1945, Serial No. 579,164
11 Claims. (Cl. 260—77.5)



1. 4,4'-di(allylcarbonato) diphenyl sulfone.

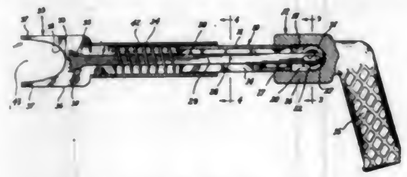
2,455,654

MULTIPLE THERMOCOUPLE ARRANGEMENTS

Kenneth A. Browne, Lakewood, Ohio, assignor to Wright Aeronautical Corporation, a corporation of New York

Application March 27, 1946, Serial No. 657,421
6 Claims. (Cl. 236—69)

1. Apparatus for measuring the highest of the temperatures at a plurality of spaced points, said apparatus comprising a plurality of thermocouples each responsive to the temperature at one of said points, an electric meter to which said thermocouples are connected in parallel, and a plurality of rectifiers each connected in the circuit of one of said thermocouples so as to pass the electric current from its associated thermocouple but not in the reverse direction.



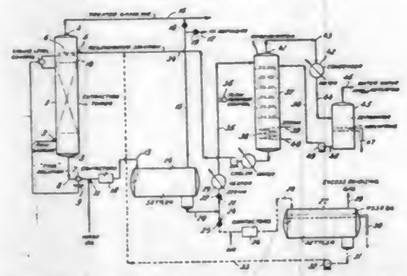
2,455,655

BONE SAW

Gay V. Carroll, Houston, Tex.

Application November 1, 1946, Serial No. 707,277
2 Claims. (Cl. 128—317)

2. A surgical instrument comprising an elongated frame, a pistol grip at one end of the frame, a saw pivoted in the frame to swing in a plane lying along the longitudinal axis of the frame, a saw guard telescopically enclosing the frame at the end opposite the pistol grip, spaced arms extending longitudinally from the saw guard, said arms being adapted partially to embrace and steady an object to be operated upon, said saw guard having a longitudinal saw receiving slot which extends through the arms, means within the saw guard yieldingly to hold the saw retracted into the slot, a crank disc mounted in the frame to rotate about an axis lying perpendicular to the



longitudinal axis of the frame, and a crank pin carried by the crank disc and engaging the saw to cause the saw to oscillate when the crank disc is rotated.

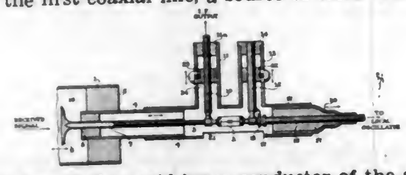
2,455,656

PRODUCTION OF COMMERCIALLY PURE MERCAPTANS AND DISULFIDES

Stephen P. Cauley, Garden City, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York

Application June 19, 1945, Serial No. 600,245
12 Claims. (Cl. 260—608)

1. The method of treating aqueous alkaline solutions to obtain commercially pure sulfur compounds which alkaline solutions have been used to extract acidic sulfur compounds from hydrocarbon fluids and which contain hydrocarbon impurities of substantially the same boiling range as said acidic sulfur compounds in commercially unacceptable amounts which comprises contacting said aqueous solution before regeneration with hydrocarbon treating material having a boiling range differential of at least 10 degrees from that of the sulfur bearing compound to be recovered and separating said hydrocarbon treating material and said sulfur compound from said aqueous treating solution.



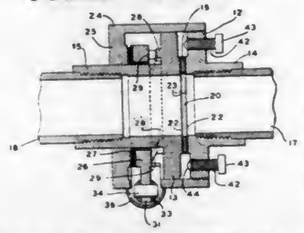
2,455,657

CIRCUIT ARRANGEMENT FOR MIXING OSCILLATIONS

Edward Cecil Cork and Michael Bowman-Manifold, Ealing, London, Frederick Henry Gale, Hillingdon, and Roy Blythen, Norwood Green, England, assignors to Electric & Musical Industries Limited, Hayes, England, a company of Great Britain

Application April 13, 1945, Serial No. 588,200
In Great Britain September 1, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires September 1, 1962
6 Claims. (Cl. 250—20)

1. In combination, a wave guide carrying signal-modulated oscillations, a coaxial line comprising an outer conductor supported by the wave guide at one end thereof and an inner conductor extending into the wave guide at said one end for receiving said signal-modulated oscillations, a second coaxial line provided with an inner conductor axially spaced from the inner conductor of the first coaxial line, a source of local oscilla-



tions coupled to said inner conductor of the second coaxial line, a mixing element electrically connected between the adjacent ends of said two inner conductors, and means coupled to one of said inner conductors for deriving a frequency resulting from the mixing of said signal and local oscillations.

2,455,658

PIPE COUPLING

Eddie M. Dons, Tulsa, and Jesse V. Stevens, Oakhurst, Okla.

Application September 17, 1945, Serial No. 616,744
8 Claims. (Cl. 251—167)

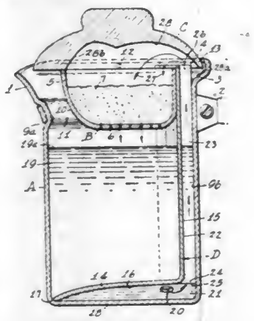
1. A pipe coupling comprising a pair of sleeves having internal screw threads to receive the ends of pipes to be coupled, each threaded sleeve being provided with a peripheral flange located adjacent to and facing the flange of its companion sleeve, a housing surrounding the flanges, one end of said housing being rigidly secured to one of said flanges, the other end of said housing having an inturned abutment confining the other flange, an oscillatory operating ring surrounding the sleeve of the last mentioned flange, said ring being directly between the last mentioned flange and said inturned abutment, cam members carried by the operating ring to force said last mentioned flange toward the other flange in response to an arcuate movement of said oscillatory operating ring, said housing having a slot in a plane between said flanges, a closure member movable into and out of said slot to provide for selective opening and closing of the pipe connection, and an operating member extending from said operating ring, said operating member being exposed at the exterior of said housing.

2,455,659

OILY COMPOSITION

Gordon W. Duncan, Westfield, and John C. Zimmer, Union, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application October 5, 1945, Serial No. 620,630
1 Claim. (Cl. 252—33)



A composition suitable for use as a soluble cutting oil, or the like, consisting essentially of about 84% mineral base lubricating oil, about 8% sodium petroleum sulfonate, about 2.5% sodium nitrite, about 2.5% naphthenic acid, 0.4% caustic soda, 0.9% isopropyl alcohol, 0.05% wax, and a small amount of water, said proportions being by weight.

2,455,660

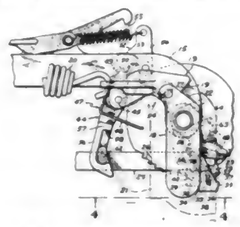
COFFEE PERCOLATOR

Donald E. Dunlop, San Pedro, Calif.

Application April 2, 1946, Serial No. 659,116
2 Claims. (Cl. 99—308)

1. In a coffee percolator, a main receptacle, a base plate resting on the bottom of the main receptacle and having a concaved under surface coacting with the main receptacle in forming a water-heating space, an upright plate extending from the base plate and having a groove fashioned therein communicating with the water-heating space, the upright plate being disposed to bear against the inner wall of the main receptacle so that a portion of the latter will form a cover over the groove and provide a tubular passageway extending upwardly from the water-heating space to a point of discharge, and an inner coffee-holding receptacle arranged to receive hot water discharging from the tubular passageway when water is heated in the space beneath the base plate, the base and upright plates being removable from the main receptacle whereby all surfaces of these plates may be inspected and cleaned, the upright plate having wings thereon shaped to bear against the inner surface of the main receptacle, the wings having vertically-extending grooves fashioned in the face thereof which bears against the inner surface of the main receptacle and designed to impede lateral flow of water from the tubular passageway.

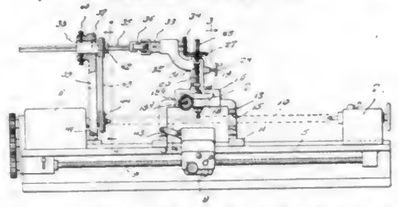
2,455,661



TARGET THROWING DEVICE

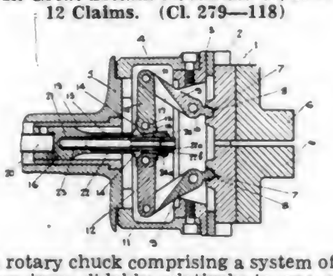
Francis G. du Pont, Utica, N. Y., assignor to Remington Arms Company, Inc., Bridgeport, Conn., a corporation of Delaware

Application November 20, 1945, Serial No. 629,813
8 Claims. (Cl. 124—8)



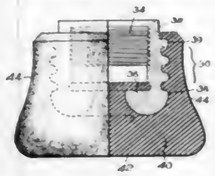
1. A device for throwing targets comprising a base; a frame supported on said base; a carrier having a target throwing arm; means for rotatably supporting said carrier on said frame; a main spring connected to said carrier; means for cocking said carrier comprising a rotatable ratchet disk, a member to rotate said disk, and a pawl mounted on said carrier, said pawl being arranged normally to engage said ratchet disk and carry the load effected by tensioning the main spring

during the cocking of said carrier; and carrier latching means comprising a trigger mounted on said frame and a resilient element associated with



said trigger, said resilient element being arranged to be engaged and actuated by said pawl during the cocking of said carrier to move said trigger into latching engagement with said carrier.

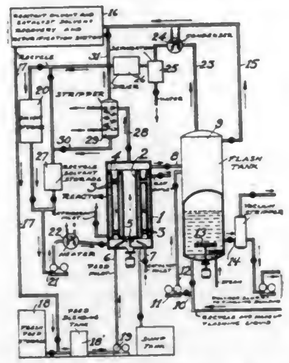
2,455,662
MILLING ATTACHMENT FOR LATHES
Charles W. Dyer, Stratton, Maine
Application June 22, 1945, Serial No. 600,981
2 Claims. (Cl. 90—11)



1. An attachment for lathes of a type including a bed, a lathe head, and a screw-operated lathe compound, said attachment comprising a support mounted on the bed for longitudinal adjustment and including an opening for receiving work mounted in the lathe, a hollow post rising from the support, a vertical shaft journaled in the post and adapted for attaching a tool at its lower end, means for adjusting the post horizontally on the support to adjust the tool transversely of the work and means operatively connecting the shaft to the lathe head.

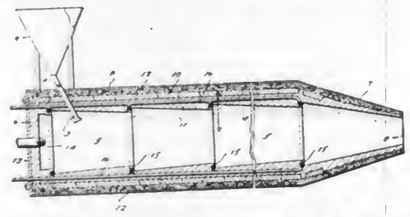
2,455,663
CHUCK
John Eaton, Cheltenham, England, assignor to Stanley Charles Icke, Solihull, England
Application November 15, 1945, Serial No. 628,695
In Great Britain November 23, 1944
12 Claims. (Cl. 279—118)

1. A rotary chuck comprising a system of work-gripping jaws slidable relatively to one another in a radial direction, an axially slidable draw-bar disposed centrally of the said jaw system, a plunger connected co-axially to the draw bar at one end and formed with a system of resilient arms, equal in number to the jaws, at the other end, a wedge carried by the plunger and extending between the said arms, and a separate toggle-link coupling each arm to a jaw and comprising two levers one of which is hingedly connected to the jaw, whereas the other is hingedly connected to the arm and is carried over a position of dead centre into abutment with the wedge as the jaw is taken to its work-gripping position.



2,455,664
STRUT TERMINAL FOR METAL-BENDING JACKS
William H. Ferguson, Malden, and John W. Geddes, Boston, Mass., assignors to H. K. Porter, Inc., Everett, Mass., a corporation of Massachusetts
Application September 15, 1945, Serial No. 616,572
2 Claims. (Cl. 248—24)

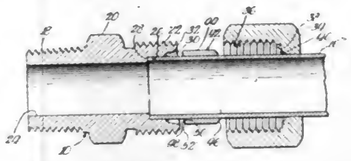
1. An abutment-engaging strut terminal for use with metal-bending jacks comprising a rigid metallic member having a coupling formation at one end for incorporating it in the jack assembly and having distally of the other end an integral transversely disposed annulus with a rounded axially presented terminal face, said annulus defining an overhanging shoulder and a body of firm yet yielding rubber surrounding said annulus and the shoulder thereof and bonded thereto and having a substantially flat face normally parallel to said annulus, the annulus defining an open center into which the body extends part way to provide a central cushioning body suspended from the annulus.



2,455,665
LOW-TEMPERATURE POLYMERIZATION PROCESS
William W. Ford and Fred D. Thiel, Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware
Application February 24, 1945, Serial No. 579,574
20 Claims. (Cl. 260—86)

1. A polymerization process comprising polymerizing an unsaturate having at least one ethylenic double linkage and from 4 to 14 carbon atoms per molecule by contact with a Friedel-Crafts catalyst at temperatures between —40° F. and —150° F. in a reaction mixture having no appreciable solvent power for the polymer even at temperatures well above the reaction temperature in a heat exchanger reactor, discontinuing the supply of catalyst when the reactor surfaces become coated with a film of polymer, continuing the addition of fresh feed and permitting the temperature of the reactor to rise to —20° F. to 0° F. and maintaining the reaction mixture substantially free from catalyst under agitation in said reactor until the polymer fouling the surfaces of the reactor is substantially completely dispersed in the reaction mixture and removed therein discharging the unpolymerized feed mixture and dispersed polymer from the reactor to means for recovering the separated polymer and the unpolymerized feed without contamination of any thereof by impurities, and thereafter, cooling the reactor to reaction temperatures

within the range between —40° F. and —150° F. and adding catalyst to the reaction mixture.



2,455,666
MEANS FOR TRANSFORMING VOLCANIC ROCK
John L. Fournier, Los Gatos, Calif.
Application February 5, 1946, Serial No. 645,527
4 Claims. (Cl. 263—21)

3. An elongated, stationary crucible provided with a steel shell or case having a discharge opening at one end and a closure at the opposite end, a refractory lining within said steel case comprising laminations of asbestos, fire-brick and fire-clay with an inner cylindrical wall forming a chamber, a refractory closure for said lining at the rear end of the crucible and an opening in the front end to register with the discharge opening of the crucible, a plurality of annular air conduits embedded in said refractory lining, suitably spaced apart longitudinally and provided with a plurality of radial vents opening into said chamber and positioned to direct currents of air forwardly and away from said lining, a source of compressed air supply for said annular air conduits, a flame-nozzle projecting longitudinally into the rear of the said chamber, a source of fuel supply for said nozzle, and means for feeding rock material to the crucible contiguous to said nozzle.

2,455,667
COUPLING FOR HIGH-PRESSURE TUBING
George E. Franck, Riverside, Ill., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application July 15, 1944, Serial No. 545,094
5 Claims. (Cl. 285—122)

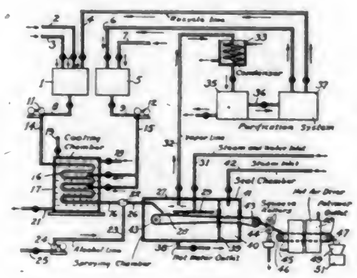
1. A coupling for tubing comprising one member having a threaded recess, a convex deflecting corner at the bottom of the recess, a sleeve having a sliding fit on the tube, a tapered edge at one end corresponding to the deflecting corner, the other end of the sleeve having a conical undercut providing an end face forming an obtuse angle with the inner surface of the sleeve,

and a second member threaded for reception of the first member, said second member including a flared enlargement comprising an inner conical portion having a relatively sharp slope relative to the tube wall and an outer conical portion adjoining the inner portion having a relatively gentle slope relative to the tube wall.

2,455,668
MINERAL OIL COMPOSITION
Everett W. Fuller and Henry S. Angel, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application May 3, 1945, Serial No. 591,840
18 Claims. (Cl. 252—46.6)

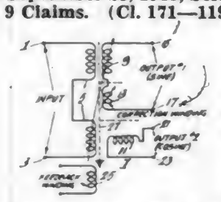
1. A mineral oil composition normally susceptible to the formation of haze therein, comprising a viscous mineral oil fraction containing a minor proportion, sufficient to stabilize said oil fraction against the deleterious effects of oxidation, of a phosphorus- and sulfur-containing reaction product obtained by reaction, at a temperature of from about 100° C. to about 190° C., of a phosphorus sulfide and a material selected from the group consisting of a dicyclic terpene and an essential oil predominantly comprised of a dicyclic terpene, and having in combination therewith a minor proportion, sufficient to suppress the formation of haze therein, of a wax-substituted hydroxyaromatic ester of an organic carboxylic acid.

2,455,669
SELF-SUPPORTING RESILIENT ARTICLE
George E. Gagnier, Detroit, Mich.
Application August 5, 1947, Serial No. 766,167
4 Claims. (Cl. 16—86)



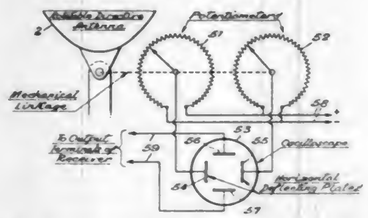
1. An article of the character described including a spring fastener of the type having a head and a shank, a washer-like reinforcing element having a central opening therein of greater cross-sectional area than that of said shank and mounted upon said shank adjacent the head, and a resilient coating overlying said reinforcing element and head and extending upon both sides of said reinforcing element, an integral portion of said coating extending through said opening to tie together the coating portions upon opposite sides of said reinforcing element.

2,455,670
DEODORIZING PETROLEUM OILS AND WAXES
Francis M. Graves, Beaumont, Tex., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
No Drawing. Application November 26, 1946, Serial No. 712,249
6 Claims. (Cl. 196—5)



1. A process for producing a substantially moisture-free, odorless petroleum wax, comprising maintaining a moisture-containing petroleum wax at a temperature above its melting point but not in excess of 40° F. thereof, blowing said molten wax with air until substantially free of moisture, introducing into said molten wax a small amount of ammonia sufficient to remove the rancid odor developed as a result of the aforesaid air-blowing, and removing excess ammonia from said wax to yield a substantially dry, odorless petroleum wax.

2,455,671
PROCESS FOR THE MANUFACTURE OF HIGH MOLECULAR WEIGHT POLYMERS
Arthur Donald Green, Cranford, N. J., assignor, by mesne assignments, to Jasco, Incorporated, a corporation of Louisiana
Original application September 19, 1941, Serial No. 411,440. Divided and this application July 6, 1944, Serial No. 543,680
7 Claims. (Cl. 260—93)

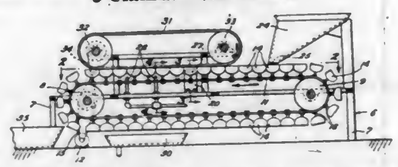


1. In the method of separating a solid isoolefinic polymer from liquid components of a polymerization mixture reacted in the presence of a Friedel-Crafts catalyst at a temperature within the range of 0° C. to —165° C. in a reaction zone closed to the atmosphere, the improvement comprising delivering said polymerization mixture from said reaction zone to a treating zone closed to the atmosphere, segregating the solid polymer from the liquid components of the polymerization mixture while conveying the polymer across the treating zone, spraying and washing the solid polymer with water as it is so conveyed removing a stream of the resulting volatilized components and a stream of water from the treating zone, then squeezing said polymer from said treating zone into an enclosed sealing zone wherein an inert gas is maintained at a pressure which exceeds the pressure in the treating zone, thereby preventing the escape of volatile components from the treating zone into the sealing zone, and further conveying the solid polymer through the sealing zone and finally squeezing it out of said sealing zone.

2,455,672
CORRECTION DEVICE FOR ELECTRONIC FUNCTION GENERATORS
Maurice Leighton Greenough, Groveland, Mass., assignor to Radio Corporation of America, a corporation of Delaware
Application September 28, 1945, Serial No. 619,237
9 Claims. (Cl. 171—119)

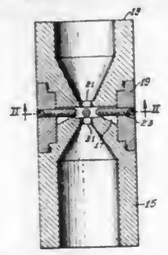
1. In a variocoupler having a stator winding and a pair of rotor windings fixedly disposed substantially at a right angle to each other and rotatable simultaneously with respect to said stator winding, means for compensating for lack of true perpendicularity between said rotor windings comprising a third rotor winding serially-connected with one of said pair of rotor windings and selectively inductively coupled to both of said pair of windings.

2,455,673
DISTANCE SELECTIVE SYSTEM
Clarence W. Hansell, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application January 19, 1942, Serial No. 427,266
12 Claims. (Cl. 343—11)



11. A pulse-echo radar system comprising means for transmitting periodically recurring radio pulses, means for receiving said pulses after they are reflected from a reflecting surface and for indicating reception of said pulses, said radar system including at least one directive antenna, means for moving the radiation pattern of said antenna in a certain plane, said second means including cathode ray tube means for visually indicating reception of said pulses, means for deflecting the cathode ray of said tube along a time axis, means for starting the sweep of said cathode ray along the time axis at a time which is a function of the angular position of said radiation pattern in said plane whereby the position of a received pulse indication on said time axis is a measure of the angular position of said radiation pattern, means for producing periodically recurring control pulses in synchronism with said radio pulses and means for applying said control pulses to said second means, means for causing said second means to indicate received pulses during and only during the application of a control pulse to said second means, means for varying the duration of each control pulse to obtain control pulses of a desired width or duration, means for phasing said desired width pulses without changing their width to cause them to occur at any desired time between successive transmitted pulses, and means for indicating said phasing in terms of distance to said reflecting surface.

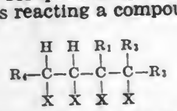
2,455,674
LIGHT STABLE COMPOSITIONS COMPRISING POLYMERIC VINYLIDENE CHLORIDE AND 2-HYDROXY-5-CHLORO-BENZOPHENONE-2'-CARBOXYLIC ACID
Carl B. Havens, Hope, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application December 8, 1947, Serial No. 790,436
4 Claims. (Cl. 260—86)



3. A composition of matter comprising a copolymer of at least 10 per cent vinylidene chloride, balance vinyl chloride, and from 1 to 10 per cent, based on the weight of the copolymer, of 2-hydroxy-5-chloro-benzophenone-2'-carboxylic acid to stabilize the polymer against the injurious effects of light.

2,455,675
MACHINE FOR HANDLING AND PREPARING OYSTERS
Zoid G. Hawk, Findlay, Ohio
Application December 6, 1946, Serial No. 714,501
3 Claims. (Cl. 17—3)

1. In a machine for cleaning food material from the intestines of shelled oysters, the combination of a conveyor, a succession of oyster receiving pockets carried on the conveyor and each adapted to support an oyster therein, a fixed knife blade positioned in the path of the conveyed oysters, a source of fluid pressure, a fixed nozzle means positioned to direct a jet of said fluid into the cuts in the oysters made by the knife, and a hold-down cover positioned adjacent the holders and opposed to the positions of the knife and the nozzle means.

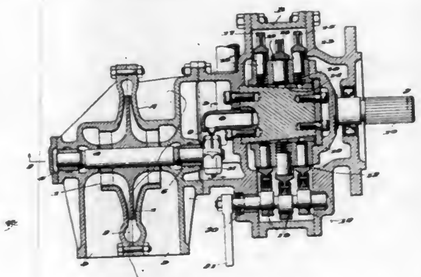


2,455,676
ELECTRON LENS CORRECTION DEVICE
James Hillier, Cranbury, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application May 21, 1946, Serial No. 671,184
12 Claims. (Cl. 250—49.5)

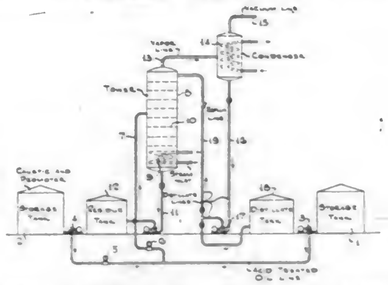
1. In an electron lens having a plurality of apertured field elements for establishing a focusing field for an electron beam passing through the apertures of said elements, the improvement comprising an adjustable metallic element extending into said field adjacent to the path of the electron beam through said apertured field elements for selectively distorting said field to compensate for axial asymmetry of said beam focusing field.

2,455,677
PREPARATION OF VINYL ACETYLENES
Joseph T. Horeczy, Cedar Bayou, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware
No Drawing. Application November 13, 1947, Serial No. 785,793
3 Claims. (Cl. 260—678)

2. A method for producing a vinyl acetylene which comprises reacting a compound having the formula

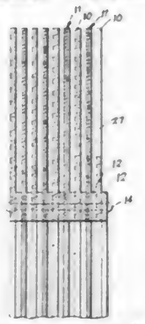


wherein C represents a carbon atom, H represents a hydrogen atom, and wherein R_1, R_2, R_3, and R_4 each represent a substituent selected from the group consisting of a hydrogen atom, an alkyl group, and an aryl group and X represents a halogen atom in an alcoholic alkali hydroxide solution at a temperature in the range of 100° to 135° C. to form a compound having the formula



wherein C represents a carbon atom and wherein R_1, R_2, R_3, and R_4 each represent a substituent selected from the group consisting of a hydrogen atom, an alkyl group, and an aryl group.

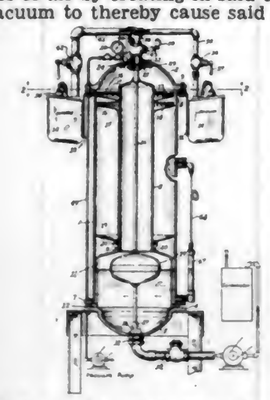
2,455,678
POWER TRANSMISSION
Irving C. Jennings, South Norwalk, Conn.
Application February 4, 1944, Serial No. 521,065
8 Claims. (Cl. 230—11)



1. In combination, a drive, a pump having bearings, a transmission between said drive and said pump, comprising a hydraulic pump driven from said drive, a hydraulic motor driven by the liquid from said hydraulic pump, and a drive connection between said motor and said first-mentioned pump, and conduit means for continuously diverting part of the liquid at reduced pressure from said hydraulic pump and before it reaches the field of operation of said motor and conducting it along a predetermined course to said first-mentioned pump to lubricate the bearings of said latter pump.

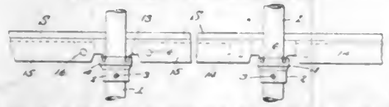
2,455,679
DISTILLATION OF ACID-TREATED OILS
Minor C. K. Jones, Mountainside, and Edward C. Eulhardt, Union, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application October 3, 1946, Serial No. 700,984
4 Claims. (Cl. 196—35)

1. The process of distilling an acid-treated mineral oil which comprises adding 90–95% of the stoichiometric quantity of caustic alkali necessary to neutralize any acid reacting substance evolved from any residue of the treating acid during the distillation of the oil together with a sufficient amount of a naphthenic acid soap to be capable of completing said neutralization, and carrying out the distillation in the presence of the said caustic alkali and the naphthenic acid soap.



2,455,680
BUFFING WHEEL
Nathan Kaplan, Freehold, N. J.
Application September 12, 1946, Serial No. 696,468
6 Claims. (Cl. 51—193)

1. The combination in a buffing wheel having means for holding annular sections in spaced positions, of annular felt sections spaced from each other, and cork sections having cloth facings between said felt sections.



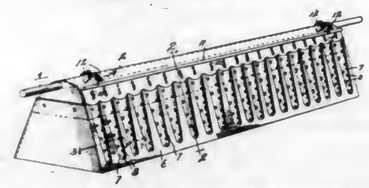
2,455,681
METHOD OF PREPARING CARBONATED BEVERAGES
James Kantor and Edward F. Rosenberg, Chicago, Ill., assignors to The Liquid Carbonic Corporation, Chicago, Ill., a corporation of Delaware
Original application July 16, 1943, Serial No. 494,972. Divided and this application August 24, 1944, Serial No. 550,953
4 Claims. (Cl. 99—79)

2. The method of preparing a carbonated beverage, including carbonated water and flavoring syrup, prior to its delivery to its ultimate containers, which consists in effecting a simultaneous flow of measured quantities of uncarbonated water and syrup into a container sealed against the ingress of air by creating in said container a partial vacuum to thereby cause said syrup and

water to flow into the container under equal pressures and to deaerate the water and syrup while in said container, mixing said water and syrup in said container while under said vacuum and then carbonating the mixture while in its deaerated condition.

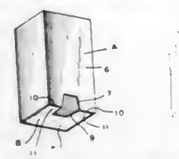
2,455,682
SHELVING
Albert F. Kern, San Francisco, Calif.
Application December 26, 1945, Serial No. 637,209
5 Claims. (Cl. 211—147)

1. In a shelving structure a post, a collar adjustably mounted thereon providing an annular recess in its upper end, plates each having a cut out at one corner adapted to embrace the post, a flange depending from each plate adjacent the cut out portion and adapted for insertion into the recess, tongues extending from the bottoms of the plates and cooperating to form slots between tongues on adjacent plates, and shelf engaging means secured within the slots.



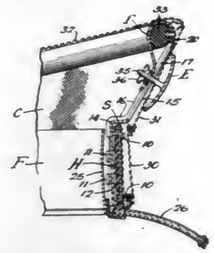
2,455,683
CLIP FOR COILING WIRE
Douglas H. King, Short Hills, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application June 22, 1945, Serial No. 600,858
5 Claims. (Cl. 242—96)

1. In combination, a length of wire and a plurality of clips mounted thereon at spaced points



thereof, each of said clips comprising a portion affixed to said wire and having therein a channel through which said wire extends longitudinally, and a pair of cooperating resilient fingers extending outwardly from the wire and defining a channel for receiving successive loops of said wire.

2,455,684
TOBACCO LEAF SUPPORT AND DRIER
Hiram S. Kirkpatrick, Fayetteville, N. C.
Application September 26, 1946, Serial No. 699,429
5 Claims. (Cl. 34—239)



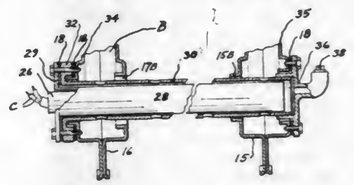
1. A tobacco leaf drying rack comprising an inverted hood having its under side open so heated air can be trapped therein, means for supporting tobacco leaves on said hood with their stems upwardly disposed, means whereby trapped heated air will pass through said hood sides into engagement with the stems of the leaves vertical stem receiving channels in the outer faces of the sides of the hood and heat pasages from the interior of the hood in the bottoms of the channels.

2,455,685
DISPENSING CONTAINER
Chester M. Lehman, St. Louis, Mo.
Application October 1, 1945, Serial No. 619,491
3 Claims. (Cl. 229—11)

1. A dispensing box comprising an elongated rectangular paper case, and a rectangular paper drawer slidable in said case, the front wall of said case being provided with a detachable section extending upwardly from the lower edge of said front wall, said front wall being weakened in a line between said detachable section and the upper portion of the front wall, so as to permit selective removal of said detachable section, thereby forming a finger-receiving opening which extends upwardly from the bottom edge of said front wall, said drawer having a bottom end wall provided with a front edge adjacent to the lower edge of said front wall of the case, said bottom end wall of the drawer being provided with a detachable section extending rearwardly from its front edge, and a weakened outline for removal thereof, so as to form a finger-receiving opening in the front edge of the bottom of the drawer registering with the opening which extends upwardly from the bottom edge of said front wall of the case, said bottom and front walls having yieldable edges located adjacent to each other, at opposite sides of their predetermined finger-receiving openings, and contents of the drawer being exposed at said finger-receiving openings for forcible removal between said yieldable edges.

2,455,686
UNIFORM CAP
Harry Lev, Chicago, Ill.
Application November 29, 1946, Serial No. 712,978
12 Claims. (Cl. 2—195)

1. In a uniform cap, the combination of a frame, a cover removably carried by the frame, a transversely bowed holder secured to the frame, a vertical support having a lower end transversely bowed and gradually flattened out thereabove adapted for sliding interfit with the holder and to engage therewith with increased friction as it is advanced toward its final position therewith, the support when so interfitted with the holder being extended thereabove at the front of the cap, and means for connecting the holder to the cover at the front.



2,455,687
CUPRAMMONIACAL PETROLEUM MAHOGANY SULFONATES
Leo Liberthson, New York, N. Y., assignor to L. Sonneborn Sons, Inc., a corporation of Delaware
No Drawing. Application April 12, 1945, Serial No. 588,069
5 Claims. (Cl. 260—438)

1. A novel fungicide and insecticide substantially consisting of a cuprammoniacal petroleum mahogany sulfonate substantially of the general formula

$$[Cu(Amm)_x](RSO_3)_2$$

in which RSO_3 designates a petroleum mahogany sulfonate radical, in which *Amm* designates an ammoniacal compound capable of entering into the formation of a cuprammoniacal complex compound when in contact with a copper salt, and in which x designates the number of *Amm* groups.

2,455,688
PORTABLE ELECTRIC STEAM RADIATOR
Philip S. Malickson, Philadelphia, Pa., assignor to Sentry Safety Control Corp., a corporation of Pennsylvania
Application February 11, 1947, Serial No. 727,927
1 Claim. (Cl. 219—38)

A portable electrically-heated steam radiator comprising complementary stampings which form

radiator sections, the edges of said sections turned so as to present no exposed sharp edges, means for holding said sections together, means for circulating steam and water through said sections, an electric heating element in the base of said radiator for the purpose of heating said water, a carrying handle integrally formed with said radiator, means to indicate when the electric heating element is energized, means for preventing and for safeguarding against the development of excessive steam pressure within the radiator sections, and said complementary stampings of said radiator sections being nonidentical, one of said sections having an outwardly extending flange and its adjacent section having an inwardly extending flange, said flanges of adjacent sections interfitting with one another.

2,455,689

STABILIZATION OF UNSATURATED NITRILES

Kenneth E. Marple, Oakland, and Bert Borders, San Francisco, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application November 6, 1946, Serial No. 708,197
9 Claims. (Cl. 260—465.9)

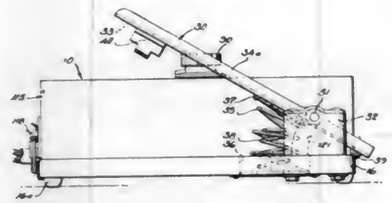
9. As a composition of matter a nitrile selected from the group consisting of acrylonitrile, alpha-substituted acrylonitriles wherein the substituent on the alpha carbon atom is a lower alkyl radical, and beta-substituted acrylonitriles wherein the substituent on the beta carbon atom is a lower alkyl radical, containing from 0.1% to 4% by weight of a cyanohydrin dissolved therein, said composition being stabilized against auto-polymerization.

2,455,690

ELECTROMAGNET WITH PIVOTALLY MOUNTED ARMATURE

Lynn H. Matthias, Fox Point, Wis., assignor to Allen-Bradley Company, Milwaukee, Wis., a corporation of Wisconsin

Application September 24, 1945, Serial No. 618,307
2 Claims. (Cl. 175—336)



1. An electromagnet device having a field piece and an armature, said field piece of U shape formed with an offset portion adjacent the end of one leg of the U to make a bearing surface, a non-magnetic metal plate attached to said armature to swing on said bearing surface, said armature in its closed position having a surface arranged to abut the end of the other leg of the field piece, a helical spring connected between said field piece and armature to bias armature in its open position and the spring so arranged that its axis shifts towards a line joining the point of attachment of spring to field piece and the bearing point between armature and field piece and the armature, metallic plate and bearing surface so arranged that with armature in closed position an air gap exists in the magnetic circuit at the bearing of the order of mechanical clearance.

2,455,691

SOUND TRANSMISSION CONTROL SYSTEM

Cameron B. McCulloch, Hollywood, Calif.

Application December 22, 1945, Serial No. 636,927
6 Claims. (Cl. 179—1)

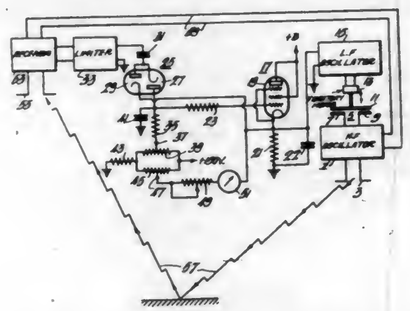
1. An audience reaction sound control system comprising a potentiometer including an element rotatable to vary the intensity of audience sound transmission, a rotatable actuating shaft connected to said element, a housing enclosing said potentiometer and shaft, a foot pedal positioned outside and horizontally offset from said housing, and a hinge attachment to said housing whereby the housing may be swung upwardly and independently of the pedal to openly expose the potentiometer and shafts.

2,455,692

VELOCIPEDE TOY SHOVEL ATTACHMENT

Frederick A. McDunnah, Hampton Falls, N. H.

Application March 27, 1947, Serial No. 737,530
5 Claims. (Cl. 214—131)



1. In a velocipede, the combination with the steering post provided at its upper end with a handle bar and at its lower end with a fork within which a dirigible front wheel is rotatably mounted, of a cantilever arm fixedly supported at its one end by one of the tines of said fork and extending forwardly therefrom; a lever member pivotally connected intermediate its ends to the forward end of said cantilever arm, said lever member being provided at its one end with a scoop that is disposed closely adjacent to the ground when said lever member occupies an approximately perpendicular position and which is shifted forwardly and upwardly when said member is swung in one direction on said pivotal connection thereby to cause said scoop to be loaded with material from the ground; means operable by the rider of the velocipede for dumping the contents of the scoop while the latter occupies its elevated position; a slotted guide arm fixedly supported by said handle bar and extending forwardly therefrom, and an angulated lever-operating member loosely confined intermediate its opposite ends within the slot of said guide arm and having its lower end pivotally connected with the opposite end of said lever member while the opposite end portion of said angulated lever-operating member occupies a position above the level of the handle bar to serve as a handle by means of which said lever-operating member is manually adjusted pivotally and endwise within said slot by the rider of the velocipede to operate and control said lever member.

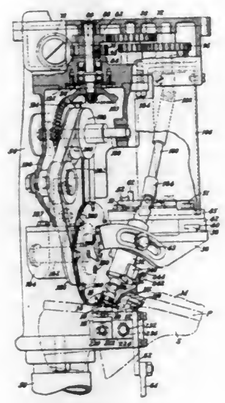
2,455,693

DISTANCE DETERMINING SYSTEM

William R. Mercer, Boston, Mass., assignor to Radio Corporation of America, a corporation of Delaware

Application July 26, 1945, Serial No. 607,215
6 Claims. (Cl. 343—14)

1. Radio distance measuring systems of the frequency modulation type including means for transmitting radio waves toward an object to be reflected therefrom, means for receiving said transmitted waves directly and after a reflection, frequency modulator means connected to said transmitting means for varying the frequency of the transmitted waves, means connected to said receiving means for producing in response to the output thereof, a unidirectional voltage which is less than a predetermined voltage by an amount proportional to the difference in frequency between said direct and reflected waves, a source of adjustable direct current voltage, a direct current meter, means for applying said first-mentioned unidirectional voltage and said adjustable voltage differentially to said meter, a low frequency oscillator connected to said frequency modulator means, and means for applying said first-mentioned unidirectional voltage to the anode supply circuit of said low frequency oscillator.



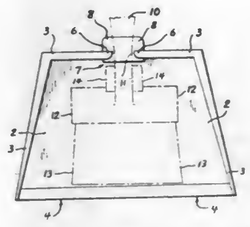
2,455,694

LASTING MACHINE

Lloyd G. Miller, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey

Application November 17, 1945, Serial No. 629,527
26 Claims. (Cl. 12—1)

12. A lasting machine having, in combination, a driven roll and cooperating pressure member for engaging opposite sides of the lasting margin of stock to be lasted and so constructed and arranged to apply lasting stress to said lasting margin for continuously and progresively tensioning the stock, for drawing the lasting margin inwardly from the edge of the shoe bottom and over the bottom of the shoe, and for feeding the shoe, and means comprising a rotary disk having a peripheral working surface provided with a plurality of circumferentially disposed helical ribs



for wiping the lasting margin inwardly from the edge of the shoe bottom and pressing it against the bottom of the shoe, said ribs being axially offset and having rounded leading ends for imparting hammer blows to the lasting margin, the leading end of each rib being in substantial axial alinement with the trailing end of the preceding rib to provide a circumferentially continuous wiping surface.

2,455,695

BRUSH AND CRUMBER SET

Foster F. Monaco, Jackson Heights, N. Y.

Application August 28, 1945, Serial No. 613,168
1 Claim. (Cl. 65—62)

A brush and crumber set comprising, in combination, a tray and a brush, the tray having an upstanding rim which is provided with a slot therethrough, an ear in the form of a back-rest extending outwardly from the slot in alignment with one surface of the slot to leave said slot open through the rim, a pair of lugs carried on the rim, one lug at each side of the slot and overhanging said slot, thus providing an entry clearance into the slot; a handle formed on the brush, made with a shank portion narrower than the entry clearance between the pair of lugs on the tray rim,

and made with a wing on each side of the shank, the two wings and shank being wider than the entry clearance but conforming in size to the slot; whereby the brush handle is adapted to have its shank portion inserted into the entry clearance, and shifted so as to bring the two wings within the slot and into position onto the back-rest for detachably connecting the handle and tray together.

2,455,696

IRON OXIDE-ALKALI METAL FERRATE CATALYST AND ITS METHOD OF PREPARATION

Max A. Mosesman, Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware

No Drawing. Application December 20, 1946, Serial No. 717,582
10 Claims. (Cl. 252—231.5)

1. A method for preparing a catalyst adapted for use in a Fischer-Tropsch synthesis which consists of the steps of preparing an admixture of an iron oxide and alkali metal ferrate in an amount in the range between 0.2 and 20% by weight of said iron oxide, heating said admixture at a superatmospheric temperature of about 1000° F. for about 4 hours in the presence of an oxidizing atmosphere, and subsequently contacting the admixture with a reducing atmosphere at a superatmospheric temperature in the range between 700° and 1600° F. for about 24 hours.

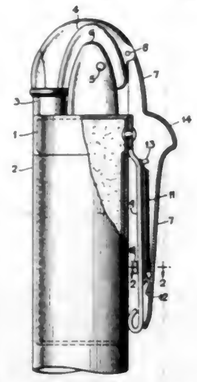
2,455,697

VULCANIZATION OF NEOPRENE

Paul F. Niessen, Canal Fulton, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. Application October 13, 1944, Serial No. 558,605
1 Claim. (Cl. 260—92.7)

The method of manufacturing a thin flexible and extensible rubber product, characterized by possessing superior resistance to crystallization on aging, from a latex of a plastic polymer of a monomeric material consisting entirely of 2-chloro butadiene-1,3, which comprises adding to said latex compounding ingredients including substantially 4% by weight based on the polymer in the latex of magnesium oxide, substantially 5% by weight based on the polymer in the latex of zinc oxide, and substantially 2% by weight based on the polymer in the latex of liquid heptylated diphenylamine, forming a product from the resulting compounded latex, drying the product and heating the product at a temperature of substantially 220 to 240° F. for substantially one hour.



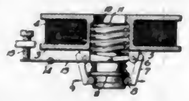
2,455,698

CIGAR LIGHTER CONSTRUCTION

Warren I. Nissen, Newark, N. J., assignor to Ronson Art Metal Works, Inc., Newark, N. J., a corporation of New Jersey

Application December 5, 1947. Serial No. 789,892
4 Claims. (Cl. 67—7.1)

1. A cigar lighter construction including a casing, an attachment clip secured to said casing and extending downwardly along the side thereof, lighting mechanism including a snuffer member movably mounted on the casing, a fingerpiece connected in driving relation to said lighting mechanism and extending downwardly to overlie said attachment clip, said fingerpiece being movably engaged with said attachment clip and being movable between an upper position in



which said snuffer member is closed and a lower position in which said snuffer member is open.

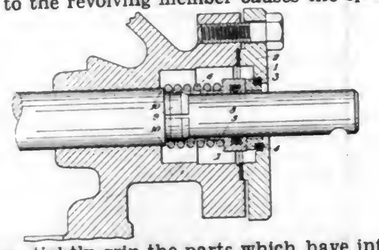
2,455,699

RELAY FOR RELIABLE OPERATION WITH DEFINITE EXCITATION

Henri Perret, Zug, Switzerland, assignor to Landis & Gyr, A. G., a body corporate of Switzerland

Application January 4, 1944, Serial No. 516,994
In Switzerland December 21, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires December 21, 1962
6 Claims. (Cl. 175—336)

1. A relay comprising, in combination, an armature, electromagnetic means for moving said armature from a position of rest to a moved position when energized, latching means engageable with said armature to prevent movement toward moved position, disengageable upon predetermined power applied to said armature to permit said movement, and spring means biasing said armature toward said position of rest whereby said latch means may re-engage said armature upon de-energization of said electromagnetic means.



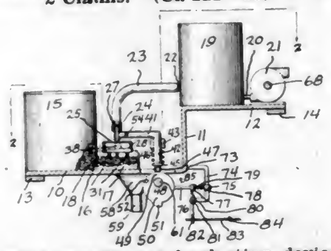
2,455,700

MECHANICAL SEAL

Frederick Benjamin Porges, Manchester, England, assignor to Flexibox Limited, Manchester, England, a British company

Application December 30, 1946, Serial No. 719,153
In Great Britain November 22, 1946
4 Claims. (Cl. 286—11.15)

1. A mechanical seal for making a fluidtight joint between a revolving member and a stationary surface comprising, in combination, a coil spring around the revolving member, a rotary seal ring around the revolving member, a stationary surface against which the rotary seal ring bears under the pressure of said spring, characterised in, that one end the spring has an interference fit with a part of the revolving member and the other end an interference fit with a part of the rotary seal ring, the convolutions of the spring being of such hand with respect to the direction of rotation that any tendency of the rotary seal ring to turn relatively to the revolving member causes the spring



to more tightly grip the parts which have interference fits with its ends and resist such tendency, the coil spring and interference fits constituting a sole means for causing the seal ring to turn with the revolving member.

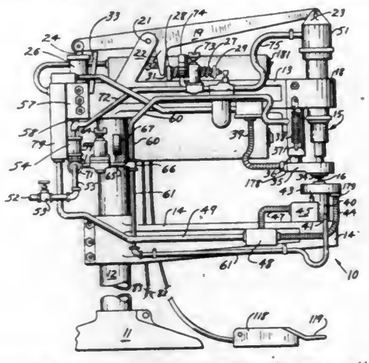
2,455,701

SEED COUNTING AND SELECTING DEVICE

Robert D. Putman and Carleton M. Magoun, Sioux City, Iowa

Application June 18, 1945, Serial No. 600,098
2 Claims. (Cl. 111—38)

1. A seed counting and selecting device comprising a vacuum creating source, a vacuum head connected thereto, said head including a plurality of attenuated tubes having end openings, whereby suction applied through said openings will cause seeds to adhere thereto, means for automatically moving said head and said tubes to a position adjacent to seed attaching position including an eccentric cam member, said head having an extension whereby abutment thereagainst by rotation of the cam member will elevate said head, means for swinging said head to a depositing position including an arm attached to said extension, said cam including a protuberant portion adapted to swing said arm, means for releasing the vacuum in said head when said head is swung to its depositing position including a valve member in said head, means for opening said valve member to cause air pressure to flow in said head when said head is in such depositing position.



2,455,702

METHOD OF FORMING MATERIAL

George D. Rechton, Los Angeles, Delbert J. Ward, Sherman Oaks, and Jack H. Watson, Los Angeles, Calif., assignors to Douglas Aircraft Company, Inc., Santa Monica, Calif.

Original application September 7, 1942, Serial No. 457,630, now Patent No. 2,372,516, dated March 27, 1945. Divided and this application September 20, 1944, Serial No. 555,028
7 Claims. (Cl. 153—21)

1. A method of dimpling between pressurally related forming elements sheets of a material which cannot be satisfactorily formed below its critical slippage point which comprises: radiationally preheating a preselected local portion of a sheet of said material by mounting the sheet between two heating elements held at different degrees of heat with the portion to be dimpled in sufficiently close proximity to the elements as to receive radiant heat therefrom; moving said

elements into engagement with the opposite surfaces of the sheet at the local portion thereof to conductively heat said portion; removing said elements from contact with the opposite surfaces of the sheet; and thereafter applying sufficient percussive flexural force at the center of the heated local portion to properly flexurally form the material without appreciably thinning the same or causing it to appreciably flow.

2,455,703

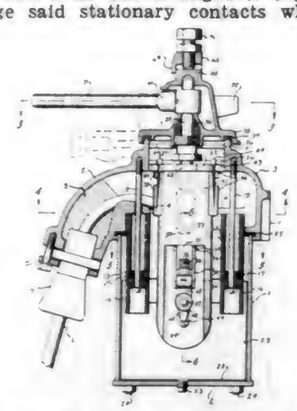
PROCESS OF PURIFYING NUCLEAR-CHLORINATED BIS-PHENOLS BY STEAM DISTILLATION

Louis F. Reuter, Elyria, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York

No Drawing. Application September 17, 1946, Serial No. 697,595
2 Claims. (Cl. 202—46)

1. The process of purifying a crude nuclear-chlorinated alkylidene bis-phenol, which comprises maintaining the crude phenol in the molten state at a temperature in excess of 100° C. but less than 250° C., passing steam superheated to a temperature greater than 185° C. but less than 250° C. into said molten crude, and condensing the vapors evolved.

2,455,704



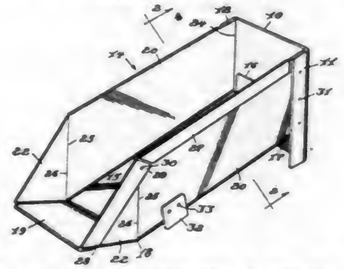
ELECTRICAL CUTOUT

William O. Schultz, South Milwaukee, Wis., assignor to Line Material Company, Milwaukee, Wis., a corporation of Delaware

Original application March 6, 1946, Serial No. 652,323. Divided and this application September 10, 1947, Serial No. 773,125
3 Claims. (Cl. 200—150)

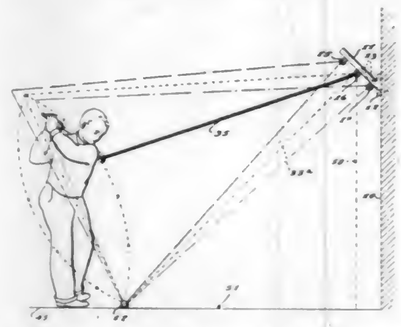
1. An oil switch construction comprising a casing adapted to contain oil, a pair of concentric cylinders of insulating material carried by said casing and having a portion at least projecting into the oil, a pair of stationary contacts carried on the inner side of the inner cylinder, leads extending downwardly in the space between the cylinders and electrically connected to the stationary contacts, an insulating rotor revolubly supported inside of said inner cylinder, and a pair of electrically connected movable contacts car-

ried by said rotor and arranged to engage and disengage said stationary contacts when said



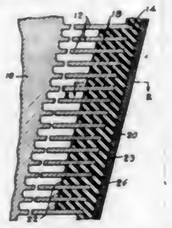
rotor is turned to first or a second position, respectively.

2,455,705
GOLF TEE
John C. Seager, Hartsdale, N. Y.
Application March 5, 1946, Serial No. 652,109
2 Claims. (Cl. 273—33)



2. A golf tee formed of a plastic material and comprising a downwardly tapering stem having at least three downwardly tapering ribs spaced equidistantly thereabout, the lower end of each rib merging with said stem adjacent the lower end thereof to form a single pointed end, and the top end of each of said ribs extending above the top of said stem and consisting of a surface inclined downwardly toward the stem whereby the outer extremities of said top ends constitute the ball-supporting means when a golf ball is positioned on the tee.

2,455,706
INCLINED BIN
Thomas Shaw, Cranston, R. I., assignor to Stack-bin Corporation, a corporation of Rhode Island
Application October 19, 1945, Serial No. 623,305
3 Claims. (Cl. 220—97)



1. A bin having a rear wall, a bottom wall at a location spaced upwardly from the lower edge of the rear wall and inclined at an obtuse angle thereto for the major portion of its extent and then directed upwardly at its mouth portion, side walls folded upwardly from the same piece of material as said bottom wall, one side wall portion being folded along said major portion of the bottom wall and another side wall portion being folded along said mouth portion of the bottom wall, said side wall portions abutting and said mouth portion of the side wall having its upper edge folded outwardly with one end overlapping the adjacent side wall portion and means for securing the overlapping parts together to hold said abutting edges in abutting relation.

2,455,707
GOLF INSTRUCTOR
Andrew D. Sheffer, Brighton, Mich.
Application May 7, 1948, Serial No. 25,609
4 Claims. (Cl. 273—35)

1. An apparatus for practicing the swinging of a golf club comprising a vertical support, a bracket secured to the support at a predetermined height above the base of the support, said bracket being inclined at an acute angle to the support, eyes equally spaced from each other and attached along the inclined bracket, a shoe connected to the head of a golf club, and a flexible member connected between one of the eyes and the shoe, said flexible member being longer than the height of any of the eyes from the ground.

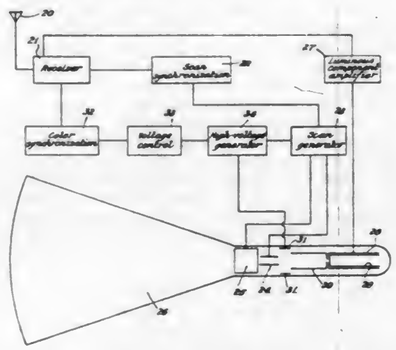
2,455,708
FIN VIBRATION DAMPENER
Frederick S. Sherwin, Fair Lawn, N. J., assignor to Wright Aeronautical Corporation, a corporation of New York
Application February 27, 1947, Serial No. 731,282
9 Claims. (Cl. 257—261)

9. Means for damping vibrations of heat exchange fins projecting from a body, said means comprising a member having spaced projections of rubber-like material extending therefrom for reception between said fins, and a member engageable with said projections for squeezing said projections laterally into engagement with said fins.

2,455,709
BATTERY BOX ASPHALT AND METHOD OF MAKING THE SAME
Wallace E. Speishouse, East Hills, and Arthur H. Boenau, Long Island City, N. Y., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application April 3, 1945, Serial No. 586,456
4 Claims. (Cl. 196—74)

1. That method of making an asphalt suitable for use, together with filler and fibre, in the production of molded battery boxes which comprises the following steps: solvent refining a reduced crude to produce therefrom a solvent extract tar, reducing said tar by distillation to a material of the following properties:

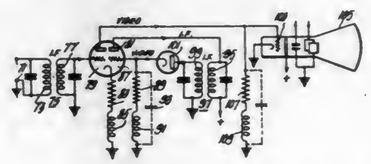
Softening point (R. & B.)----°F. min--	80
Specific gravity @ 77/77° F----min--	1.00
Penetration @ 32° F., 200 gr., 60 sec----	20 to 150
Viscosity furol @ 210° F. secs--------	100 to 750
V. G. C----------min--	.890



and then oxidizing the reduced tar to an asphalt having the following properties:

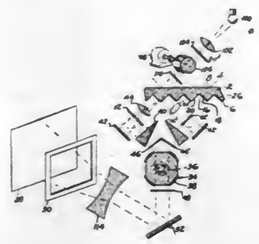
Specific gravity @ 77/77° F------min--	1.03
Softening point (R. & B.) ----------°F--	250–300
Penetration @ 77° F., 100 gr., 5 sec------	0 to 4
Penetration @ 115° F., 50 gr., 5 sec------	1 to 6
Penetration @ 150° F., 50 gr., 5 sec------	5 to 16

3. An asphaltic material, suitable for the making of molded battery boxes when blended only with fibre and filler, having the following properties:



Specific gravity @ 77/77° F------min--	1.03
Softening point (R. & B.) ----------°F--	250–300
Penetration @77° F., 100 gr., 5 sec------	0 to 4
Penetration @ 115° F., 50 gr., 5 sec------	1 to 6
Penetration @ 150° F., 50 gr., 5 sec------	5 to 16

2,455,710
COLOR TELEVISION SYSTEM
Constantin S. Szegho, Chicago, Ill., assignor to The Rauland Corporation, Chicago, Ill., a corporation of Illinois
Application December 21, 1943, Serial No. 515,081
4 Claims. (Cl. 178—5.4)

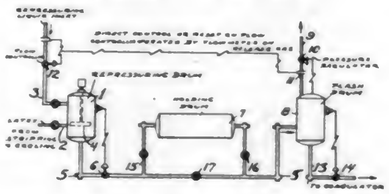


1. Color television receiver employing a cathode ray tube and reproducing screen, said screen including a plurality of phosphors arranged in discrete layers thereupon, each phosphor reproducing in the effective luminous output thereof one of the elemental colors used for color analysis, said receiver also including means for scanningly projecting an electron beam upon all the layers of said screen, and means for varying the potential of said beam, thereby selectively to excite a predetermined one of said phosphor layers.

2,455,711
BIDIRECTIONAL HIGH GAIN AMPLIFIER
George C. Sziklai, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application December 23, 1944, Serial No. 569,503
12 Claims. (Cl. 250—20)

1. A bidirectional amplifier for signal currents of different frequency including first and second amplifying tubes each including an input circuit and an output circuit and having a common cathode circuit whereby said tubes may be operated as mutual cathode followers, means for applying signal currents of one frequency to the input circuit of said first tube, means for applying signal currents of a different frequency to the input circuit of said second tube, means for deriving from said second tube amplified currents of said one frequency, and means for deriving from said first tube amplified currents of said different frequency.

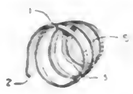
2,455,712
RECORDING DISK FOR SOUND AND PICTURES
Adolph F. von Soden, Los Angeles, Calif.
Application February 25, 1947, Serial No. 730,837
6 Claims. (Cl. 88—16.2)



5. In the apparatus of the class described, comprising a disc mounted upon a vertical rotatable shaft, a two sided angularly spiral groove upon the bottom surface side of said disc, a sensitized film strip mounted upon said sides of said spiral groove, means in said apparatus for imprinting the sound upon the top surface of said disc means, means in said apparatus for photographing pictures in consecutive successions on said sensitized film strip in said disc means, and means in said

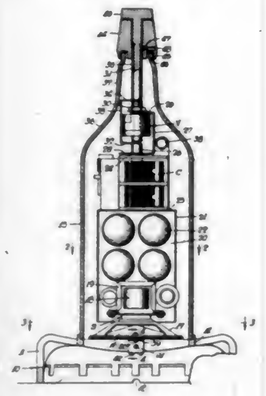
apparatus for controlling the position of said sound imprinting means and for controlling the position of said picture photographing means, during the operation of said apparatus.

2,455,713
PREPARATION OF A SULFIDE CATALYST
Alexis Voorhies, Jr., Baton Rouge, La., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Original application November 3, 1943, Serial No. 508,865. Divided and this application December 4, 1945, Serial No. 632,803
2 Claims. (Cl. 252—248)



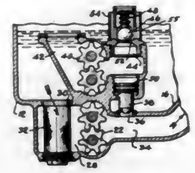
1. A process for preparing a catalyst of improved mechanical strength adapted to promote the hydrogenation of nitro aromatics in the liquid phase which comprises forming a mixture of at least one group 6 metal oxygen-containing compound and a support consisting of alumina and 10% to 40% clay, activating said mixture by heat treatment for a period of 2 hours at a temperature of about 1200° F., subjecting the mixture to a sulfiding treatment whereby the group 6 metal oxygen-containing compounds are converted to the sulfides, and heat treating the sulfided mixture at a temperature of 1300° F. to 1500° F. for a period of 2 to 12 hours to impart mechanical strength thereto.

2,455,714
METHOD FOR THE COAGULATION OF EMULSION POLYMERIZATES
Wendell W. Waterman, Cranford, and Ernest O. Ohsol, Rahway, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
Application December 5, 1942, Serial No. 467,960
4 Claims. (Cl. 260—84.5)



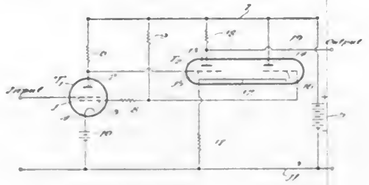
1. The process which comprises continuously combining a latex, obtained by the polymerization in aqueous emulsion of a reaction mixture of butadiene and acrylonitrile and which has been substantially freed from monomers, with an excess of butadiene as repressuring agent, mixing the latex and repressuring agent under a pressure at least equal to the vapor pressure of said repressuring agent to effect sufficient solution of the repressuring agent in the aqueous and non-aqueous phases of the latex to render the latex substantially saturated with repressuring agent at the lower pressure next applied, continuously discharging the treated latex into a flashing zone of lower pressure, venting off the liberated excess repressuring agent, controlling the rate of admission of the repressuring agent so as to maintain a substantially constant differential pressure between the mixing zone and the flashing zone, maintaining a substantially constant pressure in the flashing zone by regulating the rate at which the liberated excess repressuring agent is vented off and continuously adding coagulant brine to the treated latex while the latex contains from about 0.5 to 5% of repressuring agent.

2,455,715
ORNAMENTAL HAIR FILLET
Judith T. Webster, Boston, Mass.
Application January 16, 1947, Serial No. 722,366
6 Claims. (Cl. 132—46)



1. A hair supporting and retaining fillet comprising a resilient head band and a resilient coil connected to said head band, said resilient coil being adapted to encircle and support a coiffure.

2,455,716
RADIO RECEIVER
Shirley Irving Weiss, New York, N. Y.
Application October 11, 1945, Serial No. 621,745
12 Claims. (Cl. 250—14)

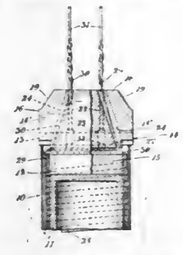


10. A radio receiver unit in the form of an advertising novelty simulating a bottle on a base, said unit comprising a hollow base with ports through the wall thereof for sound emission, said bottle structure being open at its lower end, said base having a bezel supporting the lower edge of the bottle structure, a radio receiver sub-assembly comprising a downwardly facing loud speaker structure, an upstanding panel affixed thereto and rising therefrom, said panel being at a substantial distance from the axis of the bottle structure, radio tubes removably affixed to and extending at right angles to one face of said panel, fixed condensers affixed to said panel at the opposite face thereof, variable circuit control elements, including a variable condenser and a volume-control member, one above the other, rising from the panel and supported thereon, coaxial operating shafts for said condenser and said volume-control member and rising through the neck of said bottle structure, a strap diametrically across the loud speaker and across the bezel and removably affixed to the latter to sustain the radio-received assembly within the bottle structure, an operating knob for one of the variable elements affixed to one of the operating shafts and simulating the bottle neck trim, said knob being telescoped at its outer edge over the rim of the bottle, and an operating button above said knob simulating a bottle stopper and affixed to the other shaft of said unit.

2,455,717
AUTOMATICALLY SUBMERGED SUMP PUMP
Walter L. Weeks, Wyckoff, N. J., assignor to Wright Aeronautical Corporation, a corporation of New York
Application October 9, 1946, Serial No. 702,246
11 Claims. (Cl. 103—11)

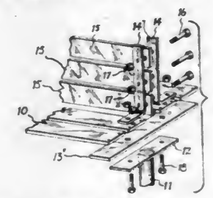
1. In combination, a sump into which a liquid is arranged to drain, a pump operable to remove liquid from said sump, a passage establishing communication between the outlet and inlet sides of said pump, a valve arranged to control said passage, said valve being urged in an opening direction by the output pressure of said pump, and means operable to hold said valve closed against said pump pressure only when the level of the liquid is above said pump to a predetermined extent.

2,455,718
DIRECT-CURRENT AMPLIFIER
Barton L. Weller, Richland, Wash., assignor to the United States of America as represented by the United States Atomic Energy Commission
Application February 27, 1945, Serial No. 580,045
4 Claims. (Cl. 179—171)



1. An electrical amplifier comprising, in combination, a discharge device including a control electrode having an input signal voltage impressed thereon, and a pair of electrodes whose voltages change in opposite directions for a given uni-directional change in input signal voltage and change in the same direction for a given uni-directional change in cathode emission current resulting from causes other than that produced by a change in signal input, circuit means including two triodes having grids connected, respectively, to said pair of electrodes and having interconnected cathodes, resistance means for making said triode grids vary in voltage the same amount and in the same direction for said given uni-directional change of cathode emission current of said first-mentioned discharge device, resistance means in series with one of said triodes to make its cathode follow the potential of its grid and to make the grid and cathode of the other triode ineffective to translate said changes of cathode emission current occurring in said first discharge device, and an output circuit controlled solely by fluctuations in anode potential of said last-mentioned triode.

2,455,719
GLASS MANUFACTURE
Woldemar A. Weyl and Helen S. Williams, State College, Pa., dedicated, by mesne assignments, to the People of the United States of America
No Drawing. Application June 1, 1945, Serial No. 597,144
6 Claims. (Cl. 41—42)



2. The method of dealkalizing glassware surfaces which comprises coating the surfaces with an aqueous dispersion of a clay, drying the coated glassware, and heating the coated glassware to above 150° C. and below the softening temperature of the glassware to effect removal of alkali from the surfaces and combination thereof with the clay.

2,455,720
CORE INSULATOR
Leonard P. Young, Chester, Conn.
Application January 15, 1947, Serial No. 722,134
6 Claims. (Cl. 201—63)

1. In an insulator for resistance wire of electric soldering irons or the like, a substantially narrow, elongated and relatively high two-piece structure adapted for association with the recessed end of a casing for supporting a heating element, said two-piece structure comprising upper and lower cooperating portions, said upper portion having an endwisely reduced downward extension provided with a recess along its entire length, a pair of vertical, parallel lead passages transversing the body of said upper portion and having enlarged ends terminating in the recess, and a pair of inclined, resistance wire-receiving passages extending from the top of the upper portion into and terminating at the ends of the recess; said lower portion having an upwardly directed, centrally disposed rib extending along its entire length, said rib being adapted to project into said recess, whereby the latter is divided into two parallel channels, and to seal the enlarged ends of said lead passages.

2,455,721
AIRWAY MARKER
John Abiuso, New Cumberland, Pa.
Application April 12, 1945, Serial No. 587,974
6 Claims. (Cl. 40—125)

2. A ground marker for aircraft including a substantially flat, horizontal section of substan-

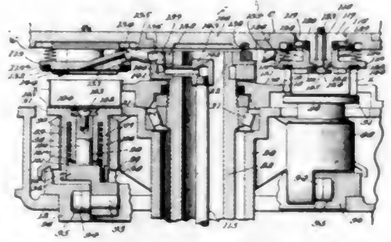
tial length and width composed of a plurality of elongated slats arranged in side-by-side, spaced relation and extending along the length of said section; and a substantially flat, vertical section disposed above said horizontal section and composed of a plurality of elongated slats arranged one above the other in vertically spaced relation, said vertical section being of substantial height and of a length substantially coextensive with that of said horizontal section.

2,455,722

METHOD FOR PRODUCTION OF POLYMERIC BETA,GAMMA-OLEFINIC ALCOHOLS

David E. Adelson and Harold F. Gray, Jr., Berkeley, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application December 8, 1945, Serial No. 633,880
9 Claims. (Cl. 260—80)



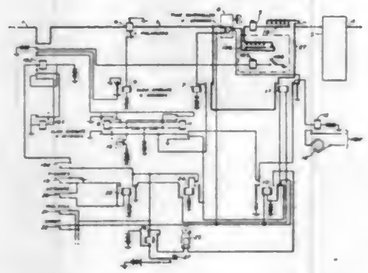
1. A process for the preparation of a polymeric alcohol which comprises heating polymer of an acetal of a saturated aliphatic monoaldehyde of 1 to 6 carbon atoms and an unsaturated monohydric alcohol having from 3 to 9 carbon atoms with an olefinic bond between the beta and gamma carbon atoms thereof in the presence of a substantial amount of a dilute aqueous solution of a strong mineral acid while removing the aldehyde from the reaction mixture substantially as fast as it is liberated by the hydrolysis reaction.

2,455,723

RECEPTACLE-MOVEMENT CONTROLLED FILLING APPARATUS

Gerald L. Ardron, Seattle, Wash., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York

Application May 3, 1943, Serial No. 485,511
5 Claims. (Cl. 226—99)



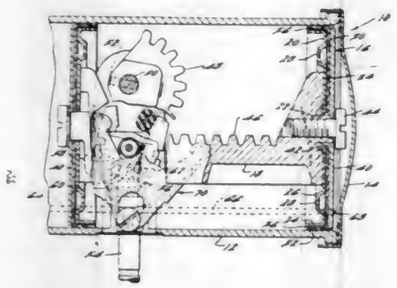
1. In apparatus for delivering liquid to containers, a relatively fixed part formed with a vertical opening through which fluid may be delivered; a filler head under said fixed part; a movable guide member on said filler head; a fixed guide member on said fixed part and having sliding engagement with said movable guide member; a spring interposed between said guide members and urging said filler head downwardly away from said fixed part; a valve port extending through said filler head under said opening; a valve seat on the bottom of said filler head and surrounding said port; a valve member carried by said fixed part and being engageable by said valve seat; and an axially resilient throat member interposed between said vertical opening and said valve port, said throat member engaging said relatively fixed part adjacent said vertical opening and engaging said filler head adjacent said valve port and serving to prevent liquid passing from said opening to said port from contacting said spring and said guide members.

2,455,724

CONTROL OF SELECTORS OVER COMMUNICATION CHANNELS BY STORAGE CONTROLLED TRANSMITTERS

Walter M. Bacon, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Original application August 17, 1940, Serial No. 353,086. Divided and this application February 5, 1943, Serial No. 474,843
18 Claims. (Cl. 178—2)



1. In a communication system, a communication channel including a plurality of stations each provided with teletypewriter receiving mechanism and each provided with a plurality of contact sets selectively operated by said mechanism, transmitting mechanism at said stations, tape transmitters at a minimum of one of said stations, slow-acting means at each of said stations for sending a prolonged calling-in signal over said channel, and means including one of said contact sets at a transmitting station provided with one of said tape transmitters responsive to the transmission of a code for operating said slow-acting means and for correspondingly delaying the operation of said tape transmitter.

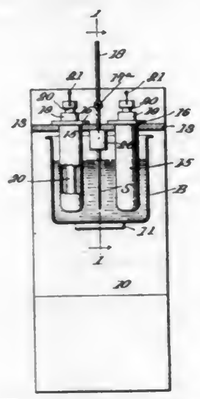
2,455,725

WINDSHIELD WIPER MECHANISM

Rupert B. Bell, Ann Arbor, Mich., assignor to King-Seeley Corporation, Ann Arbor, Mich., a corporation of Michigan

Application June 29, 1943, Serial No. 492,734
8 Claims. (Cl. 309—34)

1. In a fluid motor construction, a casing, a piston slidably disposed therein, said piston including a disc-shaped member, a cup-shaped member superimposed over said disc member having an annular flanged portion which slidably engages the inner walls of said casing, another disc-shaped member interposed between said first two members having resilient portions adjacent the



periphery thereof which engage said flange to resiliently urge said flange into engagement with said inner walls, said first and third named members being so constructed and arranged as to provide a lubrication chamber therebetween, and means formed in one of said first and third named members to conduct the lubricant from said chamber outwardly to the periphery of said second named member.

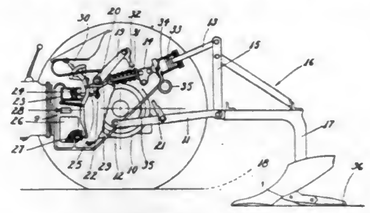
2,455,726

METHOD FOR ELECTROLYTIC STRIPPING AND DETERMINATION OF PLATING METAL

Gordon H. Bendix, Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York

Application July 13, 1942, Serial No. 450,750
4 Claims. (Cl. 204—1)

1. The method of determining the amount of tin present in tin plate having a ferrous base, which comprises magnetically suspending a specimen of the tin plate by its edge in an anolyte containing a standard quantity of elemental iodine in the presence of hydrochloric acid, passing electric current with said specimen as anode and employing a separate catholyte for preventing contact of the cathode hydrogen with the electrolyte, and determining the amount of iodine consumed during the stripping as the direct indication of the amount of tin originally present on the tin plate.



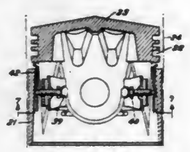
2,455,727

IMPLEMENT CONTROL MEANS FOR TRACTOR MOUNTED AGRICULTURAL IMPLEMENTS

Ernest V. Bunting, Dearborn, Mich., assignor to Harry Ferguson, Inc., Dearborn, Mich., a corporation of Delaware

Application November 23, 1944, Serial No. 564,778
8 Claims. (Cl. 97—50)

1. The combination of a tractor having a piston and cylinder type hydraulic lift motor thereon, means for supplying pressure fluid to said cylinder to effect a relative axial displacement of said piston and cylinder, compression and draft links trailingly pivoted in vertically spaced relation from the rear end portion of the tractor, means for detachably connecting an implement to the rear ends of said links to apply a forward reaction thrust to said compression link in proportion to the draft load imposed on the implement, control means for varying the volume of fluid in said cylinder automatically in response to variations in the thrust on said compression link, means for suspending said draft links from said lift motor for vertical movement thereby, and means associated with said links including an auxiliary piston and cylinder having free pressure communication with said main piston and cylinder, said auxiliary piston and cylinder being so constructed and arranged as to enable piston movement to either side of some intermediate position during the course of normal use.



2,455,728

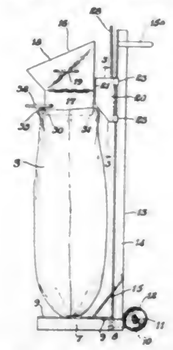
PISTON EXPANDER

David Bushby, Regina, Saskatchewan, Canada, assignor to Vacuum Air Pressure Company Limited, Regina, Saskatchewan, Canada, a company of Saskatchewan, Canada

Application February 25, 1946, Serial No. 649,841
In Canada March 19, 1945
6 Claims. (Cl. 309—12)

5. A piston expander comprising a frame having a relatively rigid member and a resilient member, said members being of generally circular section and concentrically disposed over the major portion of their length with the resilient member outermost, said resilient member being formed with outwardly curved high parts for engagement with the interior wall of a part of a piston skirt to be expanded and inwardly curved low parts positioned out of engagement with the piston skirt, means for securing said frame in a piston skirt, and means carried by said frame for expanding the high parts of the resilient member in an outward direction.

2,455,729



SACK HOLDER

Lawrence Byers, Homeworth, Ohio

Application January 16, 1947, Serial No. 722,341
4 Claims. (Cl. 248—97)

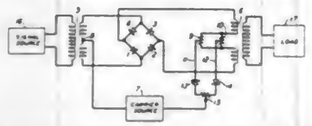
1. A sack holder having a base, wheels at one end of said base for rollably supporting the same, a standard supported on said base adjacent to said wheels and having a smooth edge extending throughout its length, a handle at the upper end of said standard, a hopper slidably and removably mounted on said standard, a friction clamp on said hopper, spring means normally holding said clamp in frictional locking engagement with the smooth edge of said standard at any point, a re-

lease lever connected to said clamp, means on the hopper for engaging the mouth of the sack in

open position, and a gravity latch for gripping the sack against said engaging means.

2,455,730
SULFONATED AROMATIC DERIVATIVES
John R. Caldwell, Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application June 5, 1945, Serial No. 597,707
3 Claims. (Cl. 260—401)

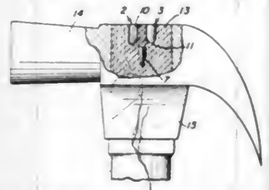
1. As a new chemical compound a sulfonated fatty acid ester of an aryl hydroxyalkyl ether having the graphic formula:



$$(MSO_3)_m—X—O—(Y—O)_n—CO—R$$

wherein M is a positive ion, X is a mononuclear aryl group of the benzene series, Y is an alkylene group containing 2–6 carbon atoms and R is an aliphatic radical selected from the group consisting of the straight chain aliphatic and cycloaliphatic radicals derived from fatty acids containing 10–25 carbon atoms, m is 1–2 and n is 1–3.

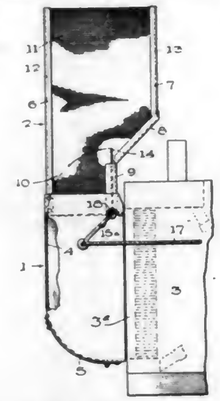
2,455,731
RESINOUS CONDENSATES OF β-PROPIONOLACTONE AND POLYHYDROXY COMPOUNDS
John R. Caldwell, Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application September 10, 1947, Serial No. 773,291
15 Claims. (Cl. 260—2)



1. A resinous condensation product of β-propionolactone and a polyhydric alcohol selected from the group consisting of aliphatic polyhydric alcohols having from 2 to 6 free hydroxyl groups and containing from 2 to 6 carbon atoms; aliphatic monocarboxylic acid esters of aliphatic polyhydric alcohols, said ester having from 2 to 5 free hydroxyl groups, the monocarboxylic acid radical containing from 2 to 18 carbon atoms; alkyl ethers of aliphatic polyhydric alcohols, said ether having from 2 to 5 free hydroxyl groups, the alkyl group containing from 1 to 4 carbon atoms; and alkyl ether-aliphatic monocarboxylic acid esters of aliphatic polyhydric alcohols, said ether-ester having from 2 to 4 free hydroxyl groups, the alkyl group containing from 1 to 4 carbon atoms and the monocarboxylic acid radical containing from 2 to 18 carbon atoms, said β-propionolactone being used in a mol. ratio of 0.5 to 1.5 mols. for each free hydroxyl group of the polyhydric alcohol.

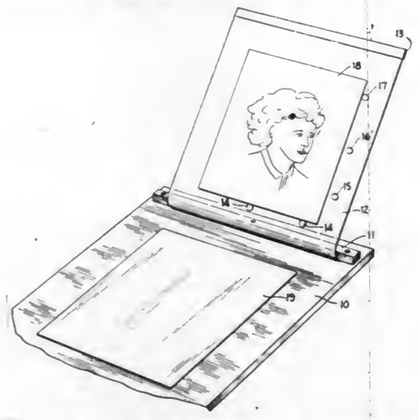
2,455,732
DOUBLE BALANCED MODULATOR
Herman T. Carter, Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 5, 1947, Serial No. 772,385
19 Claims. (Cl. 179—171.5)

1. In combination, a bridge circuit comprising at least four asymmetrically conducting elements disposed in respective arms thereof, a source of alternating current, a first divided connection from one side of said source to one pair of terminals of said bridge circuit, a pair of additional oppositely poled asymmetrically conducting elements, a second divided connection from the other side of said source to one side of each of said additional asymmetrically conducting elements, and connections from each of the other pair of bridge terminals to the other sides of both of said additional asymmetrically conducting elements, one pair of said bridge elements being poled to receive current predominantly from one of said additional asymmetrically conducting elements, and the other pair of said bridge elements being poled in the opposite direction to receive current predominantly from the other of said additional asymmetrically conducting elements.



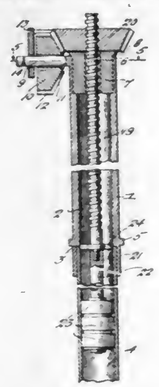
2,455,733
TOOL HANDLE WEDGE
Donald F. Christoffer, Spirit Lake, Iowa
Application January 25, 1946, Serial No. 643,238
1 Claim. (Cl. 306—33)

A locking wedge for tool handles comprising a substantially H-shaped body, integral bits radially disposed on the body and extending longitudinally thereof, said bits having cutting edges at the bottom portions thereof and smoothly contoured arcuate walls extending from the cutting edges, a locking bit having an arcuate cutting edge, said locking bit being integral with said body and having a flat upper surface spaced from the cutting edges of said first mentioned bits, grooves formed between certain of said bits, the said locking bit adapted to form an initial cleavage in a handle, the cleaved portions of which are adapted to be fractured by the cutting edges of the bits, and the fractured portions of the handle being distorted torsionally between the bits.



2,455,734
RADIATOR SHIELD
Leon R. Clausen, Racine, Wis., assignor to J. I. Case Company, Racine, Wis., a corporation
Application July 26, 1944, Serial No. 546,681
3 Claims. (Cl. 183—53)

1. In a screening device for engine cooling air, a radiator shield comprising a lower section adapted to be mounted in front of a radiator and an upper section having its upper portion of materially greater girth than the lower section, and further having a restricted lower portion attached to the lower section, said upper section having front and rear screened walls and further having screened side walls merging into a rounded screened top wall, a damper pivotally supported

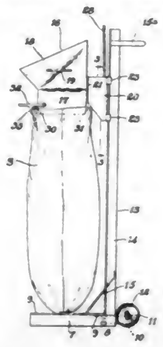


at the region of the restricted lower portion of the upper section, spring means normally urging the damper to open position and manually operable means connected with the damper for moving the same to closed position against the action of said spring means for interrupting the draft through said upper section for dropping accumulations of suspended material from the screened walls.

2,455,735
REGISTRATION OF COLOR SEPARATION IMAGES
Louis M. Condax, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application April 12, 1945, Serial No. 588,013
3 Claims. (Cl. 101—211)

1. The method of registering photographic transfer images which comprises producing a plurality of relief images representing different color sensation records of an object on separate supports, cutting straight lines along at least two adjacent edges of said supports when the images thereon are in register, soaking said relief images in a transfer solution, applying said supports carrying said relief images successively to a sheet of material having low shrink-and-swell amplitude, securely fastened at one end to a rigid support, and having stops cooperating with said adjacent edges of the supports to register said images, and pressing said relief images successively into contact with a receiving blank for said transfer solution on said rigid support.

2,455,736
WELL CYLINDER VALVE PULLER
Clarence Conley, Adamsville, Tex.
Application May 7, 1946, Serial No. 667,919
1 Claim. (Cl. 254—29)



A well cylinder valve puller including a tube detachably seated on a well casing, said tube having a depending retaining collar adapted to engage around the upper end of the casing and an upwardly facing annular shoulder adjacent the upper end thereof, a supporting block having a central bore received in the upper end of the tube and seated on said shoulder and having a lateral flange on the upper end thereof received on the upper end of the tube, a jack screw reciprocably mounted in said bore and extending into the well casing, a coaxially reduced threaded inner end on said screw for positioning in a sucker rod in the well casing, a bevel gear rotatably supported on said supporting block and having a center threaded bore for operatively receiving the jack screw, a stud extending laterally from the upper end of the tube, a bevel gear complementary to the bevel gear on the block rotatably received on said stud and ratchet means for rotating said gears to actuate said jack screw.

2,455,737
METHOD OF ATTACHING METAL CLOSURES TO CONTAINERS
John Coyle, Baltimore, Md., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application July 29, 1944, Serial No. 547,181
1 Claim. (Cl. 113—120)

The method of attaching metal closure ends to container bodies having flat sides and rounded corners consisting in forming a metal closure end with a depression surounded by a wall adapted to fit within the flat sides and rounded corners of the container body, and a flange extending outwardly all the way around the closure end, which flange overlies the body wall when

lease lever connected to said clamp, means on the hopper for engaging the mouth of the sack in

open position, and a gravity latch for gripping the sack against said engaging means.

2,455,730

SULFONATED AROMATIC DERIVATIVES

John R. Caldwell, Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application June 5, 1945, Serial No. 597,707
3 Claims. (Cl. 260—401)

1. As a new chemical compound a sulfonated fatty acid ester of an aryl hydroxyalkyl ether having the graphic formula:

$$(MSO_3)_m—X—O—(Y—O)_n—CO—R$$

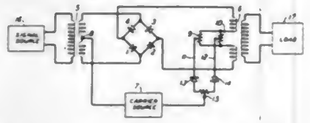
wherein M is a positive ion, X is a mononuclear aryl group of the benzene series, Y is an alkylene group containing 2–6 carbon atoms and R is an aliphatic radical selected from the group consisting of the straight chain aliphatic and cycloaliphatic radicals derived from fatty acids containing 10–25 carbon atoms, m is 1–2 and n is 1–3.

2,455,731

RESINOUS CONDENSATES OF β-PROPIONOLACTONE AND POLYHYDROXY COMPOUNDS

John R. Caldwell, Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application September 10, 1947, Serial No. 773,291
15 Claims. (Cl. 260—2)



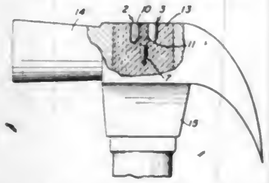
1. A resinous condensation product of β-propionolactone and a polyhydric alcohol selected from the group consisting of aliphatic polyhydric alcohols having from 2 to 6 free hydroxyl groups and containing from 2 to 6 carbon atoms; aliphatic monocarboxylic acid esters of aliphatic polyhydric alcohols, said ester having from 2 to 5 free hydroxyl groups, the monocarboxylic acid radical containing from 2 to 18 carbon atoms; alkyl ethers of aliphatic polyhydric alcohols, said ether having from 2 to 5 free hydroxyl groups, the alkyl group containing from 1 to 4 carbon atoms; and alkyl ether-aliphatic monocarboxylic acid esters of aliphatic polyhydric alcohols, said ether-ester having from 2 to 4 free hydroxyl groups, the alkyl group containing from 1 to 4 carbon atoms and the monocarboxylic acid radical containing from 2 to 18 carbon atoms, said β-propionolactone being used in a mol. ratio of 0.5 to 1.5 mols. for each free hydroxyl group of the polyhydric alcohol.

2,455,732

DOUBLE BALANCED MODULATOR

Herman T. Carter, Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application September 5, 1947, Serial No. 772,385
19 Claims. (Cl. 179—171.5)



1. In combination, a bridge circuit comprising at least four asymmetrically conducting elements disposed in respective arms thereof, a source of alternating current, a first divided connection from one side of said source to one pair of terminals of said bridge circuit, a pair of additional oppositely poled asymmetrically conducting elements, a second divided connection from the other side of said source to one side of each of said additional asymmetrically conducting elements, and connections from each of the other pair of bridge terminals to the other sides of both of said additional asymmetrically conducting elements, one pair of said bridge elements being poled to receive current predominantly from one of said additional asymmetrically conducting elements, and the other pair of said bridge elements being poled in the opposite direction to receive current predominantly from the other of said additional asymmetrically conducting elements.

2,455,733

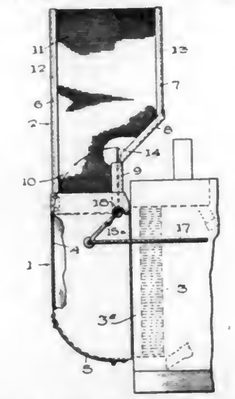
TOOL HANDLE WEDGE

Donald F. Christoffer, Spirit Lake, Iowa

Application January 25, 1946, Serial No. 643,238
1 Claim. (Cl. 306—33)

A locking wedge for tool handles comprising a substantially H-shaped body, integral bits radially disposed on the body and extending longitudinally thereof, said bits having cutting edges at the bottom portions thereof and smoothly contoured arcuate walls extending from the cutting edges, a locking bit having an arcuate cutting edge, said locking bit being integral with said body and having a flat upper surface spaced from the cutting edges of said first mentioned bits, grooves formed between certain of said bits, the said locking bit adapted to form an initial cleavage in a handle, the cleaved portions of which are adapted to be fractured by the cutting edges of the bits, and the fractured portions of the handle being distorted torsionally between the bits.

2,455,734



RADIATOR SHIELD

Leon R. Clausen, Racine, Wis., assignor to J. I. Case Company, Racine, Wis., a corporation

Application July 26, 1944, Serial No. 546,681
3 Claims. (Cl. 183—53)

1. In a screening device for engine cooling air, a radiator shield comprising a lower section

adapted to be mounted in front of a radiator and an upper section having its upper portion of materially greater girth than the lower section, and further having a restricted lower portion attached to the lower section, said upper section having front and rear screened walls and further having screened side walls merging into a rounded screened top wall, a damper pivotally supported

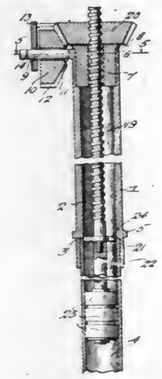
at the region of the restricted lower portion of the upper section, spring means normally urging the damper to open position and manually operable means connected with the damper for moving the same to closed position against the action of said spring means for interrupting the draft through said upper section for dropping accumulations of suspended material from the screened walls.

2,455,735

REGISTRATION OF COLOR SEPARATION IMAGES

Louis M. Condax, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

Application April 12, 1945, Serial No. 588,013
3 Claims. (Cl. 101—211)



1. The method of registering photographic transfer images which comprises producing a plurality of relief images representing different color sensation records of an object on separate supports, cutting straight lines along at least two adjacent edges of said supports when the images thereon are in register, soaking said relief images in a transfer solution, applying said supports carrying said relief images successively to a sheet of material having low shrink-and-swell amplitude, securely fastened at one end to a rigid support, and having stops cooperating with said adjacent edges of the supports to register said images, and pressing said relief images successively into contact with a receiving blank for said transfer solution on said rigid support.

2,455,736

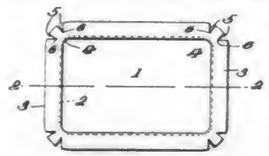
WELL CYLINDER VALVE PULLER

Clarence Conley, Adamsville, Tex.

Application May 7, 1946, Serial No. 667,919
1 Claim. (Cl. 254—29)

A well cylinder valve puller including a tube detachably seated on a well casing, said tube having a depending retaining collar adapted to engage around the upper end of the casing and an upwardly facing annular shoulder adjacent the upper end thereof, a supporting block having a central bore received in the upper end of the tube and seated on said shoulder and having a lateral flange on the upper end thereof received on the upper end of the tube, a jack screw reciprocably mounted in said bore and extending into the well casing, a coaxially reduced threaded inner end on said screw for positioning in a sucker rod in the well casing, a bevel gear rotatably supported on said supporting block and having a center threaded bore for operatively receiving the jack screw, a stud extending laterally from the upper end of the tube, a bevel gear complementary to the bevel gear on the block rotatably received on said stud and ratchet means for rotating said gears to actuate said jack screw.

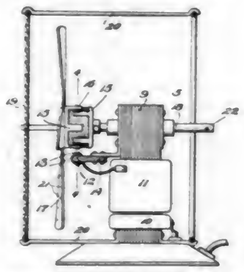
2,455,737



METHOD OF ATTACHING METAL CLOSURES TO CONTAINERS

John Coyle, Baltimore, Md., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York

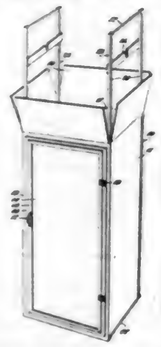
Application July 29, 1944, Serial No. 547,181
1 Claim. (Cl. 113—120)



The method of attaching metal closure ends to container bodies having flat sides and rounded corners consisting in forming a metal closure end with a depression surounded by a wall adapted to fit within the flat sides and rounded corners of the container body, and a flange extending outwardly all the way around the closure end, which flange overlies the body wall when

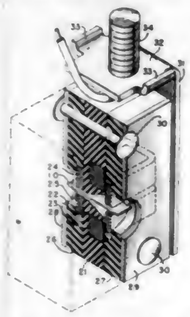
the closure is placed therein, cutting the flange at each corner so as to provide two V-shaped notches located at the end of the straight side portions of the flange and terminating in the flange at the outside of the body wall, said notches being of a size so that the sides of the retained portions of

the flange at the rounded corners are substantially parallel, placing said metal closure end on the container body and curling the flange downwardly and inwardly into locking engagement with the body member to provide a smooth substantially continuous portion with the side edges of the notches in contact.



2,455,738
ELECTROSTATIC AIR FILTER AND CIRCULATOR
George W. Crise, Columbus, Ohio
Application June 30, 1945, Serial No. 602,551
8 Claims. (Cl. 183—7)

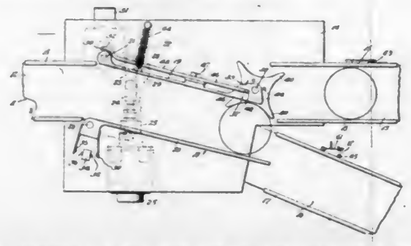
1. An electrostatic air filter and fan comprising: a synchronous alternating current motor including a stator having a frame, an armature, an armature shaft, a primary low-voltage winding on the stator, a secondary high-voltage winding disposed on the stator in inductive relationship to the low-voltage winding, and a current-rectifying commutator fixed to rotate with the armature shaft, a bladed fan rotatable with said commutator, a metallic fan guard carried by the stator frame, the periphery of said commutator being formed with electrically spaced bars carrying radially extending electrodes, alternate bars of said commutator being electrically joined with said armature shaft and said fan, and spaced sets of stationary electrodes joined with the secondary winding and insulated from said stator frame, said stationary electrodes being disposed in close physical relation to but without actual contact with the electrodes of said commutator bars.



2,455,739
COLLAPSIBLE STORAGE CABINET
Edma H. Curtis, Cincinnati, Ohio, assignor to The Nivison-Weiskopf Company, Reading, Ohio, a corporation of Ohio
Application June 2, 1945, Serial No. 597,194
4 Claims. (Cl. 312—144)

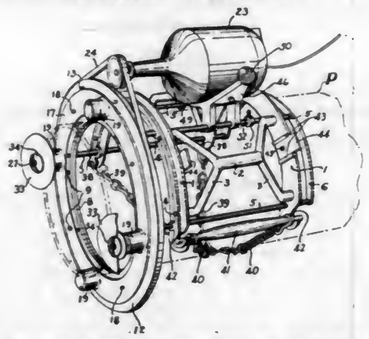
1. A collapsible cabinet comprising paperboard wall members hinged to one another at their longitudinal edges and, by virtue of said hinged connections, being collapsible into flat-folded form, frame members adapted respectively for facial engagement with opposite side walls of the cabinet at the interior thereof, the said frame members having longitudinal members residing adjacent the said walls of the cabinet which are

contiguous to said opposite side walls, and members for maintaining said frames in spaced relationship to one another against inward collapse thereof, one of said hinged walls having a die-cut opening therein, and a frame and door assembly carried by said wall upon the margin of said die-cut opening.



2,455,740
MAGNETOSTRICTIVE TIME-DELAY DEVICE
Leslie F. Curtis, Haydenville, Mass., assignor to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application November 12, 1947, Serial No. 785,425
16 Claims. (Cl. 178—44)

16. In a time-delay signal-translating device including a magnetostrictive converter, a coupler assembly for coupling to said converter comprising: a supporting member of insulating material having a transversely extending, tapered aperture through which said converter projects and having a winding receiving recess surrounding said aperture; a winding supported in said recess to enclose a predetermined section of said converter and effective to magnetize said section longitudinally; at last one pole shoe of magnetic material having high permeability, high resistivity to eddy currents and substantially no residual magnetization, said pole shoe including portions which are positioned on opposite sides of said member, overlapping said recess thereof and extending approximately to the surface of

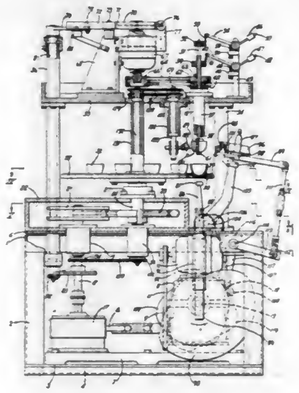


said converter, thereby to provide a low reluctance flux path for said winding comprising substantially only said predetermined section of said converter and to confine the magnetizing effect of said winding substantially to said section of said converter, additional insulating members positioned on opposite sides of said supporting member overlying said pole shoe and having apertures in coaxial alignment with said aperture of said supporting member and conductive shield plates apertured to receive said converter and positioned on the remote sides of said additional members.

2,455,741
AUTOMATIC CAN DISTRIBUTOR
Thomas C. Dodge, Seattle, Wash., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application April 23, 1946, Serial No. 664,389
8 Claims. (Cl. 198—31)

7. Means for automatically distributing a succession of cans or the like into a plurality of runways in accordance with their several capacities, comprising a conveyor for feeding the cans, a main discharge conveyor and a secondary discharge conveyor, a pivoted gate from the feed conveyor, a star-wheel mounted to rotate across the gate, means operable by the filling of either discharge conveyor to its capacity to lock the star-wheel against rotation, means for shifting said gate to discharge cans into the secondary conveyor, means for shifting said gate back to the main discharge conveyor, and means operable by the completion of the shifting of the gate to release the star-wheel for free rotation.

2,455,742
PIPE GRINDER
Rudolph P. Dorian, Wichita Falls, Tex.
Application June 26, 1946, Serial No. 679,407
13 Claims. (Cl. 51—241)



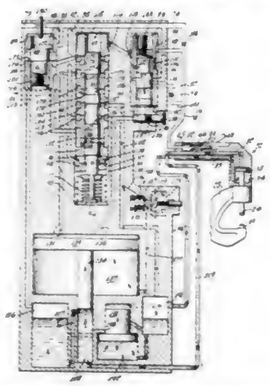
3. In a machine for grinding an end of a pipe, the combination of a main frame including spaced arcuate frame members adapted to be mounted on a pipe, abrasive means carried thereby, and a flexible device for securing the main frame on the pipe, said flexible device being connected with the arcuate frame members at one end thereof, each of said arcuate members having a catch at the opposite end thereof, and a bar connected with the flexible device and detachably engaging the catches.

2,455,743
WATER DISPERSIBLE COATING VEHICLE
George E. Ellerman, Milwaukee, Wis., assignor to Pittsburgh Plate Glass Company, a corporation of Pennsylvania
No Drawing. Original application December 10, 1943, Serial No. 513,727. Divided and this application October 23, 1945, Serial No. 624,089
7 Claims. (Cl. 260—22)

1. A process of forming a water-emulsifiable, air drying coating composition from the reaction product of glycerol, rosin and linseed oil, which process comprises treating said product with maleic anhydride at a temperature of about 200° C. for a period of about one hour to form an addendum product therewith, hydrolyzing the product with water by heating to approximately 100 to 130° C. and neutralizing the product with a mixture of sodium silicate and a basic nitrogen compound soluble in water and consisting of ammonia and alkylol amines and morpholine.

2,455,744
CUP FINISHING APPARATUS
Walter H. Emerson, East Liverpool, Ohio, assignor to The Homer Laughlin China Company, Newell, W. Va., a corporation of Delaware
Application June 21, 1947, Serial No. 756,257
24 Claims. (Cl. 25—22)

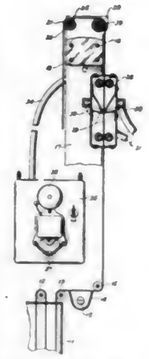
1. Cup finishing apparatus comprising a cup-receiving chuck rotatable on a vertical axis, vertically movable means below the chuck adapted to support an upright partially dried clay cup, lifting means for periodically raising said cup-supporting means to fit successive cups over said chuck, a finishing tool disposed beside the chuck, driving means for rotating the chuck with a cup thereon, and actuating means for moving the tool into contact with the cup on the rotating chuck.



2,455,745
STABILIZATION OF STYRENE AND POLYMERIZABLE RING CHLORINATED STYRENES
Edwin R. Erickson, Niagara Falls, N. Y., assignor to Mathieson Chemical Corporation, a corporation of Virginia
No Drawing. Application November 19, 1943, Serial No. 510,924
10 Claims. (Cl. 260—650)

1. The method of inhibiting the polymerization of a compound of the group consisting of styrene and polymerizable ring chlorinated styrenes which comprises incorporating therein a 2,5-dialkoxyhydroquinone.

2,455,746
STABILIZATION OF VINYL AROMATIC COMPOUNDS
Edwin R. Erickson, Niagara Falls, N. Y., assignor to Mathieson Chemical Corporation, a corporation of Virginia
No Drawing. Application March 30, 1944, Serial No. 528,777
17 Claims. (Cl. 260—650)

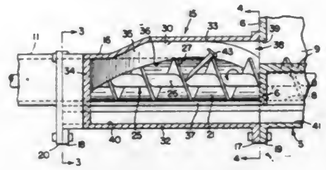


1. A compound selected from the group consisting of styrene and polymerizable ring chlorinated styrenes having dissolved therein as a stabilizer a 2,5-disubstituted hydroquinone in which the substituents are selected from the group consisting of alkyl and aralkyl radicals.

2,455,747
VALVE CONTROL FOR FLUID LEVELS IN HYDRAULIC POWER PLANTS
Howard R. Fischer and Edward W. Stevens, Detroit, Mich., assignors to Chicago Pneumatic Tool Company, New York, N. Y., a corporation of New Jersey
Original application November 18, 1939, Serial No. 305,204, now Patent No. 2,365,536, dated December 19, 1944. Divided and this application October 21, 1944, Serial No. 559,762
8 Claims. (Cl. 60—51)

2. In a hydraulic system, the combination of a cylinder, a motor piston reciprocable therein, a pair of oil reservoirs in communication with the respective ends of said cylinder, means for applying air pressure in alternate ones of said reservoirs to actuate said piston, a passageway connecting said reservoirs independently of the cylinder, a first means settable to effective and ineffective positions for controlling the flow of oil in one direction through said passageway, and a second means settable to effective and ineffective positions for controlling the flow of oil in the opposite direction through said passageway and operable when in effective position to set the first settable means in ineffective position.

2,455,748
POSITION INDICATOR DEVICE FOR FILM STRIP
Harold L. Fitch, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application December 15, 1945, Serial No. 635,242
9 Claims. (Cl. 177—311)

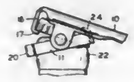


6. In an apparatus for the continuous treatment of a strip of film by a reversal process, said film comprising a base, one side of which is coated with a photographic emulsion, the combination with a printing station, of a roller over which said film strip is arranged to move, said roller comprising a hub of insulation material and a pair of spaced electrically conducting flanges engaged and spanned by said film, a signal device, electrical actuating means connected into the circuit of said flanges and said signal device, and means positioned in advance of said roller for removing surface moisture from said base and emulsion to surface-dry said strip, said dry base being non-conductive and serving to insulate said flanges from each other when the base side of said film is against said roller to render the signal device inoperative, but the inadvertent turning of said strip to bring the emulsion side thereof against said roller serving to electrically connect said flanges through said emulsion to close the circuit through said signal device to render the latter operative to indicate that the strip has been turned over.

2,455,749
CONDIMENT
Aladar Fonyo, La Grange, Ill., assignor to Wm. J. Stange Co., Chicago, Ill., a corporation of Illinois
No Drawing. Application March 15, 1946, Serial No. 654,807
3 Claims. (Cl. 99—140)

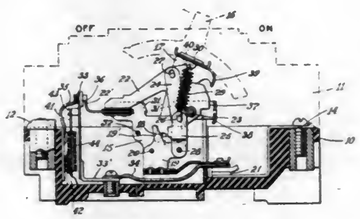
1. A condiment, characterized by the substantial immunity of its content of pungent and aromatic derivatives of black pepper from deterioration by the salt with which they are associated, comprising a major quantity of finely divided common salt, and a minor quantity of a viscous partly liquid and partly crystalline extraction of black pepper including its naturally occurring chlorophyll oleoresin, volatile pepper oil and piperine.

2,455,750
SCRAP SEPARATOR FOR MATERIALS CONVEYER
Edward A. Freed, Moline, Ill.
Application April 3, 1944, Serial No. 529,247
7 Claims. (Cl. 198—64)



7. For use with a hopper for fluent solids, a materials conveyor comprising a housing having a flared entrance adapted to communicate with said hopper and a cylindrical passage, an auger extending through said entrance from said hopper and through said passage and having a continuous helical vane for moving the fluent solids from said hopper into and through said passage, a portion of said passage having an opening communicating with the interior of said housing, said opening being defined by a continuous helical upper edge curving over the top of said auger, said upper edge extending down said one side of said auger, and a lower edge extending axially along the bottom of said passage, said housing having side and bottom walls spaced laterally and downwardly from said upper and lower edges of said opening, respectively, to provide a receptacle for said infrangible objects.

2,455,751
ALLOYS FOR MAKING CAST IRON
Albert Paul Gagnebin, Red Bank, N. J., Leslie Louis Seigle, Philadelphia, Pa., and James Sebold Vanick, Westfield, N. J., assignors to The International Nickel Company, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application April 16, 1946, Serial No. 662,616. In Canada March 15, 1946
7 Claims. (Cl. 75—171)

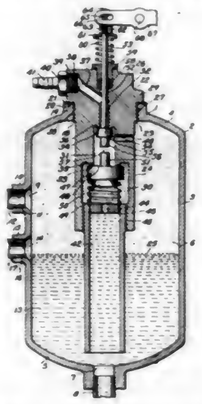


1. An addition alloy for the production of improved cast irons comprising about 11% to about 17% silicon, about 9% to about 11% chromium, about 14% to about 17% molybdenum, about 0.4% to about 1.0% calcium, about 6% to about 11% iron, and the balance essentially nickel and constituting about 48% to about 53% of the alloy.

2,455,752
BOTTLE OPENER
Ernest Geh, Rocky River, Ohio
Application December 7, 1946, Serial No. 714,838
5 Claims. (Cl. 81—3.46)

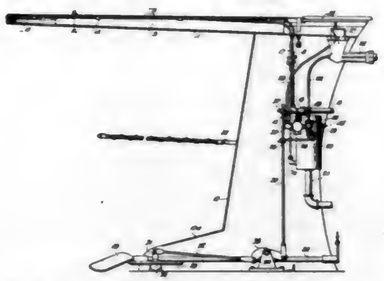
5. A device for removing crown caps from glass bottles, comprising a supporting member in the form of an annulus adapted to embrace the crimped flange of the bottle cap and to rest at one point upon the bulge of the bottle neck below said flange and at an opposite point provided with a foot adapted to rest upon the rim of the cap above the bottle neck, and a lever member pivoted upon the supporting member on a transverse axis lying intermediate said two points and at a level above the lower edge of the cap flange and having a depending claw member adapted for engagement beneath the edge of the cap flange for prying the cap loose upon operation of said lever, the claw member of said lever member and the foot of said supporting member being disposed on opposite sides of the pivotal axis of said lever, said annular supporting member having an outwardly extending U-shaped portion in the path of travel of said claw member and providing a recess through which said claw member extends and travels.

2,455,753
THERMAL CIRCUIT BREAKER
Benjamin E. Getchell, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a corporation of Connecticut
Application October 10, 1944, Serial No. 557,961
3 Claims. (Cl. 200—116)



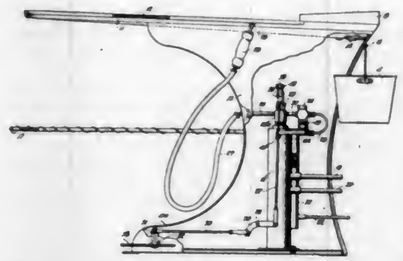
1. In an electric switch construction, an insulating housing containing the stationary and movable contacts and including a spring-pressed movable member, a thermostatic latch in the switch circuit normally restraining said movable member and adapted to release said movable member in case of a predetermined change in the condition in the circuit in which the switch is connected, an auxiliary compensating thermostatic member mounted in the housing alongside of but independently of the thermostatic latch and independent of the electric circuit and having a sliding connection with the thermostatic latch and having a substantial contact with a wall of the housing whereby both thermostatic members are subject to same changes in ambient atmospheric temperature but in offsetting directions and the compensating thermostatic member is delayed by the heat conducted to the housing wall when the latch is heated electrically.

2,455,754
DEVICE FOR TEMPERING STEAM
William C. Glover, Jr., Lee's Summit, Mo., assignor to Bill Glover Incorporated, a corporation of Missouri
Application March 10, 1945, Serial No. 582,111
11 Claims. (Cl. 261—51)



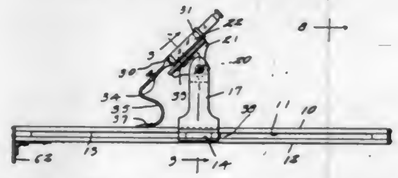
1. An apparatus of the character described including a vessel for containing a body of liquid and having means for limiting the maximum level that the liquid can attain in the vessel to provide a steam space above said liquid, a steam inlet connection for the vessel, a steam tempering unit including a valve body having a steam

chamber and an interconnected tempering liquid chamber, a duct having an inlet located within the body of liquid contained in the vessel and connected with the tempering liquid chamber for flow of liquid from the vessel into the tempering chamber under pressure of the steam acting on the body of liquid in said vessel, a valve controlling flow of tempering liquid from the tempering liquid chamber into the steam chamber, said steam chamber having a steam inlet connected with the steam space in the vessel



and an outlet, the last mentioned inlet being restricted in size as compared with said outlet, a valve controlling said outlet and having lost motion connection with the first-named valve, and means for actuating the last-named valve for discharging steam from the steam space in said vessel through said outlet and for opening the first-named valve for admitting liquid from the tempering liquid chamber into the steam chamber for tempering said steam when the last-named valve is moved a sufficient distance to actuate the first-named valve.

2,455,755
STEAM VACUUM FINISHER
William C. Glover, Jr., Kansas City, Mo., assignor to Bill Glover Incorporated, a corporation of Missouri
Application February 18, 1946, Serial No. 648,267
3 Claims. (Cl. 68—6)

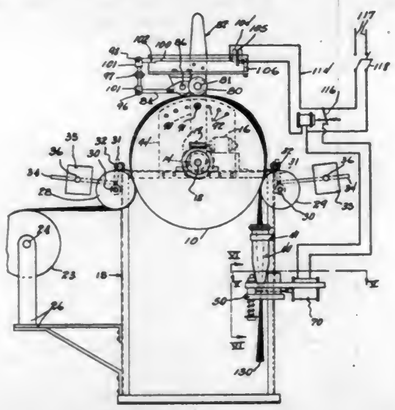


1. A steam vacuum finisher comprising a pedestal, a shallow pan supported thereby, a foraminous sheet covering the pan, a heating coil within the pan in heat exchange relation with said sheet, a nozzle for injecting an open steam supply into the pan beneath the foraminous sheet, a steam vacuum injector connected with the pan for imposing vacuum conditions on the pan, a steam separator carried by the pedestal and pipe connections for introducing steam to the separator through the coil, separate steam supply lines from the separator to the nozzle and from the separator to the vacuum injector, and controls optionally operable for separately delivering steam to the nozzle and vacuum injector.

2,455,756
MECHANISM FOR SUPPLYING STEAM AND HEATED AIR TO SPOTTING MACHINES
William C. Glover, Jr., Kansas City, Mo., assignor to Bill Glover Incorporated, a corporation of Missouri
Application February 18, 1946, Serial No. 648,268
3 Claims. (Cl. 68—6)

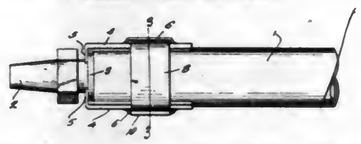
1. In a spotting board, a spotting nozzle, a receptacle having a steam inlet and a steam outlet, a discharge line connecting the receptacle to the nozzle, a valve in the discharge line for controlling the flow of steam therethrough to the nozzle, an air supply line connected to said discharge line, a valve in the air line for controlling the flow of air through the air line to the discharge line and hence to the nozzle, the air supply line including an elongated tube supported by the receptacle on the outside thereof with the wall of the tube in engagement with the wall of the receptacle to facilitate the transfer of heat therebetween, an actuating device common to said valves and movable in either direction from a neutral position, and linkage from the device to the valves adapted to open only one valve when the device is moved in one direction from neutral and to open only the other valve when the device is moved in the other direction from neutral.

2,455,757
DEVICE FOR ADMINISTERING ANESTHETICS
Ella S. Graybeal, Great Falls, Mont.
Application April 16, 1945, Serial No. 588,618
5 Claims. (Cl. 311—10)



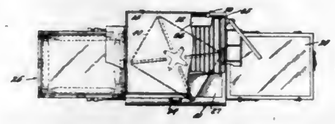
3. An apparatus for giving an anaesthetic comprising an arm board including upper and lower members, spacing elements to maintain said members in spaced relation, a laterally extending member slidable between said upper and lower members, bracing means slidable on said upper and lower members and said slidable member for holding said sliding member against all but sliding movement on said arm board, locking means fixing said arm board, said sliding member, and said bracing means against sliding movement therebetween, a second slidable member on said first slidable member and an anaesthetic container supporting platform rockably mounted on said second slidable member.

2,455,758
METHOD OF PREPARING A MINERAL BINDER
Herbert Hans Greger, Washington, D. C.
No Drawing. Application December 10, 1941, Serial No. 422,460
1 Claim. (Cl. 106—85)



A method of preparing a mineral binder comprising forming a homogeneous dry mixture of aluminum sulphate capable of liquefying in its water of crystallization calcium phosphate and an insolubilizing basic compound selected from the group consisting of barium carbonate and lead oxide capable of reacting with the metal salt in a molten condition and thereafter submitting the dry mixture to heat and pressure to liquefy the aluminum sulphate and react the calcium phosphate and insolubilizing compound therewith.

2,455,759
METHOD OF MANUFACTURING SYNTHETIC BRISTLES FOR BRUSHES.
John J. Gregory, Creighton, Pa., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania
Application April 28, 1944, Serial No. 533,206
5 Claims. (Cl. 300—21)

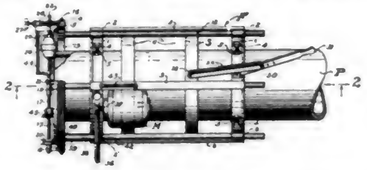


1. In a method of cutting tapered synthetic bristles to measured lengths from continuously fed bristle stock composed of successively tapered portions, the steps which comprise shearing the bristle stock to double length bristle sections at intervals according to the intervals of tapering, gathering the cut double length sections of stock with thinner portions of all the cut sections bunched together, subsequently further cutting the sections to single length bristles while maintaining together the respective thinner and thicker portions preparatory to incorporation of the bristles into a brush.

2,455,760
HOSE CLAMP
Gustaf Gustafson, Yakima, Wash.
Original application January 20, 1943, Serial No. 472,999. Divided and this application January 31, 1945, Serial No. 575,411
1 Claim. (Cl. 285—84)

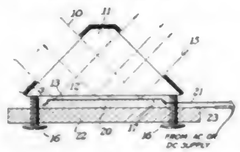
A hose clamp comprising, in combination, a pair of similar separate clips in the form of elongated sheets of arcuate cross section adapted to be mounted and secured longitudinally of and upon opposite sides of a hose and to partially embrace the latter to secure a flanged fitting therein, each clip having an inturned hook at one end engageable with the flange of the fitting and having a longitudinal loop struck outwardly therefrom intermediate the sides thereof to form a slot in the clip inwardly of the loop, and a separate metallic strap having an end inserted outwardly through the slot of one clip and bent back over the latter at one side of its slot, said strap being tightly passed around one side of the hose and beneath the other clip, then tightly around the other side of the hose and through the loop of said one clip, then tightly around both sides of the hose and through the loops of both clips, the other end of the strap being bent over the loop of said one clip to secure the strap in tight condition with the hose compressed on the fitting.

2,455,761
PRINTING PLATE WHIRLER
Fred A. Hacker, Cranford, N. J., assignor, by mesne assignments, to American Type Founders, Incorporated, Elizabeth, N. J., a corporation of New Jersey
Application August 3, 1944, Serial No. 547,851
3 Claims. (Cl. 91—42)



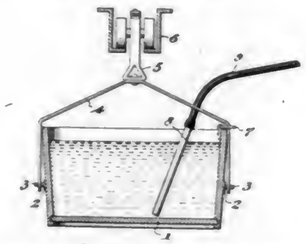
1. Apparatus for making photolithographic printing plates and the like, which comprises a cabinet having a compartment therein, a horizontal rotary plate whirler mounted on the bottom of said compartment, a motor for driving said whirler, an electrical heating element below the plane of said whirler and within the lateral confines thereof, air inlet openings in the bottom of said compartment adjacent said heating element, fan blades on the lower surface of said whirler for circulating the air, and air outlet openings in said cabinet above the plane of the whirler.

2,455,762
PIPE GRINDER
Oll R. Hall, Wichita Falls, Tex.
Application October 16, 1944, Serial No. 558,844
12 Claims. (Cl. 51—241)



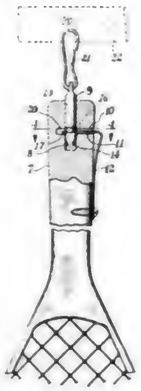
1. In a machine for surfacing the ends of pipe, an elongated saddle type stationary frame, means for detachably securing said stationary frame in

spaced relation around the outer periphery of a pipe and extending therealong, means for mounting a rotatable frame adjacent the end of said stationary frame, means for mounting a grinding



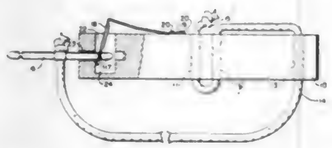
element on said rotatable frame, means for rotating said rotatable frame, and means for imparting rotation to said grinding element while rotating said rotatable frame.

2,455,763
INTERFEROMETRIC LIGHT VALVE
Henry Harrison, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application March 31, 1945, Serial No. 585,957
5 Claims. (Cl. 88—61)



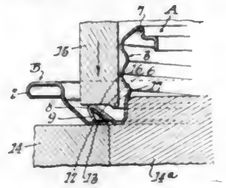
1. A light valve comprising a piezo-electric crystal carrying a light reflecting surface, a transparent member having a refracting surface separated less than five wave lengths of light from said reflecting surface to provide destructive optical interference of a light beam passing through the member to the reflecting surface and being reflected from said refracting surface and said reflecting surface back through the member and means for applying an electric field to the crystal substantially perpendicular to the light reflecting surface for varying the separation of the surfaces and hence the phase of the interference.

2,455,764
METHOD FOR GEL MANUFACTURE
Leslie T. Hartlove, Baltimore, Md., assignor to The Davison Chemical Corporation, Baltimore, Md.
Application January 22, 1943, Serial No. 473,245
2 Claims. (Cl. 214—1.1)



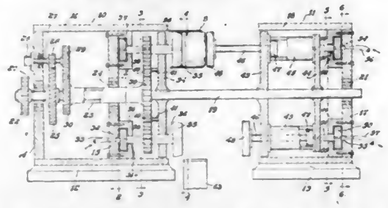
1. A method of removing hydrogel from an invertible setting container comprising inserting the discharge end of an air ejecting conduit into said gel and in engagement with the bottom of the container, ejecting air from said conduit to loosen the adhesion of the gel to the wall of the container, and then inverting the container.

2,455,765
FISH NET HANGER
James W. Harvey, Lakeville, Conn.
Application June 15, 1945, Serial No. 599,589
3 Claims. (Cl. 248—360)



1. A quick detachable fish net support comprising a pin loosely supported by the fisherman's wearing apparel and having a tapered lower end and a reduced neck with a shoulder between the lower end and the neck and a fish net having a handle with a longitudinal passage for the pin and a spring latch member having a part slidable transversely in the handle for interlocking with the shoulder of the pin, said spring having an arm extending along the outside of the handle for manual engagement.

2,455,766
FISH CARRIER
James W. Harvey, Lakeville, Conn.
Application July 25, 1946, Serial No. 686,253
4 Claims. (Cl. 224—7)

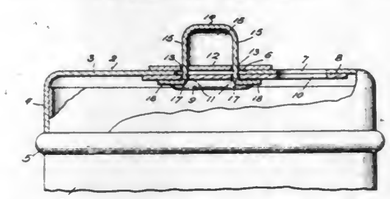


1. A fish carrier comprising a handle member having a number of passages through one end, a cord having one end adjustably held in said passages, a transverse pocket in the other end of the handle member, a spring latch having an arm secured along the upper edge of the handle member and having a member extending into said pocket, said handle member having a pin passage in its end intersecting said pocket, a threading pin secured to the other end of the cord and having a tapered tip with a reduced neck, said spring member having an elongated opening adapted to receive the tip of the pin when inserted through said pin passage in the end of the handle member, the walls of the pocket limiting the movement of the spring member.

2,455,767
SPUT CONNECTION
John Henchert, Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application August 11, 1944, Serial No. 549,054
1 Claim. (Cl. 285—49)

The combination of a container end having a flange at its outer peripheral portion and a central opening, the metal of the end being shaped so as to extend downwardly and inwardly from the flange, thence inwardly and thence upwardly to surround said central opening, the portion of the end surrounding the opening being bent outwardly to form a seaming hook, a nozzle having a vertically disposed body portion provided with a dispensing opening at the upper end thereof, said body portion of the nozzle having at its lower end thereof an outwardly extending portion overlying the seaming hook on the container end and bent back upon itself to form a seaming hook which extends into and interlocks with the seaming hook on the container end, said inclined portion on the end adapted to extend around a portion of the base of the seaming hook on the nozzle and said outwardly extending portion of the nozzle being bent downwardly and tightly around the base of the seaming hook formed on the container end so that downward pressure on the nozzle will tend to draw the inclined portion of the end around the base of the nozzle seaming hook and also draw the outwardly extending portion of the nozzle around the base of the seaming hook on the container end and thereby tighten the same.

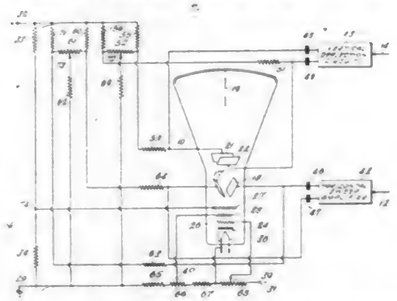
2,455,768
AUTOMATIC BEADING AND TRIMMING MACHINE
Richard H. Herman, Massillon, Ohio
Application June 21, 1946, Serial No. 678,381
8 Claims. (Cl. 153—2)



1. A machine for trimming and beading the edges of hollow sheet metal articles, comprising a rotating head stock, a plurality of rotating chucks upon the head stock, a rotating tail stock, a plurality of longitudinally movable rams upon the tail stock axially aligned with the chucks upon the head stock, fluid means for operating each ram at a predetermined point to push the open end of a hollow sheet metal article over the corresponding chuck, trimming and beading means located at one side of the path of the chucks in positions to act on the open ends of said articles carried by the chucks, means for withdrawing each ram at a predetermined point beyond the trimming and beading means, and fluid means at said last named point for removing the articles from the chucks.

2,455,769
DISPENSING CONTAINER
Louis Hermani, Baltimore, Md., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application May 25, 1945, Serial No. 595,816
3 Claims. (Cl. 222—478)

1. A dispensing container comprising a body portion, a top end seamed thereto, said end having a recess extending from a line adjacent the end seam inwardly therefrom, said recess being defined by side walls and a bottom wall, said bottom wall having inner and outer portions integrally joined and inclined upwardly from the line of juncture, a spout hingedly connected to said side walls adjacent the line of juncture of the bottom portions and adapted to be swung so as to overlie the inner inclined portion of the bottom when in closed position and so as to overlie the outer inclined portion and project beyond the end seam when in pouring position, said inner inclined portion being scored adjacent the line of juncture so that it can be ruptured when desired for providing a pouring opening.

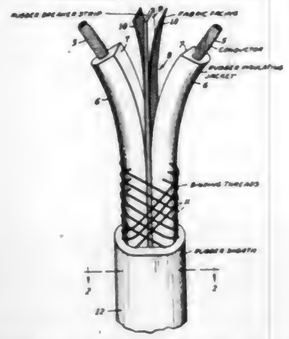


2,455,770
POWDER DISPENSING CONTAINER
Louis Hermani, Baltimore, Md., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application June 28, 1945, Serial No. 601,988
1 Claim. (Cl. 222—557)

A closure for the body portion of a powder dispensing container comprising a flat top and a depending skirt adapted to engage the body portion of the container, said top having an opening at the center thereof and a dispensing opening at one side of the center, a control slide disposed inside of the top and extending across both of said openings and having slots formed therethrough, a plate spanning the central opening on the outside of the top and having slots formed therethrough, an elongated sheet metal handle having parallel side walls carrying depending lugs adapted to extend through the slots in the plate and the slots in the slide, said lugs being folded back upon the slide for holding the plate and the slide in firm rotatable contact with the top, said lugs being of such width relative to the size of the central opening as to allow said slide to turn about the center of the opening, said con-

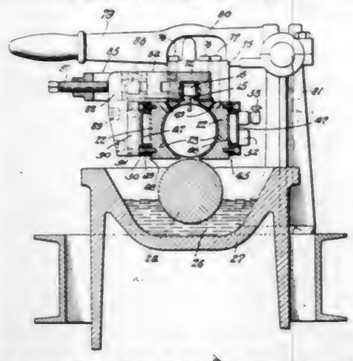
trol slide having an opening adapted to be moved into and out of registration with the dispensing opening in the top, said slide having inwardly projecting channels extending along each side thereof for strengthening the slide and holding it in intimate contact with the inner surface of the top throughout the region of the dispensing openings.

2,455,771
CENTERING MEANS FOR CATHODE-RAY DEFLECTING CIRCUITS
Paul F. G. Holst and Loren Robert Kirkwood, Oaklyn, N. J., assignors to Radio Corporation of America, a corporation of Delaware
Application October 28, 1944, Serial No. 560,756
2 Claims. (Cl. 315—31)



1. An arrangement for providing centering voltages for the deflecting plates of a cathode ray tube having means for generating a cathode ray beam and an accelerating electrode comprising a resistor combination having a pair of resistors one end of each resistor being connected to a third resistor, the other ends of said pair of resistors being joined together, said plates being connected to the ends of said third resistor, a variable contact in engagement with said third resistor, a fourth resistor connected to said variable contact, and terminal means to provide for impressing a voltage across said resistor combination from the free end of said fourth resistor to the ends of said pair of resistors, and means to supply a relatively fixed voltage to said accelerating electrode substantially equal to the average of the voltages applied to said plates.

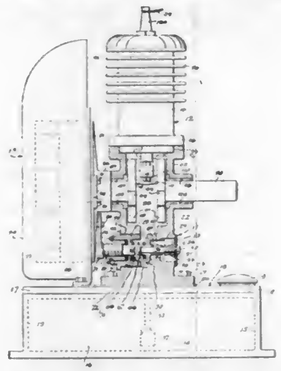
2,455,772
LOCKING DEVICE FOR GATES
John Jackle, Gratiot Township, Wayne County, Mich.
Application September 21, 1946, Serial No. 698,460
3 Claims. (Cl. 292—88)



1. A locking device including a body adapted to slide between a movable arm and a frame of a gate to prevent movement of said arm toward the gate frame, a resilient clip secured to the body for sliding movement along the gate frame, and laterally projecting handles extending from the upper extremity of the body to limit downward movement of said body by contact of said handles with ears projecting from opposite sides of said arm past opposites sides of the gate frame.

2,455,773
ELECTRIC CABLE
Richard A. Johnson, Marion, Ind., assignor to Anaconda Wire and Cable Company, a corporation of Delaware
Application July 23, 1946, Serial No. 685,581
7 Claims. (Cl. 174—117)

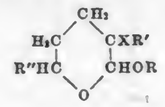
1. An electric cable comprising two conductors, an individual rubber jacket surrounding each conductor, a rubber sheath enclosing the jacketed conductors, and a breaker strip comprising a strip of rubber faced on each side with a layer of fibrous material extending the length of the cable between the jacketed conductors, the edges of said breaker strip extending into contact with and being firmly bonded to the rubber sheath.



2,455,774
WATER JACKETED AND VENTILATED HORSE
Scott R. Johnson and Ralph M. Mero, Chicago, Ill., assignors to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application January 10, 1946, Serial No. 640,170
2 Claims. (Cl. 113—60)

1. In a body maker wherein can bodies having side seams are formed, the combination of an outside horse composed of two laterally spaced parallel rails having concave opposing faces cooperating in forming a feedway for the formed can bodies, a conveyor chain for feeding the can bodies along the horse, a guide rail for the chain having a guideway through which said chain travels, means for solder bonding the can body side seams as the can bodies are moved along the horse, and jacketing extending along the laterally-outwardly presented face of each rail and providing chambering through which a coolant

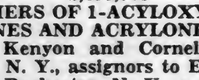
can flow for dissipating heat from the horse and preventing heat damaging of coatings on the can bodies and warping or sagging of the horse rails, said guide rail having ventilating air vents extending from its guideway through external wall portions thereof, and said horse rail also having a multiplicity of ventilating air vents extending from the concave faces thereof through external wall portions thereof along each side of the chain guide rail.



2,455,775
INTERNAL-COMBUSTION ENGINE
Ralph J. Johnston and Arthur R. Novotney, Pontiac, Mich.
Application July 26, 1946, Serial No. 686,541
20 Claims. (Cl. 123—99)

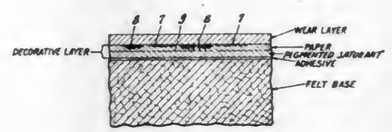
1. An internal combustion engine comprising a housing, a cylinder, a shaft rotatably mounted in said housing, a piston reciprocably mounted in said cylinder, motion-converting mechanism operatively interconnecting said piston and said shaft for converting the reciprocatory motion of said piston to rotary motion of said shaft, an ignition system connected to said cylinder and including an ignition timer with a spark advance adjuster, a fuel intake passageway connected to said housing, a liquid fuel and air mixer connected to said passageway, a valve in said passageway opening into said housing, and movable stop mechanism engageable with said valve to limit the extent to which said valve can open and operatively connecting said valve with said adjuster, said movable stop mechanism being responsive to the spark advance motion of said adjuster for increasing the extent to which said valve can open.

2,455,776
HALOGENATED PYRAN COMPOUNDS AND PRODUCTION THEREOF
David Gwyn Jones and John George Mackay Bremner, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application July 11, 1946, Serial No. 682,922. In Great Britain July 11, 1945
9 Claims. (Cl. 260—333)



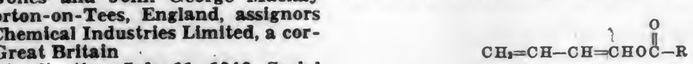
6. New tetrahydropyran derivatives of the formula

wherein R is a radical from the group consisting of —CH_3, —C_6H_5,



and

R′ is a radical from the group consisting of —Br, —Cl, and —$COOCH_3$; R″ is a radical from the group consisting of —H and —CH_3, and X is a radical from the group consisting of —Br and —Cl.

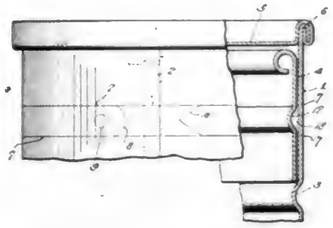


2,455,777
FLOOR COVERING
James Russell Jones, Jenkintown, Pa., assignor to Paulsboro Manufacturing Company, a corporation of New Jersey
Application November 29, 1944, Serial No. 565,591
5 Claims. (Cl. 41—22)

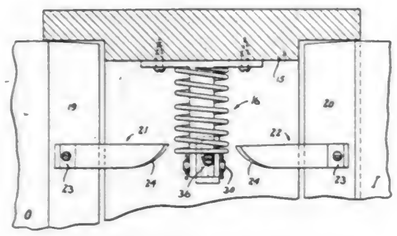
1. A floor covering comprising a foundation or under-layer and a decorative sheet laminated therewith, the decorative sheet being translucent and having contrasting color materials associated, respectively, with the lower and upper sides thereof, the color material associated with the lower side of the sheet being continuous and of uniform color and shade throughout at least a substantial portion of the total area of the sheet to provide a background color visible through the sheet, and the color material associated with the upper side of the sheet being printed in designs having lighter and darker areas through which the background color is visible to different degrees to provide a multi-shaded pattern effect.

2,455,778
COPOLYMERS OF 1-ACYLOXY-1,3-BUTADIENES AND ACRYLONITRILE
William O. Kenyon and Cornelius C. Unruh, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application September 13, 1947, Serial No. 773,940
19 Claims. (Cl. 260—84)

1. A resinous copolymer of a 1-acyloxy-1,3-butadiene represented by the formula:

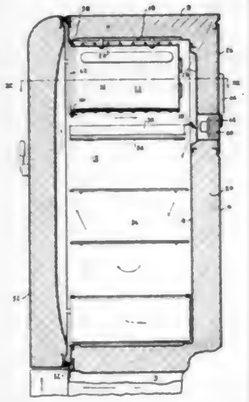


wherein R is an alkyl group having 1 to 3 carbon atoms and acrylonitrile represented by the formula:



containing from 2.0 to 8% by weight of nitrogen, said copolymer having been prepared from a mixture consisting of the 1-acyloxy-1,3-butadiene and acrylonitrile.

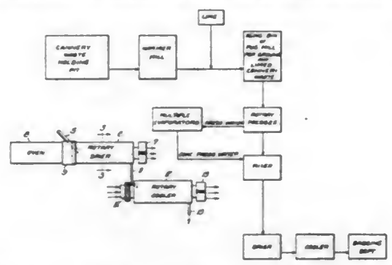
2,455,779
TONGUELESS TEARING STRIP CONTAINER
Thomas P. Keogh, New York, N. Y., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application June 6, 1945, Serial No. 597,865
1 Claim. (Cl. 220—54)



A sheet metal container comprising a body portion having its edges joined in a side seam, a collar disposed within said body, said body having parallel score lines setting off a tearing strip and a score line extending across the strip and setting off an end of the tearing strip, said body also being scored adjacent the end so that the body wall may be ruptured and an opening formed permitting a tool to be inserted for separating the end portion of the tearing strip from the body wall, said collar being beaded inwardly in the region of the tearing strip so as to provide a space between the collar and the body wall for the insertion of the tool, said bead being of less width than the distance between the score lines setting off the tearing strip so that the body wall at the score lines will be supported during the rupturing of the strip to form the opening for the tool.

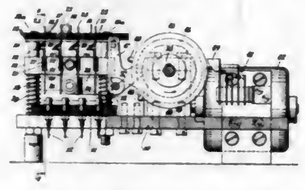
2,455,780
ALARM SYSTEM FOR DOORS HAVING A PLURALITY OF DOOR PANELS OPERATED IN SUCCESSION
Eugene A. Kohout, Miami, Fla.
Application October 16, 1946, Serial No. 703,505
8 Claims. (Cl. 177—314)

1. An alarm system for the permanent supervision of premises with doors having at least two door panels hinged on a fixed structure to be opened and closed in succession, comprising a contact device, carried by the fixed door structure and provided with at least two separately movable contact carrying members, means for coupling said members mechanically for joint movement in one direction without change of their relative position, operative members associated with said door panels for engaging and moving each of said contact carrying members, the movements produced by the said members, upon a predetermined successive operation of the door panels, occurring all in the direction in which the two separately movable members are coupled, while separate and relative movements of the contact carrying members are produced upon deviation from the predetermined succession and means for operating an alarm circuit upon a change of the relative position of the movable contact members.



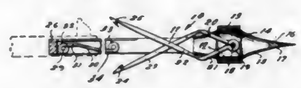
2,455,781
AIR CIRCULATING DUCT FOR TWO-TEMPERATURE REFRIGERATOR CABINETS
Ralph E. Kruck and Elliott E. Grover, Springfield, Mass., assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 20, 1946, Serial No. 710,974
7 Claims. (Cl. 62—89)

1. A refrigerator comprising an outer metal shell having vertical side walls, an inner metal shell within and spaced from the outer shell, the upper portion of each of the side walls of the inner shell being bulged outwardly to lie closer to the adjacent side walls of the outer shell than does the lower portion of each of the side walls of the inner shell, the front of said inner shell being open, heat-insulating material in the spaces between the outer and inner shell, a cooling unit in the upper portion of the inner shell, the side walls of the cooling unit lying near but spaced from said bulged-out portions to provide narrow ducts adjacent the cooling unit, and means for closing the space between the top edge and the side edges of the cooling unit at the front thereof and the respective adjacent front edges of the inner shell.



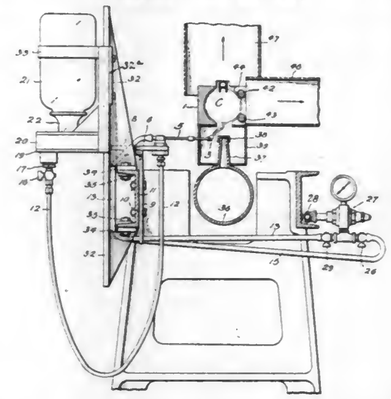
2,455,782
METHOD OF MAKING CITRUS WASTE FEED PRODUCTS
John M. Kuder, Winter Haven, Fla.
Application October 11, 1946, Serial No. 702,649
5 Claims. (Cl. 99—2)

1. In the process of converting citrus waste into feed and fertilizer products wherein the waste is pressed, and the resultant press cake is dried, the improvement, which comprises, concentrating all of the press water to a solids content within the range of from 35–55%, mixing all of the thus concentrated press water with said press cake prior to drying thereby forming a non-sticky, flaky mixture, and drying the resultant mixture to obtain a non-hygroscopic feed and



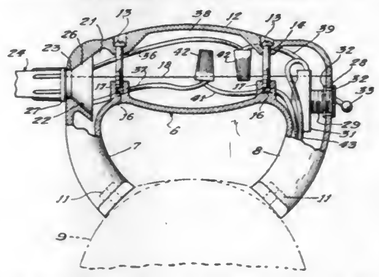
fertilizer product containing substantially all of the nutritive value of said citrus waste.

2,455,783
SELECTOR MECHANISM
Walter T. Lang, Brooklyn, N. Y., assignor to Control Instrument Company, Inc., New York, N. Y., a corporation of New York
Application December 5, 1947, Serial No. 789,994
5 Claims. (Cl. 177—353)



4. In a selector mechanism wherein circuits are established through certain of a plurality of circuit controlling elements by the selection of one of a group of control elements individual to said certain circuit controlling elements, the combination of a carrier frame movable relative to said control and circuit controlling elements, and transfer elements each individual to one of said circuit controlling elements and movable with said frame and rotatively supported therein about axes substantially parallel to the movement thereof, said transfer elements having portions operable by said selectable control elements to rotate said transfer elements to positions wherein they will engage the circuit controlling elements upon movement of said carrier frame toward the latter elements.

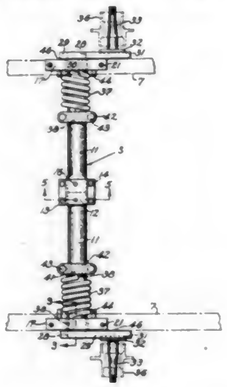
2,455,784
FISH SPEAR AND HOOK
Jacob Lapsensohn, Brooklyn, N. Y.
Application February 22, 1945, Serial No. 579,173
3 Claims. (Cl. 43—6)



1. A device of the character described including a tubular body portion, a pointed head at one end thereof, a slotted handle portion on the rear end of said body, a bearing pin extending through said tubular body portion, and barbed hooks pivotally supported on said pin in crossed relation and lying in said slotted handle portion.

2,455,785
APPARATUS FOR LACQUER COATING SIDE SEAMS OF CAN BODIES
Ralph A. Larson, Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application December 8, 1944, Serial No. 567,180
8 Claims. (Cl. 91—45)

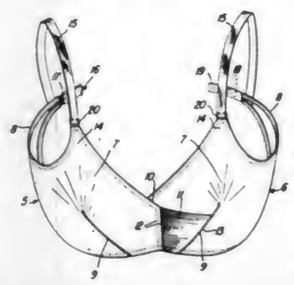
8. In a can body soldering machine having a horse for guiding can bodies with the side seam exposed for treatment at the lower side thereof, a spray nozzle disposed beneath the horse and at one side thereof, means for projecting a spray of lacquer from said nozzle, said horse at the side opposite the spray nozzle being cut away and provided with spaced guide rods for directing the can body through said cut-away section, means for supporting said spray nozzle so that it may be shifted toward and from said horse for projecting a spray of lacquer onto the outer face of the can body at the sides of and in the region of the seam opening, means for enclosing said nozzle in a manner for preventing free dispersion of the spray except against the can body in the region of the seam opening and into and through the horse as stated, and means including a duct for taking away spray passing through said horse.



2,455,786
HANDLE FOR PORTABLE BLOWERS
Clarence W. Lanter, Bartlett, Ill., assignor to Breuer Electric Mfg. Company, Chicago, Ill., a corporation of Illinois
Application March 8, 1946, Serial No. 653,212
3 Claims. (Cl. 173—322)

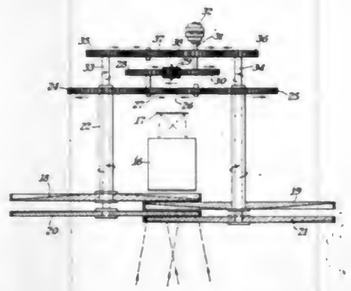
3. A handle for a portable blower and the like, comprising a concavo-convex hand gripping portion, a pair of hollow arms extending inwardly from the front and rear ends from said hand

gripping portion for engagement with a blower, a concavo-convex cap secured to said hand gripping portion to enclose same and also to enclose the outer ends of said hollow arms, said rear arm and cap forming a cable aperture and a strain relief chamber to receive the end of an electrical cable, said strain relief chamber having a frustroconical wall surface converging toward and terminating at said cable aperture, and means for securing said cap to said hand gripping portion to clamp an electrical cable against axial movement within said strain relief chamber and cable aperture.



2,455,787
TRAILER AXLE
Frank F. Linn, Walnut Creek, Calif., assignor to Frank F. Linn Corporation, a corporation of California
Application September 24, 1945, Serial No. 618,250
5 Claims. (Cl. 267—58)

1. A vehicle axle comprising, a shaft, radially projecting levers mounted on said shaft adjacent the opposite ends thereof and secured by said shaft for simultaneous joint movement in the same direction therewith, a wheel spindle secured to each of said levers in offset parallel relation to said shaft, bearings on said shaft adjacent said levers and being formed with bracket means for securing said bearings directly to a vehicle body, helical springs surrounding said shaft with one end of each of said springs adjacent one of said bearings, said bearings being formed to engage and secure said adjacent spring ends, and means on said shaft for engaging and securing the opposite ends of said springs to said shaft.

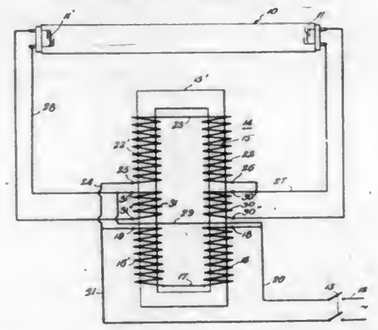


2,455,788
BRASSIÈRE
Jack J. Lo Cascio, Bayonne, N. J., assignor to Even-Pul Foundations, Inc., New York, N. Y., a corporation of New York
Application September 5, 1946, Serial No. 694,961
1 Claim. (Cl. 2—42)

A brassière comprising two substantially similar parts, each of said parts including a breast cup portion shaped to provide a breast cup and a band portion extending from the outer side of said breast cup portion, means to separably connect the free ends of said band portions together at the back of the wearer, the breast cup portions being tapered narrower to the inner sides thereof and having downwardly and inwardly inclined shaping darts extending downwardly from the centers of the cups to the lower edges of said parts, the adjacent side portions of said parts being unconnected and slightly overlapped, and two relatively wide and short horizontally yieldable elastic straps connecting the parts together at the front of the brassière, one of said elastic straps having a vertical end edge sewed to the inner edge of one part and being extended

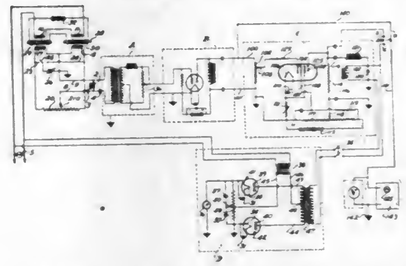
outside the other part and having an inclined end edge sewed to the breast cup portion of said other part along the inclined dart thereof, the other elastic strap having a vertical end edge sewed to the inner edge of said other part and being extended inside the one part and having an inclined end edge sewed to the breast cup portion of said one part along the inclined dart thereof.

2,455,789
OPTICAL RECTIFICATION FOR MOTION-PICTURE APPARATUS AND THE LIKE
Benjamin Ellan Luboshez, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application September 10, 1947, Serial No. 773,205
5 Claims. (Cl. 88—16.8)



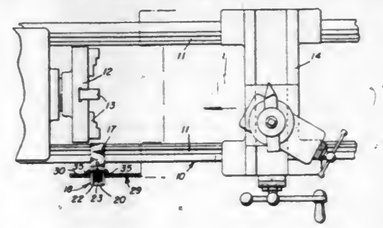
1. In motion picture apparatus of the type in which the film moves continuously at a uniform velocity, a stationary objective, a matched pair of prisms rotatable in opposite directions in front of the objective and in such phase relation as to deviate a light ray in the direction the film moves, a second matched pair of prisms rotatable in opposite directions in front of the objective and in such phase relation as to deviate a light ray in the direction opposite that of the film movement the deviating power of the second pair of prisms being one-eighth that of the first pair, and means for rotating the second pair of prisms at twice the speed of the first pair of prisms.

2,455,790
ENTERIC COATINGS
Carl J. Malm and Gordon D. Hiatt, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application June 9, 1945, Serial No. 598,638
9 Claims. (Cl. 167—82)



1. As a new article of manufacture a medicament surrounded by an enteric film or layer of a composition essentially consisting of 70–50 parts of a nontoxic water soluble salt of a polyvinyl phthalate, which polyvinyl phthalate has a phthalyl content of at least 45%, and 30–50 parts of gelatin, which composition is substantially insoluble in the acid stomach secretions but disintegrated by the alkaline intestinal fluids.

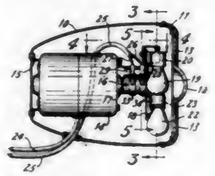
2,455,791
SYSTEM FOR OPERATING ELECTRIC DISCHARGE TUBES
Camillo Masciarelli, Clinton, Mass.
Application August 27, 1946, Serial No. 693,217
1 Claim. (Cl. 315—276)



In a system for operating and regulating an electric discharge tube having thermionic electrode filaments, a source of alternating current, a transformer providing a closed magnetic core having two relatively long legs and two relatively short legs connecting the respective ends of said long legs, primary and secondary windings each providing a coil disposed on the same long core leg, with the end of each primary coil being spaced axially of a long core leg from the end of each secondary coil, to permit a relatively large magnetic leakage between said long legs, means connecting the coils of said primary and secondary windings and said tube in a closed series circuit, filament energizing windings having their terminals connected to said tube filaments, with each filament winding being disposed on a long core leg in a space between said primary and secondary coils, and means for connecting both terminals of said primary winding to said source, whereupon sufficient voltage is developed by said filament energizing windings to immediately heat said filaments to a temperature where electrons are emitted and ionization of the gas in the tube takes place, at the open circuit voltage between the electrodes as developed by said primary and secondary windings, with the magnetic flux density in a long core leg at the location of each filament energizing winding being such that the voltage developed by such windings and resulting heating current in the filaments is reduced from its initial starting value to a lower value when the tube is ionized and operating with a reduced steadystate voltage across its electrodes, due to the back electromotive force induced by flow of arc current through the secondary winding which is out of phase with the voltage across the secondary induced from the primary, and with the out of phase current in said secondary winding being in full control of the energy output of each filament winding to obtain the desired degree of filament heating for operating the tube.

2,455,792
LIMITER CIRCUIT FOR ELECTRIC TESTING APPARATUS
Frederick A. Meunier, Cleveland, Ohio, assignor to Republic Steel Corporation, Cleveland, Ohio, a corporation of New Jersey
Application January 29, 1948, Serial No. 5,172
8 Claims. (Cl. 175—183)

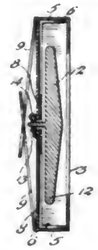
1. An apparatus for non-destructive testing of elongated metal articles including a primary circuit and a secondary circuit, said primary circuit arranged to induce an alternating current or voltage in the secondary circuit and said article under test being adapted to be moved in proximity to said circuit and the character of the article adapted to influence the current generated in the secondary circuit, said alternating currents in the secondary having phase displacement caused by undesirable characteristics of the article and magnitude changes due to characteristics other than undesirable, circuit means connected to the secondary circuit to remove random variations in the current and comprising a filter, amplifier means connected to said filter for amplifying said signal, a limiter circuit connected to said amplifier circuit to maintain said signal within certain predetermined limits, and means in the output of the limiter circuit to change the signal to a sine wave and detector means connected to said last means for detecting phase shift in said signal.



2,455,793
CARRIAGE STOP
Rudolf A. Monkiewicz, North Tonawanda, N. Y.
Application July 10, 1947, Serial No. 760,154
3 Claims. (Cl. 82—21)

1. A carriage stop for a lathe comprising a bracket adapted to be clamped to the bed of a

lathe, said bracket having a groove opening through its top and extending therethrough in parallel relation to the longitudinal axis of the lathe bed, a drum mounted in the bracket to rotate about an axis which lies parallel to the groove, the periphery of the drum lying tangent to the plane of the bottom of the groove, a stop bar movable longitudinally through the groove, said stop bar having longitudinally spaced notches in its underside, a spiral rib extending outwardly from the drum for entrance into successive notches in the stop bar whereby when the drum is rotated the stop bar will be moved along its longitudinal axis and a bar retainer pivoted to each end of the bracket for engagement with the stop bar releasably to retain it in the groove.

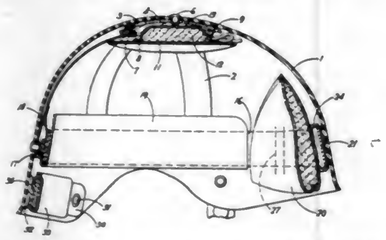


2,455,794
STOP LIGHT FOR AUTOMOBILES
Charles Joseph Montenotte, Detroit, Mich.
Application March 5, 1947, Serial No. 732,395
2 Claims. (Cl. 177—329)

1. A stop light of the kind described comprising a barrel-like casing provided with a flat end cover having a central opening framing a red lens and a plurality of openings arranged in a circle around said red lens, each of said openings framing a transparent pane of different color, a motor at the opposite end of the casing, the motor having a shaft, axially disposed within the casing, a dielectric coupling cylinder mounted on said shaft and carrying a disk spaced from the lens carrying end, a light bulb located centrally on the disk and another light bulb on the marginal portion thereof at a radial distance from the center equal to that of the respective lenses from the central one, the bulbs being located on the side of the disk facing the cover, two metal rings axially mounted on the coupling and spaced from each other, wire conductors leading from one ring to the bulbs and from the bulbs to the other ring, resilient metal fingers in contact with said rings and current conducting means to the motor and to said fingers.

2,455,795
SHADOW BOX CONTAINER FOR MERCHANDISE
Ralph E. Murphy, Beverly Hills, Calif.
Application June 25, 1946, Serial No. 679,154
1 Claim. (Cl. 206—45.31)

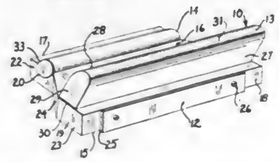
A box container comprising a substantially square windowed top having similarly shaped flaps of a like size extending outwardly from each side of said top, each of said flaps being formed with spaced transversely extending parallel score lines adapted to form box sides with inwardly extending overlapping end portions, one pair of oppositely disposed terminal end portions being formed with alignable merchandising supporting apertures adapted to be held in overlapping position by means of said merchandise when placed through said apertures and said merchandise being viewable through said window top, and the other pair of oppositely disposed terminal end portions extending in right angles to said first mentioned terminal end portions being adapted to be bent inwardly over said first mentioned flaps and said merchandise securing



means, and interchangeable locking slots formed in the terminal ends of said last mentioned pair of oppositely disposed overlapping terminal end portions.

2,455,796
ADJUSTABLE WATCH BAND
Bert W. Myer, Sr., Manitou Springs, Colo., assignor of one-half to Bert W. Myer, Jr., Manitou Springs, Colo.
Application October 5, 1945, Serial No. 620,538
2 Claims. (Cl. 224—4)

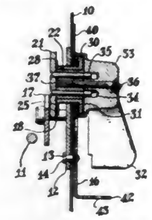
1. A device of the character described including a wrist band having a flat center surface and resilient arcuate side members to graps the wrist, similarly arcuate pocket members substantially closed at the outer ends and rigidly and longitudinally secured on the exterior of said side members, resilient arcuate straps slidably mounted in said pocket members, inwardly disposed hooks on the adjacent ends of said straps and yieldably supported adjacent said side members on each side of said flat center surface.



2,455,797
HELMET
Charles H. Myers and William P. Yant, Pittsburgh, Pa., assignors to Mine Safety Appliances Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application July 6, 1946, Serial No. 681,712
13 Claims. (Cl. 2—6)

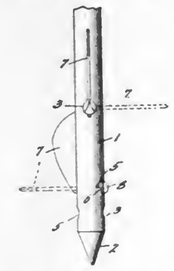
10. A helmet comprising a head-protecting shell, an adjustable head band therein having its ends located at the front of the shell, means connected to the front of the shell for adjusting said band ends toward and away from each other to vary the size of the head band, means flexibly connecting the remainder of the head band to the shell to permit said remainder to move forward therein when the size of the band is decreased, whereby the position of the front of the head band relative to the front of the shell does not change regardless of head band adjustments, and a pad slidably mounted on the head band in the front of the shell and adapted to space the forehead from said band adjusting means.

13. A helmet comprising a head-protecting shell, an adjustable head band therein having ends disposed adjacent each other, means for adjusting said band ends toward and away from each other to vary the size of the head band, the front of said band being secured to the front of the shell, cradle straps in the shell with their lower ends secured to its sides adjacent the head band and with their upper ends secured to the top of the shell, a cord connecting the straps below their upper ends, means connecting the cord to a fixed position in the shell in front of the upper ends of the straps, said cord being adapted to be drawn up to pull the upper end portions of the straps closer together and forward in the shell, and means flexibly connecting the head band to the cradle straps to permit the side and back portions of the band to move forward in the shell when the size of the band is decreased.



2,455,798
FLUORESCENT LIGHT HOLDER FOR PIANOS
Hans Nicolaysen, Brooklyn, N. Y.
Application June 5, 1946, Serial No. 674,434
4 Claims. (Cl. 248—346)

1. A bracket suitable for resting on a piano and suspending a light containing frame having hooks, comprising a base, a projecting element and a stop means, the base having a sufficient and properly positioned weight to retain the bracket in position on a piano top against the rotating force of the suspended light frame, the projecting element positioned on the base and extending upwardly and forwardly therefrom and overhanging the forward edge of the base, the stop means being positioned at the lower forward edge of the base extending below the base whereby the base is held from sliding backward.

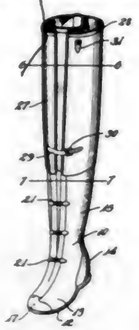


2,455,799
ELECTRIC SWITCH ACTUATING MECHANISM
Reynold A. Ohlson, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a corporation of Connecticut
Application June 17, 1946, Serial No. 677,205
10 Claims. (Cl. 200—50)

3. Switch actuating mechanism including a box cover, a stud projecting inwardly from said cover, an actuating lever hinged and slidable upon said stud to and from the cover for moving a switch part, a sleeve adjustable through said cover, a hub rotatable and slidable in said sleeve, an oscillator secured to said hub, an operating connection between said oscillator and said lever, an external handle detachably connected to said

hub and a slotted extension on the inside of said cover in the path of movement of said switch part for holding the parts in moved position and the cover in closed position.

2,455,800
LAND ANCHOR
Benton A. Oliver, Bloomington, Ind.
Application December 6, 1945, Serial No. 633,226
3 Claims. (Cl. 189—92)



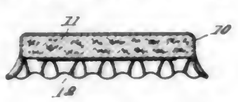
1. A land anchor including a hollow shaft having diametrically opposed openings, one of said openings having a notch, a blade having a shank mounted in said openings, and a knob on the surface of the shank, said knob entered into the hollow shaft through said notch and removably locking the blade to the shaft.

2,455,801
CLOSE-FITTING BOOT
Frederick F. Olson, Sudbury, Mass., assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application February 18, 1946, Serial No. 648,285
2 Claims. (Cl. 36—4)

1. A boot of vulcanized flexible rubbery material comprising a lower gaiter-like member having a divided frontal zone extending from the region of the instep of said gaiter-like member to the top thereof and having opposed vertical margins normally in contiguous relation, and upwardly directed leg-encircling member having its lower margin secured around the extent of the upper margin of said gaiter-like member, and a normally collapsed expandable bellows pocket extending continuously across the juncture of said members from the region of the instep to the top of the boot, the lower portion of said bellows pocket comprising a pocket member marginally secured to the opposed margins of said divided frontal zone and extending to the top of said gaiter-like member where said pocket member is marginally secured to the lower

margin of said leg-encircling member, the upper portion of said bellows pocket comprising a frontal zone of said leg-encircling portion biased toward a folded condition forming a normally

collapsed extension of said lower pocket member, said normally collapsed bellows pocket being of substantially uniform cross-sectional configuration throughout its vertical extent.



2,455,802

GLASS CLOTH SPOTTING MATERIAL

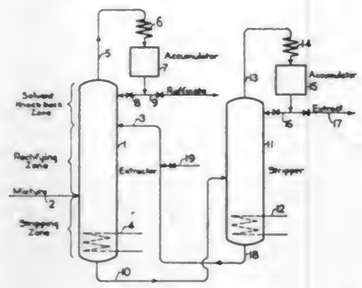
Edward C. Pfeffer, Jr., Troy, N. Y., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York

Application June 14, 1943, Serial No. 490,804

2 Claims. (Cl. 117—126)

1. A closure liner facing material for employment upon a resiliently yieldable base, comprising a fabric consisting of multiple interwoven fine fibers of glass and having a thickness of substantially 2 to 4 thousandths of an inch, and a coating adherent to the fibers of the fabric and providing a continuous surface, the material of said coating being the residue produced by baking at a temperature of substantially 375 degrees F. an enamel prepared by effecting limited polymerization of substantially 100 parts by weight of China-wood oil in the presence of substantially 100 parts by weight of a thermofusible phenol-aldehyde resin for thereby producing an oleoresinous base and then mixing with said base a solution in a volatile organic solvent of substantially 80 parts by weight of vinyl chloride-vinyl acetate polymer resin, said facing material being characterized in being flexible, free of flavor characteristics, and having a high tensile strength.

2,455,803



EXTRACTIVE DISTILLATION PROCESS

Gino J. Pierotti, Albany, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

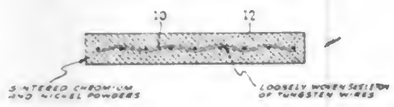
Application February 11, 1944, Serial No. 522,206

5 Claims. (Cl. 202—39.5)

1. In an extractive distillation process for the separation of a vaporizable organic mixture comprising predominantly aromatic hydrocarbons and non-aromatic hydrocarbons of similar boiling range with a sulfolane selective solvent therefor, wherein said selective solvent forms two liquid phases under the conditions of the process, the improvement comprising adding to said sulfolane solvent from an extraneous source a mutual solvent which is an aromatic hydrocarbon for said selective solvent and said mixture in amounts corresponding to a mutual solvent-to-sulfolane volume ratio not greater than about unity and sufficient to produce a single liquid

phase under the conditions of the process, whereby the efficiency of the extractive distillation is improved, both said solvents having boiling temperatures above the A. S. T. M. 90% boiling temperature of said organic mixture and sufficiently higher whereby separation of the solvents together from the resulting extracted portion of the mixture may be readily effected by distillation.

2,455,804



NICKEL CHROMIUM TUNGSTEN COMPOSITE METAL BODY AND METHOD OF MAKING SAME

Charles Eric Ransley, Sudbury, and Stanley Vaughan Williams, Kenton, England, assignors to The General Electric Company Limited, London, England

Application December 21, 1943, Serial No. 515,118

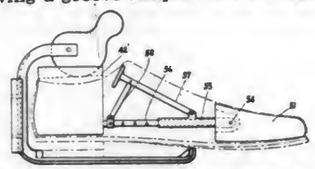
In Great Britain January 1, 1943

4 Claims. (Cl. 29—191.2)

1. A composite metal body resistive to chemical attack and creep and essentially comprising an undissolved coherent skeleton of tungsten completely imbedded in a sintered powder mass essentially consisting of nickel and chromium.

2. A composite metal body resistive to chemical attack and creep, and essentially comprising an alloy containing substantially 80% nickel and 20% chromium reinforced by an undissolved, coherent, completely imbedded skeleton of tungsten wires woven together.

2,455,805



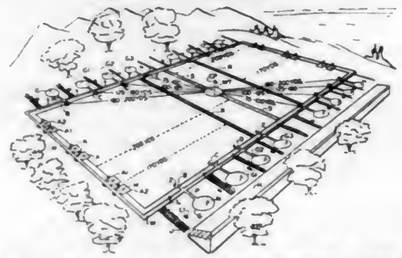
SHOE HOLDER

Stanley E. Raudebaugh, East Cleveland, Ohio

Application September 6, 1946, Serial No. 695,269

11 Claims. (Cl. 12—125)

1. A shoe holder consisting of a bracket, a cam pivotally attached to the bracket and a shoe heel-last having a groove adapted to be wedgingly associated with the said cam to detachably secure a shoe on the bracket.



2,455,806

CONSTRUCTION OF FIELDS FOR PLAYING GOLF

Milton B. Reach, Springfield, Mass.

Application November 20, 1947, Serial No. 787,216

5 Claims. (Cl. 273—32)

1. A golf game structure comprising a playing field and on the field, a water pool construction to provide a liquid target of about the same size as and to simulate the green used as a target on an orthodox golf course, a plurality of playing stations spaced apart from each other to present clear separate paths at different angles to the liquid target and also spaced away from the target at different distances, each distance corresponding to a different iron in a set of golf clubs and to the distance for which the iron is used in good golf playing on an orthodox golf course, a full sized fairway, a set of spaced tee stations at one end of the fairway for long wood drives along the fairway, the playing stations related to the liquid target for iron shots and the tee stations at the end of the fairway for wood drives being arranged in separate groupings spaced apart along the border of the fairway, whereby players on the field may move in playing the game from the particular tees of their long drives to the plurality of playing stations along side the fairway and in the sequence of their iron shots to the target, and a plurality of spaced putting greens severally arranged adjacent the several stations, for players each to complete play on one "hole" and return to the long drive stations for the next, all the structure above pointed out being related as stated and to provide means for many golf players to play at one time according to the method described.

2,455,807

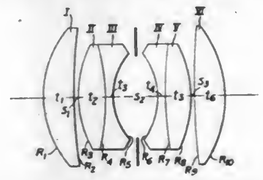
PREPARATION OF SUBSTITUTED CYANOGUANIDINE

Bryan C. Redmon and Daniel E. Nagy, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine

No Drawing. Application September 11, 1945, Serial No. 615,694

4 Claims. (Cl. 260—551)

1. A method of preparing a 1-substituted-3-cyanoguanidine which comprises reacting a member of the group consisting of dicyanimide and a metal salt thereof with a member of the group consisting of a primary amine, a secondary amine, and a salt thereof, at a temperature of at least 50° C., said reactants being employed in the ratio of one mol of the dicyanimide reactant to one mol of the amine reactant, to produce the correspondingly substituted 3-cyanoguanidine.



2,455,808

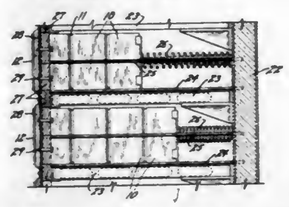
OBJECTIVE OF LOW INDEX GLASS WITH NEGATIVE COMPONENTS OF HIGH CURVATURE

Max Reiss, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

Application June 30, 1944, Serial No. 542,913

5 Claims. (Cl. 88—57)

1. A corrected photographic objective of the kind comprising two highly meniscus compound negatives components concave toward a diaphragm therebetween and axially aligned between two positive components whose outer surfaces are more strongly curved than their respective inner surfaces, the objective being characterized by having each of the two positive components include an element made of optical material of refractive index between 1.35 and 1.55 and by the average radius of curvature of the concave surfaces of the negative components being between one-tenth and one-fourth of the focal length of the objective, and that of their convex surfaces being less than one-third the focal length.

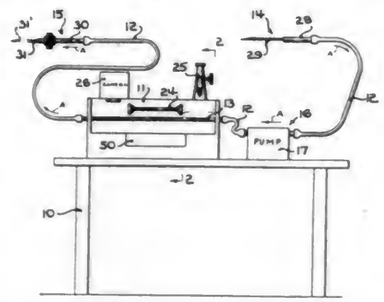


2,455,809

PACKAGE AND CABINET FOR FROZEN FOODS

Milton Rifkin, Denver, Colo., assignor, by mesne assignments, to Frez-O-Mat Corporation, a corporation of Illinois

Application March 7, 1944, Serial No. 525,461

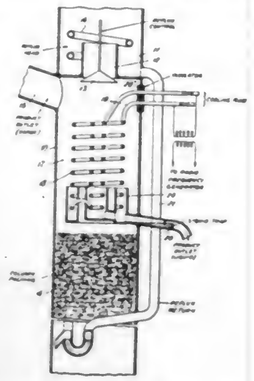


3 Claims. (Cl. 312—36)

1. Means for storing frozen foods comprising a cabinet; means for refrigerating said cabinet; track members in said cabinet for supporting rows of cartons therein, said cabinet having openings in its front one in front of each row to allow the cartons to pass therethrough; and a flexible sealing member framing each opening; and means for forcing the rows of cartons forwardly so that the foremost carton of each row will contact said sealing member to seal said cabinet, each of said

cartons being provided with a peripheral recess adjacent the front face for receiving the edges defining the opening of one of the sealing members.

2,455,810
DEVICE FOR INSPECTING BLOOD CIRCULATION
William Ryan, New York, N. Y.
Application June 8, 1945, Serial No. 598,376
2 Claims. (Cl. 128—395)



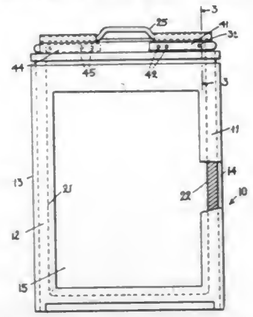
1. In an inspecting device for blood in circulation, a pipe line having a transparent section, needles on the ends of said pipe line for insertion in the blood vessels of the human body, a pump in said pipe line for circulating the blood of the body through the pipe line, said needles being characterized by an intake needle and a discharge needle, and means for eliminating the possibility of inserting the discharge needle prior to the insertion of the intake needle, said means including an element normally urging said discharge needle into an inoperative position, and solenoid means for activating said discharge needle into operative position when blood enters said intake needle.

2,455,811
HYDROAROMATIC SULFONATES AND THEIR PREPARATION
Hans Schindler, Evanston, Ill., assignor to The Pure Oil Company, Chicago, Ill., a corporation of Ohio
No Drawing. Application October 23, 1944, Serial No. 560,045
9 Claims. (Cl. 260—505)

1. The method of preparing a surface active compound comprising condensing indene with benzene in which one hydrogen is substituted with a hydroaromatic radical and sulfonating the resulting product.

2,455,812
FRACTIONATION IN PRESENCE OF RADIANT ENERGY
Carleton H. Schlesman, Camden, N. J., assignor to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
Application June 30, 1945, Serial No. 602,603
5 Claims. (Cl. 196—94)

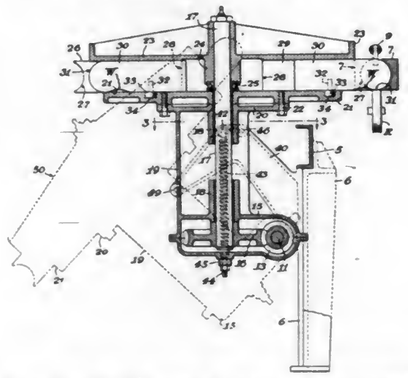
1. A process for the separation of a continuous fluid system consisting predominantly of components undergoing a change in phase at substantially the same temperature but having different capacities to absorb radiant energy of a predetermined nature into separate phases each relatively rich in one of said components, which comprises adjusting the temperature of said fluid system to a point of incipient phase change, causing phase change in said system while subjecting the system to radiation of said predetermined



nature, whereby phase change of one component is induced while phase change of another component is suppressed, and separating phases relatively rich in different components.

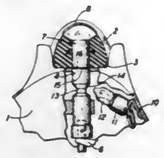
2,455,813
WORKING UP OF MAGNESIA ROCK, AND PURIFICATION OF MAGNESIUM CARBONATE
Robert A. Schoenlaub, Tiffin, Ohio, assignor to Basic Refractories, Inc., Cleveland, Ohio, a corporation of Ohio
No Drawing. Application October 7, 1943, Serial No. 505,363
6 Claims. (Cl. 23—67)

5. In a process of separating compounds of magnesium and calcium, calcining dolomite, making a slurry of the calcined material, supplying carbon dioxide to the slurry under such temperature conditions as to precipitate out calcium carbonate, then supplying carbon dioxide to the slurry under such temperature conditions as to produce a crystalline form of magnesium carbonate from the group consisting of nesquehonite and lansfordite, rough separating the crystalline magnesium carbonate from the calcium carbonate, then making a slurry of the crystalline magnesium carbonate and supplying carbon dioxide thereto under such temperature conditions as to invert the said form of magnesium carbonate into the other form of said group consisting of nesquehonite and lansfordite, and separating such crystalline form of magnesium carbonate from associated material.



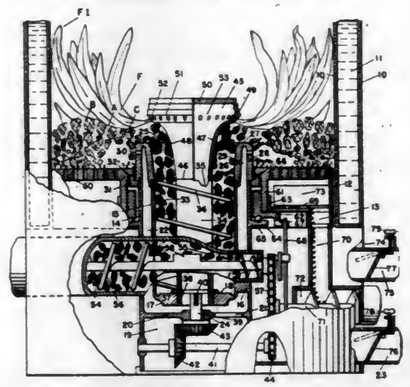
2,455,814
PLATEHOLDER FOR PHOTOGRAPHIC APPARATUS
Morris Schwartz and William Castedello, Stamford, Conn., assignors to The Kalart Company, Inc., Stamford, Conn.
Application April 28, 1945, Serial No. 590,932
1 Claim. (Cl. 95—71)

Plate holder of the type described for photographic apparatus comprising a nose fastened to the plate container of the holder near the upper edge thereof, a second nose inserted in a hole provided in the plate holder slide, and a spring supporting the second nose and biasing the same to extend through said hole from one side of the slide, said spring being fastened to the slide opposite to the side from which the second nose projects, said two noses being mounted in a relative position in which they are removed from each other when the slide is inserted in a position in which one of the slide faces faces in a predetermined direction, thereby permitting a free pas-



sage of the slide in the said position, and engage each other when the slide is inserted with the same slide face in the opposite direction, thereby locking the slide in such opposite face position, said spring being arranged to permit a withdrawal of the second nose through said hole and from its position engaging the other nose.

2,455,815
SOLDER SPLASH SHIELDING MEANS
Joseph W. Seigh, Teaneck, N. J., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application April 27, 1944, Serial No. 533,025
12 Claims. (Cl. 113—97)



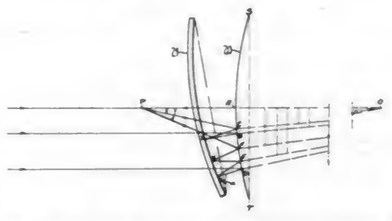
1. In apparatus of the character described, a horn along which can bodies having freshly soldered side seams are moved in equidistantly spaced relation, a wiping roll engageable with the side seams of the travelling can bodies for wiping surplus solder therefrom, a rotor driven in timed relation to the travelling can bodies with its periphery disposed adjacent said horn and having a plurality of equidistantly spaced radially disposed guides thereon, a solder spatter shield slide reciprocable in each guide, and cam means for causing each slide to be projected from the end of its guide into the space between the adjacent open ends of two travelling can bodies and travel in said space shielding the open advance end of the oncoming can body as it approaches and is passing over the wiper roll, and then be retracted again within its guide, thereby to shield the open end of each oncoming can body against the spattering of solder thereinto from the wiper roll.

2,455,816
TELEPHONE SUBSCRIBER'S SET ILLUMINATION
Oscar A. Shann, Short Hills, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 23, 1946, Serial No. 692,463
5 Claims. (Cl. 179—100)

1. In a subscriber telephone set, in combination, a base porton, a hand telephone set mounted on said base portion, a source of light within said base portion and a light conducting channel, said channel comprising a plurality of juxtaposed light conducting elements, extending from said light source to the exterior of said base portion, then through said handset to a prominent portion of its surface.

2,455,817
METHOD AND APPARATUS FOR BURNING CARBONACEOUS FUELS
Ralph A. Sherman, Columbus, Ohio, assignor, by mesne assignments, to The Battelle Development Corporation, Columbus, Ohio, a corporation of Delaware
Application June 30, 1944, Serial No. 543,010
9 Claims. (Cl. 110—45)

1. In combination with a furnace combustion chamber and fuel bed supporting grate, means for maintaining a comparatively thin, incandescent fuel bed on said grate, said means comprising a retort having an upper egress end of progressively increasing internal diameter extending above the grate, a feed screw rotatably mounted in said retort to feed an annular column of fuel upwardly therethrough, said screw terminating below the egress end of the retort, a head mounted on the upper end of said screw for rotation therewith and including a lower tapering section within the egress end of the retort and substantially parallel



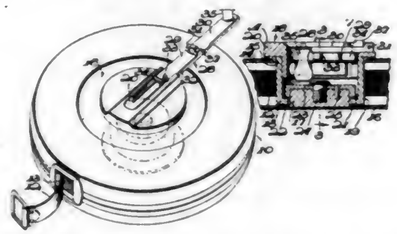
to the wall thereof, a top section spaced above the retort and an intermediate connecting section flaring outwardly and upwardly across the egress end of the retort, said top section having a series of air supply openings directed downwardly toward the fuel bed to maintain a fuel plasticizing temperature adjacent the upper end of the fuel column, said top section of the head having a diameter substantially equal to the egress opening of the retort to apply shearing forces to the plasticized fuel and said flaring section of the head directing the fuel particles radially over the fuel bed, and means for supplying additional combustion air to the fuel bed.

2,455,818

GLARE REDUCING REAR-VISION MIRROR

James Hervey Sherts, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, Allegheny County, Pa., a corporation of Pennsylvania

Application March 6, 1945, Serial No. 581,218
5 Claims. (Cl. 88—77)



1. In a rear vision mirror structure having upper and lower edge portions, a primary back mirror having a curved convex reflecting surface, a transparent reflecting plate having the same curvature as the reflecting mirror surface, the convex surface of the mirror facing the concave surface of the plate and a frame securing the lower edge portion of the mirror and plate closely adjacent to each other and securing the upper portions of said mirror and plate in spaced relation to maintain the plate disposed angularly to the mirror.

2,455,819

WINDING REEL FOR TAPE MEASURES

Louis R. Smith, Portland, Oreg.

Application September 27, 1945, Serial No. 618,955
7 Claims. (Cl. 242—84.8)

1. A winding reel for a tape measure or the like comprising a generally cylindrical drum, a trackway formed in a base of the drum comprising a slot open to a periphery of said base, and a crank arm slidably retained in the trackway and comprising inner and outer members hinged together for folding down on each other and for alignment with each other with the outer member extending from the open end of the trackway.

2,455,820

PRODUCTION OF OIL-IN-WATER EMULSIONS

Arnold B. Steiner, La Jolla, Calif., assignor to Kelco Company, San Diego, Calif., a corporation of Delaware

No Drawing. Application May 21, 1946, Serial No. 671,419
18 Claims. (Cl. 99—144)

1. The method of making a stable, oil-in-water emulsion which comprises: intimately dispersing an oily substance in an aqueous liquid containing a glycol alginate.

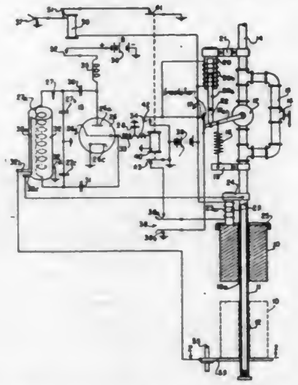
2,455,821

CRADLE FOR BASS VIOLS OR OTHER STRINGED INSTRUMENTS

Willebald Conrad Stenger, Chicago, Ill.

Application April 5, 1947, Serial No. 739,621
2 Claims. (Cl. 211—13)

1. A cradle for a musical instrument of the viol class, comprising an upright support, an arm attached to and extending laterally outward from said support and having an upwardly open pin-seat spaced outwardly from said support, and a headrest on said support being spaced inward from and above said pin-seat and comprising a channeled seat having spaced side walls which in horizontal section have inner and outer opposed portions substantially at right angles to said support with opposed outwardly diverging intermediate portions with respect to a central vertical plane defined by said headrest and pin-seat, whereby such musical instrument may be supported in an inclined position with its end pin in said pin-seat and its scroll in said channeled seat.



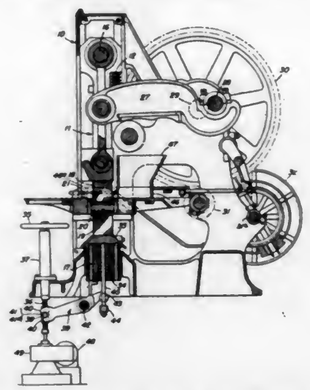
2,455,822

APPARATUS FOR HEAT-TREATING METAL PARTS

Herbert F. Storm, West Allis, Wis., assignor to Sunbeam Corporation, a corporation of Illinois

Application June 7, 1944, Serial No. 539,105
10 Claims. (Cl. 266—4)

5. Apparatus for internally heating a hollow metal piece to a quenching temperature and for then quenching the heated piece, comprising a high frequency source, a straight tubular inductor element energized from said source and telescoped through said piece, whereby a high frequency magnetic field is developed peripherally of the opening through said piece to heat the inner peripheral portion of said piece to a quenching temperature, said piece and said element being relatively movable between heating and quenching positions and the telescopic relationship between said piece and said element being maintained throughout such relative movement, said tubular element being provided with at least one quench liquid opening for playing a quench liquid upon the inner peripheral portion of said piece when said piece occupies its quenching position, means for flowing a quench liquid



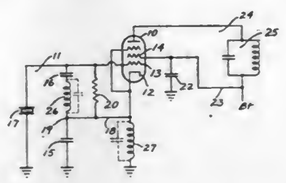
through said element, and means for effecting relative movement of said element and said piece to said quenching positions when said piece is internally heated to said quenching temperature.

2,455,823

CONTROL APPARATUS FOR MOLDING PRESSES

John A. Tauber and Harold A. Heiligman, Norristown, Pa., assignors to E. J. Lavino and Company, Philadelphia, Pa., a corporation of Delaware

Application March 3, 1948, Serial No. 12,812
12 Claims. (Cl. 25—45)



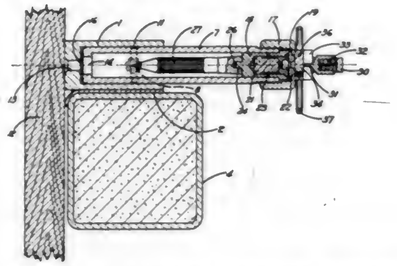
1. The combination with a cyclically operating power-driven brick-press having a stationary main frame, a brick mold stationary with said frame, a vertical sub-frame vertically movable upon and with respect to the stationary main frame in a manner controlled by a brick-forming cycle which sub-frame is adapted to absorb directly the brick-forming peak pressure, a top plunger and a bottom plunger for the mold and carried by said sub-frame, mechanisms for actuating the plungers with respect to each other and with respect to the mold to effect a brick-forming and -ejecting cycle, controllable adjusting means having a rotatable adjusting element for upwardly or downwardly adjusting the initial position of the bottom plunger determining the effective mold volume receiving the brick-forming mixture, and a reversible motor for driving said rotatable adjusting element; of a control system for automatically effecting an upward adjustment of the bottom plunger responsive to an increase in the apparent density of the brick-forming mixture and for effecting a downward adjustment of the bottom plunger responsive to a decrease in the apparent density of the mixture which system comprises a pair of responsive strain gauges mounted upon the peak pressure-absorbing portion of the sub-frame, a pair of non-responsive strain gauges subjected to substantially the same temperature conditions as the responsive strain gauges, a four-branch potential-balancing circuit with adjustable constant voltage supply to furnish input potential for the circuit, both said pairs of strain gauges constituting respective pairs of branch resistances of the circuit, the pair of responsive strain gauges being adapted to alter the bridge output potential when subjected to strain while temperature influences upon the strain gauges cancel out because of the balance condition between the responsive and the non-responsive strain gauges within the circuit, an auxiliary electronic circuit variable in response to variations of the bridge output potential, means for impressing said bridge output potential upon said electronic circuit, motor relay means controlled by said electronic circuit and adapted to close a motor-operating circuit to run the motor in one direction responsive to a drop of the bridge potential below a given intermediate value and to run the motor in the opposite direction responsive to a rise of the bridge output potential above a given intermediate value, and means for limiting the adjustment of the plunger within a press cycle.

2,455,824

HARMONIC GENERATOR

Joseph C. Tellier and Harry H. Wilson, Jr., Philadelphia, Pa., assignors, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania

Application November 30, 1944, Serial No. 565,914
12 Claims. (Cl. 250—36)



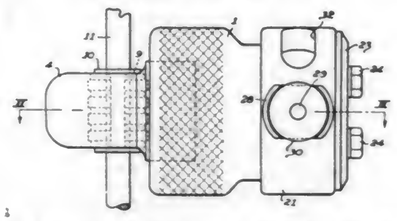
1. In a harmonic-frequency wave generator, a fundamental-frequency oscillator comprising a vacuum tube having a cathode, a grid, and an electrode functioning as an anode, said oscillator also including a fundamental-frequency-determining network a portion thereof being comprised of a tuned network which is parallel-resonant to a desired harmonic frequency, a path external of said tube interconnecting said grid and cathode, said path comprising a portion of said fundamental-frequency-determining network and including said tuned network which is parallel-resonant to the desired harmonic frequency, said path, exclusive of said tuned network, being of low impedance to the desired harmonic frequency, means coupling said oscillator anode and said fundamental-frequency-

determining network, and an output circuit electron-coupled to said oscillator through the space-path of said tube, said output circuit being tuned to said desired harmonic frequency.

2,455,825
EXPLOSIVELY ACTUATED FASTENING APPARATUS

Robert Temple, Swissvale, Pa., assignor to Temple Velocity Equipment, Inc., Wilmington, Del., a corporation of Delaware

Application August 15, 1944, Serial No. 549,545
8 Claims. (Cl. 1—47)

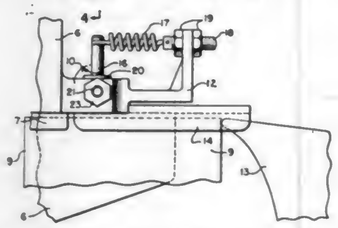


1. Explosively actuated fastening apparatus comprising a bracket adapted to be attached to a supporting member, said bracket being provided with a rearwardly opening socket having a front end wall provided with a central opening therein, a barrel mounted in said socket and having an opening in its front end registering with said bracket opening, and releasable means holding the barrel in the socket, the barrel being adapted to support a piercing stud in line with said openings, said barrel being adapted to receive an explosive charge behind the stud for driving it forward into said openings and supporting member, whereby the stud will project forward from the bracket to hold it against said supporting member.

2,455,826
EXPLOSIVELY ACTUATED TOOL

Robert Temple, Swissvale, Pa., assignor to Temple Velocity Equipment, Inc., Wilmington, Del., a corporation of Delaware

Application October 5, 1946, Serial No. 701,577
8 Claims. (Cl. 140—113)

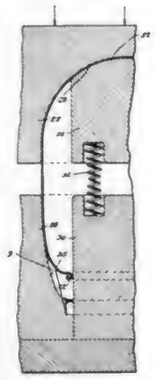


1. A tool comprising a body provided with a bore extending inwardly from one end, a piston slidably mounted in said bore, said body also being provided with a passage communicating with the inner end of the bore and extending radially thereof to the periphery of the body, said passage being adapted to receive an explosive cartridge having a rim at its outer end, an ejector extending slidably across the body and having one end adapted to engage the inner surface of the cartridge rim, the opposite end of the ejector being located adjacent the opposite side of the body, a ring encircling the body and rotatably mounted thereon, and a firing pin extended radially through the ring and normally located in line with said passage, said ring being provided with a radial opening and with a cam surface opposite said opening for pushing said opposite end of the ejector transversely of said body when the ring is rotated, whereby to eject a cartridge shell from said passage so that it can pass out through said ring opening.

2,455,827
CENTERING DEVICE

Oswald I. Thanem, Seattle, Wash., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York

Application February 27, 1946, Serial No. 650,686
6 Claims. (Cl. 153—32)

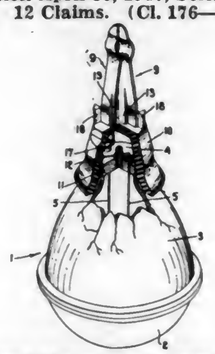


2. A device for guiding flattened can bodies and the like along a track to a floating forming mandrel comprising a support, vertically aligned pivots on the support, a journal bearing held by the pivots, a rock shaft passing through the bearing, a shoe attached by one end to the shaft, said shoe having a guiding channel opposite one side of said track and tension means from the free end of the shaft to the support urging the latter into engagement with the mandrel.

2,455,828
METHOD FOR PRODUCTION OF WASHING MACHINE TUBS

Michael Theil and Benjamin A. Woina, Salem, Ohio, assignors to Mullins Manufacturing Corporation, Salem, Ohio, a corporation of New York

Application February 3, 1944, Serial No. 520,908
4 Claims. (Cl. 113—120)

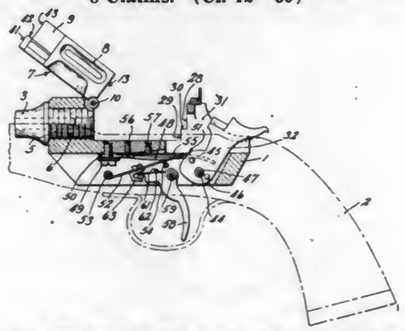


1. The method of making a container such as a washing machine tub, which comprises, necking in the margins of the side walls adjacent the opening in a relatively short radius curve wherein the opening is concentric with the side walls, forming the margins of the opening into a reinforcing roll-back curved head, inserting the open end of the tub so reinforced and necked-in into a die having a recess provided with the materially longer and less sharp curves desired and a centering member having substantially the diameter of the reinforced opening, and forcing the top portions of the tub into the die recess without internal support except at the reinforced edge by pressure distributed on the bottom and the side walls adjacent the bottom whereby the sidewalls adjacent the opening assume the curve of the recess without crinkling, buckling or cracking.

2,455,829
ELECTRIC LAMP

Ralph B. Thomas, Beverly, and Mazeppa Don Betts, Rockport, Mass., assignors to Sylvania Electric Products Inc., Salem, Mass., a corporation of Massachusetts

Application April 30, 1947, Serial No. 744,918
12 Claims. (Cl. 176—32)

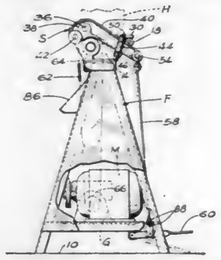


1. An electric lamp comprising a sealed bulbous envelope having a neck portion; metal prongs, one end of which engage the neck portion of said envelope; lead wires extending from said envelope and connected to said prongs; and a hollow cap of insulating material mounted on the neck portion of the envelope, said cap being provided with slots in its base through which the metal prongs extend.

2,455,830
FLEXIBLE SEAR MECHANISM FOR FIREARMS

Albert H. Tompkins, Springfield, Mass.

Application February 13, 1946, Serial No. 647,318
8 Claims. (Cl. 42—69)

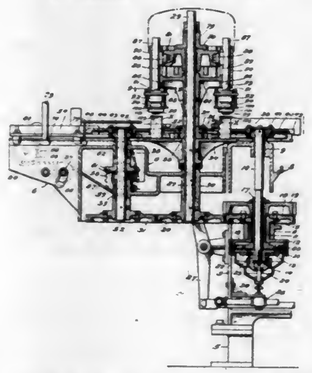


1. In a firearm, a firing member provided with a sear engaging abutment, a spring actuating said firing member, a flexible sear pivoted at one end, its second end engaging said abutment to hold said member against actuation by said spring, a second abutment positioned intermediate the ends of the sear and engaging that side of the sear which faces the firing member, a trigger and trigger operated means for flexing the sear between its pivot and said second abutment in a direction to flex its second end out of engagement with the abutment on the firing member.

2,455,831
SKINNING MACHINE

Ray T. Townsend, Des Moines, Iowa, assignor to Townsend Engineering Company, Des Moines, Iowa, a corporation of Iowa

Application November 8, 1944, Serial No. 562,460
19 Claims. (Cl. 146—130)



1. In a skinning machine, a frame, a serrated roller journaled thereon, a curved pressure shoe partially surrounding said roller and having a reduced leading edge for parting the skin from an object, a feed table for the object to feed the skin to the space between the serrations of said roller and said pressure shoe, said roller having peripheral grooves between the serrations thereof, and stripping means received in said grooves and partially surrounding said roller to strip the skin from the serrations thereof.

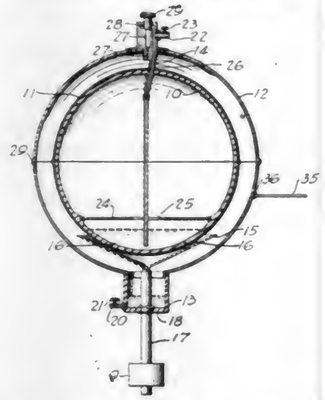
2,455,832
APPARATUS FOR STRAIGHTENING CANS AND THE FLANGES THEREOF

Alfred Treff, Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York

Application June 6, 1945, Serial No. 597,751
3 Claims. (Cl. 153—48)

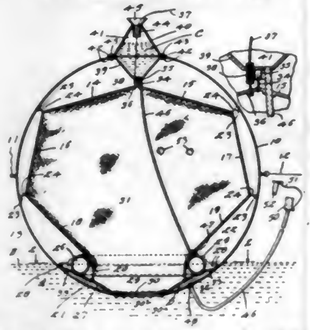
1. In apparatus of the character described, means for feeding open top cans in equidistantly

spaced relation over a definite path of travel, a carrier movable over the path of travel of the cans, a plurality of straightening dies supported on said carrier and each including a die plug conforming in shape to the open top of a can throughout the whole perimeter thereof and snugly and deeply slidable into such can tops, and means for vertically reciprocating the die plugs through a predetermined definite stroke bearing fixed relation to the open tops of the fed cans and in timed relation to the travelling cans for moving a die plug into and then out of the open top of each can passing beneath the carrier, thereby to reshape any misshapen cans throughout the whole perimeter of the open top thereof, each said die plug having a spring depressed stripper ring thereon engageable with the top of a can and effective for stripping from said plug any can tending to move upwardly therewith as the die plug is withdrawn upwardly from the open top of said can, and also an abutment means limiting free downward sliding movement of the die plug through the stripper ring and so placed with relation to the open tops of fed cans as to make the bottom of the ring effective to engage and straighten misshapen can flanges on cans in which the die plug slidably engages in straightening contact.



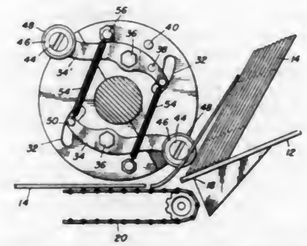
2,455,833
CLAMPING AND KNOT TYING INSTRUMENT
Louis Trombetta, Bronx, N. Y.
Application September 9, 1946, Serial No. 695,616
14 Claims. (Cl. 128—326)

1. A clamping and knot carrying ejecting and tightening instrument, comprised of a clamping element, knot carrying means, knot ejecting means and knot drawing means, the means all being carried and supported by the element and being removable therefrom and assemblable thereto as a unit and being capable of being equipped with a cord to tie a suture prior to assembling onto the clamping means and the carrying and ejecting means being relatively movable to eject and position the knot and the drawing means having retaining pieces capable of gripping the end portions of the knot and being slidably positioned on the instrument to move away from the deposited knot and draw it tightly.



2,455,834
INFLATABLE SOLAR STILL
Alexis E. Ushakoff, Newton, Mass., assignor, by direct and mesne assignments, of thirty-five per cent to Stanley A. Baron, New Orleans, La., for the benefit of himself and Frederick A. Middleton
Application August 27, 1945, Serial No. 612,879
4 Claims. (Cl. 202—234)

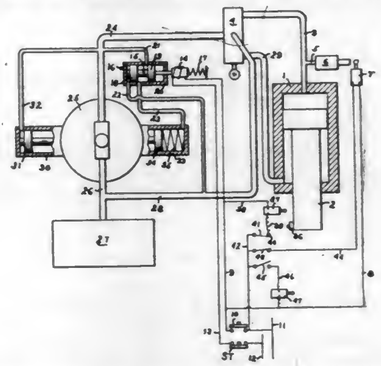
1. Solar still comprising inner and outer spaced spherical members defining between them a chamber, said inner member being externally clothed with a radiant-heat and water absorbing material, said outer member being adapted to float in water with its lower portion submerged, at least said lower portion being a condenser and at least upper portion being a transmitter of radiant-heat, the lower portion being provided with a distilled water collecting chamber, a tube extending through the upper wall of said outer and inner members having its lower end opening into said inner member and its upper end opening into said outer member above said inner member, a valved inlet to said tube external to said members for charging raw water into said inner member and fluid pressure for discharging the raw water from its



upper end upon the radiant-heat and water absorbing material clothing said inner member, a funnel within said outer member beneath said inner member for receiving overflow of raw water from the radiant-heat and water absorbing material, said funnel having a tubular outlet extending through and at some length below the lower part of said outer member, said outer member having a valved passage through the wall thereof for admitting sufficient fluid pressure to the chamber between said members to keep the column of water in said funnel outlet dispersed below the outside water level.

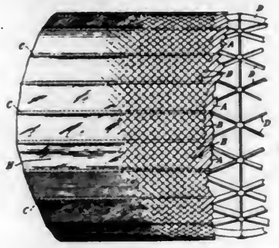
2,455,835
INFLATABLE SOLAR STILL
Alexis E. Ushakoff, Beverly, Mass., assignor of thirty-five per cent to Stanley A. Baron, New Orleans, La., for the benefit of himself, Frederick A. Middleton and John J. Finnorn
Application February 4, 1946, Serial No. 645,409
2 Claims. (Cl. 202—234)

1. A solar still comprising an outer transparent non-absorbent shell, said shell formed with an opening in the lower end thereof, a bag within said shell, means supporting said bag in spaced relation to the inner walls of said shell, said bag formed with an opening at the lower end thereof in registry with the opening of said shell, an annular ballast tube within said still surrounding said openings between the shell and bag, a salt water reservoir carried by said still between said shell and bag at the upper end thereof, a flexible connecting tube extending from said reservoir to said ballast tube for filling said ballast tube from said reservoir, means for feeding salt water from said reservoir on to said bag, a perforated condensate receptacle carried by said shell about said opening therein, and a flexible tube extending from said receptacle for drawing the condensate from said still and for admitting air into said shell and bag.



2,455,836
BOX BLANK SEPARATOR
Marinus Van Brummelen, New York, N. Y.
Application July 11, 1947, Serial No. 760,477
6 Claims. (Cl. 271—1)

1. A device for consecutively separating individual blanks having windows from a plurality of such blanks stacked on a rack, comprising a disk rotatively mounted adjacent the leading edge of a rack, a rocker arm pivoted on the side of said disk, and means to bias said arm into a position with one end thereof extending radially beyond the periphery of said disk, said one end having a journal, and a roller freely rotatively mounted on said journal, said roller being dimensionally adapted for partial entrance into, and frictional engagement with the edge of, a window in the outermost of a stack of blanks, the roller having rolling friction only with the succeeding underlying blank after said outermost blank has been shifted by the roller.

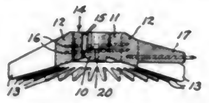


2,455,837
PUMP CONTROL MEANS FOR HYDRAULIC SYSTEMS
George A. Waldie, Edison, Ohio, assignor to The Hydraulic Development Corporation, Inc., Wilmington, Del., a corporation of Delaware
Application November 27, 1942, Serial No. 467,273
2 Claims. (Cl. 60—52)

1. In a hydraulic system, a source of fluid under pressure, control means movable to vary the delivery of said source from zero to maximum, first means connected to respond to pressure from said source to urge said control means toward zero delivery position, second means adapted to be connected to respond to pressure from said source to urge said control means to maximum delivery position against the action of said first means, said first and second means normally exerting equal opposed forces, continuously acting resilient means assisting the action of said second means, a valve movable into a first position to connect said second means to said source and into a second position to exhaust, a reciprocable ram connected to be actuated by fluid from said source, ram actuated means operable at the

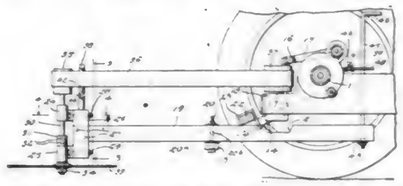
ends of the stroke thereof to move said valve into its second position, and manual means selectively operable to counteract said ram actuated means to return said valve to its first position.

2,455,838
AIR FRAME STRUCTURE
Barnes Neville Wallis, Weybridge, England, assignor to Vickers-Armstrongs Limited, Westminster, London, England
Application June 15, 1945, Serial No. 599,668
In Great Britain June 19, 1944
8 Claims. (Cl. 244—117)



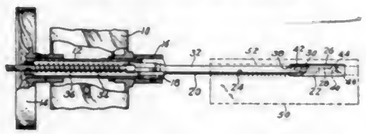
6. In an airframe construction, which includes a skeletal framework or substructure, in combination, a flexible outer skin applied to said substructure, said skin comprising two or more systems of thin metal ribbons interlaced after the fashion of the components of a woven fabric, but relatively movable with respect to each other to accommodate any differential tautening of the ribbons of the respective systems, the component ribbons being disposed closely together to form a substantially continuous surface, and means forming a permanent part of the construction for applying and maintaining tension in said skin in both of two directions in the plane thereof.

2,455,839
FINNED ELECTRIC AIR HEATER
Ernest R. Walton, Seattle, Wash.
Application January 18, 1946, Serial No. 641,919
5 Claims. (Cl. 219—38)



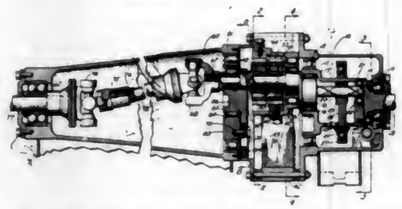
1. A one piece cast metal electric heating unit of relatively flat circular concavo-convex shape,

comprising a centrally positioned element carrying portion; an electric heating element embedded in said element carrying portion; and thin flat spaced apart heat radiating fins extending outwardly from said element carrying portion in planes substantially parallel to the



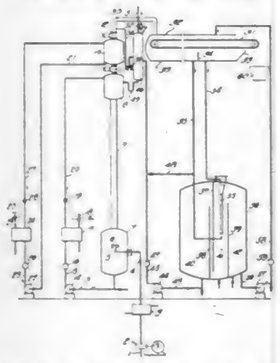
axis of said unit and in directions conforming to the concavo-convex shape of said unit, whereby an umbrella shaped finned structure is provided so that air directed against the concave side of said unit will be converged toward the axis thereof.

2,455,840
TREE-FELLING SAW ATTACHMENT FOR TRACTORS
James Stewart Webb, Demopolis, Ala.
Application November 3, 1944, Serial No. 561,710
1 Claim. (Cl. 143—43)



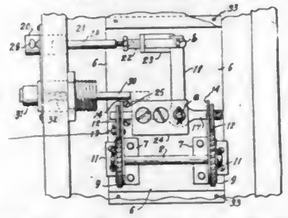
A saw attachment for a tractor having a drawbar and vertically swingable supporting arms for the drawbar, said attachment comprising an elongated beam engaging over said drawbar, a vertical pivot securing said beam to said drawbar between the ends of said beam, a transverse bar fixed between said arms and engaging over said beam forwardly of said pivot to hold the rear extended end of said beam against vertical rocking relative to said drawbar while permitting horizontal swinging of said beam, a vertical saw-carrying shaft at the rear of said beam, a bearing for said shaft carried by the rear of said beam, and an operative connection between said shaft and the tractor power take-off.

2,455,841
HONING SPINDLE
Arthur F. Wedge, Hartford, and Homer T. Bidwell, Manchester, Conn., assignors to Colt's Manufacturing Company, a corporation of Connecticut
Application December 4, 1943, Serial No. 512,928
8 Claims. (Cl. 51—184.3)



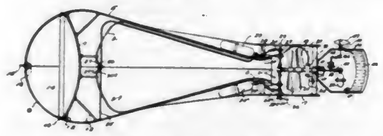
1. In combination with a substantially cylindrical honing spindle longitudinally splined and provided in said spline with a honing member adjustably projecting radially therefrom, a longitudinally slotted sleeve telescopically engaging said spindle and providing a work engaging surface opposed to said honing member, said slot in said sleeve being aligned with said spline whereby said honing member also projects through said slot, and disconnectible interengaging locking means respectively carried by said spindle and sleeve to prevent appreciable relative movement therebetween in a longitudinal direction.

2,455,842
POWER TRANSMISSION MECHANISM
Daniel M. Weigel, Detroit, Mich.
Application March 30, 1945, Serial No. 585,589
7 Claims. (Cl. 74—121)



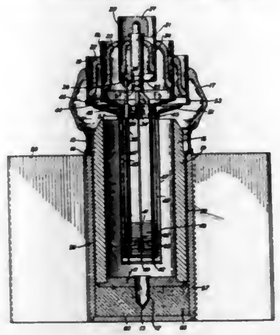
1. A power transmission comprising a housing, a drive shaft journalled therein, an enlarged inner end on said shaft having an eccentric recess therein, a drive pin hub journalled in said recess, a drive pin thereon in eccentric relation therewith, a clutch shaft journalled on said pin, a pinion journalled on the clutch shaft, a slide frame circumambient said pinion and mounted for reciprocative movement within the housing, a gear rack in said frame engaged with said pinion, overrunning clutch pawls intermediate said pinion and said clutch shaft, a plate having an eccentric hole therethrough mounted for rotative movement in said housing, an eccentric cam journalled in said hole, a balance weight mounted on said cam, an eccentric bearing in said cam for the support of the clutch shaft, a driven shaft and articulate linkage intermediate the clutch shaft and the driven shaft.

2,455,843
METHOD AND APPARATUS FOR PRODUCTION OF GEL BODIES
Horace M. Weir, Wynnewood, Pa., assignor to The Davison Chemical Corporation, Baltimore, Md.
Application March 10, 1944, Serial No. 525,938
3 Claims. (Cl. 252—317)



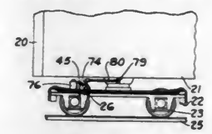
1. A method of gelling silica and other oxide hydrosols comprising forming small bodies of the hydrosol in a substantially immiscible liquid at a temperature above the atmospheric boiling point of the hydrosol, moving the bodies through the immiscible liquid, circulating the immiscible liquid in a direction countercurrent to the direction of movement of the bodies, correlating depth and the rate of circulation of the immiscible liquid to maintain the hydrogel in the liquid until the desired gellation has been effected, subsequently and without substantial reduction of pressure passing the gelled bodies into a zone of cooler immiscible liquid, moving the gelled bodies through the cooler liquid whereby said gel bodies are cooled to a temperature below the atmospheric boiling point of the liquid phase of said gelled bodies, circulating the cooled liquid countercurrent to the movement of the bodies, reducing the maintained pressure to substantially atmospheric pressure, and removing the gelled bodies from the liquid.

2,455,844
CLOSURE LOCK
Thomas J. Welborn, Lubbock, Tex.
Application May 10, 1946, Serial No. 668,881
6 Claims. (Cl. 292—22)



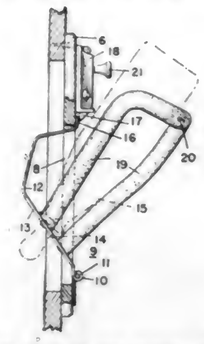
1. A sash lock for windows including pinions disposed in the frame of said window with gravity operated dogs to constrain the same to rotate only in one direction, a rack secured to said sash to move therewith and held in operative engagement with said pinions, a weighted arm of substantially inverted T-shape pivotally disposed for operation exteriorly of said frame to render said dogs inoperative to effect free and unrestricted movement of said sash.

2,455,845
ROCKET
Edward P. Wells, Jacksonville, Fla.
Application May 22, 1944, Serial No. 536,783
4 Claims. (Cl. 102—49)



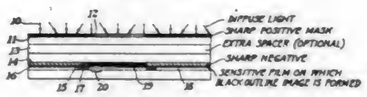
1. In a jet-propelled rocket, a hollow elongated body including a rearwardly tapering major intermediate portion defining a combustion chamber and a rear gas discharge neck of venturi-tube formation merging and co-axial with said intermediate portion, flasks of different highly compressed liquid fuels secured on the outside of said body adjacent said discharge neck, discharge nozzles mounted centrally of the forward end of said combustion chamber, means including pumps and admission valves therefor mounted directly at the rear of said body for intermittently supplying fuel from said flasks to said nozzles, electrical means for igniting the fuels issuing from sad nozzles, an electric generator mounted at the rear of said body for supplying current to said igniting means, a turbine arranged to be driven by gasses issuing from said discharge neck, and driving connections between said turbine and the pumps, the admission valves and the generator.

2,455,846
COAXIAL LEADIN FOR ELECTRON DISCHARGE DEVICES
John W. West, Jackson Heights, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application October 18, 1946, Serial No. 704,075
13 Claims. (Cl. 250—27.5)



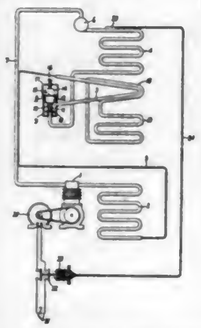
1. An electron discharge device comprising a vessel enclosing a plurality of electrodes, concentric tubular conductors insulatingly sealed to said vessel, said electrodes being connected to said conductors, and yieldable means extending across one of said conductors to relieve temperature strains in the sealed insulating joint adjacent the junction with said one conductor.

2,455,847
LUBRICATING SYSTEM FOR VEHICLES
Howard Winther, Harrington Park, N. J., assignor to Nathan Manufacturing Company, New York, N. Y., a corporation of New York
Application July 11, 1947, Serial No. 760,188
6 Claims. (Cl. 184—3)



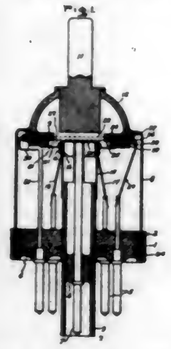
2. In a system for lubricating the wheel flanges of a vehicle having wheels mounted in a frame supporting the vehicle body, devices adapted to discharge oil against the wheel flanges, a pump mounted upon the frame having an inlet, a plurality of outlets in communication with the devices, a cylinder, a piston within the cylinder, a shaft adapted to reciprocate the piston, operating mechanism for the shaft actuated by the relative movements of two points on the frame, distributing means within the pump to supply oil to the devices successively through each of the outlets in timed relation with the reciprocation of the piston, and mechanism connecting a point on the frame and a point on the vehicle body with the pump to adjust the reciprocatory stroke of the piston in proportion to the relative movement between vehicle body and frame.

2,455,848
CALF FEEDER
Carroll I. Young, Westminster, Md.
Application August 9, 1946, Serial No. 689,612
3 Claims. (Cl. 119—71)



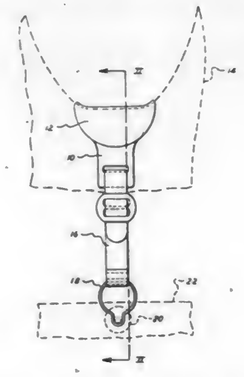
1. A device of the character described comprising a wall-like base having a doorway therein, a closure member hingedly connected at its lower end to the base and having a portion adapted to project through the doorway, said projecting portion constituting an inclined shelf having a bottle neck-receiving aperture, a bottle cage secured to the projecting portion of the closure member, and means for latching the upper end of the closure member to the base for confining the bottle within the cage.

2,455,849
PHOTOGRAPHIC UNSHARP MASKING METHOD
John. A. C. Yule, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application March 11, 1944, Serial No. 526,040
9 Claims. (Cl. 95—5)



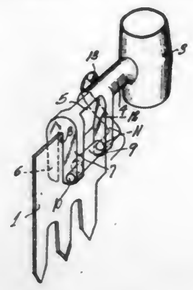
1. The method of producing from a continuous-tone picture having a maximum, a minimum and a plurality of intermediate tones, a two-tone reproduction with outline effects in which outline effects over at least a major portion of the picture-tone range all tones are reproduced as one tone, i. e. with effectively equal density and zero contrast, and only sudden changes in tone over the picture area are reproduced as lines of the other of the two tones and in which over the remaining portion, if any, of the picture-tone range all tones are reproduced as the other tone and sudden changes in tone are reproduced as lines of said one tone and which two-tone reproduction includes in addition to said outline effect a halftone reproduction of intermediate tones which method comprises masking a continuous tone transparency in an unsharp manner using a continuous tone mask which is negative with respect to the transparency and which has a contrast approximately equal to that of the transparency, placing and exposing a sensitive material in printing relation with the transparency, the superimposed images of the transparency and mask being respectively sharp and unsharp at the sensitive material during said exposing removing the mask, placing a halftone screen in screen relation with the transparency and the material, exposing the material to the screened transparency and processing the material to a combination halftone and line record.

2,455,850
TWO-TEMPERATURE REFRIGERATING SYSTEM
Leonard W. Atchison, Erie, Pa., assignor to General Electric Company, a corporation of New York
Application May 5, 1947, Serial No. 745,939
3 Claims. (Cl. 62—115)



1. Refrigerating apparatus comprising a primary refrigerating system including two evaporators, means for supplying refrigerant to said evaporators in series, a valve connected in said system between said evaporators for maintaining a constant pressure in one of said evaporators, and a secondary refrigerating system including a secondary condenser and a secondary evaporator, said secondary condenser being arranged in heat exchange relationship with said one of said first-mentioned evaporators.

2,455,851
IMPROVED ELECTRODE AND ENVELOPE STRUCTURE FOR ELECTRIC DISCHARGE DEVICES
James E. Beggs, Schenectady, N. Y., ass'gnor to General Electric Company, a corporation of New York
Application March 1, 1946, Serial No. 651,234
13 Claims. (Cl. 250—27.5)



1. An electric discharge device including an envelope, an anode having a planar active surface supported within said envelope, a cathode structure extending transversely of said envelope and having a planar annular emitting surface surrounding a centrally located aperture, a planar control grid positioned between said cathode structure and the active portion of said anode, a cylindrical conductor sealed through said envelope and joined to said cathode around said aperture, and a support and lead-in conductor for said grid extending through the aperture in said cathode structure.

2,455,852
UNDERWEAR SUPPORTED SUSPENDER
Josephine H. Campbell, Jackson, Mich.
Application July 21, 1944, Serial No. 545,935
2 Claims. (Cl. 2—323)

1. A concealed suspender for trousers having suspender buttons at the sides on the inside of the waistband thereof, said suspender being adapted to be worn on the outside of a sleeveless undershirt to be supported from the reinforcing edge of an arm hole thereof and being concealed beneath an outer shirt and comprising, a hook having an inwardly disposed downwardly projecting bill engageable over the reinforcing edge of an arm hole of the sleeveless undershirt with the bill of the hook disposed inwardly, said hook having the lower portion of the body thereof offset to be substantially in the plane with portions of the bill of the hook and having a flared throat for engagement over a considerable portion of the arm hole of the undershirt, a button engaging loop portion engageable over a button of the trousers with a portion of the outer shirt interposed over the button, and a flexible strap supporting said button loop portion from the hook portion and having an adjustable end on the inner side whereby said adjustable end is presented to lie against the outer side of the undershirt, thereby leaving the button loop portion entirely free and open on its outer side for engagement over a trousers button, the offset formation of the hook and the connection of the loop portion being such that the bill of the hook and the loop are presented to be disposed in substantially the same line of tension when the suspender is in use and the hook portion will be disposed adjacent to the body of the wearer without projection inwardly beyond the plane of the supporting strap and the adjusting end of the supporting strap will be presented inwardly against the undershirt to thus avoid contact of this end with the outer shirt.

2,455,853
SAW BLADE AND HANDLE
Oscar Carlson, Spokane, Wash.
Application February 1, 1946, Serial No. 644,943
1 Claim. (Cl. 145—110)

A saw blade, and a handle for said saw blade comprising a handle engaging member, a shank projecting from said handle engaging member and having its outer end portion formed with a longitudinally extending groove, said groove extending from the outer end of said shank inwardly for a portion of its length, a pair of parallel spaced depending legs at each end of the grooved outer end portion of the shank, the legs of each pair being disposed at opposite sides of the groove, said saw blade being disposed between the legs of each pair of legs and having an edge portion fitting snugly in the groove, a cam between the legs at one side of the grove, said cam having eccentric coaxial shafts extending from its ends, said shafts being rotatably mounted in the legs at the said one side of the groove, the cam being of a diameter adapting it when rotated to engage the confronting side face of the saw blade and urge said blade against the legs at the other side of the groove, the inner one of said shafts extending through and projecting rearwardly from the leg in which it is mounted and its projecting end portion being formed with a laterally extending lever arm for turning the cam into and out of engagement with the confronting side face of the saw blade, and said lever being of a length adapting it to extend across the shank and having its free end portion curved longitudinally and disposed in close fitting engagement with a side portion of the shank rearwardly of the inner pair of legs when said lever is moved to a position disposing the cam in engagement with the saw blade.

2,455,854
STRIPPABLE COATING COMPOSITION COMPRISING A POLYCHLOROPRENE AND ALUMINUM POWDER
George E. Condé, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 25, 1944, Serial No. 565,191
10 Claims. (Cl. 260—41.5)

1. A corrosion-resistant, sprayable, strippable coating composition comprising, by weight, 100 parts of an uncured chloroprene polymer obtained by polymerizing chloroprene in the presence of an amount of elementary sulfur up to 2% by weight of the chloroprene, a curing accelerator for the said chloroprene, 15–50 parts of finely divided aluminum powder, and a liquid volatile vehicle containing a solvent for the chloroprene.

2,455,855

STRIPPABLE COATING COMPOSITION COMPRISING A POLYCHLOROPRENE AND A STRIPPING AGENT

Clyde G. Murphy, Metuchen, and John P. Sermattei, Matawan, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application November 25, 1944, Serial No. 565,193
10 Claims. (Cl. 260—23)

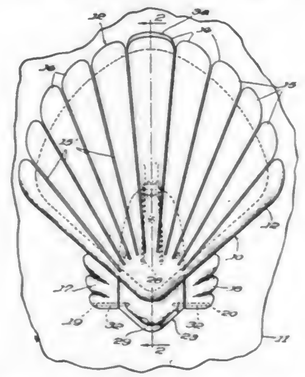
1. A corrosion-resistant, sprayable, strippable coating composition comprising, by weight, 100 parts of an uncured chloroprene polymer obtained by polymerizing chloroprene in the presence of an amount of elementary sulfur up to 2% by weight of the chloroprene, a curing accelerator for the said chloroprene, and about 0.05–5.0 parts of a stripping agent selected from the group consisting of soya lecithin, a lead soap of petroleum oil acids, and a stearyl alcohol ester of a styrene-maleic anhydride reaction product.

2,455,856

STRIPPABLE COATING COMPOSITION COMPRISING A POLYCHLOROPRENE AND CARBON BLACK

Clyde G. Murphy, Metuchen, and John P. Sermattei, Matawan, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application November 25, 1944, Serial No. 565,194
6 Claims. (Cl. 260—41.5)



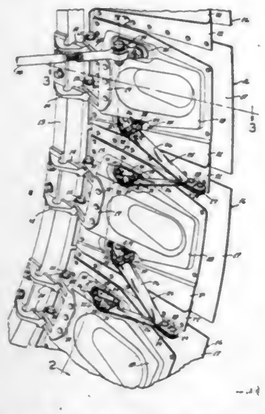
1. A corrosion-resistant, sprayable, strippable coating composition comprising, by weight, 100 parts of an uncured chloroprene polymer obtained by polymerizing chloroprene in the presence of an amount of elementary sulfur up to 2% by weight of the chloroprene, a curing accelerator for the said chloroprene, and about 150–250 parts of carbon black.

2,455,857

HOLDER

James E. Donaldson, Columbus, Ohio

Application November 13, 1945, Serial No. 627,977
12 Claims. (Cl. 211—89)



8. A supporting device adapted to be positioned in a horizontal use and a vertical non-use position, comprising a fan shaped member having an inner concave surface and an outer convex surface, a plurality of arcuate finger portions formed in said fan shaped member, a lip portion on one of said finger portions extending outwardly of said convex surface, a plurality of spaced members connected to the bottom portion of said fan shaped member, a boss on said inner concave surface of said fan shaped member, a bracket adapted to be enclosed within said concave surface of said fan shaped member with the lower portion of said bracket positioned between said spaced members, fastening means for connecting said bracket to a wall, a protruding member upon the top portion of said bracket positioned to frictionally engage said boss and thereby retain said fan shaped member in the non-use position, and means hingedly joining said bracket and said fan shaped member.

2,455,858

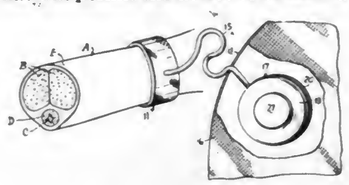
COWL FLAP OPERATING MECHANISM

Lloyd F. Engelhardt, Ferguson, Mo., assignor to Curtiss-Wright Corporation, a corporation of Delaware

Application June 25, 1945, Serial No. 601,526
7 Claims. (Cl. 268—96)

1. In a cowl flap installation having a pair of flaps with their hinge axes angularly related but in a substantially common plane, a primary operating means for moving at least one of the flaps about its hinge axis, and means for effecting substantially equiangular movement of the flaps about their hinge axes comprising a leaf spring affixed at one end to each flap, the opposite ends of the leaf springs being connected, each leaf spring being arranged with its major cross-sectional dimension substantially in the direction of movement of the springs about said axes, the direction of extent of each leaf spring, from the end thereof affixed to the flap to the opposite end thereof connected to the other leaf spring, being generally away from the hinge axis of the related flap, and the springs being arranged to resist by their resilience hinging movement of the flaps from a partially open position.

2,455,859



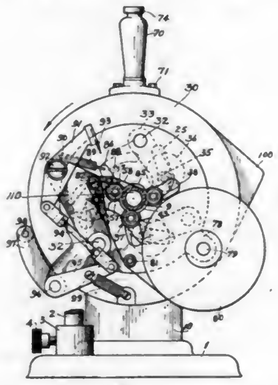
ARTIFICIAL SPHINCTER AND METHOD

Frederic E. B. Foley, St. Paul, Minn.

Application May 13, 1946, Serial No. 669,218
6 Claims. (Cl. 128—346)

1. A method for controlling involuntary escape of urine which comprises permanently isolating a segment of the urethra by forming a cutaneous tunnel between it and normally attached adjacent tissue, and applying a clamping element to such segment to constrict the same adjacent the tunnel and prevent the flow of urine through the segment.

5. An artificial sphincter for controlling the involuntary escape of urine comprising a hollow urethra encircling member that is radially inwardly expansible under fluid pressure to clamp the urethra closed, a fluid pressure device connected to the member by an elongated flexible tube that will permit the device to be moved about



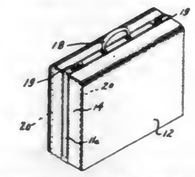
with respect to said member, and which will permit the device to be operated at a point substantially remote from the urethra encircling member, said fluid pressure device having a fluid chamber that is in constant communication with the interior of the urethra encircling member through said flexible tube, and manually operative means for effectively increasing and decreasing the size of said chamber to thereby control the flow of fluid to and from the urethra encircling member.

2,455,860

TUBE CAPPING MACHINE

Willard E. Gerbing, Chicago, Ill., assignor to The Scholl Mfg. Co., Inc., Chicago, Ill., a corporation of New York

Application November 22, 1943, Serial No. 511,271
8 Claims. (Cl. 93—56)



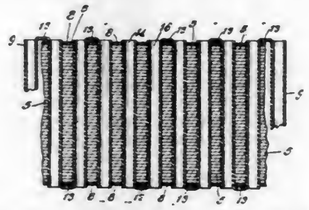
1. In a machine for securing an oversize disc to the end of a conduit, means for holding a disc in position against the end of a conduit, a rotatable member, a plurality of rollers carried by said member and shaped complementally to the conduit end and disc, a tape holder also carried by said member to supply tape to be pressed into position around the conduit end and disc by said rollers, a cam member arranged to urge said rollers inwardly against the conduit and disc and also actuate said rotatable member, said cam member having a series of inwardly extending cam tracks, and riders for said tracks associated with said rollers.

2,455,861

REINFORCED LUGGAGE

Morris Gerson, Newark, N. J., assignor to Henry L. Kotkins, Seattle, Wash.

Application April 10, 1947, Serial No. 740,566
1 Claim. (Cl. 190—50)



In a suitcase of the character described, a rectangular bottom, a single rectangular member bent at one end thereof to form a side and a top, means to attach the lower end of said side to said bottom, a substantially rectangular piece at each end of said suitcase, out-turned edges on said last named pieces forming, with said member, an exterior welt, and L-shaped metal reinforcement lying inside said case adjacent said welt, a securing strip covering said reinforcement and extending into said welt at one side and secured to said end at the other side, and stitching passing through said welt and through said securing strip to secure the pieces of said welt together.

2,455,862

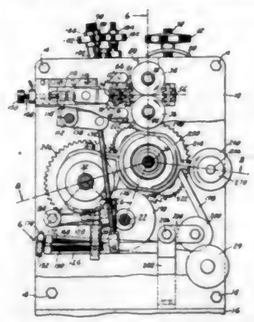
CONTINUOUS STRIP SLOT INSULATION

Richard O. Goldberg, Chicago, Ill., assignor to Pioneer Gen-E-Motor Corporation, Chicago, Ill., a corporation of Delaware

Application February 7, 1947, Serial No. 727,096
14 Claims. (Cl. 171—206)

1. Insulating means for electric rotors and the like, comprising a thin, flat longitudinally extended strip of flexible insulating material, longitudinally scored along its central axis, the strip being notched on opposed sides thereof at a plurality of spaced points along both sides, the notches alternating and extending inwardly substantially to the scored center line the opposite walls of the notches being parallel and perpendicular to the scored center line.

2,455,863



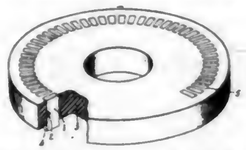
SPRING COILING MACHINE EMBODYING A CHANGE SPEED MECHANISM

Elmer W. Halvorsen, Worcester, Mass., assignor to The Torrington Manufacturing Company, Torrington, Conn., a corporation of Connecticut

Application December 26, 1946, Serial No. 718,534
39 Claims. (Cl. 153—65)

1. In a spring coiling machine, the combination of wire feed rollers, spring coiling mechanism positioned to coil the wire after it has passed the rollers, cutoff mechanism positioned to cut the wire after it has been coiled, a constant speed drive shaft, an intermediate shaft geared

to the feed rollers, a change speed mechanism connected with the drive shaft, a rotatable member driven by the change speed mechanism, a rotatable cam shaft, means operable repetitively by the cam shaft during rotation thereof for adjusting the change speed mechanism to rotate the rotatable member alternately at two different normally fixed speeds, gearing connected with the rotatable member and serving upon rotation of the member at one said speed to rotate the intermediate shaft in the direction to rotate the feed rollers so as to effect feeding and coiling, the said gearing serving upon rotation of the member at the other said speed to maintain the intermediate shaft and the feed rollers stationary so as to discontinue feeding and coiling, and a means actuated by the cam shaft for operating the cutoff mechanism when the intermediate shaft and the feed rollers are stationary.



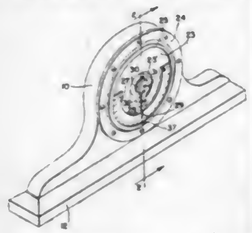
35. A wire coiling machine comprising wire feed rollers, coiling mechanism positioned to coil the wire after it has passed the rollers, cut off mechanism positioned to sever the coiled wire, a drive shaft, a differential change speed mechanism connecting the shaft with the rollers and operable to drive the latter at rates varying with respect to that of the drive shaft, a cam shaft driven by the drive shaft, a cam mechanism connected with the cam shaft and operating to control the differential mechanism and cause it to drive the rollers at rates varying from zero to a maximum, and cam controlled means connected with the cam shaft and operable to cause the cut off mechanism to sever the wire when the feed rollers are held stationary by the differential mechanism under the control of the cam mechanism.

2,455,864

METHOD OF MANUFACTURE OF PLURAL CIRCUIT CONNECTING MEMBERS

Max R. Hanna, Erie, Pa., assignor to General Electric Company, a corporation of New York

Application December 4, 1945, Serial No. 632,733
2 Claims. (Cl. 29—155.54)



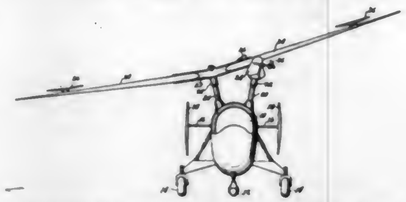
1. The method of making a plural circuit connecting member comprising forming a groove in a peripheral surface of a hollow cylindrical member of electrically conductive material, longitudinally slotting said member for a distance less than the longitudinal width thereof to form a plurality of bars connected to a solid ring portion, molding insulating material around said bars substantially from said solid ring portion longitudinally to a point beyond said groove but less than the outer extremity of said bars away from said solid portion so that an end portion on said bars beyond said insulating material is left exposed for providing lead connecting portions, and removing said solid ring portion as by grinding, whereby newly formed end surfaces of separate spaced conductor bars are exposed and adapted to make contact with a suitable brush contact member at the face of said plural circuit connecting member opposite said end portions providing lead connecting portions.

2,455,865

MEASURING INSTRUMENT HAVING AN ADJUSTABLE SCALE

Herbert C. Houser, St. Louis, Mo., assignor to Curtiss-Wright Corporation, a corporation of Delaware

Application September 9, 1944, Serial No. 553,387
6 Claims. (Cl. 33—215)



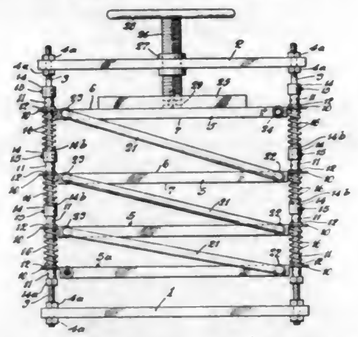
1. A measuring instrument comprising a body member having a circular aperture therethrough, a ring member secured to the body member around the aperture, a convexly formed flexible diaphragm secured between said members, a scale frictionally retained between the convex side of said diaphragm and one of said members, said scale being movable relative to said members upon flexing of said diaphragm from its normally convex configuration.

2,455,866

AIRCRAFT OF ROTARY WING TYPE

Charles H. Kaman, West Hartford, Conn., assignor to The Kaman Aircraft Corporation, West Hartford, Conn., a corporation of Connecticut

Application August 19, 1946, Serial No. 691,431
12 Claims. (Cl. 244—17)



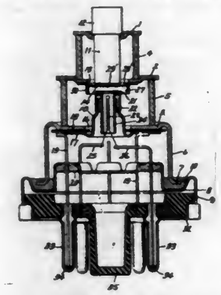
1. An aircraft of the rotary blade type including in combination, a fuselage, a power driven substantially vertical shaft connected with the fuselage, a plurality of similar radially extending aerofoil blades equally spaced circumferentially and having their root portions connected with the shaft for rotation therewith and so held as to prevent rotative movements of the said root portions about axes extending longitudinally of the blades, each blade being formed of wood with the cross-sectional area at its root portion greater than the cross-sectional area at any other portion and with a longitudinal opening therein extending along its leading edge from its root portion to a point at the outer portion thereof and each blade being capable of substantial twisting about its longitudinal mean axis and with respect to its nonrotatable root portion and having torsional resiliency causing it to be restored to its normal shape after such twisting, a plurality of similar aerofoil flaps carried respectively by the outer portions of the blades adjacent the outer ends of the said longitudinal openings in the leading edges thereof and angularly movable relatively to the blades about axes substantially parallel with the mean axes of the blades which flaps serve by reason of aerodynamic forces acting thereon during rotation to twist the respective blades progressively from the said root portions to the said flaps and to thereby change the effective blade pitches to varying substantial extents dependent on varying relative angular positions of the flaps, relatively movable flap moving connections extending from the flaps to the fuselage which connections include elements extending longitudinally of the blades and positioned within the said openings in the leading edges thereof, and a pilot controlled flap actuating mechanism on the fuselage for moving the said connections during rotation of the blades and flaps so as to angularly move the flaps relatively to the blades, the said flap actuating mechanism enabling the pilot to control the movement of the aircraft by reason of varying flap induced twisting of the blades and the resultant varying effective pitches thereof.

2,455,867

PRESSURE TYPE FREEZER

Herman W. Kleist, Chicago, Ill., assignor to Dole Refrigerating Company, Chicago, Ill., a corporation of Illinois

Application January 6, 1944, Serial No. 517,171
6 Claims. (Cl. 62—114)



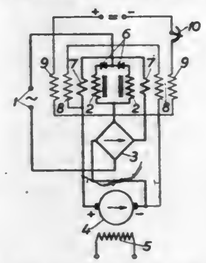
6. In a freezer, a plurality of horizontal freezing plates, uprights adapted to guide them in vertical movement, yielding means interposed between the plates tending to move them upwardly and separate them, stop members on the guiding means adjustable in position whereby the tension of the yielding means may be adjusted, the stop members being adapted also to serve to limit the upward excursion of each individual plate, adjustable means for overcoming the thrust of the yieldng means to compress material to be frozen between the plates, flexible fluid tight connections between said plates in series, said plates being connected, by said connections, and being adapted to receive a coolant passing through the plates in series, at all permitted and relative positions of the plates.

2,455,868

CONTROL GRID FOR ELECTRIC DISCHARGE DEVICES AND METHOD OF MAKING SAME

Arthur R. Koch, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York

Application April 21, 1945, Serial No. 589,488
7 Claims. (Cl. 250—27.5)

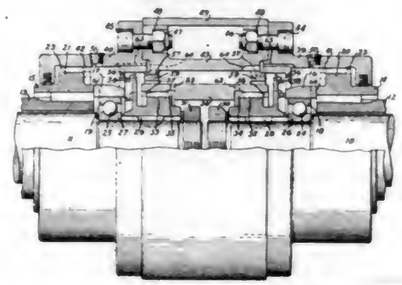


4. An electric discharge device comprising a plurality of electrodes including an anode, a cathode and a control member, a disk-like member providing an externally accessible connection for each of said electrodes, a plurality of cylindrical members of insulating material sealed between said disk-like members to space said connections, the disk-like member for said grid including a cylindrical support concentric with one of said members of insulating material and extending toward said cathode, a grid structure including a cylindrical supporting portion received in and secured to said support, the lowermost portion of said support and grid structure extending below the upper surface of the cathode to prevent material vaporized from said cathode from depositing on said one member.

2,455,869

MEANS FOR OPERATING SEPARATELY EXCITED DIRECT-CURRENT MOTORS

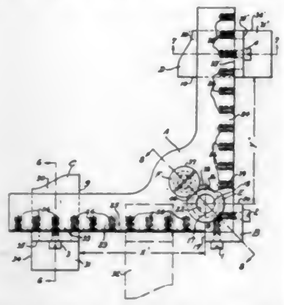
Ulrik Krabbe, Fruens Boge, Denmark, assignor to Allmanna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a corporation of Sweden



Application December 4, 1947, Serial No. 789,732
In Sweden December 6, 1946
3 Claims. (Cl. 318—308)

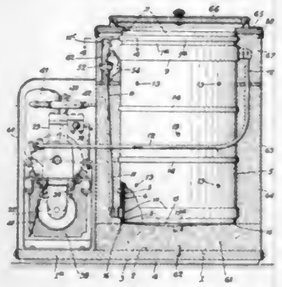
1. Means for operating direct current motors comprising a direct current motor with separate

excitation, a rectifier having direct current terminals connected in series with said motor and alternating current terminals connected in series with a direct current saturable reactor to alternating current terminals, self-magnetizing means for said reactor, and at least two additional magnetizing means for said reactor, one of which cooperates with the self-magnetizing means and is essentially proportional to the armature current of the motor, while another opposes the self-magnetisation and is essentially proportional to the voltage across the rectifier.



2,455,870
COUPLING
John A. Maul and Willis P. Lautzenheiser, Fort Wayne, Ind., assignors to General Electric Company, a corporation of New York
Application January 5, 1944, Serial No. 517,078
9 Claims. (Cl. 64—9)

1. A coupling for connecting a pair of inner and outer substantially co-axial shafts extending in one direction to another pair of inner and outer substantially co-axial shafts extending in the opposite direction including a pair of engagement members respectively secured to each of said inner shafts, means including a coupling member arranged in engagement with said engagement members for providing a driving connection between said inner shafts, a second pair of engagement members respectively secured to each of said outer shafts, means including a second coupling member surrounding said first-mentioned coupling member and arranged in engagement with said second engagement members for providing a driving connection between said outer shafts, and a means including a pair of anti-friction bearings respectively positioned between each of said inner shafts and said second engagement members for supporting said inner shafts, said second coupling member being formed as a lubricant reservoir for said bearings, each of said second engagement members having a plurality of outwardly extending openings adjacent said bearings for creating a centrifugal fan action on rotation of said coupling whereby lubricant is drawn through said bearings.

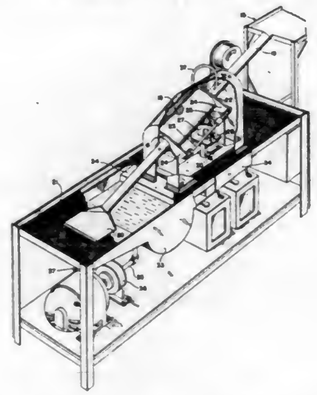


2,455,871
ADJUSTABLE DRILL JIG
Arthur W. Meyer, St. Louis, Mo., assignor of one-half to Joseph P. Happley, St. Louis, Mo.
Application February 10, 1945, Serial No. 577,265
4 Claims. (Cl. 77—62)

1. A tool of the class described comprising the combination of a body member adapted to be mounted on top of a work piece, a non-adjustable measuring element, an adjustable measuring element, and clamping means for said adjustable measuring element, said body member including two legs intersecting each other at one of their ends and diverging from their intersection at an angle of 90° to each other, said body member having an aperture located adjacent to the intersection of said legs for receiving a guide for a rotatable cutting device and positioning the latter immovably in said body member in a plane extending transversely to the axis of rotation of the cutting device, said non-adjustable element being positioned on the outer side of a leg of said body member and having a surface extending lengthwise of the axis of said aperture and at 90° to the side surface of the leg and outwardly therefrom, said adjustable element being mounted on the same leg on which said non-

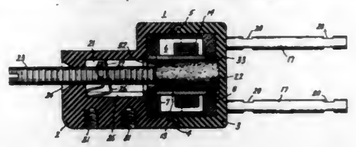
adjustable element is positioned and having a horizontal portion adapted to engage the underside of the leg and an upwardly projecting portion engaging the outer side surface of the leg, said latter portion having a surface extending outwardly at 90° from the outer side surface of the leg and facing toward the above-mentioned surface of said non-adjustable element, said horizontal portion having a surface extending in the same direction as the above-mentioned surface on said upwardly projecting portion for engagement with a side surface of the work piece, and said clamping means holding said upwardly extending portion of said adjustable element directly to the leg of the body member to position said latter element on the leg in spaced relation with said non-adjustable element.

2,455,872
CYLINDRICAL DOMESTIC REFRIGERATOR
Willard L. Morrison, Lake Forest, Ill.
Application May 26, 1945, Serial No. 596,048
16 Claims. (Cl. 62—116)



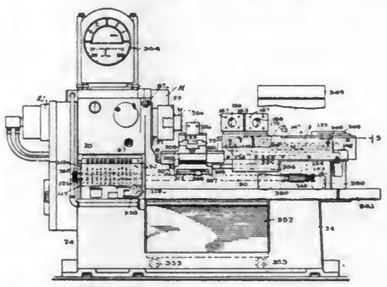
1. In an open topped evaporator and storage structure for refrigerators, concentric generally vertically axised inner and outer cylinders having spacing means adapted to space them slightly apart, said cylinders being sealed together adjacent their ends to define therebetween an evaporator space, a bottom member closing the storage space surrounded by the evaporator space thus formed, said cylindrical members being additionally separated adjacent their upper ends to provide a generally circumferentially extending heat interchanger space, means for delivering a liquid refrigerant to said heat interchanger space and thence to said evaporator, and means for withdrawing evaporated refrigerant from the evaporator.

2,455,873
MODIFIED WAX-COMPATIBLE ETHYLENE GLYCOL - TETRACHLOROPHTHALATE RESINS
Birger W. Nordlander and William E. Cass, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
No Drawing. Application July 4, 1945, Serial No. 603,268
6 Claims. (Cl. 260—22)



1. A flame-resistant, wax-compatible, permanently fusible, resinous composition, containing from 30 to 40 percent, by weight, of chlorine, said composition being the resinous product of simultaneous reaction of ingredients consisting of (*a*) ethylene glycol, (*b*) tetrachlorophthalic anhydride, the ethylene glycol being present in an amount equal to from 1.05 to 1.25 mols per mol of tetrachlorophthalic anhydride, and (*c*) a modifying substance being at least in part chemically combined in the resinous composition and being selected from the class consisting of (1) fatty oils, (2) fatty acids having from 10 to 33 carbon atoms, inclusive, and (3) fats and waxes containing esters of the fatty acids defined in (2), the modifying substance being present, by weight, in an amount corresponding to from 5 to 25 per cent of the total weight of the starting ingredients.

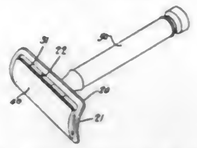
2,455,874
MACHINE FOR TESTING AND MARKING PARTS MAGNETICALLY
Albert J. Newman, Kenmore, N. Y., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application April 7, 1944, Serial No. 530,020
8 Claims. (Cl. 175—183)



1. A machine for testing parts magnetically including means for applying a magnetically sensitive film to said parts, a magnetizing coil, means for directing said parts to said means for applying a magnetically sensitive film and then through said coil, and means for momentarily energizing said coil for arresting said parts in said coil, whereby to utilize the magnetic field set up by the latter to modify the film on those of said parts which are defective.

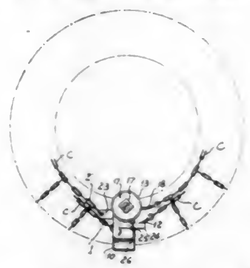
2,455,875
INDUCTANCE UNIT
Eric O. Peterson, Bridgeport, David I. Wright, Westport, and Henry T. Heaton, Milford, Conn., assignors to General Electric Company, a corporation of New York
Application July 10, 1944, Serial No. 544,286
2 Claims. (Cl. 171—119)

1. A transformer arrangement for high frequency currents comprising a plurality of housing members, each of said members comprising insulating means forming a substantially closed chamber, a magnetic core supported within said chamber, a winding disposed within said core, and a one-turn link coupling for said windings within said chambers comprising a conductive body surrounding said members for shielding said windings from electromagnetic fields external to said body.



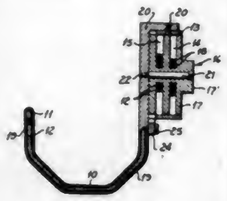
2,455,876
MACHINE TOOL
William Wallace Potter and Alfred Joseph Fuller, Pawtucket, R. I., assignors, by mesne assignments, to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey
Application May 26, 1944, Serial No. 537,490
18 Claims. (Cl. 29—44)

1. A turret lathe comprising a spindle, cross slides a turret slide, an indexable turret mounted on the turret slide, means for driving said spindle and reciprocating said cross slides and said turret slide relative to the spindle for performing work operations, a device mounted on the turret slide for centering and locking the turret in indexed position and for unlocking the same prior to indexing of the turret, a selector device mounted on the turret slide for rendering either or both of the cross slides effective or ineffective with respect to the position of any face of the turret and including a disconnectible means in said cross-slide drive actuated by said selector device, the means for driving said turet slide including a single rotatably mounted cam-disc disposed



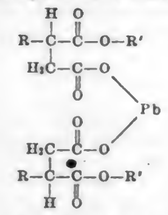
under the upper surface of the turret slide and cam surfaces thereon for directly reciprocating the turret slide, for directly indexing the turret, for directly actuating the turret locking and unlocking device and for actuating said selector device in time relation with respect to each other.

2,455,877
SAFETY RAZOR
Olaf Rasmussen, Sidney, Ohio
Application December 16, 1944, Serial No. 568,424
3 Claims. (Cl. 30—73)



1. A shaving device comprising in combination, a guard, transversely arcuate and having two slots each parallel to and adjacent a longer edge of said guard and terminating adjacent the shorter, arcuate edges thereof, the middle portion of the guard between said slots being flat the corresponding surfaces of the arcuate and flat portions of the guard being in tangency at the longitudinal center of the guard; a blade shorter than the length of the slots and wider than the middle portion of the guard, having a cutting edge at each longer side thereof, each cutting edge substantially aligning with the outer edge of a slot when said blade is in position on the flat portion of the guard; a clamp wider than the middle portion of the guard and narrower than the blade and having an arcuate surface operative to engage and urge the blade toward said flat portion of the guard and thereby flexing said blade transversely over said portion to hold each cutting edge thereof no less than forty thousandths of an inch from the adjacent edge of the guard, said clamp being narrower than and longer than the blade, yet shorter than the slots in the guard; and means for urging the clamp toward and upon the guard to clamp the blade thereupon and flex it, said means providing a handle for the device.

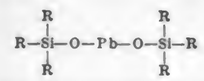
2,455,878
ANTISKID DEVICE FOR TIRES
Charles Sadowsky, Great Neck, N. Y., assignor to United Device Corporation, New York, N. Y., a corporation of New York
Application August 7, 1946, Serial No. 688,831
8 Claims. (Cl. 152—219)



3. An anti-skid device for tires, comprising, in combination with anti-skid chains, a channel-shaped bar fitting the contour of the tire, a drum having a rear supporting member securably attached to one end of said bar, said drum being adapted to receive and wind up two cables in separate compartments thereof, said cables being

attached at one end to said anti-skid chains, the other ends of said chains being fastened to the channel-shaped bar and the rear supporting member of said drum respectively.

2,455,879
ORGANIC LEAD SALT STABILIZERS FOR VINYL HALIDE RESINS
Moyer M. Safford, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application May 13, 1946, Serial No. 669,469
10 Claims. (Cl. 260—86)

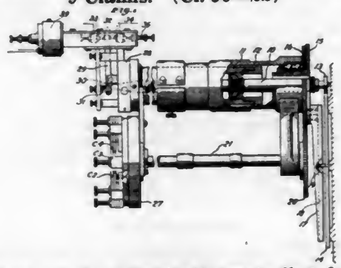


1. A composition comprising (1) a vinyl halide resin and (2) from 0.5 to 10 per cent, by weight, based on the weight of (1) of a heat, light and electrical stabilizer therefor comprising a compound having the general formula

wherein R and R′ are each an alkyl radical, the former having from 3 to 10 carbon atoms and the latter having from 1 to 5 carbon atoms in the radical.

2,455,880
LEAD SILANOLATE STABILIZERS FOR VINYL HALIDE RESINS
Moyer M. Safford and Edwin L. Mincher, Schenectady, N. Y., assignors to General Electric Company, a corporation of New York
No Drawing. Application May 13, 1946, Serial No. 669,470
12 Claims. (Cl. 260—86)

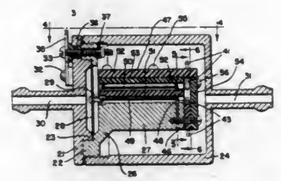
1. A composition comprising (1) a vinyl halide resin and (2) from 0.5 to 10 per cent, by weight, based on the weight of (1) of a heat and light stabilizer therefor comprising a compound having the general formula



where R is a hydrocarbon radical selected from the class consisting of alkyl, aryl, aralkyl and alkaryl radicals.

2,455,881
MERCURY-TREATED CHARCOAL CATALYST AND PROCESS FOR ITS PREPARATION
Leroy Frank Salisbury, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Original application September 7, 1945, Serial No. 615,090. Divided and this application July 18, 1947, Serial No. 762,009
6 Claims. (Cl. 252—217)

1. The process for obtaining a catalyst, which comprises impregnating charcoal with an aqueous solution of a mercuric salt, the concentration of said solution being such as to provide an impregnated charcoal containing said mercuric salt in an amount within the range of from two to 198 grams, calculated as elementary mercury, per liter of charcoal, then converting said salt in situ to mercuric oxide, drying the impregnated charcoal at a temperature below 100° C., thereafter contacting the charcoal with a suspension of basic mercuric nitrate, the concentration of said suspension being such as to provide a basic mercuric nitrate coating on said charcoal in an amount within the range of from two to 198 grams, calculated as elementary mercury, per liter of charcoal, and a total weight of mercuric oxide and basic mercuric nitrate associated with the charcoal within the range of from four to 200 grams, calculated as elementary mercury, per liter of charcoal, and drying the resultant product at a temperature below 100° C.

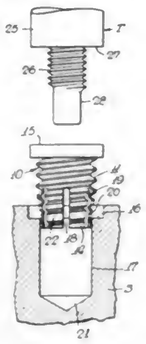


2,455,882
AUTOMATIC DUPLICATING MACHINE
Robert D. Shaw, Bloomfield, Conn., assignor to Niles-Bement-Pond Company, West Hartford, Conn., a corporation of New Jersey
Application January 28, 1944, Serial No. 520,020
9 Claims. (Cl. 90—62)

1. A tracer for electrically controlled duplicating machines comprising in combination, a tracer body, a tracer arm therein one end of which is adapted to engage the periphery of a template and the opposite end varies the position of a contact carrying lever when the tracer arm is actuated in any direction, a member mounted adjacent said lever having opposed contacts thereon suitably spaced apart and engageable respectively with the contacts on said lever, and means controlled by movement of said tracer about the template to move said member a limited distance in a direction to open one of its contacts and close the other contact with the contacts on said lever.

2,455,883
ELECTRIC PRESSURE STRAIN GAUGE
Louis D. Statham, Beverly Hills, Calif., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application April 10, 1945, Serial No. 587,629
7 Claims. (Cl. 201—63)

1. In a pressure gage, a member having a fluid passage therethrough and means for connecting said passage to a source of fluid pressure to be measured, a diaphragm having its peripheral portion seating on said member with its intermediate portion flexible in response to variations in fluid pressure introduced through said passage, a collar secured to said member and clamping said peripheral portion of the diaphragm to the member, the collar having an arm substantially rigid therewith, an insulating pin carried by said arm, a pair of wire anchoring elements insulated from and carried by the arm adjacent said pin,

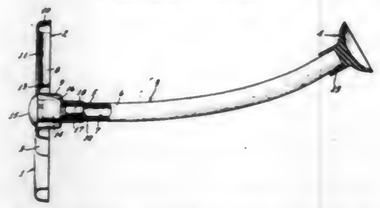


a hook carried by the central portion of the diaphragm, a strain wire having its end portions anchored to said anchoring elements and the wire being wound under tension around said hook and said pin, the spans of the wire between the hook and pin extending along lines substantially normal to the plane of the diaphragm, flexure of the diaphragm being resisted only by the strain wire connected thereto by said hook, and the diaphragm being so proportioned relative to the strain wire that the latter will bear not more than about ten per cent of the pressure load exerted on the diaphragm.

2,455,884
INFANT'S SLEEPING GARMENT COMBINATION
Libera L. Steigerwald, Chicago, Ill.
Application April 19, 1944, Serial No. 531,737
2 Claims. (Cl. 128—134)

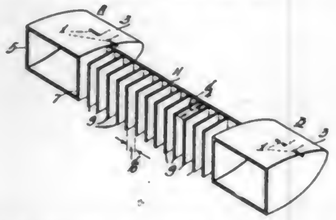
1. In an infant's sleeping garment structure of the character set forth, a sheet, means for securing the corner portions of the sheet to a bed, a body garment extending about the body of the child and provided with openings through which the legs of the child extend, said body garment having a crotch portion received between the legs of the child and a tie member narrower than said body garment and equal to about half its length, and means for securing the tie member to said sheet at an intermediate point thereon and in line with the longitudinal axis of the child's body.

2,455,885
SCREW FASTENING
Erich G. Theurer, Teaneck, N. J.
Application October 1, 1945, Serial No. 619,606
4 Claims. (Cl. 85—32)



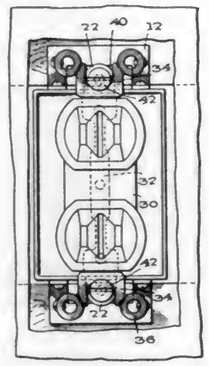
1. An insert suitable for self tapping into an untapped cylindrical bore in a plastic mount and suitable for accommodating therein a machine screw having a thread of uniform diameter, cross section and pitch, said insert comprising an internally and externally threaded tube of metal having interruptions extending longitudinally from one end thereof, the sides of said interruptions determining cutting edges, the inside diameter of said tube throughout the entire length thereof being sufficiently large to accommodate such machine screw and said bore being threaded at least throughout the major portion thereof with a thread of diameter and pitch to fit that of such machine screw, said threaded portion extending from within the uninterrupted portion into the interrupted portion of said tube, the external thread of said tube being a machine thread of uniform root diameter extending along the major portion of the length of the insert, the crest of said external thread being of uniform diameter at that portion of the insert length which is beyond said interruptions, and the crest of said exterior thread along a portion of the length thereof which has the interruptions being in a conical locus tapering to the interrupted extremity of the insert, whereby upon threading the insert into such untapped bore the cutting edges at its entry and will form a corresponding thread in the plastic and the resistance of the mount will force said interrupted portion of the tube slightly inward, so that upon the subsequent introduction of a machine screw that fits into the insert said interrupted portion of the tube will be forced outward thereby to substantially its original form for enhanced grip of the insert in such mount and of such screw in the insert.

2,455,886
METHOD OF RENDERING TEXTILE MATERIAL WATER REPELLENT, AND THE PRODUCT
Peter J. Ariente, Pawtucket, and Herman C. Allen, Saylesville, R. I., assignors to Sayles Finishing Plants, Inc., Saylesville, R. I., a corporation of Rhode Island
No Drawing. Application March 10, 1944, Serial No. 525,942
5 Claims. (Cl. 117—167)



3. The process of producing a durable water-repellency in a fibrous textile material which comprises impregnating the material with an aqueous dispersion of cetyl acetamide, zirconium stearate and zirconium formate in approximately the relative proportions four parts by weight of cetyl acetamide to one part by weight of zirconium stearate to one-third part by weight of zirconium formate, and drying the impregnated material at an elevated temperature.

2,455,887
TOY STEERING WHEEL
Jack J. Braude, Los Angeles, Calif., assignor to Evco, Inc., Los Angeles, Calif., a corporation of California
Application March 30, 1948, Serial No. 17,939
5 Claims. (Cl. 46—1)

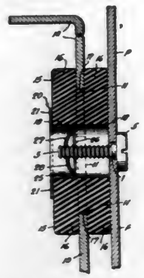


1. A toy steering wheel of plastic material having a central outwardly facing cup having a bottom wall; a sleeve projecting rearwardly from the rear of said wall; a stud projecting rearwardly from said wall within said sleeve, said stud having a base concentric with and spaced from the inside of said sleeve to provide a gap therebetween, the outer end of said stud having a side surface at a given peripheral region thereof which is spaced from said sleeve by a smaller gap than the remainder of the periphery at the outer end of said stud to thereby provide a gap between said sleeve and outer end of said stud at said region which is of less radial width than the gap at the base of said stud; and a resilient, hollow steering column having an end portion fitting inside said sleeve and over said stud, said column having a wall of greater thickness than said smaller gap, whereby to provide a friction grip at said smaller gap for preventing said wheel from falling off said steering column while permitting rotation of said wheel relative to said steering column.

2,455,888
ANTENNA
George H. Brown, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application August 12, 1944, Serial No. 549,241
11 Claims. (Cl. 250—33)

5. In a system including two antennas, apparatus for preventing direct-path transmission between said two antennas, including a plurality of parallel-conductor transmission line sections, means supporting said line sections between said antennas and perpendicular to the line between said antennas, said supporting means short-circuiting each of said line sections at least at one point thereon to provide high impedance paths between said antennas.

2,455,889
QUICK ATTACH STRAP
Victor R. Despard, Syracuse, N. Y., assignor to Pass & Seymour, Inc., Syracuse, N. Y., a corporation of New York
Application September 28, 1945, Serial No. 619,229
5 Claims. (Cl. 174—52)



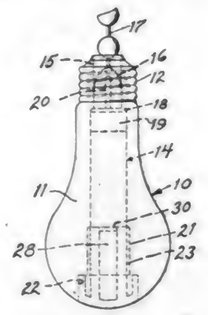
2. The combination with an electric wiring device to be secured in an outlet box, of supporting means for said device attached thereto and having two oppositely disposed projecting tabs to be attached to the box each by means of a screw extending through the same and into a tapped hole in the box, each of said tabs having a notch therein, said notches opening oppositely and having their bottom walls spaced a distance intermediate that between the shanks of the two screws and that between the heads thereof, at least one of the notches being wide enough for its full length to pass over the head of one of said screws whereby the wiring device may be mounted by means of pre-inserted screws.

2,455,890
POLYSTYRENE-MINERAL OIL EXTRACT PLASTIC COMPOSITION
Eric William Musther Fawcett, Albert Millien, and Norah Mulhern, Sunbury-on-Thames, England, assignors to Anglo-Iranian Oil Company Limited, London, England, a British corporation
No Drawing. Application January 27, 1944, Serial No. 519,948
In Great Britain January 2, 1943
2 Claims. (Cl. 260—33.6)

2. As a composition of matter, an improved polystyrene composition comprising polystyrene in admixture with a hydrocarbon fraction derived from a high boiling mineral oil fraction having a low degree of compatibility with polystyrene and boiling in the boiling range of 250° C.–800° C. at 760 mm. mercury pressure, by extraction of said mineral oil fraction with a selective solvent, the hydrocarbons of said hydrocarbon fraction being non-volatile and of non-polar character, having a high average molecular weight in the range 200 to 850, a high specific gravity in the range 0.995 to 1.075, a high carbon content averaging at least .6 atom of carbon per atom of hydrogen, and a high solvent power for and a high degree of compatibility with polystyrene, and, said hydrocarbon fraction and the polystyrene being in the ratio of up to 200 parts by weight of said fraction to 100 parts by weight of polystyrene.

2,455,891
SHOCKPROOF MOUNTING
John E. Flanagan, Chicago, Ill., assignor to Tinnerman Products, Inc., Cleveland, Ohio, a corporation of Ohio
Application July 16, 1947, Serial No. 761,389
3 Claims. (Cl. 248—358)

1. In a shock absorbing mounting, a part having a grommet opening, a grommet positioned over said opening comprising a resilient body having a bore, a fastener associated with said grommet comprising a sheet metal body defining a washer portion bearing on said grommet, a bushing portion received in said bore in the grommet and a nut portion carried by said bushing portion comprising resilient thread engaging means, and a bolt or screw having a threaded connection with said resilient thread engaging means in spaced relation to the wall of said bore in the grommet and securing said part to a supporting part in a resilient joint provided by the resiliency of said grommet and the resiliency of said resilient thread engaging means.

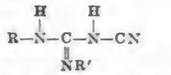


2,455,892
LUBRICATING GREASES AND METHOD OF MAKING THE SAME
Harold M. Fraser, New Orleans, La., assignor to International Lubricant Corporation, New Orleans, La., a corporation of Louisiana
No Drawing. Application August 27, 1946, Serial No. 693,379
17 Claims. (Cl. 252—41)

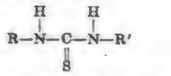
1. A grease composition comprising a mineral lubricating oil and having incorporated therein in an amount sufficient to thicken the mineral oil to a grease consistency, an alkali soap of a high molecular weight fatty acid, and 2.5% to 12.5% by weight of an alkali salt of acetic acid, the alkali components having an atomic weight varying between about 6.99 and about 22.99.

2,455,893
LUMINOUS PENDANT
Joseph A. Kelly, New York, N. Y., assignor to Luminous Processes, Inc., New York, N. Y., a corporation of Delaware
Application May 19, 1945, Serial No. 594,639
3 Claims. (Cl. 250—73)

1. A marking pendant for an electric switch operating cord comprising, a body composed of light-transmitting material, said body being pro-



vided with an aperture extending inwardly and axially from one of its ends, said aperture having a wide-diameter portion located adjacent to said end, a plug of light-transmitting material secured in said aperture, said plug being provided with a tubular shank portion of less diameter than the wide diameter portion of the aperture, said shank portion bearing a coating of luminescent material, an integral head formed on the



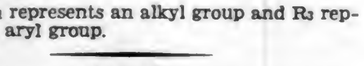
shank at one end of the same, said head being in cup-shaped form and including an annular wall portion spaced from and surrounding a portion of the luminescent-coated shank, the head having a diameter closely fitting within the wide-diameter portion of the aperture, said head having a rounded outer surface extending over one end of the shank, said surface being exposed on the outside of the body and following the curvature of adjacent surrounding portions of the body.

2,455,894
PRODUCTION OF 1-MONO- AND 1,2-DISUBSTITUTED-3-CYANOGUANIDINES
Hans Z. Lecher, Plainfield, Robert Prescott Parker, Somerville, and Robert Sidney Long, Plainfield, N. J., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application August 8, 1946, Serial No. 689,202
9 Claims. (Cl. 260—551)

1. In the manufacture of N-organic substituted-3-cyanoguanidine compounds having the following formula:

wherein R is selected from the class consisting of hydrocarbon and halo-aryl groups and R' is selected from the class consisting of hydrogen and hydrocarbon groups, the process which comprises reacting an N-organic substituted thiourea having the following formula:

wherein R and R' are as defined above, with a member of the group consisting of (1) a metal salt of cyanamide selected from the group consisting of the mercury, lead, and silver salts thereof, and (2) cyanamide and an oxide of a metal chosen from the group consisting of mercury, lead, and silver, in an inert solvent, and recovering the corresponding N-organic substitute-3-cyanoguanidine compound so obtained.



8. A process for the preparation of 1-p-chlorophenyl-3-cyanoguanidine which comprises reacting N-p-chlorophenyl thiourea with lead cyanamide in an inert solvent.

2,455,895
PREPARATION OF ALKALI METAL SALTS OF DICYANIMIDE
Daniel E. Nagy and Bryan C. Redmon, Stamford, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application September 22, 1945, Serial No. 618,071
7 Claims. (Cl. 23—75)

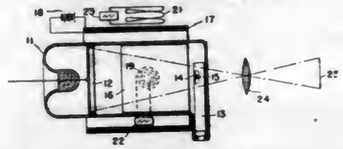
2. A method of preparing an alkali metal salt of dicyanimide which includes the steps of reacting in water a dicyanimide salt of a metal chosen from the group consisting of calcium, copper, and zinc with an alkali metal salt, the anion portion of which forms a substantially water insoluble inorganic salt of a metal chosen from the group consisting of calcium, copper, and zinc, to produce an alkali metal dicyanimide, removing the aforementioned substantially water insoluble inorganic salt from the alkali metal dicyanimide, and recovering the alkali metal dicyanimide.

2,455,896
1-ARYL, 5-ALKYL, BIGUANIDES
Daniel E. Nagy, Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application October 12, 1945, Serial No. 622,075
2 Claims. (Cl. 260—565)

1. As new chemical compounds, the unsymmetrical 1,5-substituted biguanides having the following formula

wherein R_1 represents an alkyl group and R_3 represents an aryl group.

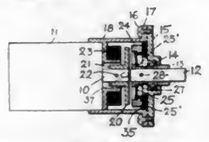
2,455,897
1,5-DIARYLBIGUANIDES FROM AROMATIC AMINES AND DICYANIMIDE
Daniel E. Nagy, Stamford, Conn., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application October 12, 1945, Serial No. 622,076
6 Claims. (Cl. 260—565)



1. As an improvement in the manufacture of 1,5-diarylbiguanide compounds, the improvement which comprises reacting in an aqueous media, a metal salt of dicyanimide selected from the class consisting of the alkali metal and alkaline earth metal salts thereof with an acid salt of an aryl amine selected from the class consisting of primary aryl amines and secondary aryl amines in the ratio of one equivalent of the dicyanimide reactant to two equivalents of the amine reactant, at a temperature of at least 80° C. at atmospheric pressure, and recovering the 1,5-diarylbiguanide compound so obtained.

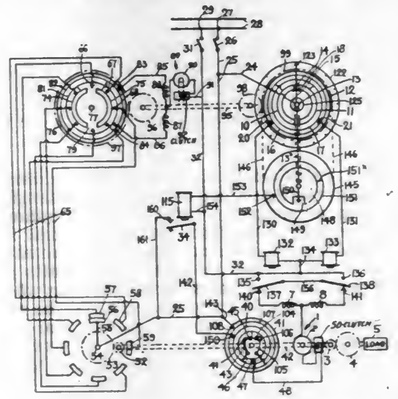
2,455,898
LAKES OF BASIC DYESTUFFS
Walter E. Ness, Middlesex, N. J., assignor to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application December 10, 1943, Serial No. 513,715
20 Claims. (Cl. 106—289)

1. A pigment composition suitable for intaglio printing comprising a reaction product of a basic



polyaryimethane dyestuff with a natural tanning agent, and a water insoluble polyvalent metal salt of at least one soap-forming acid.

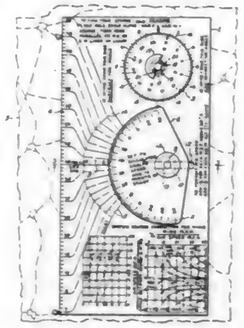
2,455,899
AUTOMATIC SIGNAL LEVEL CONTROL
Robert W. Sanders, Fort Wayne, Ind., assignor, by mesne assignments, to Farnsworth Research Corporation, a corporation of Indiana
Application November 18, 1943, Serial No. 510,753
3 Claims. (Cl. 250—41.5)



1. In a television system, apparatus for generating video signals comprising, a photoelectric electrode for producing a plurality of streams of primary electrons having limiting values of electron concentrations varying in accordance with the average intensity of light projected onto the electrode and representing a television subject, means including an electron multiplier located in the path of said primary electron streams for converting said streams into a video signal voltage having a peak-to-peak value not exceeding a predetermined value, said multiplier including a plurality of secondary electron emissive electrodes, means disposed between said photoelectric electrode and said multiplier for admitting said primary electron streams successively to said multiplier, a source of accelerating voltage for said multiplier, a voltage divider connected to said voltage source and having fixed and adjustable connections, means including said fixed connections for impressing predetermined fixed accelerating voltages on certain ones of said multiplier electrodes, and means including an adjustable one of said voltage divider connections for impressing on another one of said multiplier electrodes one of said fixed accelerating voltages.

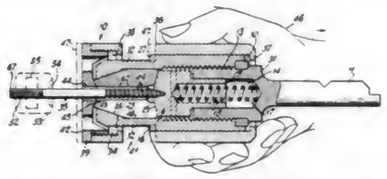
2,455,900
COMBINED CLUTCH AND BRAKE
Michel N. Yardeny and Leon Kardorff, New York, N. Y.; said Kardorff assignor to said Yardeny
Application December 16, 1944, Serial No. 568,435
3 Claims. (Cl. 192—14)

1. A combined clutch and brake comprising, in combination, a driving shaft; a driven shaft in concentric extension of the driving shaft; a casing arranged to be fixedly supported relative to both shafts and shaped interiorly to provide a chamber surrounding adjacent end portions of both shafts; a pair of cooperating clutch members, one secured to the driving shaft and the other to the driven shaft; an electromagnet; braking means carried by the casing; and means in the chamber for resiliently mounting one of said clutch members on and spaced around the shaft to which it is secured, the last-named clutch member constructed to constitute an armature for the electromagnet when energized and the mounting means being resiliently biased whereby such energization moves the resiliently mounted clutch member against such bias into clutch engagement with the other clutch member, the mounting means also being arranged to urge the resiliently mounted clutch member into engagement with the braking means for rendering the latter effective when the magnet is deenergized, the mounting means being arranged annularly around the respective shaft, and the clutch member mounted thereby being annularly discontinuous around the mounting means, portions of the discontinuous clutch member facing the electromagnet having a greater mass than the clutch portions facing the braking means.



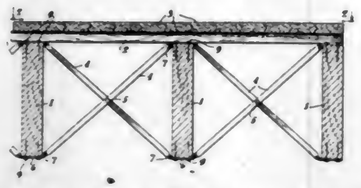
2,455,901
REMOTE CONTROL WITH MULTIPLE-SPEED GOVERNOR
Michel N. Yardeny, New York, N. Y.
Application December 22, 1944, Serial No. 569,309
8 Claims. (Cl. 318—31)

7. In a remote control system for placing a load at any desired end point, in combination, a pair of relatively movable members, one of the members having electrical conducting elements separated by a gap, the other member having a contact element slidably engageable with the said conducting elements, a motor for moving the load, circuit means including the said motor and elements and a source of current supply, one of the said pair of members being selectively adjusted to cause displacement between said gap and contact element and engagement thereof with one or the other of the said conducting elements depending upon the direction in which it is desired the motor to rotate, means under control of the load motor for turning the other member of the pair in a direction to cause alignment of contact element and gap to stop the motor, a rotary speed governor driven by the said motor, contacts on the governor connected to the said motor circuit, a pair of switch arms mounted on the governor and spring urged, into engagement with the said contacts, the said pair of switch arms being distally weighted, the said spring-urged arms and distal weights being arranged to cause one of the said pair of switch arms to disengage its said contact at a predetermined normal running speed and to cause the other switch arm to disengage its contact at a reduced speed, and means associated with the said pair of movable members operative when the members of the said pair are close to



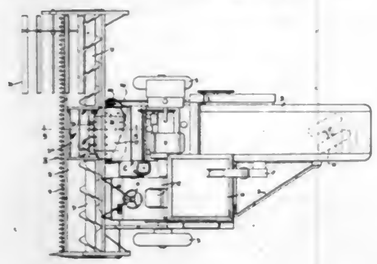
alignment of contact element and gap for rendering the normal-speed governor arm effective for control of the motor speed during the normal running of the motor and placing the motor under control the reduced-speed governor arm as the load approaches the desired end point.

2,455,902
CALCULATING AND AERIAL NAVIGATION INSTRUMENT
William D. Cockrell, Schenectady, N. Y.
Application February 24, 1947, Serial No. 730,608
12 Claims. (Cl. 235—61)



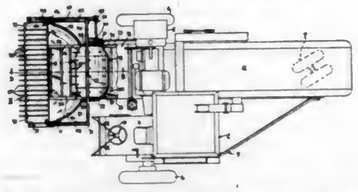
1. In a calculating instrument for adding to one quantity the product of two other quantities, a linear scale marked in units of a first quantity, a set of equally spaced substantially radial lines corresponding to points on said scale, a rotatable circular scale marked in equal linear units of a second quantity and intersecting said lines whereby any point on said circular scale may be made to register with any one of said radial lines, means affording adjustment of the axis of rotation of said circular scale along a radial line, and a scale along said last mentioned radial line marked in units of a third quantity whereby said circular scale may be positioned to intersect said last mentioned radial line at a selected value of said third quantity, said radial lines being the loci of the products of said second and third quantities which are equal to the corresponding units on said linear scale when the zero point on said circular scale lies on the radial line corresponding to the zero point on said linear scale.

2,455,903
DIMPLING MANDREL
Howard R. Fischer, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a corporation of New Jersey
Application April 4, 1944, Serial No. 529,479
6 Claims. (Cl. 153—21)



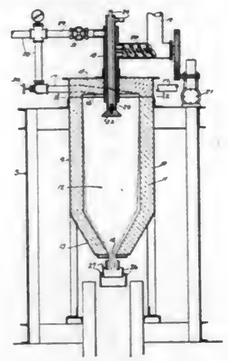
1. In combination, a mandrel having a shank, a threaded end portion, and a serrated end portion including a series of annular flanges, the outside diameter of the shank, of the crests of the threads, and of the annular flanges being substantially equal so that the mandrel may be passed through an aperture of substantially such diameter in a work sheet, and a die having a threaded bore to receive the threaded end of the mandrel, said die being slotted for the reception of a handle to hold the die in position for the threading of the mandrel thereinto.

2,455,904
METAL CROSS BRIDGING
Emil C. Meulenbergh, Brooklyn, N. Y.
Application September 25, 1945, Serial No. 618,528
2 Claims. (Cl. 20—9)



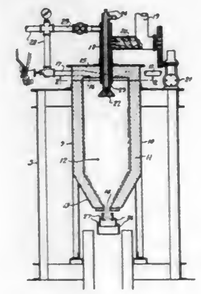
1. An adjustable bridging for building structures comprising a pair of brace arms pivotally connected to each other, said brace arms respectively comprising a pair of substantially flat apertured attaching portions for engaging the top and bottom surfaces of a pair of spaced beams, a substantially flat web portion disposed between said attaching portions at substantially right angles to each, and a pair of connecting twist portions separately connecting said attaching portions to the adjacent ends of said web portion, each said twist portion being located substantially at the inner terminus of the attaching portion to which it is connected so as to be located substantially at an edge of the beam in the installed position of the bridging.

2,455,905
COMBINE
Martin Ronning, St. Louis Park, and Kenneth M. Keith, Minneapolis, Minn., assignors to Minneapolis-Moline Power Implement Company, Minneapolis, Minn., a corporation of Delaware
Application November 20, 1943, Serial No. 511,054
16 Claims. (Cl. 56—124)



1. In a combine having a harvester and a thresher rearwardly thereof, a conveyor for conveying crop material rearwardly from the harvester to the thresher, a rotary feeder device across the entire width of the conveyor and cooperating with a rearwardly moving part of the conveyor to assist in moving the crop material from the harvester to the thresher, said feeder device having extensible and retractable crop engaging members, and means for extending the members as they rotate downwardly and thence rearwardly adjacent to and in conjunction with the rearwardly moving part of the conveyor.

2,455,906
CROP GATHERING MECHANISM FOR COMBINES
Martin Ronning, St. Louis Park, and Kenneth M. Keith, Minneapolis, Minn., assignors to Minneapolis-Moline Power Implement Company, Minneapolis, Minn., a corporation of Delaware
Application December 31, 1943, Serial No. 516,563
10 Claims. (Cl. 56—364)

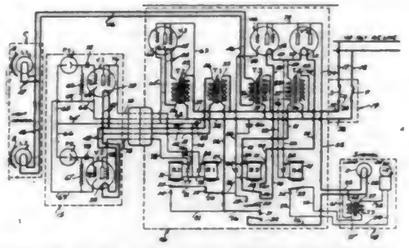


1. In a combine having a thresher part, an apron conveyor extending forwardly from the thresher part for delivering crop material thereto, a rotary pick-up device disposed at the forward end of the apron for transferring grain lying on the field to the conveyor, a rotary drum feeder disposed over the apron conveyor to cooperate therewith in feeding grain to the thresher part, said drum feeder extending transversely of the apron conveyor with a length substantially equal to the width of the apron conveyor, projectable and retractible arms carried by the drum feeder, and means for rotating the feeder and actuating the arms whereby the arms will be projected while moving rearwardly above the conveyor.

2,455,907
APPARATUS FOR MELTING GLASS
Games Slayter, Newark, Ohio, assignor to Owens-Corning Fiberglas Corporation, a corporation of Delaware
Application April 15, 1944, Serial No. 531,219
6 Claims. (Cl. 49—1)

1. An apparatus for forming glass fibers comprising a hollow body having a discharge opening at the bottom through which both molten glass and products of combustion escape from the body, a plurality of gas burners arranged to produce a swirling flame in the body, means for introducing glass batch materials into the body under a fluid pressure at least equal to the pressure of the gas entering said burners and for directing the batch outwardly into the flame to melt the batch, said body being substantially sealed against the escape of products of combustion except for the discharge opening aforesaid which is restricted to such an extent that sufficient pressure is built up in the body to discharge the products of combustion at a high velocity through the opening, and means outwardly of the body for directing the flow of molten glass into the high velocity stream of the products of combustion to form the glass into fibers.

2,455,908
METHOD OF MAKING GLASS FIBERS
Games Slayter, Newark, Ohio, assignor to Owens-Corning Fiberglas Corporation, a corporation of Delaware
Original application April 15, 1944. Serial No. 531,219. Divided and this application June 5, 1946, Serial No. 674,585
6 Claims. (Cl. 49—77.5)

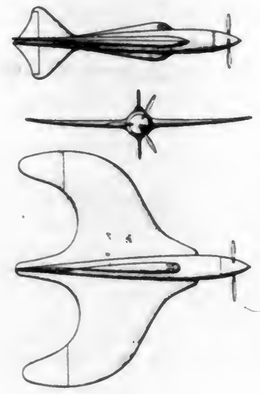


2. The method of producing glass wool which consists in melting glass batch materials under pressure in a substantially cylindrical confined melting zone having a restricted discharge path defining the lower end of said zone and leading therefrom, bringing the batch into contact with a swirling flame in the upper end of the confined zone to reduce it to a molten state, flowing the molten glass around the high velocity stream of the products of combustion escaping said zone through the discharge path to fiberize the molten glass issuing from the path, and inducing an inwardly directed movement of air around the molten glass issuing from the discharge path by movement of the blast of the products of combustion passing through the path to urge the molten glass into the blast.

2,455,909
FOUL DETECTOR AND INDICATOR FOR BOWLING ALLEYS
Putnam M. Smith, Redwood Falls, Minn., assignor of one-half to A. Leslie Janes, Jr., Redwood Falls, Minn.
Application December 3, 1941, Serial No. 421,435
2 Claims. (Cl. 273—50)

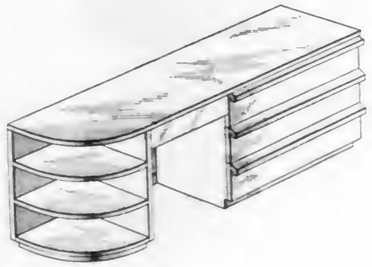
1. In a foul detecting and indicating system for bowling alleys, a normally inoperative foul signaling device, an operating circuit for the signaling device which includes a normally open switch, electro-magnetically operated means for operating the signal circuit switch, a circuit for said electro-magnetically operated signal circuit switch operating means and which, circuit, includes a serially connected pair of switches, one

of said pair of switches being normally open and the other of which is normally closed, another



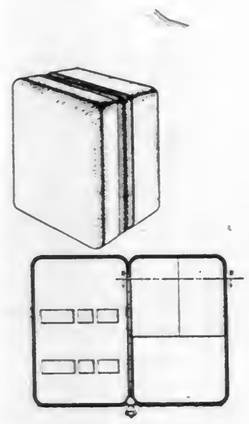
circuit for said electro-magnetically operated signal switch operator and which includes a normally open switch under control of the said electro-magnetically operated switch operator and excludes said pair of switches, whereby to provide a holding circuit for maintaining the said electro-magnetic signal switch operator energized independently of said pair of switches after initial energization by coincidental closing of said pair of switches, separate electro-magnetically operated devices for independently operating the last said switches, light wave responsive control devices for independently controlling operation of said last named electro-magnetic switch operators, and means for projecting light waves from side to side of a bowling alley above and parallel to the foul line thereof and below the top of a bowling ball rolled over the foul line, said light wave responsive control devices each being subject to projected light waves that will be intercepted by a bowling ball rolled over the foul line.

DESIGNS

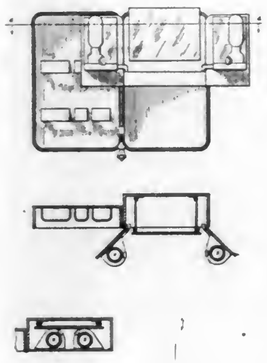


DECEMBER 7, 1948

151,948
DESIGN FOR AN AIRPLANE
Pablo M. Acosta, San Gabriel, Calif.
Application October 21, 1947, Serial No. 142,043
Term of patent 7 years
(Cl. D71—1)



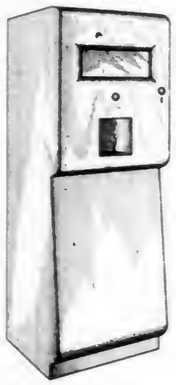
The ornamental design for an airplane, as shown.



151,949
DESIGN FOR A COMBINED CHEST AND DESK
Dorothy B. Allen and Alan A. Allen,
Los Angeles, Calif.
Application March 25, 1947, Serial No. 137,868
Term of patent 3½ years
(Cl. D33—7)

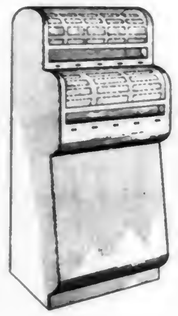
The ornamental design for a combined chest and desk, substantially as shown and described.

151,950
DESIGN FOR AN ACCESSORY KIT
Sidney G. Anderson, San Francisco, Calif.
Application February 28, 1948, Serial No. 144,828
Term of patent 14 years
(Cl. D87—3)



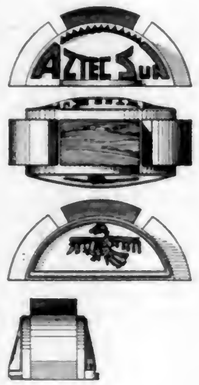
The ornamental design for an accessory kit, as shown.

151,951
DESIGN FOR A CONTOUR PROJECTOR OR THE LIKE
John T. Armbruster, Niagara Falls, N. Y., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application May 29, 1948, Serial No. 146,679
Term of patent 14 years
(Cl. D61—1)



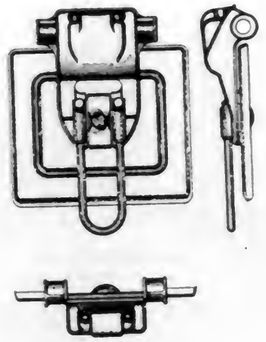
The ornamental design for a contour projector or the like, substantially as shown and described.

151,952
DESIGN FOR A CONFECTION VENDING MACHINE
George Babcock, Chicago, Ill., assignor to Wm. Wrigley Jr. Company, a corporation of Delaware
Application July 25, 1946, Serial No. 131,918
Term of patent 14 years
(Cl. D52—3)



The ornamental design for a confection vending machine, as shown.

151,953
DESIGN FOR A CONFECTION VENDING MACHINE
George Babcock, Chicago, Ill., assignor to Wm. Wrigley Jr. Company, a corporation of Delaware
Application July 25, 1946, Serial No. 131,924
Term of patent 14 years
(Cl. D52—3)

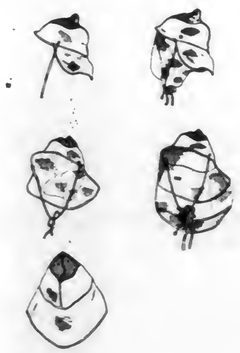


The ornamental design for a confection vending machine, as shown and described.

151,954
DESIGN FOR A JAR OR SIMILAR CONTAINER
Archie A. Baldocchi, San Francisco, Calif.
Application December 16, 1946, Serial No. 135,559
Term of patent 14 years
(Cl. D58—25)

The ornamental design for a jar or similar container, as shown.

151,955
DESIGN FOR A JOURNAL BOX LID FOR RAILWAY CARS
Donald S. Barrows, Rochester, N. Y.
Application January 29, 1947, Serial No. 136,494
Term of patent 14 years
(Cl. D66—2)



The ornamental design for a journal box lid for railway cars, as shown.

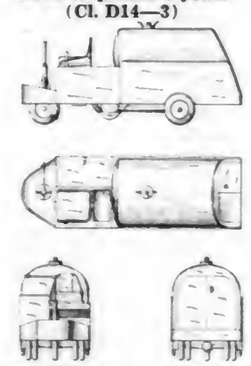
151,956
DESIGN FOR A BOX FOR COSMETICS OR THE LIKE
Georges Baud, Paris, France
Application August 21, 1946, Serial No. 132,709
Term of patent 14 years
(Cl. D58—12)

The ornamental design for a box for cosmetics or the like, substantially as shown.

151,957
DESIGN FOR A PROTECTIVE HEAD COVERING
Barbara J. Boeringer, Minneapolis, Minn.
Application May 18, 1946, Serial No. 129,848
Term of patent 3½ years
(Cl. D3—13)

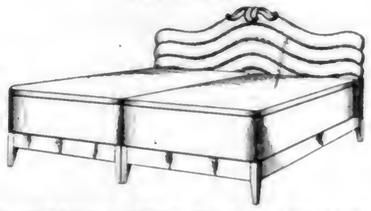
The ornamental design for a protective head covering, as shown.

151,958
DESIGN FOR A NECKLACE OR THE LIKE
Herman Bogoff, Chicago, Ill.
Application December 6, 1947, Serial No. 142,988
Term of patent 7 years
(Cl. D45—16)



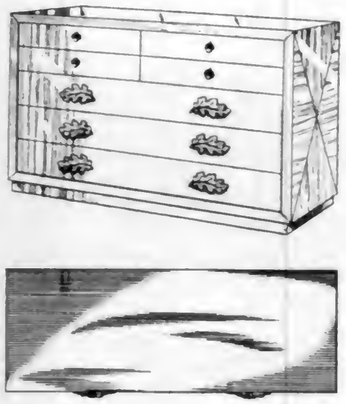
The ornamental design for a necklace or the like, substantially as shown.

151,959
DESIGN FOR A DESK UNIT
Bailey T. Bowers, Chicago, Ill.
Application May 27, 1947, Serial No. 139,301
Term of patent 14 years
(Cl. D74—1)



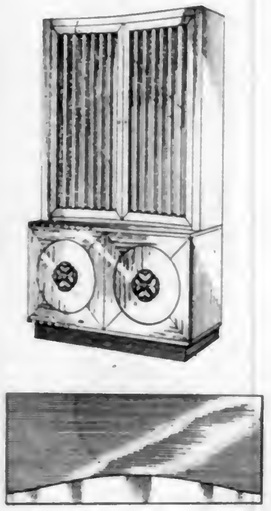
The ornamental design for a desk unit, substantially as shown.

151,960
DESIGN FOR A TANK VEHICLE
George A. Brasfield, Berkeley, Calif.
Application April 14, 1947, Serial No. 138,359
Term of patent 7 years
(Cl. D14—3)



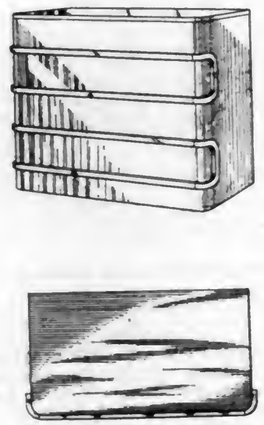
The ornamental design for a tank vehicle, substantially as shown.

151,961
DESIGN FOR A BED
Anthony J. Buckner, New York, N. Y., assignor to Grosfeld House, Inc., New York, N. Y.
Application March 29, 1947, Serial No. 138,045
Term of patent 7 years
(Cl. D5—4)



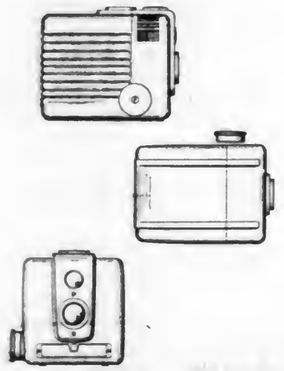
The ornamental design for a bed, substantially as shown.

151,962
DESIGN FOR A COMMODE
Anthony J. Buckner, New York, N. Y., assignor to Grosfeld House, Inc., New York, N. Y.
Application March 29, 1947, Serial No. 138,047
Term of patent 7 years
(Cl. D33—6)



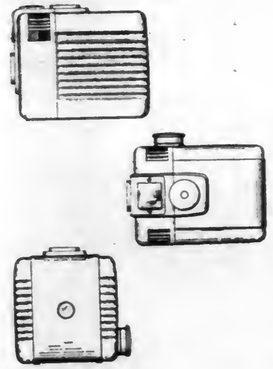
The ornamental design for a commode, substantially as shown and described.

151,963
DESIGN FOR A CABINET
Anthony J. Buckner, New York, N. Y., assignor to Grosfeld House, Inc., New York, N. Y.
Application March 29, 1947, Serial No. 138,049
Term of patent 7 years
(Cl. D33—19)



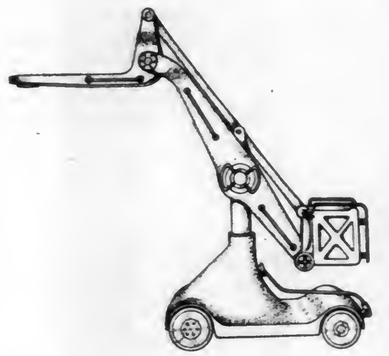
The ornamental design for a cabinet, substantially as shown and described.

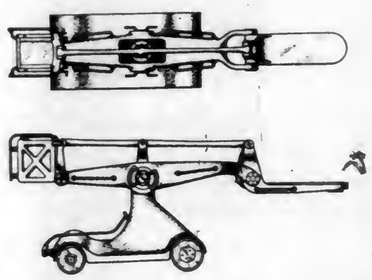
151,964
DESIGN FOR A COMMODE
Anthony J. Buckner, New York, N. Y., assignor to Grosfeld House, Inc., New York, N. Y.
Application March 29, 1947, Serial No. 138,050
Term of patent 7 years
(Cl. D33—6)



The ornamental design for a commode, substantially as shown and described.

151,965
DESIGN FOR A BOX CAMERA
Arthur H. Crapsey, Jr., Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application August 26, 1948, Serial No. 148,316
Term of patent 14 years
(Cl. D61—1)

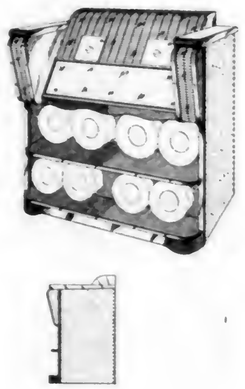




151,965—Continued

The ornamental design for a box camera, as shown.

151,966
DESIGN FOR A CAMERA BOOM
André Crot, Topanga, Calif., assignor to Motion Picture Research Council, Inc., Hollywood, Calif., a corporation of California
Application July 19, 1948, Serial No. 147,655
Term of patent 14 years
(Cl. D61—1)

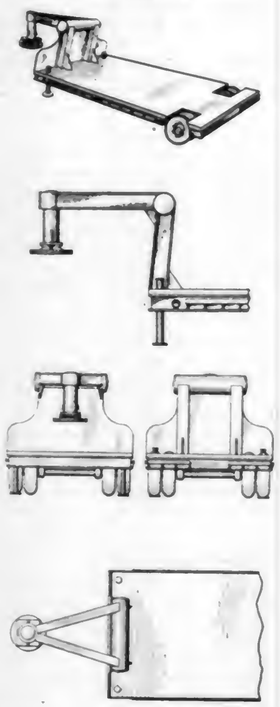


The ornamental design for a camera boom, as shown.

151,967
DESIGN FOR A CHAIR
Jack B. Cunningham, North Hollywood, Calif.
Application February 24, 1947, Serial No. 137,109
Term of patent 3½ years
(Cl. D15—1)

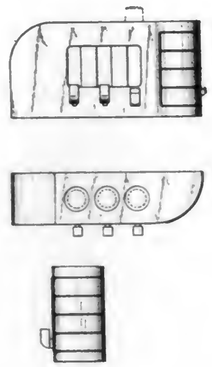
The ornamental design for a chair, as shown.

151,968
DESIGN FOR A CABINET FOR SHOE SHINING MACHINES
Carl E. Danielson, North Sacramento, Calif.
Application April 16, 1948, Serial No. 145,768
Term of patent 14 years
(Cl. D9—2)



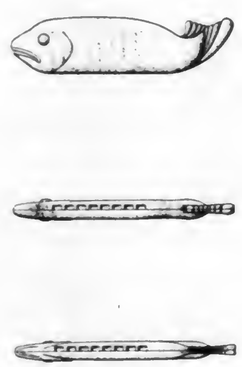
The ornamental design for a cabinet for shoe shining machines, as shown and described.

151,969
DESIGN FOR A BABY BED
Frances Perdue Davis, Atlanta, Ga.
Application April 19, 1947, Serial No. 138,507
Term of patent 14 years
(Cl. D5—5)



The ornamental design for a baby bed, as shown and described.

151,970
DESIGN FOR A SEMI-TRAILER
Ernest Ellberg, Warren, Pa., assignor to Benjamin F. Mead, Warren, Pa.
Application August 26, 1947, Serial No. 141,069
Term of patent 14 years
(Cl. D14—3)

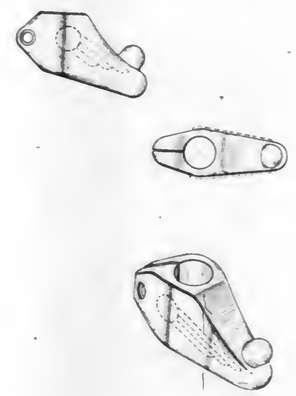


The ornamental design for a semi-trailer, substantially as shown.

151,971
DESIGN FOR A DISPLAY CASE FOR BOTTLES OR THE LIKE
Lewis Fine, St. Paul, Minn., assignor to Stuart Inc., St. Paul, Minn., a corporation of Minnesota
Application May 12, 1947, Serial No. 138,980
Term of patent 3½ years
(Cl. D80—5)

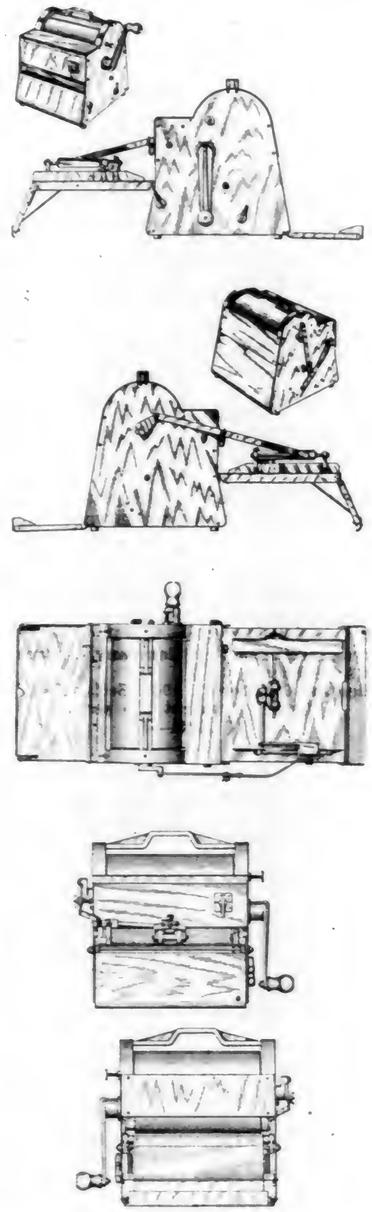
The ornamental design for a display case for bottles or the like, as shown and described.

151,972
DESIGN FOR A FISH TYPE HARMONICA
Samuel Freimauer and Jack Skoloff, Hillside, N. J.
Application August 16, 1947, Serial No. 140,924
Term of patent 14 years
(Cl. D56—1)



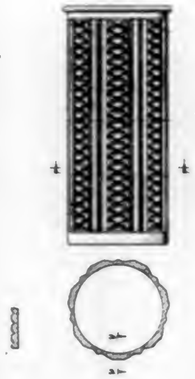
The ornamental design for a fish type harmonica, as shown.

151,973
DESIGN FOR A PRY-OFF TYPE CONTAINER CAP REMOVING TOOL
Lawrence P. Frettoloso, Brooklyn, N. Y., assignor to Udall & Landan Manufacturing Co. Inc., New York, N. Y., a corporation of New York
Application January 4, 1947, Serial No. 135,942
Term of patent 3½ years
(Cl. D44—29)



The ornamental design for a pry-off type container cap removing tool, as shown.

151,974
DESIGN FOR A BUMPER ENGAGING MEMBER FOR AN AUTOMOBILE JACK
Ralph Gambardella, Warwick, R. I., assignor to Narragansett Machine Company, a corporation of Rhode Island
Application October 23, 1946, Serial No. 134,180
Term of patent 3½ years
(Cl. D41—1)

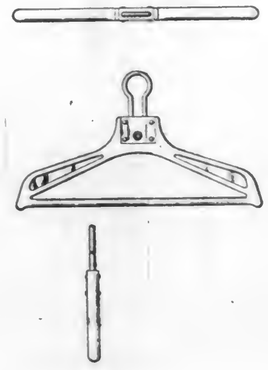


The ornamental design for a bumper engaging member for an automobile jack, substantially as shown and described.

151,975
DESIGN FOR A DUPLICATING MACHINE
Arthur H. Geib, Milwaukee, Wis.
Application May 13, 1947, Serial No. 139,019
Term of patent 7 years
(Cl. D64—11)

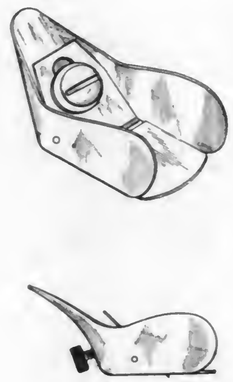
The ornamental design for a duplicating machine, as shown and described.

151,976
DESIGN FOR A GLASS JAR
Harry C. Gessler, Brooklyn, N. Y., assignor to Medco Products, Inc., North Bergen, N. J., a corporation of New Jersey
Application July 10, 1946, Serial No. 131,441
Term of patent 14 years
(Cl. D58—25)



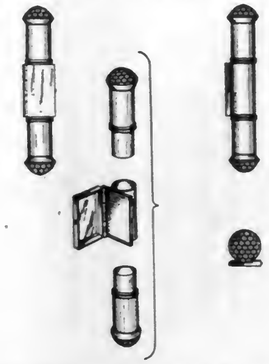
The ornamental design for a glass jar, substantially as shown.

151,977
DESIGN FOR A COMBINATION FIGURINE AND BEVERAGE SET
Zilpah Corn Gifford, Oakland, Calif.
Application April 28, 1947, Serial No. 138,658
Term of patent 7 years
(Cl. D44—24)



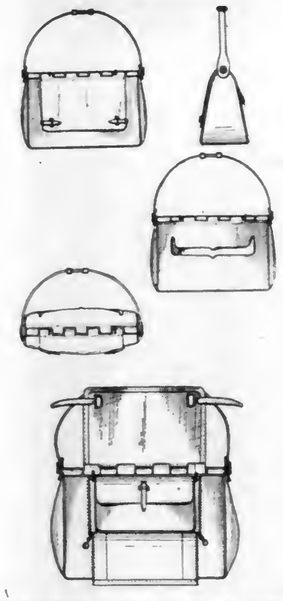
The ornamental design for a combination figurine and beverage set, substantially as shown.

151,978
DESIGN FOR A GARMENT HANGER
Mike A. Glavies, Campbell, Ohio
Application April 18, 1947, Serial No. 138,485
Term of patent 14 years
(Cl. D80—8.5)



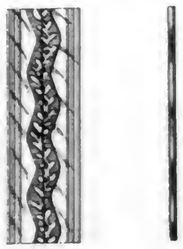
The ornamental design for a garment hanger, as shown and described.

151,979
DESIGN FOR A CARPENTER'S PLANE
Rene Gouirand, New York, N. Y.
Application January 21, 1947, Serial No. 136,270
Term of patent 3½ years
(Cl. D93—4)



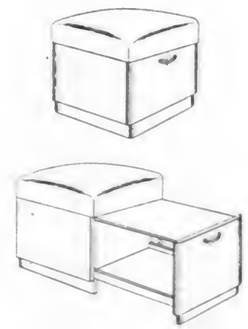
The ornamental design for a carpenter's plane, as shown and described.

151,980
DESIGN FOR A COMBINED TWIN LIPSTICK CASE AND MIRROR COMPARTMENT OR THE LIKE
Elizabeth N. Graham, New York, N. Y.
Application September 11, 1947, Serial No. 141,314
Term of patent 14 years
(Cl. D86—10)



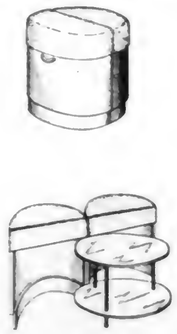
The ornamental design for a combined twin lipstick case and mirror compartment or the like, substantially as shown.

151,981
DESIGN FOR A COMBINED AIR TRAVEL BAG AND COSMETIC CASE
Elizabeth N. Graham, New York, N. Y.
Application January 8, 1948, Serial No. 143,589
Term of patent 14 years
(Cl. D87—3)



The ornamental design for a combined air travel bag and cosmetic case, substantially as shown and described.

151,982
DESIGN FOR A TAPE OR SIMILAR ARTICLE
James V. Granitto, Milford, Conn., assignor to The A. J. Donahue Corporation, Milford, Conn., a corporation of Connecticut
Application June 3, 1947, Serial No. 139,423
Term of patent 14 years
(Cl. D3—32)

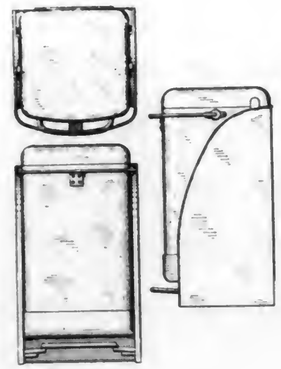


The ornamental design for a tape or similar article, as shown.

151,983
DESIGN FOR A COMBINATION HASSOCK AND COFFEE TABLE
Gabriel C. Guertin, Boston, Mass.
Application April 10, 1947, Serial No. 138,280
Term of patent 3½ years
(Cl. D15—8)

The ornamental design for a combination hassock and coffee table, substantially as shown and described.

151,984
DESIGN FOR A COMBINATION CIRCULAR HASSOCK AND COFFEE TABLE
Gabriel C. Guertin, Boston, Mass.
Application April 10, 1947, Serial No. 138,281
Term of patent 3½ years
(Cl. D15—8)

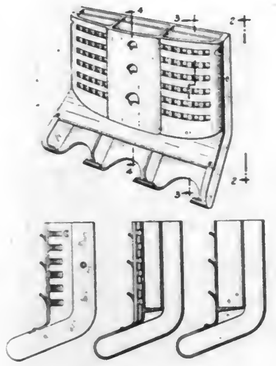


The ornamental design for a combination circular hassock and coffee table, substantially as shown and described.

151,985
DESIGN FOR A FEED CARRIER
Simon A. Halls, Zumbrota, Minn.
Application August 13, 1947, Serial No. 140,847
Term of patent 14 years
(Cl. D14—3)

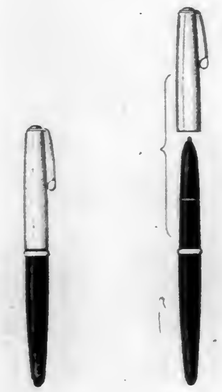
The ornamental design for a feed carrier, as shown.

151,986
DESIGN FOR A WASTE CAN
Bertis F. Hamilton, Columbus, Ind.
Application March 6, 1947, Serial No. 137,399
Term of patent 14 years
(Cl. D58—22)



The ornamental design for a waste can, as shown.

151,987
DESIGN FOR A WATER HEATER
Jon W. Hauser, Oak Park, Ill., assignor to Sears, Roebuck and Co., Chicago, Ill., a corporation of New York
Application March 8, 1947, Serial No. 137,460
Term of patent 14 years
(Cl. D81—2)

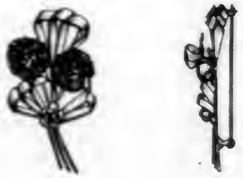


The ornamental design for a water heater, substantially as shown and described.

151,988
DESIGN FOR A DENTAL DISPENSING UNIT
Fred J. Hayman, Forest Hills, N. Y.
Application October 28, 1946, Serial No. 134,343
Term of patent 7 years
(Cl. D52—2)

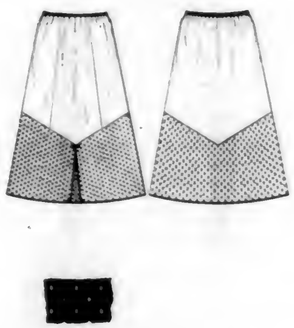
The ornamental design for a dental dispensing unit, substantially as shown.

151,989
DESIGN FOR A BALL POINT FOUNTAIN PEN
Mahlon Edward Hirsch, Erie, Pa., assignor to Louis Marx & Company, Inc., New York, N. Y., a corporation of New York
Application July 1, 1947, Serial No. 140,040
Term of patent 3½ years
(Cl. D74—17)



The ornamental design for a ball point fountain pen, as shown and described.

151,990
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
William W. Hobé, New York, N. Y.
Application July 24, 1948, Serial No. 147,765
Term of patent 3½ years
(Cl. D45—19)



The ornamental design for a brooch or similar article, substantially as shown.

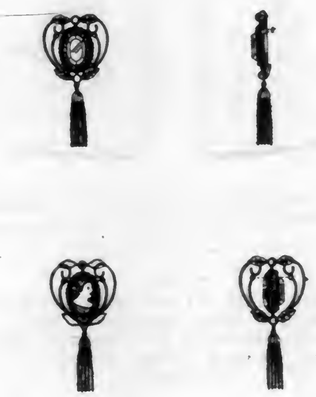
151,991
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
William W. Hobé, New York, N. Y.
Application September 10, 1948, Serial No. 148,532
Term of patent 3½ years
(Cl. D45—19)

The ornamental design for a brooch or similar article, substantially as shown.

151,992
DESIGN FOR A SLIP
Norman Hochbaum, New York, N. Y.
Application January 21, 1948, Serial No. 143,951
Term of patent 3½ years
(Cl. D3—26)

The ornamental design for a slip, as shown.

151,993
DESIGN FOR AN ALPHABET FOR FORMING MONOGRAMS OR SIMILAR ARTICLE
Viola T. Howard, Saylesville, R. I., assignor to Swank, Inc., a corporation of Delaware
Application November 14, 1947, Serial No. 142,538
Term of patent 14 years
(Cl. D64—12)



The ornamental design for an alphabet for forming monograms or similar article, substantially as shown.

151,994
DESIGN FOR AN ALPHABET FOR FORMING MONOGRAMS OR SIMILAR ARTICLE
Viola T. Howard, Saylesville, R. I., assignor to Swank, Inc., a corporation of Delaware
Application November 14, 1947, Serial No. 142,539
Term of patent 14 years
(Cl. D64—12)

The ornamental design for an alphabet for forming monograms or similar article, substantially as shown.

151,995
DESIGN FOR A REVOLVING BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application August 17, 1948, Serial No. 148,149
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a revolving brooch or similar article, substantially as shown and described.

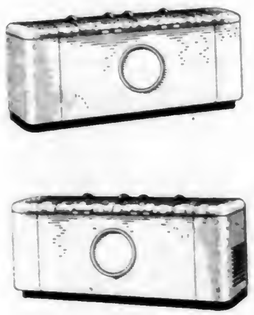
151,996
DESIGN FOR A SEPARABLE BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application August 21, 1948, Serial No. 148,239
Term of patent 7 years
(Cl. D45—19)

The ornamental design for a separable brooch or similar article, substantially as shown.

151,997
DESIGN FOR A SEPARABLE BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1948, Serial No. 148,421
Term of patent 7 years
(Cl. D45—19)

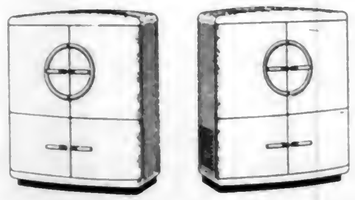
The ornamental design for a separable brooch or similar article, substantially as shown.

151,998
DESIGN FOR A SEPARABLE BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1948, Serial No. 148,422
Term of patent 7 years
(Cl. D45—19)



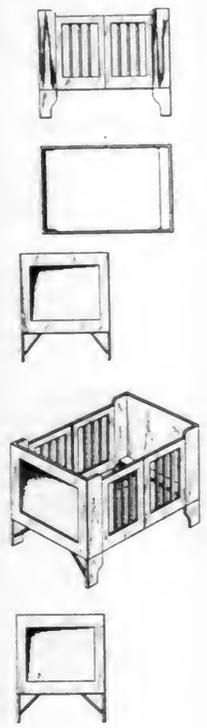
The ornamental design for a separable brooch or similar article, substantially as shown.

151,999
DESIGN FOR A SEPARABLE BROOCH OR SIMILAR ARTICLE
Adolph Katz, Providence, R. I., assignor to Coro, Inc., New York, N. Y., a corporation of New York
Application September 2, 1948, Serial No. 148,423
Term of patent 7 years
(Cl. D45—19)



The ornamental design for a separable brooch or similar article, substantially as shown.

152,000
DESIGN FOR A FREEZER CHEST CABINET
Theodore H. Koeber, Oak Park, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application March 29, 1947, Serial No. 138,032
Term of patent 14 years
(Cl. D67—3)

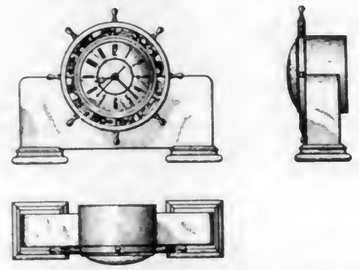


The ornamental design for a freezer chest cabinet, as shown.

152,001
DESIGN FOR A COMBINATION REFRIGERATOR AND COOLER CABINET
Theodore H. Koeber, Oak Park, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application March 29, 1947, Serial No. 138,033
Term of patent 14 years
(Cl. D67—3)

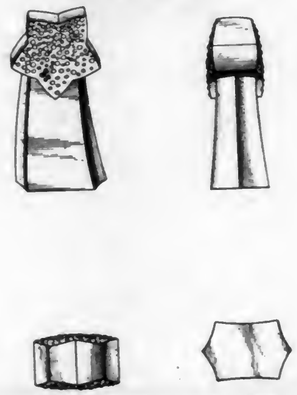
The ornamental design for a combination refrigerator and cooler cabinet, as shown.

152,002
DESIGN FOR A COLLAPSIBLE CRIB
Althea W. Kunz, Minneapolis, Minn.
Application March 10, 1947, Serial No. 137,498
Term of patent 7 years
(Cl. D5—5)



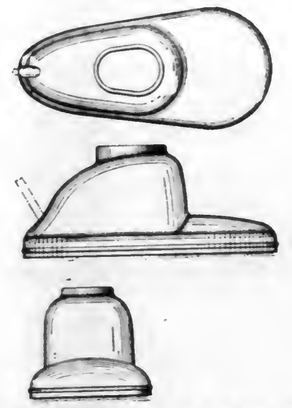
The ornamental design for a collapsible crib, as shown.

152,003
DESIGN FOR A LIPSTICK CASE OR SIMILAR ARTICLE
William H. Leavin, New York, N. Y., assignor to Hampden Sales Associates, Inc., New York, N. Y.
Application November 7, 1947, Serial No. 142,385
Term of patent 7 years
(Cl. D86—10)



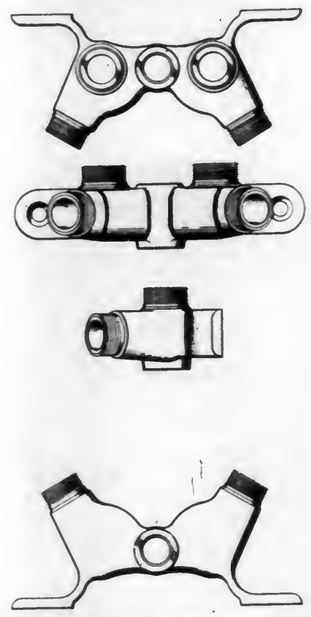
The ornamental design for a lipstick case or similar article, substantially as shown and described.

152,004
DESIGN FOR A CLOCK
Ben Lerman, Chicago, Ill.
Application January 22, 1947, Serial No. 136,299
Term of patent 3½ years
(Cl. D42—7)



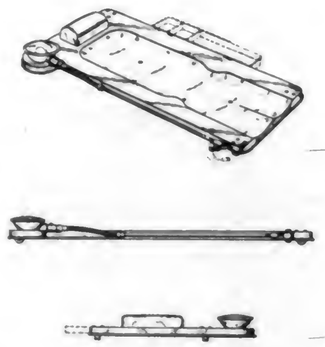
The ornamental design for a clock, substantially as shown.

152,005
DESIGN FOR A BOTTLE
Benjamin Lewis, New York, N. Y.
Application March 28, 1947, Serial No. 138,000
Term of patent 7 years
(Cl. D58—9)



The ornamental design for a bottle, as shown.

152,006
DESIGN FOR A FLOOR RENOVATOR
Howard C. Lilly, Sharon, Mass., assignor to Masury-Young Company, Charlestown, Mass., a corporation of Massachusetts
Application August 6, 1947, Serial No. 140,734
Term of patent 3½ years
(Cl. D9—2)

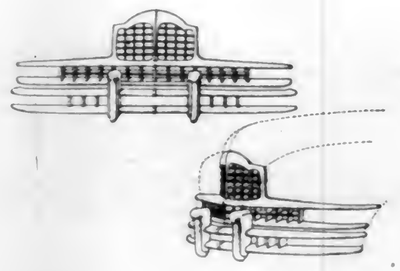


The ornamental design for a floor renovator, substantially as shown.

152,007
DESIGN FOR A CASING FOR SHOWER VALVE
Hugh H. Logan, La Canada, Calif.
Application November 14, 1946, Serial No. 134,790
Term of patent 14 years
(Cl. D91—3)

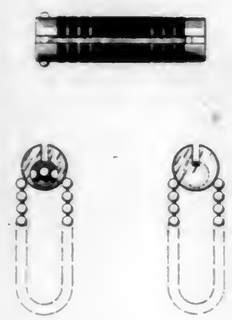
The ornamental design for a casing for shower valve, substantially as shown.

152,008
DESIGN FOR A UTILITY CREEPER WITH ILLUMINATOR OR THE LIKE
Stephen J. Lucas, Chicago, Ill.
Application June 25, 1947, Serial No. 139,906
Term of patent 14 years
(Cl. D14—3)



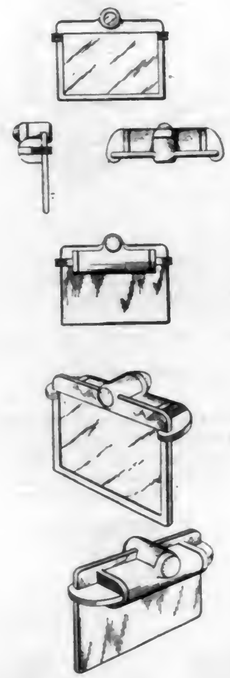
The ornamental design for a utility creeper with illuminator or the like, as shown and described.

152,009
DESIGN FOR A PROTECTOR FOR BABY'S SHOE
Verne L. Lyons, Minneapolis, Minn.
Application May 20, 1947, Serial No. 139,147
Term of patent 7 years
(Cl. D7—4)



The ornamental design for a protector for baby's shoe, as shown and described.

152,010
DESIGN FOR A COMBINED AUTOMOBILE GRILLE AND BUMPER ASSEMBLY OR SIMILAR ARTICLE
Edward Macauley, Grosse Pointe Farms, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application June 12, 1947, Serial No. 139,624
Term of patent 14 years
(Cl. D14—18)

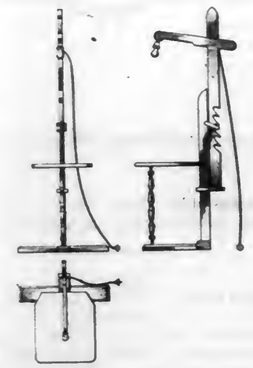


The ornamental design for a combined automobile grille and bumper assembly or similar article, substantially as shown and described.

152,011
DESIGN FOR A COMBINED SKATE SHARPENER AND CHAIN
Matthew J. McGoey, Middle Village, N. Y.
Application December 11, 1947, Serial No. 143,100
Term of patent 14 years
(Cl. D9—6)

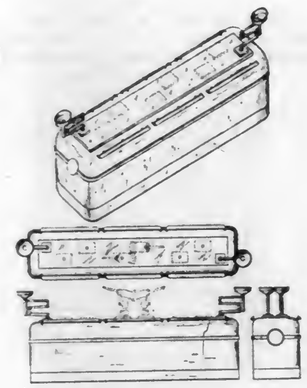
The ornamental design for a combined skate sharpener and chain, as shown and described.

152,012
DESIGN FOR A COMBINED LAMP AND MIRROR
Phillip E. Merrill and Oliver R. Titchenal, Santa Monica, Calif.
Application August 26, 1947, Serial No. 141,076
Term of patent 14 years
(Cl. D86—10)



The ornamental design for a combined lamp and mirror, substantially as shown.

152,013
DESIGN FOR A FURNITURE BASE OR SIMILAR ARTICLE
George H. Mildwoff, New York, N. Y.
Application March 15, 1947, Serial No. 137,635
Term of patent 3½ years
(Cl. D33—1)



The ornamental design for a furniture base or similar article, substantially as shown.

152,014
DESIGN FOR A LAMP STAND
Marshall Engler Miller, Catasauqua, Pa.
Application October 10, 1947, Serial No. 141,863
Term of patent 3½ years
(Cl. D48—20)

The ornamental design for a lamp stand, as shown.

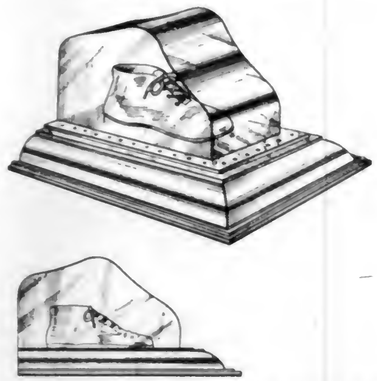
152,015
DESIGN FOR AN EXTENSION OIL DRAIN OR SIMILAR ARTICLE
Willard C. Moore, Dayton, Ohio
Application September 20, 1946, Serial No. 133,453
Term of patent 3½ years
(Cl. D52—2)

The ornamental design for an extension oil drain or similar article, as shown and described.

152,016
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 27, 1948, Serial No. 148,325
Term of patent 7 years
(Cl. D45—16)

The ornamental design for a necklace or similar article, substantially as shown.

152,017
DESIGN FOR A NECKLACE OR SIMILAR ARTICLE
Alfred Philippe, Scarsdale, N. Y., assignor to Trifari, Krussman & Fishel, Inc., New York, N. Y.
Application August 31, 1948, Serial No. 148,384
Term of patent 7 years
(Cl. D45—16)

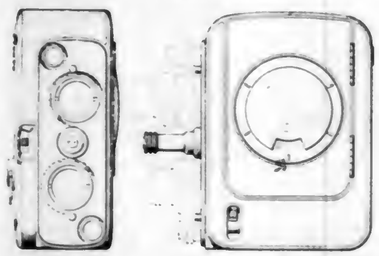


The ornamental design for a necklace or similar article, substantially as shown.

152,018
DESIGN FOR A STOCKING
Benjamin Franklin Playford, Cape May, N. J.
Application March 24, 1948, Serial No. 145,326
Term of patent 14 years
(Cl. D47—7)

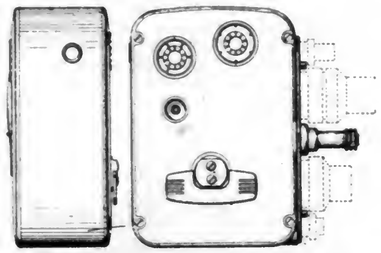
The ornamental design for a stocking, substantially as shown and described.

152,019
DESIGN FOR A BOOK END
David Rego, Fall River, Mass.
Application April 9, 1947, Serial No. 138,261
Term of patent 7 years
(Cl. D33—1)



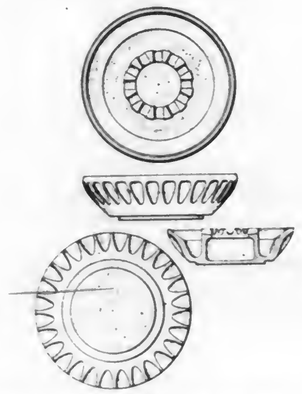
The ornamental design for a book end, as shown.

152,020
DESIGN FOR A RING OR THE LIKE
Stephen Anthony Reichmuth, St. Louis, Mo.
Application September 12, 1946, Serial No. 133,261
Term of patent 14 years
(Cl. D45—10)



The ornamental design for a ring or the like, substantially as shown and described.

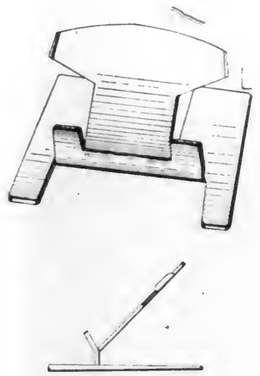
152,021
DESIGN FOR A PHOTOGRAPHIC CAMERA
Jean O. Reinecke, Oak Park, Ill., assignor to Bell & Howell Company, Chicago, Ill., a corporation of Illinois
Application January 20, 1948, Serial No. 143,917
Term of patent 14 years
(Cl. D61—1)



152,021—Continued

The ornamental design for a photographic camera, as shown and described.

152,022
DESIGN FOR AN ASH TRAY
Louis A. Revell, Los Angeles, Calif.
Application March 10, 1947, Serial No. 137,489
Term of patent 14 years
(Cl. D85—2)

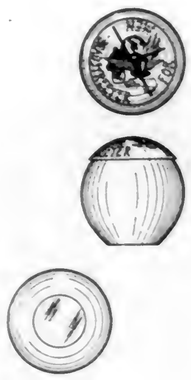


The ornamental design for an ash tray, substantially as shown.

152,023
DESIGN FOR A LAWN SEAT
Robert M. Rink, Goshen, Ind., assignor to The Goshen Manufacturing Company, Goshen, Ind., a corporation of Indiana
Application July 12, 1946, Serial No. 131,526
Term of patent 14 years
(Cl. D15—1)

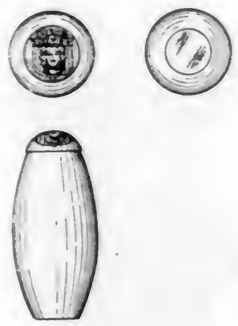
The ornamental design for a lawn seat, as shown.

152,024
DESIGN FOR A SUPPORT FOR A SADIRON
Michael A. Rollman, Landisville, Pa.
Application October 8, 1947, Serial No. 141,803
Term of patent 14 years
(Cl. D49—6)



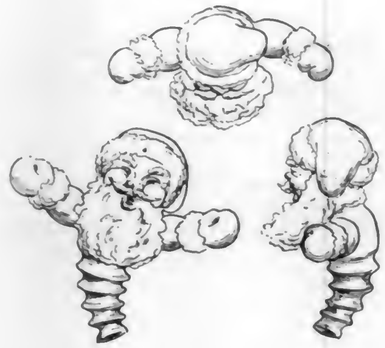
The ornamental design for a support for a sadiron, as shown and described.

152,025
DESIGN FOR A SWEATER OR SIMILAR ARTICLE
Morris W. Rosen, New York, N. Y., assignor to Morrison Knitwear Co., Inc., Brooklyn, N. Y., a corporation of New York
Application February 4, 1948, Serial No. 144,281
Term of patent 7 years
(Cl. D3—4)



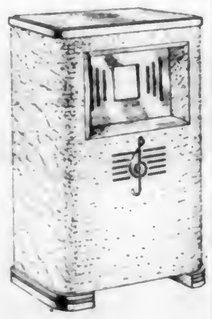
The ornamental design for a sweater or similar article, as shown.

152,026
DESIGN FOR A COSMETIC CONTAINER
Pearl L. Schluttig, Kansas City, Mo.
Application November 19, 1946, Serial No. 134,888
Term of patent 7 years
(Cl. D58—8)



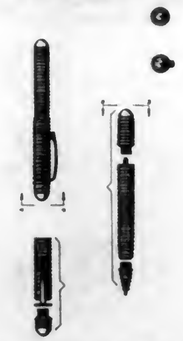
The ornamental design for a cosmetic container, as shown.

152,027
DESIGN FOR A COSMETIC CONTAINER
Pearl L. Schluttig, Kansas City, Mo.
Application November 19, 1946, Serial No. 134,889
Term of patent 7 years
(Cl. D58—8)



The ornamental design for a cosmetic container, as shown.

152,028
DESIGN FOR A CHRISTMAS TREE ORNAMENT
Elmer J. Schwartzman, Baltimore, Md.
Application January 24, 1947, Serial No. 136,367
Term of patent 14 years
(Cl. D29—1)



The ornamental design for a Christmas tree ornament, as shown.

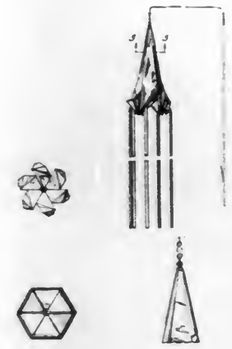
152,029
DESIGN FOR A RADIO CABINET
Hal G. Sherry, Pasadena, Calif.
Application May 10, 1947, Serial No. 138,964
Term of patent 3½ years
(Cl. D56—4)

The ornamental design for a radio cabinet as shown.

152,030
DESIGN FOR A WRITING INSTRUMENT
Irving Shupack, Forest Hills, Long Island, N. Y.
Application June 4, 1947, Serial No. 139,449
Term of patent 7 years
(Cl. D74—17)

The ornamental design for a writing instrument, as shown.

152,031
DESIGN FOR A BROOCH OR SIMILAR ARTICLE
Victor Silson, New York, N. Y.
Application May 15, 1948, Serial No. 146,389
Term of patent 3½ years
(Cl. D45—19)

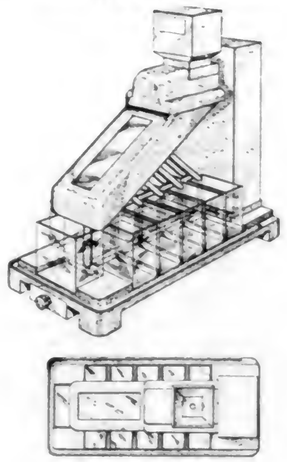


The ornamental design for a brooch or similar article, substantially as shown.

152,032
DESIGN FOR A WHIRLING TOY
Dorothy M. Smith, Santa Barbara, Calif.
Application May 2, 1947, Serial No. 138,751
Term of patent 14 years
(Cl. D34—15)

The ornamental design for a whirling toy, as shown and described.

152,033
DESIGN FOR A STREAMER TOY
Dorothy M. Smith, Santa Barbara, Calif.
Application May 2, 1947, Serial No. 138,752
Term of patent 14 years
(Cl. D34—15)

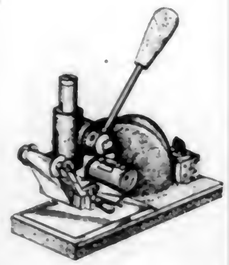


The ornamental design for a streamer toy, as shown and described.

152,034
DESIGN FOR A FLOWER STAND
Frank F. Solak, Klamath Falls, Oreg.
Application November 20, 1947, Serial No. 142,678
Term of patent 14 years
(Cl. D35—3)

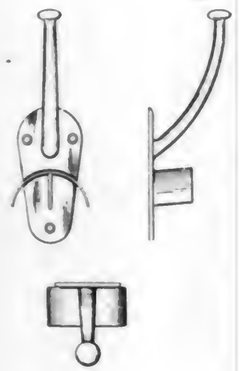
The ornamental design for a flower stand, as shown.

152,035
DESIGN FOR A BALL-BEARING SEPARATOR
John E. Sonnhalter, South Euclid, Ohio, assignor to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
Application August 29, 1946, Serial No. 132,950
Term of patent 3½ years
(Cl. D52—1)



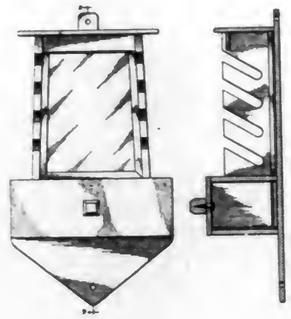
The ornamental design for a ball-bearing separator, substantially as shown.

152,036
DESIGN FOR A LOCK FOR HANDBAGS OR THE LIKE
Robert T. Sporman, Essex County, N. J., assignor to The J. E. Mergott Co., Newark, N. J., a corporation of Delaware
Application March 13, 1947, Serial No. 137,581
Term of patent 3½ years
(Cl. D87—2)



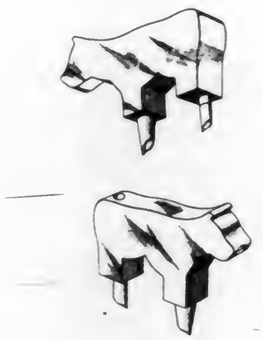
The ornamental design for a lock for handbags or the like, as shown and described.

152,037
DESIGN FOR A HOT STAMPING MACHINE
James A. Stadler, New Brunswick, N. J., assignor to Lion Monogram Machine Company, San Francisco, Calif., a corporation of California
Application April 14, 1947, Serial No. 138,352
Term of patent 7 years
(Cl. D64—10)



The ornamental design for a hot stamping machine, as shown.

152,038
DESIGN FOR A COAT AND HAT RACK
Anton Stauber, Chicago, Ill.
Application August 6, 1947, Serial No. 140,716
Term of patent 3½ years
(Cl. D17—12)

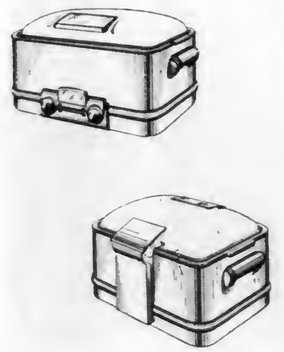


The ornamental design for a coat and hat rack, as shown.

152,039
DESIGN FOR A COMBINED COMB HOLDER AND WALL CABINET
Samuel Strick, New York, N. Y.
Application February 11, 1947, Serial No. 136,839
Term of patent 7 years
(Cl. D4—3)

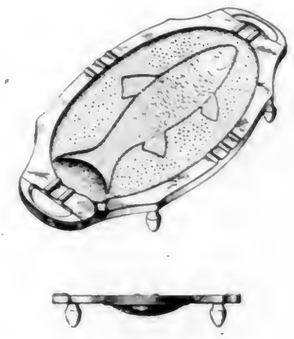
The ornamental design for a combined comb holder and wall cabinet, as shown.

152,040
DESIGN FOR A DISPENSER FOR CANNED LIQUIDS
Francis J. Strodel, Liverpool, N. Y.
Application October 22, 1947, Serial No. 142,087
Term of patent 7 years
(Cl. D22—2)



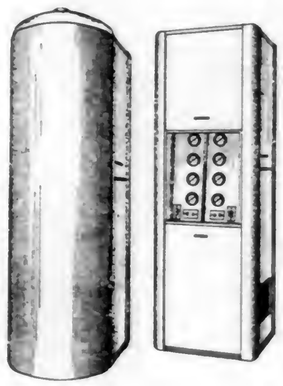
The ornamental design for a dispenser for canned liquids, as shown.

152,041
DESIGN FOR A LAMP
John James Stupka and John Venekamp, Chicago, Ill.
Application January 27, 1947, Serial No. 136,448
Term of patent 3½ years
(Cl. D48—20)



The ornamental design for a lamp, substantially as shown.

152,042
DESIGN FOR AN ELECTRIC ROASTER
Carl W. Sundberg and Montgomery Ferar, Detroit, Mich., assignors to The Swartzbaugh Manufacturing Company, Toledo, Ohio, a corporation of Ohio
Application February 10, 1947, Serial No. 136,804
Term of patent 14 years
(Cl. D81—10)



The ornamental design for an electric roaster, as shown.

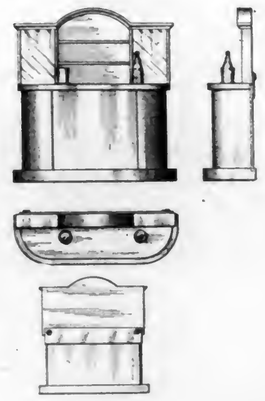
152,043
DESIGN FOR A BROILER BASE
Henry J. Talge, Kansas City, Mo., assignor to John C. Hockery, Kansas City, Mo., trustee for Henry J. Talge and Foster L. Talge
Application April 15, 1946, Serial No. 128,605
Term of patent 14 years
(Cl. D44—1)

The ornamental design for a broiler base, substantially as shown and described.

152,044
DESIGN FOR A STEAM SYSTEM CONTROL UNIT FOR RETURN OF CONDENSATE TO BOILER
Louin Tiller, Chicago, Ill.
Application August 21, 1947, Serial No. 140,971
Term of patent 14 years
(Cl. D81—2)

The ornamental design for a steam system control unit for return of condensate to boiler, substantially as shown.

152,045
DESIGN FOR A COMBINATION TWIN WALKER AND STROLLER FOR CHILDREN
John R. Vibber, Kennewick, Wash.
Application July 11, 1947, Serial No. 140,223
Term of patent 7 years
(Cl. D14—3)

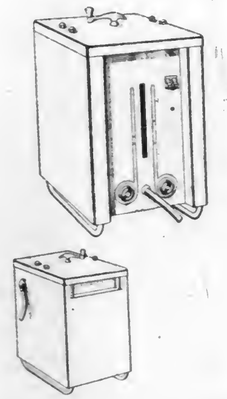


The ornamental design for a combination twin walker and stroller for children, as shown and described.

152,046
DESIGN FOR A BEACH SANDAL BASE
Alan B. Vickers, San Jose, Calif.
Application July 1, 1947, Serial No. 140,048
Term of patent 3½ years
(Cl. D7—5)

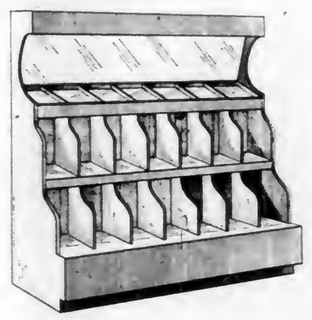
The ornamental design for a beach sandal base, substantially as shown.

152,047
DESIGN FOR A CIGARETTE DISPENSER
Daniel Volpe, New York, N. Y.
Application September 19, 1946, Serial No. 133,414
Term of patent 3½ years
(Cl. D85—2)



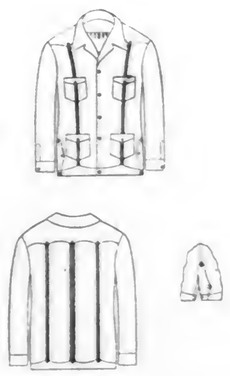
The ornamental design for a cigarette dispenser, substantially as shown.

152,048
DESIGN FOR A SCOURING PAD HOLDER
Alexander C. Weiss, Chicago, Ill.
Application November 27, 1946, Serial No. 135,135
Term of patent 7 years
(Cl. D9—2)



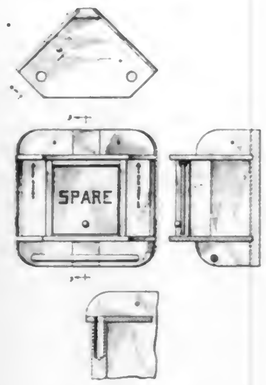
The ornamental design for a scouring pad holder, as shown.

152,049
DESIGN FOR A WELDER
Alanson U. Welch, Jr., West Springfield, Mass., assignor to General Electric Company, a corporation of New York
Application May 17, 1947, Serial No. 139,094
Term of patent 14 years
(Cl. D26—5)



The ornamental design for a welder, substantially as shown.

152,050
DESIGN FOR A SHOWCASE
William A. Yantis, St. Joseph, Mo., assignor to Chase Candy Company, St. Joseph, Mo.
Application May 20, 1946, Serial No. 129,899
Term of patent 14 years
(Cl. D80—11)



The ornamental design for a showcase, as shown and described.

152,051
DESIGN FOR A SHIRT OR SIMILAR ARTICLE
Vincent Zito, New York, N. Y.
Application August 17, 1946, Serial No. 132,600
Term of patent 3½ years
(Cl. D3—25)

The ornamental design for a shirt or similar article, as shown.

152,052
DESIGN FOR A COMBINATION HANGING CORNER TOILET TISSUE CABINET AND UTILITY HOLDER
Joseph Zwart, Rockville Centre, N. Y.
Application April 29, 1947, Serial No. 138,682
Term of patent 3½ years
(Cl. D4—3)

The ornamental design for a combination hanging corner toilet tissue cabinet and utility holder, as shown.

MANUFACTURER—PRODUCER—BANKER—LAWYER

LIST OF TRADE-MARK APPLICANTS

PUBLISHED FOR OPPOSITION

Allied Synthetics Co., San Diego, Calif. Translucent panels. 547,957, Dec. 14. Class 12.

American Electrical Heater Company, Detroit, Mich. Electrical goods. Serial No. 534,501, Dec. 14. Class 21.

American Optical Company, Southbridge, Mass. Ophthalmic frames and mountings. Serial No. 549,487, Dec. 14. Class 26.

Anderson-Fluke Engineering Company, Springdale, Stamford, Conn. Electronic measuring instrument. Serial No. 550,647, Dec. 14. Class 26.

Anderson-Prichard Oil Corporation, Oklahoma City, Okla. Thinner for paint, varnish and enamel. Serial No. 516,245, Dec. 14. Class 16.

Armstrong Cork Company, Lancaster, Pa. Graduates. Serial No. 549,407, Dec. 14. Class 26.

Armstrong, James, & Company Limited, London, England. Machines for washing, laundering, cleaning and pressing clothes, etc., and parts of all such machines. Serial No. 523,196, Dec. 14. Class 24.

Art-Rich Manufacturing Co., Dalton, Ga. Women's chenille and cotton robes. Serial No. 506,725, Dec. 14. Class 39.

Artistic Foundations, Inc., New York, N. Y. Girdles, corsets and brassières and combinations thereof. Serial No. 547,224, Dec. 14. Class 39.

Atlas Supply Company, Newark, N. J. Vulcanizing patch units. Serial No. 550,377, Dec. 14. Class 35.

Augstein, S., & Co., Inc., College Point, N. Y. Sportswear panties. Serial No. 546,171, Dec. 14. Class 39.

Aviatrix Co., New York, N. Y. Coiffeur retaining caps, protectors for the hair, caps, etc. Serial No. 494,004, Dec. 14. Class 39.

Ayer, Harriet Hubbard, Inc., New York, N. Y. Lipsticks. Serial No. 558,446, Dec. 14. Class 6.

Ayerst, McKenna & Harrison Limited, Rouses Point and New York, N. Y. Troches. Serial No. 553,335, Dec. 14. Class 6.

Ballantine, George, & Son Limited, Dumbarton, Scotland. Whiskey. Serial No. 523,509, Dec. 14. Class 49.

Bally's Shoe Factories Ltd., Schonewerd, Switzerland. Elastic webbing. Serial No. 521,106, Dec. 14. Class 42.

Bancroft, Joseph, & Sons Co., Rockford, Wilmington, Del. Cotton and rayon fibres. Serial No. 529,345, Dec. 14. Class 1.

Barry and Staines Linoleum (Canada) Limited, Farnham, Quebec, Canada. Linoleum for floor, wall, table, etc. Serial No. 516,528, Dec. 14. Class 20.

Bathasweet Corporation, New York, N. Y. Soap. Serial No. 550,777, Dec. 14. Class 4.

Beach Soap Company, Lawrence, Mass. Water soluble detergent composition. Serial No. 484,729, Dec. 14. Class 4.

Beneficial Industrial Loan Corporation, Wilmington, Del. Rendered in the small loan, instalment loan and instalment credit business. Serial No. 527,272, Dec. 14. Class 55.

Bertene Garcia Cigar Co.: *See*—
Simring, Simon.

Birtman Electric Company, Chicago, Ill. Electric domestic vacuum cleaners, electric space heaters and electric irons. Serial No. 538,232, De. 14. Class 21.

Bliss & Laughlin, Inc., Harvey, Ill. Gold finished bar steels. Serial No. 544,533. Dec. 14. Class 14.

Bohemian Distributing Company, doing business as International Products Company, Los Angeles, Calif. Whiskey. Serial No. 525,775, Dec. 14. Class 49.

Bone Dry Shoe Mfg. Co., Tacoma, Wash. Men's shoes. Serial No. 533,841, Dec. 14. Class 39.

Boorum & Pease Company, Brooklyn, N. Y. Spring-back memorandum sheet holders. Serial No. 533,128, Dec. 14. Class 37.

Borden Import Corp., New York, N. Y. Men's hats. Serial Nos. 519,797–8, Dec. 14. Class 39.

Borg, George W., Corporation, The, Chicago, Ill., and Delavan, Wis. Potentiometers. Serial No. 485,324, Dec. 14. Class 21.

Bosch Brewing Company, Houghton, Mich. Beer. Serial No. 539,484, Dec. 14. Class 48.

Boston Chemical Industries, Inc., Boston, Mass. Cleaning preparations. Serial No. 558,003, Dec. 14. Class 4.

Botany Mills, Inc., Passaic, N. J. Woolen fabrics in the piece. Serial No. 545,694, Dec. 14. Class 42.

Botany Mills, Inc., Passaic, N. J. Woolen fabrics in the piece. Serial No. 550,577, Dec. 14. Class 42.

Brockwal Glass Company, Inc., Brockway, Pa. Glass bottles. Serial No. 512,960, Dec. 14. Class 33.

Brockway Company, The, Naugatuck, Conn. Pipe fittings. Serial No. 516,952, Dec. 14. Class 13.

Brooks Bank Note Company, Springfield, Mass. Writing and printing paper. Serial No. 552,337, Dec. 14. Class 37.

Paint oil. Valentine & Company. 341,882, Dec. 29, 1936. Republished Dec. 14.
Paints, Ready-mixed. International Compositions Company, Inc. 287,497, Sept. 29, 1931. Republished Dec. 14.
Paints, Ready-mixed. Valentine & Company. 344,842, Apr. 6, 1937. Republished Dec. 14.
Paints, Ready-mixed, paint enamels, aluminum paint, etc. Valentine & Company. 340,743, Nov. 17, 1936. Republished Dec. 14.
Paints, Ready-mixed, screen paint enamels, stovepipe paint enamels, etc. Con-Ferro Paint & Varnish Company. 335,600, June 9, 1936. Republished Dec. 14.
Paints, stains, enamels, etc. Patterson-Sargent Company. 70,999, re-renewed Oct. 20, 1948. O. G. Dec. 14.
Polish, Furniture and automobile. A. A. Banks. 345,403, Apr. 27, 1937. Republished Dec. 14.
Wax or similar preservative and protective compositions. Franklin Research Company. 354,923, Mar. 1, 1938. Republished Dec. 14.

CLASS 17

Cigars. Consolidated Cigar Corporation. 232,114, Aug. 30, 1927. Republished Dec. 14.
Cigars. Consolidated Cigar Corporation. 313,943, June 12, 1934. Republished Dec. 14.
Cigars. Consolidated Cigar Corporation. 323,635–6, Apr. 23, 1935. Republished Dec. 14.
Cigars. Consolidated Cigar Corporation. 333,064, Mar. 10, 1936. Republished Dec. 14.
Cigars. Consolidated Cigar Corporation. 385,464, Mar. 4, 1941. Republished Dec. 14.
Cigars. Consolidated Cigar Corporation. 419,937, Apr. 12, 1946. Republished Dec. 14.

Cigars. Consolidated Cigar Corporation. 420,413–14, Apr. 9, 1946. Republished Dec. 14.
Cigars. Consolidated Cigar Corporation. 424,606, Oct. 15, 1946. Republished Dec. 14.
Cigars. Consolidated Cigar Corporation. 425,252, Nov. 12, 1946. Republished Dec. 14.
Cigars. Lewis Osterweis & Sons. 244,765, July 24, 1928. Republished Dec. 14.
Cigars. Lewis Osterweis & Sons. 335,748, June 16, 1936. Republished Dec. 14.
Tobacco, Smoking and chewing. Gallaher, Limited. 237,883, Jan. 17, 1928. Republished Dec. 14.

CLASS 19

Bicycles, motorcycles, tricycles, etc. James Cycle Co. Limited. 127,423, renewed Nov. 11, 1939. O. G. Dec. 14.
Mirrors for motor vehicles. Kales Stamping Company. 197,613, Apr. 21, 1925. Republished Dec. 14.
Windshield-cleaners. Folberth Auto Specialty Co. 148,578, renewed Jan. 5, 1948. O. G. Dec. 14.

CLASS 21

Antenna, Radio. Ward Products Corporation. 504,842, Dec. 14; Serial No. 542,981, published Sept. 7, 1948.
Ceramic electrical insulating materials, Prepared. Orefraction Incorporated. 441,609, Dec. 14; Serial No. 525,021, published Aug. 24, 1948.
Coils, Ignition, and replacement ignition coils. Windsor-Lloyd Products, Inc. 504,793, Dec. 14; Serial No. 534,848, published Sept. 14, 1948.
Connectors, Electric, electric conductors and electric rail bonds. Ohio Brass Company. 504,732, Dec. 14; Serial No. 511,570, published Sept. 14, 1948.
Electric air circulating fans. Signal Electric Manufacturing Co. 504,785, Dec. 14; Serial No. 533,410, published Sept. 7, 1948.
Electric combination broiler, grill, and warming oven and parts thereof. O. E. Eckhoff. 504,833, Dec. 14; Serial No. 541,523, published Sept. 14, 1948.
Electric dynamotors, electric motors, rotary electric converters, and inverters, etc. Elcor, Inc. 375,868, Mar. 6, 1940. Republished Dec. 14.
Electric generators and Diesel electric generator sets and parts for said products. Caterpillar Tractor Co. 504,829, Dec. 14; Serial No. 540,642, published Sept. 14, 1948.
Electric lamps. W. J. Miller. 434,046, Nov. 4, 1947. Republished Dec. 14.
Electric metal-working apparatus. Thomson Electric Welder Company. 504,840, Dec. 14; Serial No. 542,799, published Sept. 14, 1948.
Electric motors, generators, magnetos, etc. Bendix Aviation Corporation. 431,622, July 29, 1947. Republished Dec. 14.
Electrical apparatus. Gregory Electric Company. 504,736, Dec. 14; Serial No. 515,874, published Sept. 14, 1948.
Electrical cutouts. W. N. Matthews Corporation. 504,748, Dec. 14; Serial No. 522,896, published Sept. 7, 1948.
Electrical devices. G. H. Leland, Inc. 504,841, Dec. 14; Serial No. 542,853, published Sept. 7, 1948.
Electrical equipment. United States War Department. 504,860, Dec. 14; Serial No. 534,843, published Aug. 24, 1948.
Flash lights and flash-light cases. Carbon Products Co. 254,020, renewed Mar. 12, 1949. O. G. Dec. 14.
Floor polishers and cleaners, Electrically operated. Multi-Clean Products, Incorporated. 504,776, Dec. 14; Serial No. 531,047, published Sept. 14, 1948.
Heating units, etc., Electrical. Tuttle & Kift, Inc. 504,745, Dec. 14; Serial No. 520,480, published Sept. 7, 1948.
Lighting equipment, Flood, mercury industrial lighting fixtures, fluorescent lighting fixtures, etc. Smoot-Holman Company. 504,795, Dec. 14; Serial No. 535,190, published Sept. 7, 1948.
Magneto service parts. Wells Manufacturing Corporation. 408,937, Sept. 5, 1944. Republished Dec. 14.
Motor vehicle accessories. Doray Lamp Co., Inc. 504,819, Dec. 14; Serial No. 538,731, published Sept. 7, 1948.
Motors, Starting, generators and dynamotors. Eclipse Aviation Corporation. 335,020, May 19, 1936. Republished Dec. 14.
Radio and telephone headsets and earphones, group hearing aids. Trimm, Inc. 504,816, Dec. 14; Serial No. 538,676, published Sept. 7, 1948.
Radio receiving sets. Empire Manufacturing Company. 504,839, Dec. 14; Serial No. 542,300, published Sept. 14, 1948.
Radio receiving sets. Harden Associates, Inc. 504,823, Dec. 14; Serial No. 539,515, published Aug. 17, 1948.
Radio receiving sets and radio phonograph combination sets. Magnavox Company. 504,782, Dec. 14; Serial No. 532,144, published Apr. 6, 1948.
Radio receiving sets, automatic electric phonograph players and phonograph record changers, etc. Hallicrafters Co. 504,720, Dec. 14; Serial No. 491,254, published May 11, 1948.
Radio receiving sets; radio receiving apparatus, etc. Scott Radio Laboratories Incorporated. 504,826, Dec. 14; Serial No. 540,462, published Sept. 14, 1948.
Shades, Electric lamp. Railley Corporation. 441,584, Dec. 14; Serial No. 511,502, published Sept. 14, 1948.
Sound amplifying, Inter-communicating, and transmitting systems. Webster Electric Company. 504,810, Dec. 14; Serial No. 538,058, published Sept. 7, 1948.
Storage batteries. Corsair Company. 504,834, Dec. 14; Serial No. 541,647, published Aug. 24, 1948.
Storage batteries, Electric. A. Setzer. 181,596, Mar. 25, 1924. Republished Dec. 14.
Transformers, Electric. Maguire Industries, Incorporated. 504,759, Dec. 14; Serial No. 528,936, published Sept. 7, 1948.
Transmitters and repeaters, Synchronous electrical angular motion. Ford Instrument Company, Inc. 504,788, Dec. 14; Serial No. 534,265, published Aug. 24, 1948.
Tube apparatus, Electronic. General Electric Company. 441,588, Dec. 14; Serial No. 512,835, published Sept. 9, 1947.
Tubes, Radio vacuum. Walgreen Co. 308,019, Nov. 14, 1933. Republished Dec. 14.
Vacuum cleaner, Electric. Syndicate-Alliance Trading Co., Inc. 350,820, Oct. 5, 1937. Republished Dec. 14.
Vacuum cleaners, Electric. Modern Hygiene Corporation. 504,806, Dec. 14; Serial No. 537,810, published Sept. 7, 1948.
Vacuum cleaners, Electric. United Utilities & Specialty Corporation. 504,779, Dec. 14; Serial No. 531,553, published Aug. 31, 1948.
Voltage regulators and variable voltage transformers. Acme Electric Corporation. 504,775, Dec. 14; Serial No. 530,890, published Sept. 7, 1948.

CLASS 22

Bicycles, motorcycles, tricycles, etc. James Cycle Co. Limited. 127,423, renewed Nov. 11, 1939. O. G. Dec. 14.
Game, Bagatelle type amusement. Boizelle & Elsinger Corporation. 504,883, Dec. 14; Serial No. 539,124.
Golf balls. Bonded Brands, Incorporated. 348,764, Aug. 10, 1937. Republished Dec. 14.

CLASS 23

Auger bits. Irwin Auger Bit Company. 367,384, May 16, 1939. Republished Dec. 14.
Auger bits. Irwin Auger Bit Company. 373,152, Nov. 28, 1939. Republished Dec. 14.
Auger bits, Expansive wood-boring. Irwin Auger Bit Company. 379,090, July 2, 1940. Republished Dec. 14.
Bits and augers. Irwin Auger Bit Company. 65,244, Sept. 17, 1907. Republished Dec. 14.
Blades, Razor. Club Razor & Blade Mfg. Corp. 381,108, Sept. 10, 1940. Republished Dec. 14.
Clamps, Rope. American Hoist & Derrick Co. 156,609, July 11, 1922. Republished Dec. 14.
Clutches, Mechanical, clutch plates, and parts thereof. Borg & Beck Company. 300,396, Jan. 17, 1933. Republished Dec. 14.
Clutches, Mechanical, clutch plates, parts thereof. Borg-Warner Corporation. 398,179, Oct. 13, 1942. Republished Dec. 14.
Conveyors, Flexible spring belt. E. C. Horne. 399,013, Dec. 8, 1942. Republished Dec. 14.
Cutting machines, Masonry, and parts thereof. Martin Fireproofing Corporation. 383,516, Dec. 10, 1940. Republished Dec. 14.
Files and rasps. Carver File Company. 50,089, Mar. 6, 1906. Republished Dec. 14.
Mower, binder, header, and reaper guards, heads, and pitman boxes. R. Herschel Manufacturing Co. 164,594, Feb. 20, 1923. Republished Dec. 14.
Paper, Autograph, bill heads, blank books, etc. International Printing Pressmen and Assistants' Union of North America. 398,018, Oct. 6, 1942. Republished Dec. 14.
Paper, Autograph, bill heads, blank books, etc. International Printing Pressmen and Assistants' Union of North America. 398,020, Oct. 6, 1942. Republished Dec. 14.
Pile drivers, locomotive cranes, crawler cranes, etc. Great Lakes Dredge & Dock Company. 248,738, renewed Oct. 30, 1948. O. G. Dec. 14.
Portable apparatus adapted for various uses such as automobile jacks. Auto Specialties Manufacturing Company. 357,676, June 14, 1938. Republished Dec. 14.
Pump shafts and poppet valves. Thompson Products, Inc. 249,035, renewed Nov. 6, 1948. O. G. Dec. 14.
Razors, Safety. J. Potter. 130,560, Apr. 27, 1920. Republished Dec. 14.
Razors, shears, scissors, etc., All manner and kinds of. C. S. Bresnick. 235,317, Nov. 15, 1927. Republished Dec. 14.
Razors, shears, scissors, etc., All manner and kinds of. C. S. Bresnick. 250,452, Dec. 11, 1928. Republished Dec. 14.
Rollers and blocks, Wall-paper print. F. P. Dustan. 218,823, Oct. 5, 1926. Republished Dec. 14.
Sewing machines, felling machines, dyeing machinery, etc. Isaac Braithwaite & Son, Engineers, Limited. 249,333, renewed Nov. 13, 1948. O. G. Dec. 14.
Sprayers, Hand and power operated, spray pumps, fire pumps, etc. D. B. Smith & Company, Inc. 252,792, renewed Feb. 12, 1949. O. G. Dec. 14.
Tools and machinery. Billings & Spencer Company. 399,829, Feb. 2, 1943. Republished Dec. 14.

CLASS 24

Machines for washing garments and fabrics, wringing and mangling machines, and garment pressing machines. Isaac Braithwaite & Son, Engineers, Limited. 249,047, renewed Nov. 6, 1948. O. G. Dec. 14.
Washboards. National Washboard Company. 252,742, renewed Feb. 12, 1949. O. G. Dec. 14.
Washboards. National Washboard Company. 252,746–7, renewed Feb. 12, 1949. O. G. Dec. 14.

CLASS 26

Adding, listing, and calculating machines. Wales Adding Machine Company. 134,199, Aug. 17, 1920. Republished Dec. 14.
Baths, Water. Technicon Co. 504,740, Dec. 14; Serial No. 517,930, published Sept. 14, 1948.
Cabinets, Box-like temperature controlled. Garrison Machine Works, Inc. 441,572, Dec. 14; Serial No. 481,322, published Sept. 7, 1948.
Columns, Liquid level, liquid level controls, etc. Reliance Gauge Column Company. 504,764, Dec. 14; Serial No. 529,698, published Sept. 14, 1948.
Gauges, Draft. F. W. Dwyer. 441,610, Dec. 14; Serial No. 525,072, published Sept. 7, 1948.
Gauging material, Plastic. Perfect Circle Corporation. 504,746, Dec. 14; Serial No. 521,820, published Sept. 7, 1948.
Instrument for testing and analysing circuit breakers. Cincinnati Clock & Instrument Co. 504,780, Dec. 14; Serial No. 531,652, published Sept. 14, 1948.
Instruments and controls responsive to changes in physical conditions. White-Rodgers Electric Company. 365,781, Mar. 21, 1939. Republished Dec. 14.
Instruments and controls responsive to temperature. White-Rodgers Electric Company. 369,413, July 25, 1939. Republished Dec. 14.
Lenses, Photographic. Argus, Incorporated. 441,583, Dec. 14; Serial No. 511,195, published Sept. 14, 1948.
Lenses, Photographic. Bell & Howell Company. 504,778, Dec. 14; Serial No. 531,293, published Sept. 14, 1948.
Lenses, Photographic. Wollensak Optical Company. 504,722, Dec. 14; Serial No. 495,853, published Sept. 7, 1948.
Lenses, Projection. Bell & Howell Company. 504,761, Dec. 14; Serial No. 529,562, published Sept. 14, 1948.
Machines for locating and measuring unbalance in rotating parts and bodies, etc. Gisholt Machine Company. 504,726–7, Dec. 14; Serial Nos. 507,981–2, published Sept. 7, 1948.
Micro-projectors, auxiliary power units therefor, etc. Scopicon Inc. 504,739, Dec. 14; Serial No. 516,735, published Sept. 14, 1948.
Mixing and measuring machines and instruments for paints. Sherwin-Williams Company. 441,606, Dec. 14; Serial No. 524,736, published Sept. 7, 1948.
Motion picture films. Metro Pictures Corporation. 171,816, Aug. 14, 1923. Republished Dec. 14.
Motion-picture films. Metro Pictures Corporation. 178,349, Jan. 8, 1924. Republished Dec. 14.
Motion pictures. Fox Case Corporation. 251,585, renewed Jan. 8, 1949. O. G. Dec. 14.
Motion pictures. Fox Case Corporation. 251,605, renewed Jan. 8, 1949. O. G. Dec. 14.
Optical elements. Ray-Control Company. 441,575, Dec. 14; Serial No. 492,222, published Sept. 7, 1948.
Optical goods. Charles Foster & Co. 504,749, Dec. 14; Serial No. 524,969, published Sept. 14, 1948.
Optical goods. Charles Foster & Co. 504,781, Dec. 14; Serial No. 531,658, published Sept. 14, 1948.
Photographic and photo-engraving product. Chemco Photoproducts Company. 361,019, Oct. 4, 1938. Republished Dec. 14.
Photographic apparatus, and accessories. Pignons S. A. 441,587, Dec. 14; Serial No. 512,088, published Sept. 7, 1948.
Rules, folding rules, and extension rules. Master Rule Manufacturing Co., Inc. 388,720, July 8, 1941. Republished Dec. 14.
Scales, Balances and weighing. Christian Becker, Inc. 171,827, Aug. 14, 1923. Republished Dec. 14.
Scales, Weighing. Rock-Ola Manufacturing Corporation. 504,837, Dec. 14; Serial No. 541,785, published Sept. 7, 1948.
Slide-charts showing percentage possibilities of various poker hands, Printed. Perrygraf Corporation. 441,605, Dec. 14; Serial No. 524,078, published Sept. 14, 1948.
Stands, Projector. Bell & Howell Company. 504,762, Dec. 14; Serial No. 529,571, published Sept. 14, 1948.
Thermometers. L. L. Klamkin. 404,297, Nov. 16, 1943. Republished Dec. 14.
Time-controlled follow-up card holding and designating machines, Electrically operated. Pennzoil Company. 504,734, Dec. 14; Serial No. 514,133, published Sept. 7, 1948.
Timers, thermostatic hot water controls, and draft controls. White-Rodgers Electric Company. 392,896, Jan. 20, 1942. Republished Dec. 14.
Valves, Refrigerant control. Alco Valve Company. 432,400, Sept. 2, 1947. Republished Dec. 14.

CLASS 28

Jewelry. Ostby and Barton Company. 313,362, May 29, 1934. Republished Dec. 14.
Jewelry. Ostby and Barton Company. 314,155, June 19, 1934. Republished Dec. 14.
Jewelry. Ostby and Barton Company. 334,957, May 19, 1936. Republished Dec. 14.
Jewelry. Ostby and Barton Company. 368,693, June 27, 1939. Republished Dec. 14.
Jewelry. Ostby and Barton Company. 373,832, Dec. 26, 1939. Republished Dec. 14.
Pins, Fraternity, badges, lapel buttons, etc. Phi Chi. 234,605, Nov. 1, 1927. Republished Dec. 14.

CLASS 32

Bedroom, living room, dining room, and dinette furniture. Meier & Frank Company, Inc. 359,154, Aug. 9, 1938. Republished Dec. 14.
Bed-springs and seat-spring constructions. Barber Manufacturing Company. 120,707, Mar. 5, 1918. Republished Dec. 14.
Chairs, Lounge. Kroehler Manufacturing Company. 390,262, Sept. 16, 1941. Republished Dec. 14.
Furniture, Wooden. Pi Beta Phi Settlement School of The Pi Beta Phi Fraternity. 248,756, Oct. 30, 1928. Corrected. O. G. Dec. 14.
Mattresses. Stearns & Foster Company. 159,117–19, Sept. 19, 1922. Republished Dec. 14.
Mattresses. Stearns & Foster Company. 172,370, Aug. 28, 1923. Republished Dec. 14.
Mattresses. Stearns & Foster Company. 181,105, Mar. 11, 1924. Republished Dec. 14.
Mattresses and box springs. Stearns & Foster Company. 336,942, July 21, 1936. Republished Dec. 14.
Mattresses, pillows, and box springs. M. Gordon. 179,924, Feb. 19, 1924. Republished Dec. 14.
Pillows. P. R. Mitchell Co. 244,703, July 24, 1928. Republished Dec. 14.
Upholstered living room furniture. Kroehler Manufacturing Company. 416,428, Sept. 11, 1945. Republished Dec. 14.

CLASS 34

Air conditioning units. United States Air Conditioning Corporation. 345,258, Apr. 20, 1937. Republished Dec. 14.
Generators, Steam. Pierce Butler Radiator Corporation. 504,869, Dec. 14; Serial No. 512,926.

CLASS 35

Belting, Rubber, rubber hose, machinery packing, etc. Anchor Packing Company. 254,554, renewed Mar. 26, 1949. O. G. Dec. 14.
Hose, Flexible metal. Bendix Aviation Corporation. 423,438, Sept. 3, 1946. Republished Dec. 14.
Machinery packing. C. A. Daniel. 52,414, May 8, 1906. Republished Dec. 14.
Machinery packing. Quaker City Rubber Company. 218,591, Sept. 28, 1926. Republished Dec. 14.
Packings for the wearing and bearing parts of machines and mechanical devices. Tweed, Greene, & Co. 53,420, June 5, 1906. Republished Dec. 14.
Tire, Vehicle, and tube patching materials. Shaler Company. 288,169, Oct. 20, 1931. Republished Dec. 14.
Tires, Automobile. Corduroy Tire Company. 247,266, Sept. 25, 1928. Republished Dec. 14.
Tires of rubber, fabric, synthetic rubber. Richmond Rubber Co., Inc. 406,369, Mar. 28, 1944. Republished Dec. 14.
Tires of rubber, fabric, synthetic rubber. Richmond Rubber Co., Inc. 407,330, Mar. 30, 1944. Republished Dec. 14.
Tires, Pneumatic vehicle, and portable tire repair kits. Shaler Company. 291,253, Feb. 2, 1932. Republished Dec. 14.

CLASS 36

Music stands. Krauth & Benninghofen. 504,804, Dec. 14; Serial No. 537,198, published Sept. 14, 1948.
Phonograph records of the disc type, Mechanically grooved. Teen-Timers, Inc. 433,963, Nov. 4, 1947. Republished Dec. 14.
Pianos and non-electrical phonographs. Strawbridge & Clothier. 504,798, Dec. 14; Serial No. 535,647, published Sept. 14, 1948.
Records, Mechanically, grooved phonograph, and record blanks. Columbia Records Inc. 504,843, Dec. 14; Serial No. 544,550, published Sept. 14, 1948.
Records of the mechanically grooved type. Phonograph. Pilot Radio Corporation. 441,576, Dec. 14; Serial No. 496,269, published Sept. 14, 1948.

CLASS 37

Paper, Dull-finished. Martin Cantine Company. 269,125, Mar. 25, 1930. Republished Dec. 14.
Paper, Autograph, bill heads, blank books, etc. International Printing Pressmen and Assistants' Union of North America. 398,018, Oct. 6, 1942. Republished Dec. 14.

LIST OF REISSUE PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 14TH DAY OF DECEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Atkins, George E., Glen Ridge, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Signaling system. Re. 23,057, Dec. 14.

Beckwith, Dudley R.: *See*—
New, Archibald, A., Foord, and Beckwith.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Atkins, George E.

Bronaugh, Lewis J., Portland, Oreg., and T. I. Potter, New York, assignors to Refrigeration Patents Corporation, Buffalo, N. Y. Refrigerator. Re. 23,058, Dec. 14.

Cochary, Thomas A., Brockton, Mass. Open-back shoe with stiffening means. Re. 23,059, Dec. 14.

Corning Glass Works, assignee: *See*—
McGregor, Rob Roy and Warrick.

Foord, Stanley G.: *See*—
New, Archibald A., Foord, and Beckwith.

Hydroblast Corporation, The, assignee: *See*—
Tirrell, Leslie L.

International Standard Electric Corporation, assignee: *See*—
New, Archibald A., Foord, and Beckwith.

McGregor, Rob Roy, Verona, and E. L. Warrick, Pittsburgh, Pa., assignors to Corning Glass Works, Corning, N. Y. Organo-silicon polymers and methods of making them. Re. 23,060, Dec. 14.

Molchan, Stephan, El Monte, assignor of one-half to Hy Schwartz, Los Angeles, Calif. Curling rod. Re. 23,061, Dec. 14.

New, Archibald A., S. G. Foord, and D. R. Beckwith, London, England, assignors to International Standard Electric Corporation, New York, N. Y. Electric insulating material. Re. 23,062, Dec. 14.

Potter, Thomas I.: *See*—
Bronaugh, Lewis J., and Potter.

Refrigeration Patents Corporation, assignee: *See*—
Bronaugh, Lewis J., and Potter.

Research Corporation, assignee: *See*—
Shive, William, and Snell.

Schwartz, Hy, assignee: *See*—
Molchan, Stephan.

Shive, William, Austin, Tex., and E. E. Snell, Madison, Wis., assignors to Research Corporation, New York, N. Y. N-substituted pantoyl amides. Re. 23,063, Dec. 14.

Snell, Esmond E.: *See*—
Shive, William, and Snell.

Tirrell, Leslie L., Benton Harbor, Mich., assignor to The Hydroblast Corporation, Chicago, Ill. Method and apparatus for sand blasting. Re. 23,064, Dec. 14.

Warrick, Earl L.: *See*—
McGregor, Rob R., and Warrick.

LIST OF PLANT PATENTEES

Benton, William A., and G. L. Smith, Wassaic, N. Y. English or persian walnut tree. 815, Dec. 14.

Jones, Oscar F., Crozet, Va., and W. C. Jones, Hagerstown, Md. Peach tree. 814, Dec. 14.

Jones, Wilbur C.: *See*—
Jones, Oscar F. and W. C.

Smith, Gilbert L.: *See*—
Benton, William A., and Smith.

LIST OF DESIGN PATENTEES

Armstrong Products Corporation, assignee: *See*—
Chatfield, William W.

Barnes, Albert L., Longview, Wash. Bottle carrier. 152,053, Dec. 14.

Bletcher, James H.: *See*—
Bletcher, Ralph E., and Bucknell.

Bletcher, Pearl W.: *See*—
Bletcher, Ralph E., and Bucknell.

Bletcher, Ralph E., and E. H. Bucknell, Los Angeles, Calif., assignors of ten percent to R. E. Bletcher, twelve and one-half per cent to E. H. Bucknell, twelve and one-half per cent to M. Bucknell, ten per cent to P. W. Bletcher, twenty-five per cent to M. B. Liston, 10 per cent to J. H. Bletcher, ten per cent to H. B. Skinner, ten per cent to C. R. B. Robertson. Shower head. 152,054, Dec. 14.

Brasfield, George A., Berkeley, Calif. Tank vehicle. 152,055, Dec. 14.

Brull, Stephen C., Chicago, Ill. Door handle. 152,056, Dec. 14.

Bruynzeel's Deurenfabriek N. V., assignee: *See*—
Staartjes, Johannes.

Bryce, Betty A., Tacoma, Wash., now by decree of marriage B. A. Dobiash. Sweater. 152,057, Dec. 14.

Bucknell, Ernest H.: *See*—
Bletcher, Ralph E., and Bucknell.

Bucknell, Mabel: *See*—
Bletcher, Ralph E., and Bucknell.

Bustin, Leo, New York, N. Y. Grille guard for motor vehicles. 152,058, Dec. 14.

Bustin, Leo, New York, N. Y. Grille guard for motor vehicles. 152,059, Dec. 14.

Campion, Walter A., South St. Paul, Minn. Can punch. 152,060, Dec. 14.

Candlin, James E., Jr.: *See*—
Murphy, Frank L., and Candlin, Jr.

Carr, William I., Eldon, Mo. Bottle display fixture. 152,061, Dec. 14.

Cascade Plastics Inc., assignee: *See*—
Jahn, Herbert, and Zaremba.

Chatfield, William W., assignor to Armstrong Products Corporation, Huntington, W. Va. Electric heater casing. 152,062, Dec. 14.

Clark, William J., Bexley, Ohio, assignor to Curtiss-Wright Corporation. Airplane. 152,063, Dec. 14.

Coleman, Joseph A., assignor to Maiden Form Brassiere Company, Inc., New York, N. Y. Brassière. 152,064, Dec. 14.

Coro, Inc., assignee: *See*—
Katz, Adolph.

Crowley, John C., Willoughby, Ohio. Combined tire gauge and key holder. 152,065, Dec. 14.

Crowley, John C., Willoughby, Ohio. Combined tire gauge and key holder. 152,066, Dec. 14.

Curtis, John C., Claremont, N. H., assignor to Joy Manufacturing Company. Power winch. 152,067, Dec. 14.

Curtiss-Wright Corporation, assignee: *See*—
Clark, William J.

De Groodt & Associates, Inc., assignee: *See*—
Melillo, Joseph.

Dobiash, Betty A., by decree of marriage: *See*—
Bryce, Betty A.

Donchi, Samuel R., South Orange, N. J. Multigem setting or similar article. 152,068, Dec. 14.

Fettinger, John G., Utica, assignor to Robert Gair Company, Inc., New York, N. Y. Display carton. 152,069, Dec. 14.

Gair, Robert, Company, Inc., assignee: *See*—
Fettinger, John G.

Giovagnoni, Violet, New York, N. Y. Negligee. 152,070, Dec. 14.

Goldsmith, Edwin B., assignee: *See*—
Kapphan, Elwood D.

Hobé, William W., New York, N. Y. Brooch or similar article. 152,071, Dec. 14.

Hobé, William W., New York, N. Y. Brooch or similar article. 152,072, Dec. 14.

Hobé, William W., New York, N. Y. Brooch or similar article. 152,073, Dec. 14.

Hobé, William W., New York, N. Y. Necklace or similar article. 152,074, Dec. 14.

Hobé, William W., New York, N. Y. Brooch or similar article. 152,075, Dec. 14.

Hobé, William W., New York, N. Y. Brooch or similar article. 152,076, Dec. 14.

Hobé, William W., New York, N. Y. Brooch or similar article. 152,077, Dec. 14.
Hobé, William W., New York, N. Y. Bracelet or similar article. 152,078, Dec. 14.
Hobé, William W., New York, N. Y. Bracelet or similar article. 152,079, Dec. 14.
Hobé, William W., New York, N. Y. Brooch or similar article. 152,080, Dec. 14.
Hobé, William W., New York, N. Y. Bracelet or similar article. 152,081, Dec. 14.
Hobé, William W., New York, N. Y. Brooch or similar article. 152,082, Dec. 14.
Hobé, William W., New York, N. Y. Necklace. 152,083, Dec. 14.
Hobé, William W., New York, N. Y. Necklace. 152,084, Dec. 14.
Hobé, William W., New York, N. Y. Necklace. 152,085, Dec. 14.
Hobé, William W., New York, N. Y. Necklace or similar article. 152,086, Dec. 14.
Huppert, William, New York, N. Y. Electrical push button cover plate. 152,087, Dec. 14.
Jahn, Herbert, Garfield, and C. S. Zaremba, Patterson, N. J., assignors to Cascade Plastics Inc. Fly swatter. 152,088, Dec. 14.
Joy Manufacturing Company, assignee: *See*—
Curtis, John C.
Kapphan, Elwood D., Fort Lauderdale, Fla., assignor of one-half to E. B. Goldsmith, Pittsburgh, Pa. Grand piano. 152,089, Dec. 14.
Karstadt, Clarence, Glen Ellyn, Ill. Electric cooking appliance. 152,090, Dec. 14.
Karstadt, Clarence, Glen Ellyn, Ill. Electric cooking appliance. 152,091, Dec. 14.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 152,092, Dec. 14.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 152,093, Dec. 14.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 152,094, Dec. 14.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 152,095, Dec. 14.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 152,096, Dec. 14.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 152,097, Dec. 14.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 152,098, Dec. 14.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 152,099, Dec. 14.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Brooch or similar article. 152,100, Dec. 14.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Earring or similar article. 152,101, Dec. 14.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Combined brooch and locket. 152,102, Dec. 14.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Combined brooch and locket. 152,103, Dec. 14.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Combined brooch and locket. 152,104, Dec. 14.
Katz, Adolph, Providence, R. I., assignor to Coro, Inc., New York, N. Y. Combined brooch and locket. 152,105, Dec. 14.

Jahn, Herbert, and Zaremba.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 14TH DAY OF DECEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Aber, Joseph S., Philadelphia, Pa. Elastic snap ring fastener. 2,456,355, Dec. 14.
Aber, Joseph S., Philadelphia, Pa. Packing gasket and static seal. 2,456,356, Dec. 14.
Abramson, Morris H., Springfield, Mass. Securing device. 2,456,039, Dec. 14.
Ackerman, Arthur O., Fullerton, Calif. Entrapping condensation. 2,456,238, Dec. 14.
Ackley, Robert A., assignor to Republic Flow Meters Company, Chicago, Ill. Vapor indicating apparatus. 2,455,966, Dec. 14.
Acrotarque Company, The, assignee: *See*—
Orahansky, Elias, Jr.
Acton, Russel D., Chicago, Ill. Hydraulic cylinder and piston device. 2,456,236, Dec. 14.
Acton, Russel D., Chicago, Ill., assignor to International Harvester Company. Tractor mounted implement. 2,456,237, Dec. 14.
Adams Bros. Mfg. Co., Inc., assignee: *See*—
Adams, Edwin C.
Adams, Edwin C., assignor to Adams Bros. Mfg. Co., Inc., Pittsburgh, Pa. Electric heater. 2,455,967, Dec. 14.
Addressograph-Multigraph Corporation, assignee: *See*—
Gruver, John H., and Seeley.
Janke, Edward J.
Agostinelli, Joseph, Detroit, Mich. Heel counter reenforcement. 2,456,102, Dec. 14.
Agriculture, United States of America as represented by the Secretary of, assignee: *See*—
Dimler, Robert J.
Mast, William C.
Air Reduction Company, Incorporated, assignee: *See*—
Georg, Walter.
Schneider, Robert H.
Aktiebolaget Hadar Schmidt, assignee: *See*—
Oden, Knut.
Aktiengesellschaft Brown, Boveri & Cie, assignee: *See*—
Stoecklin, Josef.
Alderson, Witty L., Jr., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Curing ethylene polymers. 2,455,910, Dec. 14.
Allen, Harry L., Philadelphia, Pa., and E. G. Kerr, Haddonfield, N. J., assignors to Allied Chemical & Dye Corporation, New York, N. Y. Complex resins and making. 2,456,357, Dec. 14.
Allen, Harry L., Philadelphia, Pa., and E. G. Kerr, Haddonfield, N. J., assignors to Allied Chemical & Dye Corporation, New York, N. Y. Thermoplastic resins and making. 2,456,358, Dec. 14.
Alliance Manufacturing Company, The, assignee: *See*—
Schneider, Emmor V.
Allied Chemical & Dye Corporation, assignee: *See*—
Allen, Harry L., and Kerr.
Gilbert, Everett E., and Segool.
Hopkins, Abner C., Jr., Stephenson, and Watson.
Kern, Jean G.
Allied Electric Products, Inc., assignee: *See*—
Weisberg, Sidney M.
Alling, E. Roy, Kenmore, and J. C. Knepflar, said Knepflar assignor to Rice and Adams Corporation, Tonawanda, N. Y. Prerinsing apparatus for container washers. 2,456,040, Dec. 14.
Allis-Chalmers Manufacturing Company, assignee: *See*—
Newhouse, Ray C.
Alvear, Victor, Clifton, N. J. Electric battery improvement. 2,456,477, Dec. 14.
American Bakers Machinery Company, assignee: *See*—
Buechek, John.
American Bridge Company, assignee: *See*—
Balke, Harry A.
American Briquet Company, assignee: *See*—
Dallas, George, Mifflin, and Fine.
American Can Company, assignee: *See*—
Martin, William M.
Nordquist, Ronald E. J.
American Cyanamid Company, assignee: *See*—
Clark, Le Roy V.
Hechenbleikner, Ingenuin.
Hultquist, Martin E., and Northey.
Lytle, Lawrence D.
American Steel Package Company, The, assignee: *See*—
Duerk, Karl A.
American Viscose Corporation, assignee: *See*—
Furness, William H.
Amstutz, Walter, assignor to Butler Brothers, Chicago, Ill. Collapsible blackboard. 2,456,103, Dec. 14.
Andersen, Nils P. E., Elm Grove, assignor to Harnischfeger Corporation, Milwaukee, Wis. Cargo hoist. 2,456,104, Dec. 14.
Anderson, Gordon V.: *See*—
Mueller, Siegfried E., Anderson, and Dacas.
Anderson, Milton B., Rockford, Ill., assignor, by mesne assignments, to the United States of America, as represented by the Secretary of the Navy. Selective propulsion means for amphibious craft. 2,456,478, Dec. 14.
Anderson, William S., Jr., Williamsport, Pa., assignor to Avco Manufacturing Corporation. Sectional type boiler. 2,456,239, Dec. 14.
Andrews, Edward F., assignor, by mesne assignments, to The Miller Spreader Corporation, Youngstown, Ohio. Adjustable truck hitch. 2,456,359, Dec. 14.
Antil, Michael, Cortland, N. Y. Collapsible container. 2,456,479, Dec. 14.
Apex Railway Products Co., assignee: *See*—
Marsh, John W.
Arenberg, Albert L., Highland Park, assignor to Patent License Corporation, Chicago, Ill. Electric lighting. 2,456,166, Dec. 14.
Argus, Incorporated, assignee: *See*—
Clapp, Roy A.
Arkus, Catherine, assignor to Feder Industries, Inc., New York, N. Y. Head ornament. 2,456,167, Dec. 14.
Arnold, Harold W., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Acrylonitrile process. 2,456,360, Dec. 14.
Arvey Corporation, assignee: *See*—
Johnson, Arnold E.
Atlas Powder Company, assignee: *See*—
Jefferson, George D.
Atteslander, Edouard, assignor to Sulzer Frères, Société Anonyme, Winterthur, Switzerland. Device for adjusting the blades of ship's propellers. 2,456,361, Dec. 14.
Attorney General of the United States, Vested in the: *See*—
Dohrn, Max, and Laubereau.
Heitz-Boyer, Maurice G.
Auer, Frederick, Teaneck, assignor to Champlain Company, Inc., Bloomfield, N. J. Chase die assembly. 2,456,240, Dec. 14.
Austin, Dwight E., Kent, assignor to Samuel Moore & Company, Cleveland, Ohio. Stanchion connection. 2,456,480, Dec. 14.
Automatic Electric Laboratories, Inc., assignee: *See*—
Peterson, Edward S.
Wood, Frederic E.
Avco Manufacturing Corporation, assignee: *See*—
Anderson, William S., Jr.
Aves, Fred J., Beverly Hills, Calif. Remote control adjustable mirror. 2,456,362, Dec. 14.
Axler, Meyer H., Corona, and K. F. Tripp, Tuckahoe, N. Y., assignors to Farrand Optical Co., Inc. Making optical transmission filters by thermal evaporation 2,456,241, Dec. 14.
B-J Company, Inc., The, assignee: *See*—
Berghoff, Mathew W.
Bailey, Benjamin F., Ann Arbor, assignor to United Lens Corporation, Detroit, Mich. Directional signal and circuits therefor. 2,456,242, Dec. 14.
Baird, Bruce M.: *See*—
Gibbs, Frank C., Baird, and Brosamer.
Bake, Louis S., Pennsgrove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Self-curing polychloroprene compositions. 2,455,911, Dec. 14.
Baker, Corwin W., Stoneham, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Lasting machine. 2,455,969, Dec. 14.
Baker, Edna J., Los Angeles, Calif. Key holder. 2,455,968, Dec. 14.
Balke, Harry A., Valencia, Pa., assignor to American Bridge Company. Center bearing. 2,455,970, Dec. 14.
Ballantyne, William G., and J. A. Thompson, Portland, Oreg. Rigid lightweight metal tray. 2,456,481, Dec. 14.
Barfod, Frederik: *See*—
Wirth, Emil O., and Barfod.
Barfod, Frederik, assignor to Bendix Aviation Corporation, South Bend, Ind. Fuel supply system. 2,456,603, Dec. 14.
Barfod, Frederik, and E. O. Wirth, assignor to Bendix Aviation Corporation, South Bend, Ind. Fuel supply system. 2,456,604, Dec. 14.
Barker, Edgar, Toronto, Ontario, Canada. Machine for machining arcuate surfaces. 2,456,041, Dec. 14.
Barnard, Harlin W., Olean, N. Y., C. O. Johnson, and F. P. Carey, assignor to W. R. Case & Sons Cutlery Co., Bradford, Pa. Knife blade grinding machine. 2,456,482, Dec. 14.

Barrows, Robert S., Claymont, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Emulsion polymerization of 2-chloro-1,3-butadiene in the presence of tetraalkyl - diamino - diphenyl - methanes. 2,456,243, Dec. 14.

Bash, John M., Chicago, Ill. Censer. 2,456,244, Dec. 14.

Bauer, Benjamin B., Oak Park, assignor, by mesne assignments, to Shure Brothers Incorporated, Chicago, Ill. Stylus construction. 2,455,913, Dec. 14.

Bausch & Lomb Optical Company, assignee: *See*—
Markell, Stanley.
Sharp, John V., and Boughton.

Beardsley, Guy E., Jr., West Hartford, and C. W. Laubin, Windsor, assignors to United Aircraft Corporation, East Hartford, Conn. Ignition timing. 2,456,042, Dec. 14.

Beattie, Robert, Plainfield, assignor to Tide Water Associated Oil Company, Bayonne, N. J. Container. 2,456,483, Dec. 14.

Bedwell, Floyd B.: *See*—
Stengl, Rudolph J. and Bedwell.

Beech-Nut Packing Company, assignee: *See*—
Grupe, William F.
Hoffman, John J.

Behrens, Albert, New York, N. Y. Display carton with sliding closure. 2,456,168, Dec. 14.

Belfield, H., Company, assignee: *See*—
Goehring, Francis R.

Bellsle, Adelard J., assignor to The Berkline Corporation, Springfield, Mass. Locking device for rocking chairs. 2,456,043, Dec. 14.

Bell, Bernard I.: *See*—
Weiner, Leon and Bell.

Bell, Lee A., Valencia, Pa. Glare screen. 2,456,484, Dec. 14.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Jordan, Homer G.

Bellamy, John I., Brookfield, assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Electromagnetic counting device. 2,456,169, Dec. 14.

Bendix Aviation Corporation, assignee: *See*—
Barfod, Frederik.
Barfod, Frederik and Wirth.
Nardone, Romeo M.
Trout, Norwood S., Jr.
Wirth, Emil O. and Barfod.

Bendix Home Appliances, Inc., assignee: *See*—
Constantine, Arthur R.

Bendix, Vincent, Flemington, N. J., assignor to Helicopters, Inc. Helicopter with coaxial rotors. 2,456,485, Dec. 14.

Bennett, Ashley C., St. Louis Park, Minn. Liquid fuel burner control. 2,456,170, Dec. 14.

Benrus Watch Company, Inc., assignee: *See*—
Marchand, Adamir.

Berg, Carl, Northampton, and M. Berg, assignors to Nickel Cadmium Battery Corporation, Easthampton, Mass. Battery gland for terminals or vents. 2,456,246, Dec. 14.

Berg, Louis, Birmingham, Mich Hydraulic jack. 2,456,105, Dec. 14.

Berg, Marcus: *See*—
Berg, Carl, and M.

Bergel, Franz, A. L. Morrison, A. R. Moss, M. Königstein, and H. Rinderknecht, Welwyn Garden City, England, assignors to Hoffman-La Roche Inc., Nutley, N. J. Bile acid derivatives and the manufacture of same. 2,456,363, Dec. 14.

Berghoff, Mathew W., Lafayette, assignor to The B-J Company, Inc., West Lafayette, Ind. Inside storm window. 2,456,486, Dec. 14.

Berkline Corporation, assignee: *See*—
Bellsle, Adelard J.

Bernau, Arthur C., Sioux Falls, S. Dak. Packsack. 2,456,247, Dec. 14.

Bernreuter, Herbert A., assignor to Simpson Electric Company, Chicago, Ill. Electrical measuring instrument. 2,456,171, Dec. 14.

Beronius, Harry V., assignor to Welding Machines Manufacturing Company, Detroit, Mich. Welding gun. 2,456,106, Dec. 14.

Berry, Francois J., Lille, France. Gyratory screen. 2,456,248, Dec. 14.

Berry, William S., Buffalo, N. Y. Diaper washer. 2,456,364, Dec. 14.

Bidwell, George L., Riegelsville, Pa., assignor to Riegel Paper Corporation, New York, N. Y. Apparatus for producing variegated fiber lengths in the manufacture of paper. 2,456,249, Dec. 14.

Biermann, David, Cook County, Ill. Dispensing nozzle with automatic cutoff. 2,456,044, Dec. 14.

Blitz, Francis J., Eatontown, N. J. Voice operated antisinging repeater. 2,455,914, Dec. 14.

Bishop, Richard B.: *See*—
Schlesman, Carleton H., Denton, and Bishop.

Bobrich Manufacturing Corp., assignee: *See*—
Theodore, Henry P.

Bocciarelli, Carlo V., Oxford, Pa., assignor to Philco Corporation. Magnetic lens for correcting scanning defects. 2,455,977, Dec. 14.

Bodkin, Ernest A., Mickleton, and J. W. Payne, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Process of stabilizing treatment of inorganic oxide gels against wetting. 2,456,576, Dec. 14.

Bodkin, Ernest A., Mickleton, and J. W. Payne, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Process of stabilizing inorganic oxide gels against wetting. 2,456,577, Dec. 14.

Bodkin, Ernest A., Pitman, and J. W. Payne, Woodbury, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Process of stabilizing inorganic oxide gels against wetting. 2,456,578, Dec. 14.

Boeing Airplane Company, assignee: *See*—
Price, Nathan C.

Boeing Airplane Company, Wichita Division, assignee: *See*—
Giwosky, Harry L., and Ketelsen.

Bonard, Claude, administrator: *See*—
Dreyfus, Henry.

Borcherding, Walter H., New York, N. Y., assignor to The M. W. Kellogg Company, Jersey City, N. J. Catalytic conversion of hydrocarbons. 2,455,915, Dec. 14.

Bosch, James F., Wappingers Falls, N. Y. Bookbinding and producing the same. 2,455,971, Dec. 14.

Boudreau, Alban M., assignor to Hedstrom-Union Company, Gardner, Mass. Combined brake and safety leg for perambulators. 2,456,250, Dec. 14.

Boughton, Olin W.: *See*—
Sharp, John V., and Boughton.

Boughton, Willis A., Fort Lauderdale, Fla., and C. L. Dawes, and W. R. Mansfield, Cambridge, Mass., assignors to W. A. Boughton, C. L. Dawes, W. R. Mansfield, F. C. Hughes, and D. M. Hill, trustees of the Mica Patents Trust. Composite bonded sheet insulating materials. 2,456,251, Dec. 14.

Bourland, James F.: *See*—
Hass, Henry B., and Bourland.

Bowditch, Hoel L., Sharon, Mass. Combination magnifying lens and punch or the like. 2,455,972, Dec. 14.

Boyce Thompson Institute for Plant Research, Inc., assignee: *See*—
Prill, Edward A.

Boyd, William J., Jr., Pittsburgh, Pa. Keyway cutter holder. 2,455,973, Dec. 14.

Brach, E. J., & Sons, assignee: *See*—
Spain, William P.

Brady, Samuel G.: *See*—
Gruenberg, Ivor J., and Brady.

Branch, Burl, Brantford, Ontario, Canada. Barking drum. 2,456,365, Dec. 14.

Brant, John R., assignee: *See*—
Reid, Ralph W. and C. L.

Bren, Bozetech C., West Caldwell, and Jesse O. White, Arlington, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Plasticized polyvinyl acetal compositions. 2,456,366, Dec. 14.

Brewer, Oscar Z., Spokane, Wash., assignor of one-half to H. H. McNeill Lumber Co., Inc., New York, N. Y. Carboy package. 2,456,107, Dec. 14.

Briggs Manufacturing Company, assignee: *See*—
Shallot, Douglas.

Bristol, John E.: *See*—
Hansley, Virgil L., and Bristol.

Britton, Edgar C., and A. J. Dietzler, assignors to The Dow Chemical Company, Midland, Mich. Calcium-nickel phosphate catalyst and preparation thereof. 2,456,367, Dec. 14.

Britton, Edgar C., and A. J. Dietzler, assignors to The Dow Chemical Company, Midland, Mich. Calcium nickel phosphate-chromium oxide catalyst. 2,456,368, Dec. 14.

Brock, William H. J., Leamington Spa, England. Pipe coupling. 2,456,045, Dec. 14.

Brogan, Thomas C., Jr., Philadelphia, Pa. Embalming. 2,456,108, Dec. 14.

Brosamer, Robert J.: *See*—
Gibbs, Frank C., Jr., Baird, and Brosamer.

Broslus, John, Jr., Seattle, Wash. Stroboscopic projector of the continuously moving film type. 2,456,487, Dec. 14.

Brown, George W., Ames, Iowa, assignor to Radio Corporation of America. Automatic solution of linear simultaneous equations. 2,455,974, Dec. 14.

Brown, Herbert A.: *See*—
Jackson, Alphonsus L., and Brown.

Brown, Raymond H., New Hartford, assignor to The Torrington Manufacturing Co., Torrington, Conn. Centrifugal blower housing. 2,456,488, Dec. 14.

Bruning, Charles, Company, assignee: *See*—
Johnston, Derland.

Brush Development Company, The, assignee: *See*—
Massa, Frank.

Brusse, Archie B., assignor to Rocky Mountain Metal Products Co., Denver, Colo. Buccal tube for orthodontia. 2,455,916, Dec. 14.

Brustowsky, Morris, Brooklyn, N. Y., assignor to U. S. Slicing Machine Company, La Porte, Ind. Switch control means for slicing machines. 2,456,369, Dec. 14.

Buck, Mortimer P., Huntington, W. Va., assignor to The International Nickel Company, Inc., New York, N. Y. Producing electrodeposited nickel strip containing boron. 2,456,370, Dec. 14.

Buckner, Cecil C., Grosse Pointe Park, Mich. Fluid pump. 2,456,109, Dec. 14.

Buechek, John, Kokomo, Ind., assignor, by mesne assignments, of one-half to American Bakers Machinery Company, St. Louis, Mo. Pressure sheeting of dough. 2,456,371, Dec. 14.

Buechek, John, Kokomo, Ind., assignor, by mesne assignments, of one-half to American Bakers Machinery Company, St. Louis, Mo. Method of rolling baking dough. 2,456,372, Dec. 14.

Buehl, Walter M., and C. B. Shepherd, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Gas generator. 2,455,975, Dec. 14.

Bugatti, Ettore, Paris, France. Grinding machine and footstock thereof. 2,456,252, Dec. 14.

Burke, Wilbur B., East Cleveland, Ohio. Machine for drilling capstan head. 2,456,245, Dec. 14.

Burkholder, John D., Jr., Harrisonburg, Va. Poultry house. 2,456,489, Dec. 14.

Burns, Walter, Munger, Mich. Seed potato cutter. 2,456,172, Dec. 14.

Burnside, Don G., Princeton, N. J., assignor to Radio Corporation of America. Electron discharge device for ultra high frequencies. 2,456,579, Dec. 14.

Burrows, Glen A., Charlotte, N. C. Leg brace. 2,456,046, Dec. 14.

Busch, Fred, Wauwatosa, and A. J. Nelson, assignors, by mesne assignments, to Milsteel Products Co., Milwaukee, Wis. Steam-press iron and steam baffle and separator therefor. 2,456,490, Dec. 14.

Bushey, George E., St. Albans, Vt. Pack carrier. 2,456,253, Dec. 14.

Butler Brothers, assignee: *See*—
Amstutz, Walter.

Butler, Cornelius V.: *See*—
Duhaime, Sidney J., and Butler.

Byrne, Joseph E.: *See*—
Sauter, Joseph H., and Byrne.

Cairns, Theodore L., and R. M. Joyce, Jr., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Polymerized tetramethylethylene oxide. 2,455,912, Dec. 14.

Caldwell, Joseph M., Roscoe, Calif. Internal-combustion engine. 2,456,110, Dec. 14.

Campaigne, William E., assignor to Wingfoot Corporation, Akron, Ohio. Rubber flooring. 2,456,373, Dec. 14.

Cantrell, Troy L.: *See*—
Smith, Herschel G., and Cantrell.

Capolongo, Pasquale R.: *See*—
Stevens, Nelson B., and Capolongo.

Carey, Fred P.: *See*—
Barnard, Harlin W., and Johnson, and Carey.

Carnegie-Illinois Steel Corporation, assignee: *See*—
Holman, Robert W.
Larkin, Charles A.

Carpenter Container Corporation, assignee: *See*—
Carpenter, Herbert L.

Carpenter, Herbert L., Amityville, assignor to Carpenter Container Corporation, Brooklyn, N. Y. Container. 2,456,047, Dec. 14.

Carpenter, Herbert L., Amityville, assignor to Carpenter Container Corporation, Brooklyn, N. Y. Sectional container and coupling. 2,456,048, Dec. 14.

Carrozza, Theodore, New York, N. Y. Interlocking partition structure. 2,456,049, Dec. 14.

Carter, Charles H., Mount Pocono, Pa. Suspension hook. 2,456,374, Dec. 14.

Carter, Raymond S., Cuyahoga Falls, and M. L. Dorf, assignors to Wingfoot Corporation, Akron, Ohio. Making transmission belts. 2,456,580, Dec. 14.

Caruso, Mario, Maplewood, assignor to C-Eight Laboratories, Newark, N. J. Article ejector for vending machines. 2,455,976, Dec. 14.

Caruso, Rocco P., Newark, assignor of forty-five per cent to R. W. Smith, Arlington, N. J., and ten per cent to A. D. T. Libby. Fishing rig. 2,456,254, Dec. 14.

Case, W. R., & Sons Cutlery Co., assignee: *See*—
Barnard, Harlin W., and Johnson, and Carey.

Cass, Oliver W., Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Photochlorination of acetylene. 2,456,173, Dec. 14.

Cedarholm, Oscar R., Quincy, Mich., assignor of twenty per cent to O. R. Cedarholm, Jr., Fairfield, Conn. Vehicle bumper jack. 2,456,375, Dec. 14.

Cedarholm, Oscar R., Jr., assignee: *See*—
Cedarholm, Oscar R.

C-Eight Laboratories, assignee: *See*—
Caruso, Mario.

Celanese Corporation of America, assignee: *See*—
Dreyfus, Henry.
Fallows, Leonard, and Mellers.

Central Bank and Trust Company, executor: *See*—
McLaren, Peter J., Vaughan, and Fry.

Champlain Company, Inc., assignee: *See*—
Auer, Frederick.

Chirelstein, Nathan, Maplewood, N. J. Display lamp. 2,456,376, Dec. 14.

Chrysler Corporation, assignee: *See*—
Iavelli, Teno, and Matulaitis.
Neracher, Carl A., Dunn, Iavelli, and Syrovy.

Churchill, Wilmer H., Saugus, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Fastener clip. 2,456,553, Dec. 14.

Churchill, Wilmer H., Saugus, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Connector for cords or cables. 2,456,554, Dec. 14.

Ciba Limited, assignee: *See*—
Widmer, Willy.

Circo Products Company, assignee: *See*—
Skelly, James J., and Ralston.

Cislak, Francis E., and M. M. Otto, Indianapolis, Ind., assignors to Reilly Tar & Chemical Corporation. Separating 2,4-lutidine and 2,5-lutidine. 2,456,377, Dec. 14.

Cislak, Francis E., and A. L. Kranzfelder, assignors to Reilly Tar & Chemical Corporation, Indianapolis, Ind. Synthesizing carbazole. 2,456,378, Dec. 14.

Cislak, Francis E., and A. L. Kranzfelder, assignors to Reilly Tar & Chemical Corporation, Indianapolis, Ind. 2-amino-5-methyl pyridine and process of making it. 2,456,379, Dec. 14.

Cislak, Francis E., Indianapolis, Ind., and W. R. Wheeler, Cincinnati, Ohio, assignors to Reilly Tar & Chemical Corporation, Indianapolis, Ind. Catalytic oxidation of nicotine. 2,456,380, Dec. 14.

Cislak, Francis E., and M. O. Otto, assignors to Reilly Tar & Chemical Corporation, Indianapolis, Ind. Preparing metacresol-1,3,4-xylenol. 2,456,581, Dec. 14.

Cislak, Francis E., and M. O. Otto, assignors to Reilly Tar & Chemical Corporation, Indianapolis, Ind. Separation of isomeric xylenols. 2,456,582, Dec. 14.

Clapp, Roy A., Minneapolis, Minn., assignor, by mesne assignments, to Argus, Incorporated, Ann Arbor, Mich. Motion-picture projector. 2,455,918, Dec. 14.

Clark Equipment Company, assignee: *See*—
Lapsley, Robert.

Clark, Frank M., Pittsfield, Mass., assignor to General Electric Company. Electric capacitor. 2,456,381, Dec. 14.

Clark, Le Roy V., New Castle, Pa., assignor, by mesne assignments, to American Cyanamid Company, New York, N. Y. Method for preparing lead nitroaminoguanidine. 2,456,583, Dec. 14.

Clark, Ned, Atlanta, Ga. Footrest and drainage for bathtubs. 2,456,174, Dec. 14.

Clifford, Albert M., Stow, assignor to Wingfoot Corporation, Akron, Ohio. Copolymer of cyclohexyl alpha chloroacrylate and butadiene-1,3. 2,456,382, Dec. 14.

Coast Envelope & Leather Products Company, assignee: *See*—
Miller, Joseph C.

Coffman, Donald D., and T. A. Ford, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Polymers of trifluoroethylene and obtaining them. 2,456,255, Dec. 14.

Coggeshall, Norman D.: *See*—
Muskat, Morris, and Coggeshall.

Coggeshall, Norman D., O'Hara Township, Allegheny County, and M. Muskat, Oakmont, assignors to Gulf Research & Development Company, Pittsburgh, Pa. Geophysical exploration of boreholes by microwaves. 2,455,942, Dec. 14.

Colaluca, Leonardo, Somerville, N. J. Spring-actuated projector for game boards. 2,455,978, Dec. 14.

Colgate-Palmolive-Peet Company, assignee: *See*—
Miles, Gilbert De Wayne.

Collins, Johnnie C., assignor to Servis Equipment Company, Dallas, Tex. Tractor implement. 2,456,491, Dec. 14.

Collins, Richard D., Baltimore, Md. Adjustable holder for precision indicators. 2,456,383, Dec. 14.

Columbian Rope Company, assignee: *See*—
Orser, Keith L.

Commercial Solvents Corporation, assignee: *See*—
Morey, Glen H.
Smith, Everet F.

Compo Shoe Machinery Corporation, assignee: *See*—
Macdonald, Kenneth W.

Conaway, Rollin F., Waynesboro, Va., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Thermal-stretching apparatus for yarn. 2,456,384, Dec. 14.

Cone Automatic Machine Company, assignee: *See*—
Miller, Carroll E., and Ingalls.

Conklin, James W., Indianapolis, Ind., assignor to Radio Corporation of America. Electro-servo system. 2,455,979, Dec. 14.

Constantine, Arthur R., assignor to Bendix Home Appliances, Inc., South Bend, Ind. Ironing machine. 2,456,385, Dec. 14.

Continental Can Company, Inc., assignee: *See*—
Henchert, John.

Control Instrument Company, Inc., assignee: *See*—
Feller, Anton M.

Cooney, John R., Waldoboro, Maine. Electrical circuits. 2,456,050, Dec. 14.

Cooper, Charles W., Kenmore, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Nontacky synthetic film. 2,456,387, Dec. 14.

Cooper, Howell C., Sewickley, Pa. Cascade refrigeration unit with controls therefor. 2,456,386, Dec. 14.

Cope, Arthur C., Belmont, Mass., assignor to Sharp & Dohme, Incorporated, Philadelphia, Pa. Secondary alkyl(secondary) amino alcohol esters of aryl-substituted aliphatic acids. 2,456,555, Dec. 14.

Cope, Arthur C., Belmont, Mass., assignor to Sharp & Dohme, Incorporated, Philadelphia, Pa. Socendary-alkyl(secondary)amino alcohol esters of para-dialkyl amino benzoic acid. 2,456,556, Dec. 14.

Coppock, Kenneth E., Pleasant Ridge, and G. A. Smith, assignors to General Motors Corporation, Detroit, Mich. Front post and windshield construction. 2,456,175, Dec. 14.

Corning Glass Works, assignee: *See*—
Hyde, James F.

Cornwell, Lionel B., New Canaan, Conn. Magnetic sound translating head. 2,456,388, Dec. 14.

Covent, Barnett B., assignee: *See*—
Keith, Glenn.

Crake, Wilfred S., Houston, Tex., assignor to Shell Development Company, San Francisco, Calif. Drilling control system. 2,455,917, Dec. 14.

Cramer, Richard D., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Monomeric addition products of azobisformates and polyfluoroethylenes. 2,456,176, Dec. 14.

Craver, Orville G., Sr., Chester, N. C. Lawn mower sharpener. 2,456,389, Dec. 14.

Creech, Ballard, Chehalis, Wash. Child's knockdown chair and table. 2,456,111, Dec. 14.

Creson, William K., and R. H., Jordan, assignors to Ross Gear & Tool Company, Lafayette, Ind. Steering gear. 2,456,390, Dec. 14.

Crimora Research and Development Corporation, assignee: *See*—
Jacobs, James H., and Yarroll.

Crimp Seal Products Co., assignee: *See*—
Foster, Cyril J.

Crowley, Daniel G., Remus, Mich. Remote control switching device. 2,456,256, Dec. 14.

Cupery, Martin E., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. N-alkyl polymeric amic acids and coating compositions containing them. 2,456,177, Dec. 14.

Curry, Willam R., Ogden, Utah. Flushing device for douche syringes. 2,456,257, Dec. 14.

Curtiss-Wright Corporation, assignee: *See*—
Sawyer, James G.

Cutler-Hammer, Inc., assignee: *See*—
Seeger, Edwin W., and Schmitz.

Dacas, Arthur: *See*—
Mueller, Siegfried E., Anderson, and Dacas.

Dalkin, A., Company, assignee: *See*—
Yuza, Rudolph.

Dallas, George M., and B. M. Fine, assignors to American Briquet Company, Philadelphia, Pa. Split roll for briquetting machines or the like. 2,455,980, Dec. 14.

Daniel and Florence Guggenheim Foundation, assignee: *See*—
Goddard, Robert H.

Daon, Rene, assignor to Yankee Metal Products Corp., Norwalk, Conn. Rearview mirror mounting. 2,455,919, Dec. 14.

Davies, Charles, New Rochelle, N. Y. Ventilator. 2,456,391, Dec. 14.

Dawes, Chester L.: *See*—
Boughton, Willis A., Dawes, and Mansfield.

Dayton Rubber Company, The, assignee: *See*—
Lofton, Edgar K.

De Atley, Wilbur W.: *See*—
Harris, Charles R., and De Atley.

Deere & Company, assignee: *See*—
Standlund, Carl G.

Deere Manufacturing Co., assignee: *See*—
West, James R., and Jones

Demmer, Edward U., assignee: *See*—
Elliott, Gordon R.

Denton, William I.: *See*—
Schlesman, Carleton H., Denton, and Bishop.

Detroit Lubricator Company, assignee: *See*—
Landon, Walter S.

Greenlee, Sylvan O.

Diaphragm & Chemical Company, assignee: *See*—
Waterbury, Carl C.

Dictaphone Corporation, assignee: *See*—
Petruschell, Lucius P.

Dietzler, Andrew J.: *See*—
Britton, Edgar C., and Dietzler.

Dimick, William A., St. Johnsbury, Vt., assignor to Fairbanks, Morse & Co., Chicago, Ill. Balance weight assembly for weighing scales. 2,456,178, Dec. 14.

Dimler, Robert J., Peoria, Ill., assignor to United States of America as represented by the Secretary of Agriculture. Alkali process for wheat starch production. 2,455,981, Dec. 14.

Dings Magnetic Separator Co., assignee: *See*—
Manegold, Robert L., and Wynne.

Dixon, Arthur G., assignor to Modine Manufacturing Company, Racine, Wis. Convector heating unit. 2,456,492, Dec. 14.

Dodd, Arthur E., Edgewood, assignor to The Union Switch & Signal Company, Swissvale, Pa. Electrical relay. 2,456,112, Dec. 14.

Dohrn, Max, Berlin-Charlottenburg, and O. Laubereau, Berlin-Neukoln, Germany; vested in the Attorney General of the United States. P-amino phenyl-p'-amino pyridyl sulfone and making the same. 2,456,258, Dec. 14.

Dole Valve Company, The, assignee: *See*—
Kempton, Leslie A.

Dooley Bros., assignee: *See*—
Fellay, Louis J., and Kavanaugh.

Dorf, Marvin L.: *See*—
Carter, Raymond S., and Dorf.

Dorjée, Hendrik, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Insulating support for electric wiring. 2,456,259, Dec. 14.

Dorner, John A., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Step-by-step molding of extensive articles. 2,456,113, Dec. 14.

Dow Chemical Company, The, assignee: *See*—
Britton, Edgar C., and Dietzler.

Dowell, Henry L.: *See*—
Shelton, Georg I., and Dowell.

Dowty, George H., Cheltenham, England. Sealing washer. 2,455,982, Dec. 14.

Doyle, Irving W., Massapequa, assignor to Fairchild Camera and Instrument Corporation, Jamaica, N. Y. Camera lens mount. 2,456, 053, Dec. 14.

Doyle, Irving W., Massapequa, assignor to Fairchild Camera and Instrument Corporation, Jamaica, N. Y. Sextant marking device. 2,456,392, Dec. 14.

Doyle, Irving W., Massapequa, and C. V. Johnson, Kew Gardens, assignors to Fairchild Camera and Instrument Corporation, Jamaica, N. Y. Curtain for focal plane shutters. 2,456,052, Dec. 14.

Draeger, Arthur A., Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Recovering olefins from a hydrocarbon stream. 2,456,260, Dec. 14.

Drane, Phillips B., and C. D. Laidley, Tulsa, Okla. Time controlled valve. 2,456,493, Dec. 14.

Dreyfus, Henry, London, England; C. Bonard, administrator of said H. Dreyfus, deceased, assignor to Celanese Corporation of America. Production of polymers from carbylamine and carboxylic compounds. 2,455,983, Dec. 14.

Duerk, Karl A., assignor to The American Steel Package Company, Defiance, Ohio. Condenser structure. 2,456,114, Dec. 14.

Duhalme, Sidney J., and C. V. Butler, Los Angeles, Calif. Clothesline reel. 2,456,115, Dec. 14.

Du Mont, Allen B., Laboratories, Inc., assignee: *See*—
Goldsmith, Thomas T., Jr., and Mann.
Owen, Robert P.

Duncan, Douglas R., Gibbstown, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Drying of sodium nitrite to obtain a relatively non-caking granular form. 2,456,393, Dec. 14.

Dunn, Cecil G., Pittsfield, Mass., assignor to General Electric Company. Magnetic core. 2,456,461, Dec. 14.

Dunn, William T.: *See*—
Neracher, Carl A., Dunn, Iavelli, and Syrovy.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Alderson, Witty L., Jr.
Arnold, Harold W.
Bake, Louis S.
Barrows, Robert S.
Brenz-Bozetech C., and White.
Buehl, Walter M., and Shepherd.
Cairns, Thomas L., and Joyce, Jr.
Cass, Oliver W.
Coffman, Donald D., and Ford.

Livingston, Herbert K.
Miller, Henry C.
Pratt, Burt C.
Prichard, William W.
Ramler, Edward O.
Richter, Henry J.
Stamatoff, Gelu S.
Vaala, Gordon T.
Walker, Joseph F.
Walker, Kenneth E.
Wiley, Richard H.

Durand & Huguenin, A. G., assignee: *See*—
Tschan, Ernst.

Dyduszynski, Adam, Chester, England, assignor to Shell Development Company, San Francisco, Calif. Hydrocarbon conversion. 2,456,557, Dec. 14.

Eastman Kodak Company, assignee: *See*—
Hagemeyer, Hugh J., Jr.
Lowe, Wesley G.
Sun, Kuan-Han.

Eaton Manufacturing Company, assignee: *See*—
Hoern, Joseph H., and Pardee.

Ebbley, Norman E., Jr., Leadville, Colo. Antispill attachment for skis. 2,455,920, Dec. 14.

Eberhardt, Daniel A., St. Louis, Mo. Locking device for the sliding members of extensible frames. 2,456,054, Dec. 14.

Edison, Thomas A., Incorporated, assignee: *See*—
Fritzinger, George H.

Ehrlich, Josef, assignor to Erko Corporation, New York, N. Y. Making a plastic cork composition. 2,455,921, Dec. 14.

Eko Products Company, assignee: *See*—
Lueneburg, Walter C.

Elderbaum, Gilbert L.: *See*—
Howell, Clifton W., and Elderbaum.

Electric and Musical Industries Limited, assignee: *See*—
White, Eric L. C., Harker, and Houchin.

Electrical Engineers Equipment Co., assignee: *See*—
Hoye, Peder B.

Electrons, Incorporated, assignee: *See*—
Smith, Earl K.

Elliott, Gordon R., Ferndale, Mich., assignor to I. A. Puchner and E. U. Demmer, Milwaukee, Wis. Hydraulic pressure intensifier unit. 2,455,984, Dec. 14.

Elliott, Gordon R., Ferndale, Mich., assignor to I. A. Puchner and E. U. Demmer, Milwaukee, Wis. Hydraulic brake booster. 2,455,985, Dec. 14.

Englander, Joseph B., Woodmere, N. Y. Annunciating device. 2,455,922, Dec. 14.

Enns, John H., Ann Arbor, Mich., assignor to Leeds and Northrup Company, Philadelphia, Pa. Stabilized control gap for spark spectroscopes. 2,456,116, Dec. 14.

Ensink, Johannes, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Circuit arrangement for the modulation of electrical oscillations. 2,456,494, Dec. 14.

Equitable Paper Bag Co., Inc., assignee: *See*—
Lofgreen, Carl H.

Erko Corporation, assignee: *See*—
Ehrlich, Josef.

Evenwell, David, San Francisco, Calif. Lipstick dress protector. 2,455,986, Dec. 14.

Faeber, Harry W., Larchmont, assignor to Time, Inc., New York, N. Y. Coating machine. 2,456,495, Dec. 14.

Fair, William F., Jr., Pittsburgh, Pa., assignor, by mesne assignments, to Koppers Company, Inc., Bituminous laminated material. 2,455,923, Dec. 14.

Fairbanks, Morse & Co., assignee: *See*—
Dimick, William A.
Guldbrandsen, Guldbrand.

Fairchild Camera and Inatrument Corporation, assignee: *See*—
Doyle, Irving W.
Doyle, Irving W., and Johnson.

Fairchild Engine and Airplane Corporation, assignee: *See*—
Gregory, Alfred T.

Fallows, Leonard, and E. V. Mellers, Spondon, near Derby, England, assignors, by mesne assignments, to Celanese Corporation of America. Manufacture of hydrogen cyanide. 2,455,987, Dec. 14.

Farkas, Walter G.: *See*—
Flexser, Leo A., and Farkas.

Farnam Company, assignee: *See*—
Jensen, Deane L.

Farrand Optical Co., Inc., assignee: *See*—
Axler, Meyer H., and Tripp.

Farrar, John R., Lakewood, Ohio. End connection for structural steel beams. 2,456,055, Dec. 14.

Feder Industries, Inc., assignee: *See*—
Arkus, Catherine.

Fellay, Louis J., and H. H. Kavanaugh, assignors to Dooley Bros., Peoria, Ill. Mine drill support and driving mechanism. 2,456,056, Dec. 14.

Feller, Anton M., Elizabeth, N. J., assignor to Control Instrument Company, Inc., Brooklyn, N. Y. Salinity metering system. 2,456,117, Dec. 14.

Felter, John S.: *See*—
Thomas, Charles E., Felter, and Ness.

Ferrari, Frank: *See*—
Gallichio, Paul, and Ferrari.

Fields, Reuben T., Arlington, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Fabrication of polytetrafluoroethylene articles. 2,456,262, Dec. 14.

Fife, Truesdell C., Reading, Mass. Water heater. 2,455,988, Dec. 14.

Fine, Bernard M.: *See*—
Dallas, George, Mifflin, and Fine.

Finer, Henry J., Sutton Coldfield, assignor to Masts Limited, Birmingham, England. Street lighting standard. 2,456,179, Dec. 14.

First National Bank of Boston, The, assignee, trustee: *See*—
Guilden, Ira.

Fischer, Albert W.: *See*—
Kettering, Charles F., and Fischer.

Fisher, Hardin Y., Hillside, assignor to Soreng Manufacturing Corporation, Chicago, Ill. Nonchattering alternating current solenoid and plunger. 2,456,394, Dec. 14.

Flatt, William O., Fort Worth, Tex. Razorstrop composition. 2,456,263, Dec. 14.

Flexser, Leo A., Elizabeth, and W. G. Farkas, Palisades Park, assignors to Hoffmann-La Roche Inc., Nutley, N. J. Synthesis of riboflavin. 2,456,395, Dec. 14.

Food Machinery and Chemical Corporation, assignee: *See*—
Wade, John B.

Food Machinery Corporation, assignee: *See*—
Stilwell, Glenn E., and Paxton.

Food Research Laboratories, Inc., assignee: *See*—
Melnick, Daniel.

Ford Instrument Company, Inc., assignee: *See*—
Poitras, Edsard J., and Tear.

Ford, James G., Sharon, and R. N. Wenzel, Swissvale, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Lubricants. 2,456,496, Dec. 14.

Ford, Thomas A.: *See*—
Coffman, Donald D., and Ford.

Forsmark, Harold R., assignor to Stiger Precision Products, Inc., Chicago, Ill. Micrometer bore gauge. 2,456,497, Dec. 14.

Fosgood Corporation, assignee: *See*—
Ward, Robert S.

Foster, Cyril J., assignor, by mesne assignments, to T. Hawkinson and H. Burnett, Chicago, Ill., co-partners, trading as Crimp Seal Products Co. Terminal member. 2,456,118, Dec. 14.

Fostoria Pressed Steel Corporation, assignee: *See*—
Goble, Lawrence E.

Franck, Paul L., Washington, D. C. Direction signal. 2,456,498, Dec. 14.

Frazier, Van, Springfield, Mo. Tandem axle spring suspension. 2,455,989, Dec. 14.

Friedheim, Ernst A. H., and S. Soloway, New York, N. Y. Addition compounds of pyridine derivatives and preparing same. 2,455,924, Dec. 14.

Friedlen, Maurice A., Chicago, Ill. Preparing appliqués for attachment. 2,456,264, Dec. 14.

Friedman, Bernard S., Chicago, and G. L. Hervert, Berwyn, assignors to Universal Oil Products Company, Chicago, Ill. Production of surface active agents. 2,456,119, Dec. 14.

Fritzinger, George H., assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Electrical control and/or measuring system. 2,456,499, Dec. 14.

Frohock, Warren S., Danvers, assignor to Sylvania Electric Products Inc., Salem, Mass. Control of vaporizable material. 2,456,396, Dec. 14.

Frolich, Per K., Westfield, N. J., assignor, by mesne assignments, to Jasco, Incorporated. Modifying agents for use in low-temperature polymerization reactions. 2,456,265, Dec. 14.

Fry, Macon: *See*—
McLaren, Peter J., Vaughan, and Fry.

Furness, William H., Haddonfield, N. J., assignor to American Viscose Corporation, Wilmington, Del. Thread advancing reel. 2,456,120, Dec. 14.

G. B. & S. Mill, Inc., assignee: *See*—
Gates, Wearing D.

Gallichio, Paul, and F. Ferrari, New York, N. Y. Broiler. 2,456,397, Dec. 14.

Ganz, Henry, Ridgefield Park, assignor to The Personal Products Corporation, New Brunswick, N. J. Manufacture of absorbent tampons. 2,455,925, Dec. 14.

Garing, Jane E., Atlanta, Ga. Protection device for hair driers. 2,456,180, Dec. 14.

Gates, D. Wearing, Seattle, assignor to G. B. & S. Mill, Inc., Yakima, Wash. Drum grinding mill with discharge openings in the liner. 2,456,266, Dec. 14.

Gaugler, Lloyd P., Elysburg, Pa. Safety device for firearms. 2,455,990, Dec. 14.

Gazda, Antoine, Providence, R. I. Handle bar. 2,456,267, Dec. 14.

Gear Grinding Machine Company, The, assignee: *See*—
Gruenberg, Ivor J., and Brady.

General Baking Company, assignee: *See*—
Sauter, Joseph H., and Byrne.

General Controls Co., assignee: *See*—
Paille, Eugene.
Ray, William A.

General Electric Company, assignee: *See*—
Clark, Frank M.
Dunn, Cecil G.
Gethmann, Richard B.
Jackson, Edwin J.
Ogden, Harold S.
Patterson, Franklin G., and Sims.
Sommerville, Gareth G.
Starle, George B.
Wainwright, Joseph A.
Wargin, Edward F., Harkness, and Peroutky.

General Motors Corporation, assignee: *See*—
Coppock, Kenneth E., and Smith.
Grube, William L.
Kettering, Charles F., and Fischer.

General Railway Signal Company, assignee: *See*—
Preston, Neil D., and Hitchcock.

General Tire & Rubber Company, The, assignee: *See*—
Schwall, Chester F., Jr.

George, F. C., Machine Company, assignee: *See*—
George, Frank C.

George, Frank C., assignor, by mesne assignments, to F. C. George Machine Company, Orlando, Fla. Tamping device for block molding machines. 2,456,181, Dec. 14.

Gerhold, Clarence G., assignor to Universal Oil Products Company, Chicago, Ill. Fractionation control apparatus. 2,456,398, Dec. 14.

Gessler, Albert E., Scarsdale, N. Y., W. F. Grupe, Lyndhurst, N. J., C. J. Rolle, Yonkers, and F. J. Tuttle, assignors to Interchemical Corporation, New York, N. Y. Automobile body structure. 2,455,926, Dec. 14.

Gethmann, Richard B., Bridgeport, Conn., assignor to General Electric Company. Cathode-ray apparatus. 2,456,399, Dec. 14.

Giannini, G. M., & Co. Inc., assignee: *See*—
Giannini, Gabriel M.

Giannini, Gabriel M., assignor to G. M. Giannini & Co. Inc., Pasadena, Calif. Low torque toroidal resistor. 2,456,261, Dec. 14.

Giannopulos, Alexander, Fresno, Calif. Irrigation pipe and constructing same. 2,456,400, Dec. 14.

Gibbs, Frank C., Jr., Borger, Tex., B. M. Baird, Oklahoma City, Okla., and R. J. Brosamer, U. S. Navy, assignors to Phillips Petroleum Company. Catalyst preparation. 2,456,268, Dec. 14.

Gilbert, Everett E., New York, and H. D. Segool, Flushing, N. Y., assignors to Allied Chemical & Dye Corporation. Purification of diaryl monosulfides. 2,456,500, Dec. 14.

Gill, Joseph W., Elmhurst, assignor to United States Gypsum Company, Chicago, Ill. Plastic joint composition. 2,456,269, Dec. 14.

Gilmore, Ronald P., Fulton, Mo., assignor to Shell Development Company, San Francisco, Calif. Interference eliminator for seismic recording systems. 2,456,401, Dec. 14.

Girdler Corporation, The, assignee: *See*—
Houlton, Harold G.

Giwosky, Harry L., and P. Ketelsen, assignors to Boeing Airplane Company, Wichita Division, Wichita, Kans. Lubricating device. 2,456,270, Dec. 14.

Glen Jewelry Company, Inc., assignee: *See*—
Rowen, Irving.

Glick, Sanford E., Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Polymerization of styrene and related compounds. 2,456,558, Dec. 14.

Glossbrenner, Frederick W., Indianapolis, Ind. Vaporizer and control panel. 2,456,057, Dec. 14.

Goble, George H., Haddon Heights, N. J. Lamp socket. 2,456,501, Dec. 14.

Goble, Lawrence E., assignor to The Fostoria Pressed Steel Corporation, Fostoria, Ohio. Flexible joint assembly. 2,456,182, Dec. 14.

Goddard, Robert H., Roswell, N. Mex., assignor of one-half to The Daniel and Florence Guggenheim Foundation, New York, N. Y. Combustion chamber and supplying plural liquid fuels thereto. 2,456,402, Dec. 14.

Goehring, Francis R., assignor to H. Belfield Company, Philadelphia, Pa. Diaphragm control valve. 2,456,403, Dec. 14.

Goerg, Walter, North Bergen, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y. Flux coating for welding rods. 2,456,121, Dec. 14.

Goldberg, Elias, assignee: *See*—
Keith, Glenn.

Goldfield, Edwin R., and R. C. Schiring, University Heights, assignors to Picker X-ray Corporation Waite Manufacturing Division, Inc., Cleveland, Ohio. Desk of packing case construction. 2,455,991, Dec. 14.

Goldsmith, Thomas T., Jr., Cedar Grove, and E. R. Mann, Upper Montclair, assignors to Allen B. Du Mont Laboratories, Inc., Passaic, N. J. Cathode-ray tube amusement device. 2,455,992, Dec. 14.

Goldthwaite, George R., North Easton, Mass., assignor, by mesne assignments, to Westinghouse Electric Corporation. Outlet grille. 2,456,058, Dec. 14.

Good, Harvey G., East Earl, Pa. Gatherer for silage harvesters. 2,456,404, Dec. 14.

Goodrich, B. F., Company, The, assignee: *See*—
Dorner, John A.
Hickler, Walter R.
MacKinnon, John C., and Hickler.

Goodwin, Willis R., Malden, Mass. Work positioning means for heel nailing machines. 2,456,405, Dec. 14.

Gordon, John T., and R. E. Solliday, assignors to Wingfoot Corporation, Akron, Ohio. Thread feed arresting device. 2,456,406, Dec. 14.

Gorin, Everett, Woodbury, N. J., M. H. Gorin, San Francisco, Calif., assignors, by mesne assignments, to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Conversion of dimethyl ether. 2,456,584, Dec. 14.

Gorin, Manuel H.: *See*—
Gorin, Everett and M. H.

Grady, Stephen S., New York, N. Y. Electric switch. 2,455,927, Dec. 14.

Graham, Boynton, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Reaction product of n-substituted polyamides with hydroxylated materials and obtaining same. 2,456,271, Dec. 14.

Graybill, Howard W., Honey Brook, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Double throw switch. 2,456,502, Dec. 14.

Green, Arthur, Coventry, England. Machine for producing screwthreads. 2,456,407, Dec. 14.

Green, Charles P., Chicago, Ill. Device for clamping and locking work in jigs or fixtures. 2,456,183, Dec. 14.

Greenlee, Sylvan O., assignor to Devoe & Raynolds Company, Inc., Louisville, Ky. Synthetic drying compositions. 2,456,408, Dec. 14.

Greenwald, William C., Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Purification of tetrachlorethylene. 2,456,184, Dec. 14.

Gregory, Alfred T., Manhasset, assignor to Fairchild Engine and Airplane Corporation, Farmingdale, N. Y. Engine cylinder construction. 2,456,272, Dec. 14.

Gregurich, Matthew: *See*—
Stuckey, Warren A., and Gregurich.

Grewe, Raymond K., Silverton, Tex. Two-part clothespin with pivot joint. 2,456,409, Dec. 14.

Grinnell Corporation, assignee: *See*—
Loepsinger, Albert J.

Grube, William L., assignor to General Motors Corporation, Detroit, Mich. Electroplating apparatus. 2,456,185, Dec. 14.

Gruenberg, Ivor J., Pleasant Ridge, and S. G. Brady, Royal Oak, assignors to The Gear Grinding Machine Company, Hamtramck, Mich. Gear grinding machine. 2,456,410, Dec. 14.

Grupe, William F.: *See*—
Gessler, Albert E., Grupe, Rolle, and Tuttle.

Grupe, William F., Lyndhurst, N. J., assignor to Beech-Nut Packing Company, Canajoharie, N. Y. Machine for and banding boxes. 2,456,059, Dec. 14.

Gruver, John H., East Cleveland, and H. A. Seeley, Cleveland, Ohio, assignors to Addressograph-Multigraph Corporation, Wilmington, Del. Printing machine. 2,456,273, Dec. 14.

Guilden, Ira, Miami Beach, Fla., assignee, by mesne assignments, to The First National Bank of Boston, Boston, Mass., as trustee. Time zone watch. 2,456,122, Dec. 14.

Guinot, Henri M., Versailles, assignor to Les Usines De Melle (Societe Anonyme), Saint-Léger-les-Melle, France. Catalytically hydrogenating organic substances. 2,456,187, Dec. 14.

Guldbrandsen, Guldbrand, St. Johnsbury, Vt., assignor to Fairbanks, Morse & Co., Chicago, Ill. Dial scale mechanism. 2,456,186, Dec. 14.

Gulf Oil Corporation, assignee: *See*—
Smith, Herschel G., and Cantrell.

Gulf Research & Development Company, assignee: *See*—
Coggeshall, Norman D., and Muskat.
Muskat, Morris, and Coggeshall.

Gutzwiller, Ernst, Basel, assignor to Sandoz Ltd., Fribourg, Switzerland. Aryl thio-ethers of metal-containing phthalocyanines and producing same. 2,456,274, Dec. 14.

Haas, Henry B., West Lafayette, Ind., and J. F. Bourland, Martinsville, N. J., assignors to Purdue Research Foundation, West Lafayette, Ind. Production of nitrohydroxy compounds. 2,456,585, Dec. 14.

Hagemeyer, Hugh J., Jr., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Condensation of ketenes with esters of keto acids. 2,456,503, Dec. 14.

Hagenberg, Theodorus, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Discharge tube. 2,455,993, Dec. 14.

Hammerstein, Arthur, Palatine, Ill. Dispensing device. 2,456,504, Dec. 14.

Hanlin, Robert A., Logansport, Ind. Lamp shade. 2,455,994, Dec. 14.

Hansley, Virgil L., and J. E. Bristol, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Cyanhydrin esters. 2,456,188, Dec. 14.

Happe, Reynold: *See*—
Turner, Edgar P., and Happe.

Harbison, Benjamin F., Rocky Ford, Colo. Continuous sediment separator. 2,456,189, Dec. 14.

Harding, Clarke T.: *See*—
Rupp, Walter H., and Harding.

Harker, Maurice G.: *See*—
White, Eric L. C., Harker, and Houchin.

Harkness, Joseph R.: *See*—
Wargin, Edward F., Harkness, and Peroutky.

Harnischfeger Corporation, assignee: *See*—
Andersen, Nils P. E.

Harris, Charles R., Lockport, and W. W. De Atley, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Production of nitriles from certain olefins and HCN. 2,455,995, Dec. 14.

Harris, Louise E., Macon, Ga. Bathtub. 2,456,275, Dec. 14.

Harrison, Burnett, assignee: *See*—
Foster, Cyril J.

Harstick, William H., Oak Park, Ill., assignor to International Harvester Company. Stall cock for milking machines. 2,456,276, Dec. 14.

Hart, Thomas W., Leicester, England, assignor to United Shoe Machinery Corporation, Flemington, N. J. Edge finishing machine. 2,456,123, Dec. 14.

Hartford National Bank and Trust Company, as trustee, assignee: *See*—
Dorjée, Hendrik.
Ensink, Johannes.
Hagenberg, Theodorus.
Van der Mark, Jan, and Weyers.

Harvey, Aro M., deceased, Kansas City, Mo.; by Neva J. Harvey, administratrix, assignor to Neva J. Harvey, Kansas City, Mo. Garment supporting device for ironing boards. 2,456,411, Dec. 14.

Harvey, Neva J., administratrix, assignee: *See*—
Harvey, Aro M.

Harvey, Robert L., Princeton, N. J., assignor to Radio Corporation of America. Frequency modulated radio testing system. 2,455,996, Dec. 14.

Hastings, James E., assignor to The L. S. Starrett Company, Athol, Mass. Clamping unit for surface gauges or the like. 2,456,505, Dec. 14.

Hathaway, Clarence A.: *See*—
Seamon, David J., Wood, and Hathaway.

Hattan, Mark, Pasadena, Calif. Rotatable-joint clasp having safety locking means. 2,455,929, Dec. 14.

Hawkinson, Thomas, assignee: *See*—
Foster, Cyril J.

Hawks, Thomas R., Washington, D. C. X-ray tube sighting device. 2,455,928, Dec. 14.

Hazeltine Research, Inc., assignee: *See*—
James, Emrys G.
Loughren, Arthur V.

Hechenbleikner, Ingenuin, Norwalk, Conn., assignor to American Cyanamid Company, New York, N. Y. 2-butoxyethyl fluoroacetate. 2,456,586, Dec. 14.

Hedstrom-Union Company, assignee: *See*—
Boudreau, Alban M.

Heilbronner, Harry S., Perry, N. Y. Self-adjusting garment. 2,456,190, Dec. 14.

Heimbaugh, Clyde L., Duluth, Minn. Exercising device. 2,456,412, Dec. 14.

Heitz-Boyer, Maurice G., Vichy, France; vested in the Attorney General of the United States. Surgical table. 2,456,277, Dec. 14.

Helicopters, Inc., assignee: *See*—
Bendix, Vincent.

Henchert, John, Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y. Clinching bail ears to can body blanks and apparatus therefor. 2,456,506, Dec. 14.

Hendrickson, Emil G., and F. La Cour, Lake Charles, La., assignors to The Scholl Mfg. Co., Inc., Chicago, Ill. Applying tubular bandages. 2,456,507, Dec. 14.

Hervert, George L.: *See*—
Friedman, Bernard S., and Hervert.

Herwald, Seymour W., and H. M. Watson, Pittsburgh, assignors to Westinghouse Electric Corporation, East Pittsburgh, Pa. Electric motor control system. 2,456,508, Dec. 14.

Hewett, Philip S., Royal Oak, assignor to Reichhold Chemicals, Inc., Detroit, Mich. Aqueous urea formaldehyde resin for stabilizing textiles. 2,456,191, Dec. 14.

Heyel, Frederick W., East Port Chester, assignor to Pitney-Bowes, Inc., Stamford, Conn. Tape advancing and retracting means. 2,456,414, Dec. 14.

Hickler, Walter R.: *See*—
MacKinnon, John C., and Hickler.

Hickler, Walter R., Winthrop, Mass., assignor to The B. F. Goodrich Company, New York, N. Y. Manufacturing a resin-bonded composite product. 2,456,006, Dec. 14.

High Standard Manufacturing Corporation, The, assignee: *See*—
Humeston, Frederick L.

Hill, Donald M., trustee, assignee: *See*—
Boughton, Willis A., and Dawes, and Mansfield.

Hill, George L., Houston, Tex. Acetylene generator. 2,456,278, Dec. 14.

Hillenbrand, William A., Franklin County, assignor to Hill-Rom Company, Inc., Batesville, Ind. Table construction. 2,456,415, Dec. 14.

Hill-Rom Company, Inc., assignee: *See*—
Hillenbrand, William A.

Hitchcock, Forest B.: *See*—
Preston, Neil D., and Hitchcock.

Hoern, Joseph H., Birmingham, and C. G. Pardee, Detroit, Mich., assignors to Eaton Manufacturing Company, Cleveland, Ohio. Rotor grinder. 2,456,060, Dec. 14.

Hoffman, John J., Point Pleasant, assignor to Beech-Nut Packing Company, Canajoharie, N. Y. Apparatus for and method of treating food products. 2,456,124, Dec. 14.

Hoffmann-La Roche Inc., assignee: *See*—
Bergel, Franz, Morrison, Moss, Konigstein, and Rinderknecht.
Flexser, Leo A., and Farkas.

Hogan, Louis W., Houlton, Maine. Potato digging machine. 2,456,416, Dec. 14.

Hohwart, George, Detroit, assignor to N. A. Woodworth Company, Ferndale, Mich. Double end center lapping machine. 2,456,061, Dec. 14.

Holder, Clinton H.: *See*—
Welty, Albert B., Jr., and Holder.

Holman, Robert W., Gary, Ind., assignor to Carnegie-Illinois Steel Corporation. Current regulating system. 2,455,997, Dec. 14.

Homestead Valve Manufacturing Company, assignee: *See*—
Ofeldt, Frank W.

Hooker Electrochemical Company, assignee: *See*—
Loverde, Anthony.

Hopkins, Abner C., Jr., Hempstead, and R. M. Stephenson, Long Island City, N. Y., and W. E. Watson, West Orange, N. J., assignors to Allied Chemical & Dye Corporation. Manufacture of hydrogen fluoride. 2,456,509, Dec. 14.

Horsdal, Paul, Ottawa, Ontario, Canada. Steam and combustion gas turbine. 2,456,417, Dec. 14.

Horsfield, Basil, Florence, Ala., assignor to Orefraction Incorporated, Pittsburgh, Pa. Apparatus for electrostatic separation of material particles. 2,456,279, Dec. 14.

Houchin, John P. W.: *See*—
White, Eric L. C., Harker, and Houchin.

Houdry Process Corporation, assignee: *See*—
Mills, George A.

Houlton, Harold G., assignor to The Girdler Corporation, Louisville, Ky. Continuous process for the manufacture of synthetic resins. 2,456,192, Dec. 14.

Howell, Clifton W., and G. L. Elderbaum, Erwin, N. C. Pick controlled stop motion for looms. 2,456,193, Dec. 14.

Hoye, Peder B., Maywood, assignor to Electrical Engineers Equipment Co., Melrose Park, Ill. Electrical load breaking device. 2,455,998, Dec. 14.

Hubbell, Harvey, Long Hill, Conn. Plug receptacle. 2,455,930, Dec. 14.

Hughes, Albert E., East Providence, R. I. Lead burning. 2,456,194, Dec. 14.

Hughes, Everett C., Cleveland Heights, assignor to The Standard Oil Company, Cleveland, Ohio. Making n-methyl aniline. 2,455,931, Dec. 14.

Hughes, Everett C., Cleveland Heights, assignor to The Stanard Oil Company, Cleveland, Ohio. Making aryl amines. 2,455,932, Dec. 14.

Hughes, Frank C., trustee, assignee: *See*—
Boughton, Willis A., Dawes, and Mansfield.

Hultquist, Martin E., and E. H. Northey, Bound Brook, N. J., assignors to American Cyanamid Company, New York, N. Y. N'-dodecanoylsulfanilamides. 2,456,051, Dec. 14.

Humeston, Frederick L., Hamden, assignor to The High Standard Manufacturing Corporation, New Haven, Conn. Buffer device for firearms. 2,456,280, Dec. 14.

Hunt, Richard H., Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Polyvinyl acetal resin compositions. 2,456,413, Dec. 14.

Hurt, Hansford D., Pasadena, Calif. Fluid controlled feathering means for propellers. 2,456,510, Dec. 14.

Hyde, James F., assignor to Corning Glass Works, Corning, N. Y. Preparing organo-silicones. 2,455,999, Dec. 14.

Hyner, Jacob, Waterbury, Conn., assignor to United Chromium, Incorporated, New York, N. Y. Removing incrustations from lead anodes used for chromium plating. 2,456,281, Dec. 14.

Hyster Company, assignee: *See*—
Johnson, George V.

Iavelli, Teno: *See*—
Neracher, Carl A., Dunn, Iavelli, and Syrovy.

Iavelli, Teno, and V. E. Matulaitis, Detroit, assignors to Chrysler Corporation, Highland Park, Mich. Power transmission. 2,455,933, Dec. 14.

Imerman, Stanley, Detroit, Mich. Bushing and manufacturing same. 2,456,418, Dec. 14.

Imperial Chemical Industries Limited, assignee: *See*—
Lipscomb, Robert.

Induction Heating Corp., assignee: *See*—
Stevens, Nelson B., and Capolongo.

Ingalls, John M.: *See*—
Miller, Carroll E.

Ingersoll-Rand Company, assignee: *See*—
Kidney, Carleton B.
Naab, Julius.

Interchemical Corporation, assignee: *See*—
Gessler, Albert E., Grupe, Rolle, and Tuttle.

International Harvester Company, assignee: *See*—
Acton, Russel D.
Haratick, William H.
Manwaring, Howard S.
Vogel, Hilmond O.

International Nickel Company, Inc., The, assignee: *See*—
Buck, Mortimer P.

Irling, Joseph, Chicago, Ill. Curtain rod support. 2,456,000, Dec. 14.

Isserstedt, Siegfried G., Toronto, Ontario, Canada. Golf tee. 2,456,511, Dec. 14.

Iwanski, Emil F., Chicago, Ill. Thermometer and thermostatically operable electric signaling device. 2,456,062, Dec. 14.

Jack & Heinz Precision Industries, Inc., assignee: *See*—
Mueller, Siegfried E., Anderson, and Cacas.

Jackson, Alphonsus L., and H. A. Brown, St. Clair, Mo. Folding box. 2,456,419, Dec. 14.

Jackson, Edwin J., Schenectady, N. Y., assignor to General Electric Company. Electronic direct-current control system. 2,456,420, Dec. 14.

Jackson, James O., Crafton, Pa., assignor to Pittsburgh-Des Moines Company. Spherical type insulated container for liquefied gases. 2,456,195, Dec. 14.

Jacobs, James H., Boulder City, Nev., and W. H. Yarroll, Provo, Utah, assignors, by mesne assignments, to Crimora Research and Development Corporation, Crimora, Va. Electrolytic cell for recovering manganese. 2,456,196, Dec. 14.

Jaeger Machine Company, The, assignee: *See*—
Lamberton, Ralph E.

Jahrling, Robert J., Jamaica, assignor to Premier Crystal Laboratories, Incorporated, New York, N. Y. Dual crystal unit. 2,456,421, Dec. 14.

James, Emrys G., Pinner, England, assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill. High-frequency oscillator. 2,456,422, Dec. 14.

James, Harold V., Denver, Colo. Tire retreading device. 2,456,053, Dec. 14.

Jamke, Edward J., assignor to Addressograph-Multigraph Corporation, Cleveland, Ohio. Inking system for printing machines. 2,456,282, Dec. 14.

Jasco, Incorporated, assignee: *See*—
Frolich, Per K.

Jefferson, George D., Kennett Square, Pa., assignor to Atlas Powder Company, Wilmington, Del. Textile wax compositions. 2,456,283, Dec. 14.

Jensen, Deane L., Blair, assignor to Farnam Company, Omaha, Nebr. Currying machine. 2,456,197, Dec. 14.

Jobst, Conrad, assignor, by mesne assignments, to Owens-Illinois Glass Company, Toledo, Ohio. Injection molding machine. 2,456,423, Dec. 14.

Johndrew, Wilbur, Buffalo, N. Y. Automatic multiple riveter. 2,456,125, Dec. 14.

Johndrew, Wilbur, Buffalo, N. Y. Auxiliary feeding attachment. 2,456,126, Dec. 14.

Johndrew, Wilbur, Buffalo, N. Y. Riveting machine. 2,456,127, Dec. 14.

Johnson, Arnold E., assignor to Arvey Corporation, Chicago, Ill. Display stand. 2,456,064, Dec. 14.

Johnson, Carl O.: *See*—
Barnard, Harlin W., Johnson, and Carey.

Johnson, Carl V.: *See*—
Doyle, Irving W., and Johnson.

Johnson, Frank E., Malden, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Shiftable rotary operative fastener. 2,456,559, Dec. 14.

Johnson, George V., assignor to Hyster Company, Portland, Oreg. Muffler for internal-combustion engines. 2,456,512, Dec. 14.

Johnson, S. C., & Son, Inc., assignee: *See*—
Rood, Clifford T.

Johnson, Theodore L., St. Louis, Mo. Molding of hollow articles. 2,456,513, Dec. 14.

Johnston, Deerland, Evanston, Ill., assignor to Charles Bruning Company, Inc., New York, N. Y. Diazotype light-sensitive materials. 2,456,514, Dec. 14.

Jones, Frank D.: *See*—
West, James R., and Jones.

Jones, George E., Weston-super-Mare, England. Hypodermic ampoule syringe. 2,456,001, Dec. 14.

Jones & Lamson Machine Company, assignee: *See*—
Tuncred, William L.

Jonette, Charles, Dawson City, Yukon, Canada. Ski brake. 2,456,002, Dec. 14.

Jordan, Homer G., Fanwood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Plume for air laid wire. 2,456,284, Dec. 14.

Jordan, Rollie H.: *See*—
Creson, William K., and Jordan.

Jost, Matyas J., assignor to Just Manufacturing Company, Chicago, Ill. Sink. 2,456,065, Dec. 14.

Joyce, Robert M., Jr.: *See*—
Cairns, Thomas L., and Joyce, Jr.

Just Manufacturing Company, assignee: *See*—
Just, Matyas J.

Kamlet, Jonas, New York, N. Y. and R. P. Reece, Highland Park, assignor to Thiokol Corporation, Trenton, N. J. Animal feed composition. 2,456,515, Dec. 14.

Kamper, John S., Demopolis, Ala. Concrete feed and fertilizer mixer. 2,456,285, Dec. 14.

Kavanaugh, Harry H.: *See*—
Fellay, Louis J., and Kavanaugh.

Keith, Glenn, East Detroit, assignor of one-fourth to M. M. Weinstein, one-tenth to E. Goldberg, one-tenth to H. Weinstein, one-tenth to B. B. Covent, and one-tenth to W. Mintz, Detroit, Mich. Receptacle closure means. 2,456,560, Dec. 14.

Kelleher, Francis W., Lynn, Mass. Chuck operating mechanism. 2,455,934, Dec. 14.

Keller, Charles N., Dayton, Ohio. Voltage regulator. 2,455,935, Dec. 14.

Kellogg, M. W., Company, The, assignee: *See*—
Borcherding, Walter H.

Kellogg Switchboard and Supply Company, assignee: *See*—
Bellamy, John I.

Kempton, Leslie A., assignor to The Dole Valve Company, Chicago, Ill. Member sealing means. 2,456,066, Dec. 14.

Kennelly, Jeremiah D., Oak Park, Ill. Low brake pressure signal device. 2,456,286, Dec. 14.

Kennelly, Jeremiah D., Oak Park, Ill. Warning light for vehicles. 2,456,287, Dec. 14.

Kern, Jean G., Orchard Park, assignor to Allied Chemical & Dye Corporation, New York, N. Y. Process of dyeing nylon-acetate mixed fabric with 3-nitro-4-amino-2'-chlorobiphenyl. 2,456,288, Dec. 14.

Kerr, Earl G.: *See*—
Allen, Harry L., and Kerr.

Kessler, Joseph S., assignor to Tri-Clover Machine Co., Kenosha, Wis. Pump and impeller therefor. 2,456,128, Dec. 14

Ketarome Limited, assignee: *See*—
Weizmann, Charles.

Ketelsen, Peter: *See*—
Giwosky, Harry L., and Ketelsen.

Kettering, Charles F., and A. W. Fischer, assignors to General Motors Corporation, Detroit, Mich. Control. 2,456,198, Dec. 14.

Kidney, Carleton B., Phillipsburg, N. J., assignor to Ingersoll-Rand Company, New York, N. Y. Locking and adjusting device. 2,456,516, Dec. 14.

Knepflar, John C.: *See*—
Alling, E. Roy, and Knepflar.

Knutson, Lester T., Minneapolis, Minn. Universal indicator support. 2,456,003, Dec. 14.

Kofalt, Joseph A.: *See*—
Wheeler, Harold R., and Kofalt.

Konigstein, Marianne: *See*—
Bergel, Franz, Morrison, Moss, Konigstein, and Rinderknecht.

Koppenhoefer, Robert M., Jackson Heights, N. Y., assignor to Socony-Vacuum Oil Company, Incorporated. Soluble oil composition. 2,456,587, Dec. 14.

Koppers Company, Inc., assignee: *See*—
Fair, William F., Jr.

Kranzfelder, Arthur L.: *See*—
Cisiak, Francis E. and Kranzfelder.

Krogh, Ralph E., Detroit, Mich. Visor document clip. 2,456,129, Dec. 14.

Kuhlman, Theodore C., Detroit, Mich. Centrifugal casting machine. 2,456,067, Dec. 14.

La Cour, Fritz: *See*—
Hendrickson, Emil G., and La Cour.

Ladd, Elbert C., Passaic, and H. W. Paxton, Lodi, N. J., assignors to United States Rubber Company, New York, N. Y. Cyanoethyl, aceto-succinic acid esters. 2,456,517, Dec. 14.

Lagasse, Alfred, assignee: *See*—
Moore, Guy S.

Laidley, Clarence D.: *See*—
Drane, Phillips B., and Laidley.

Laing, Marvin R.: *See*—
Malek, Sidney K., and Laing.

Lake, George B., Long Beach, and J. M. McDowell, Wilmington, assignors to Union Oil Company of California, Los Angeles, Calif. Azeotropic separation of xylene isomers. 2,456,561, Dec. 14.

Lamb, Anthony H., Hillside, assignor to Weston Electrical Instrument Corporation, Newark, N. J. Generator control system. 2,456,199, Dec. 14.

Lamberton, Ralph E., Worthington, assignor to The Jaeger Machine Company, Columbus, Ohio. Pipe union for air compressors. 2,456,200, Dec. 14.

Lambertsen, Christian J., Scotch Plains, N. J. Breathing apparatus. 2,456,130, Dec. 14.

Landis Tool Company, assignee: *See*—
Price, Ralph E.

Landon, Walter S., assignor to Detroit Lubricator Company, Detroit, Mich. Draft control means for fuel burners. 2,456,131, Dec. 14.

Lapsley, Robert, Berrien Springs, assignor to Clark Equipment Company, Buchanan, Mich. Transmission. 2,456,132, Dec. 14.

Larkin, Charles A., Pittsburgh, Pa., assignor to Carnegie-Illinois Steel Corporation. Apparatus for handling metal sheets. 2,456,004, Dec. 14.

Laubereau, Otto: *See*—
Dohrn, Max, and Laubereau.

Laubin, Clarence W.: *See*—
Beardsley, Guy E., Jr., and Laubin.

Laufer, Maurice K.: *See*—
Roper, John M., and Laufer.

Lawrence Products Co., assignee: *See*—
Pruitt, Willis.

Leach Company, assignee: *See*—
Manthie, Otto F.

Lee, Hoard, Houston, Tex. Heating element. 2,456,201, Dec. 14.

Lee, Hoard, Houston, Tex. Heating unit. 2,456,202, Dec. 14.

Leeds and Northrup Company, assignee: *See*—
Enns, John H.

Lehigh Portland Cement Company, assignee: *See*—
McCoy, Walter J.

Les Usines De Melle (Societe Anonyme), assignee: *See*—
Guinot, Henri M.

Lewis, Alfred H., Huntington Woods, assignor to Swift Electric Welder Company, Detroit, Mich. Flash trimming machine. 2,456,432, Dec. 14.

Libbey-Owens-Ford Glass Company, assignee: *See*—
Simons, John K.
Walter, Henry A.
Weaver, Weldome I.

Libby, A. D. T., assignee: *See*—
Caruso, Rocco P.

Liben, Jay, New York, N. Y. Dispenser for stacked articles. 2,456,068, Dec. 14.

Lieberman, Samuel Y.: *See*—
Mueller, George P., Stiller, and Lieberman.

Liguori, Anthony: *See*—
Shenk, Eugene R., and Liguori.

Lindman, Emrik I., Ronninge, Sweden. Safety device for air bombs. 2,456,289, Dec. 14.

Lindsay, Duncan D., Scunthorpe, England. Manually operated vapor compression sea water still. 2,456,562, Dec. 14.

Lipscomb, Robert, Norton-on-Tees, England, assignor to Imperial Chemical Industries Limited. Pump for gaseous working fluids. 2,456,133, Dec. 14.

Livingston, Herbert K., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Adjusting the pH of synthetic elastomer latices. 2,456,069, Dec. 14.

Ljutic, Albert V., Verona, Calif. Gas-operated automatic rifle. 2,456,290, Dec. 14.

Locke, Arthur A., assignee: *See*—
Patrick, Lawrence M.

Loepsinger, Albert J., assignor to Grinnell Corporation, Providence, R. I. Coupling for tubular members. 2,456,203, Dec. 14.

Lofgreen, Carl H., New York, assignor to Equitable Paper Bag Co. Inc., Long Island City, N. Y. Machine for applying fasteners to web material. 2,456,433, Dec. 14.

Lofton, Edgar K., Lake Bluff, Ill., assignor to The Dayton Rubber Company. V-Flat drive. 2,456,518, Dec. 14.

Long, Ralph B., Flint, Mich. Folding stool supporting structure. 2,456,519, Dec. 14.

Loughren, Arthur V., Great Neck, N. Y., assignor to Hazeltine Research, Inc., Chicago, Ill. Inverter system. 2,456,204, Dec. 14.

Loverde, Anthony, assignor to Hooker Electrochemical Company, Niagara Falls, N. Y. Production of organic mercaptans. 2,456,588, Dec. 14.

Lowe, Wesley G., assignor to Eastman Kodak Company, Rochester, N. Y. Gelling of polyvinyl alcohol coatings. 2,455,936, Dec. 14.

Lowe, Wesley G., assignor to Eastman Kodak Company, Rochester, N. Y. Preparation of hardened polyvinyl alcohol coatings. 2,455,937, Dec. 14.

Lueneburg, Walter C., Evanston, assignor to Ekco Products Company, Chicago, Ill. Pressure cooker cover structure. 2,456,134, Dec. 14.

Lytle, Lawrence D., Plainfield, N. J., assignor to American Cyanamid Company, New York, N. Y. Gray vat dyestuffs and method of making the same. 2,456,589, Dec. 14.

Macdonald, Kenneth W., Winchester, assignor to Compo Shoe Machinery Corporation, Boston, Mass. Shoe support. 2,456,135, Dec. 14.

MacKinnon, John C., Wellesley, and W. R. Hickler, Winthrop, Mass., assignors to The B. F. Goodrich Company, New York, N. Y. Aircraft structural material and making the same. 2,456,005, Dec. 14.

Magder, Jesse, Toronto, Ontario, Canada. Ski pole. 2,456,205, Dec. 14.

Magnetic Devices, Inc., assignee: *See*—
Price, Osborne I.

Malek, Sidney K., and M. R. Laing, assignors to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn. Thermoelectric generator with fluid cooling. 2,456,070, Dec. 14.

Mallory, P. R., & Co., Inc., assignee: *See*—
Wall, Alexander C.

Malone, Homer F., assignor of one-half to F. D. Ross, Chicago, Ill. Toaster. 2,456,291, Dec. 14.

Manegold, Robert L., Shorewood, and I. H. Wynne, assignors to Dings Magnetic Separator Co., Milwaukee, Wis. Art of sintering ores. 2,456,136, Dec. 14.

Mann, Estie R.: *See*—
Goldsmith, Thomas T., Jr., and Mann.

Mansfield, William R.: *See*—
Boughton, Willis A., Dawes, and Mansfield.

Manthie, Otto F., assignor to Leach Company, Oshkosh, Wis. Self-loading vehicle. 2,456,434, Dec. 14.

Manwaring, Howard S., La Grange, Ill., assignor to International Harvester Company. Liquid filtering apparatus. 2,456,292, Dec. 14.

Marchand, Adamir, La Chaux de Fonds, Switzerland, assignor to Benrus Watch Company, Inc., New York, N. Y. Shock-absorbing device for pivots of watch balance staffs. 2,456,071, Dec. 14.

Maresco, Joseph G., Bronx, N. Y. Caster. 2,456,520, Dec. 14.

Marini, Costanzo, Leominster, Mass. Comb. 2,456,138, Dec. 14.

Marisic, Milton M., Northfield, assignor to The Pure Oil Company, Chicago, Ill. Conversion of hydrocarbons in the presence of a catalyst and calcium oxide together with steam and/or carbon dioxide. 2,456,072, Dec. 14.

Markell, Stanley, assignor to Bausch & Lomb Optical Company, Rochester, N. Y. Semirimless ophthalmic mounting. 2,456,293, Dec. 14.

Marsh, John W., Arlington, Va., assignor to Apex Railway Products Co., Chicago, Ill. Air brake apparatus. 2,456,137, Dec. 14.

Marsilius, Newman M., Trumbull, Conn. Index head. 2,456,007, Dec. 14.

Martin, Don S., Jr., Santa Fe, N. Mex., N. D. Nachtrieb, Chicago, Ill., and J. E. Seegmiller, Salt Lake City, Utah, assignors to the United States of America as represented by the Secretary of the Navy. Inert gas eliminator for high altitude oxygen apparatus. 2,456,606, Dec. 14.

Martin, William M. River Forest, Ill., assignor to American Can Company, New York, N. Y. Making tubular container bodies with solderless six-layer side seams. 2,455,938, Dec. 14.

Martinelli, Guy, and H. M. McMann, Indianapolis, Ind., said McMann assignor to said Martinelli. Splash guard. 2,456,206, Dec. 14.

Martinet, Roger: *See*—
Morane, Roger, and Martinet.

Massa, Frank, Cleveland Heights, assignor to The Brush Development Company, Cleveland, Ohio. Underwater sound transmitter or receiver. 2,456,294, Dec. 14.

Mast, William C., Philadelphia, Pa., assignor to the United States of America as represented by the Secretary of Agriculture. Coating compositions. 2,456,295, Dec. 14.

Masts Limited, assignee: *See*—
Finer, Henry J.

Matulaitis, Victor E.: *See*—
Iavelli, Teno, and Matulaitis.

Matuszak, Maryan P., Bartlesville, Okla., assignor to Phillips Petroleum Company. Alkylation process. 2,456,435, Dec. 14.

Maxson Corporation, W. L., The, assignee: *See*—
McLaren, Peter J., Vaughan, and Fry.

Maxwell, Bernard T., Fairport, N. Y. Prism system and prism system mount for optical viewing instruments. 2,456,521, Dec. 14.

McBride, John W., Burbank, Calif. Musical instrument. 2,456,008, Dec. 14.

McCarthy, Henry J., Danvers, assignor to Sylvania Electric Products Inc., Salem, Mass. Ultra high frequency electronic tube. 2,456,563, Dec. 14.

McCoy, Walter J., Catasauqua, Pa., assignor to Lehigh Portland Cement Company, Allentown, Pa. Light weight aggregate and producing same. 2,456,207, Dec. 14.

McDill, Rex D., Cleveland Heights, Ohio. Visual inspection projection apparatus. 2,456,296, Dec. 14.

McDowell, Josephine M.: *See*—
Lake, George R., and McDowell.

McGarr, Walter J., Cordele, Ga. Posthole digger. 2,456,208, Dec. 14.

McGraw Electric Company, assignee: *See*—
Osterheld, Clark M.

McLane, Jack S., Columbia, S. C. Friction-rotary blotting device for duplicating machines. 2,456,009, Dec. 14.

McLaren, Peter J., deceased, by Central Hanover Bank and Trust Company, executor, New York, J. A. Vaughan, Hempstead, N. Y., and M. Fry, Harrington Park, N. J.; said McLaren, Vaughan, and Fry assignors, by mesne assignments, to The W. L. Maxson Corporation, New York, N. Y. Continuously adjustable speed electric drive. 2,456,522, Dec. 14.

McMann, Harry M.: *See*—
Martinelli, Guy.

McNeill, H. H., Lumber Co., Inc., assignee: *See*—
Brewer, Oscar Z.

Mead, John H., Kalamazoo, Mich. Banding machine. 2,456,523, Dec. 14.

Mechanite Metal Corporation, assignee: *See*—
Smalley, Oliver.

Meincke, Howard D., Jr., assignor to H. D. Meincke, Sr., Glencoe, Ill. Apparatus suitable for use in the treatment of water containing chlorides dissolved therein. 2,456,524, Dec. 14.

Meincke, Howard D., Sr., assignee: *See*—
Meincke, Howard D., Jr.

Mellers, Eric V.: *See*—
Fallows, Leonard, and Mellers.

Melnick, Daniel, Kew Gardens Hills, N. Y., assignor, by mesne assignments, to Food Research Laboratories, Inc. Protein hydrolysis. 2,456,297, Dec. 14.

Meredith, Frederick W., London, England, assignor to S. Smith & Sons (England) Limited. Device for detecting turn or measuring rate of turn. 2,455,939, Dec. 14.

Merritt, Glenn W., assignor to The Mining Safety Device Company, Bowerston, Ohio. Car-dumping apparatus. 2,456,209, Dec. 14.

Metallurgical Processes Co., assignee: *See*—
Thomas, Charles E., Felter, and Ness.

Metzger, Edmund C., Chicago, Ill. Envelope opener. 2,456,436, Dec. 14.

Meyer, Wm., Company, The, assignee: *See*—
Wehmer, Bruno F.

Mica Patents Trust, The: *See*—
Boughton, Willis A., and Dawes, and Mansfield.

Miles, Gilbert D., New York, N. Y., assignor to Colgate-Palmolive-Peet Company, Jersey City, N. J. Nondusting soap composition and making the same. 2,456,437, Dec. 14.

Miller, Carroll E., and J. M. Ingalls, assignors to Cone Automatic Machine Company Inc., Windsor, Vt. Multiple spindle lathe. 2,456,139, Dec. 14.

Miller, Dola F., and F. Puslecki, San Francisco, Calif. Nonskid device applier and remover. 2,456,438, Dec. 14.

Miller, Fred T.: *See*—
Miller, Paul L. and F. T.

Miller, Gustav F., Tacoma, Wash. Permutation ignition switch. 2,456,010, Dec. 14.

Miller, Henry C., Claymont, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Unsaturated esters of benzenediacetic acids and their polymers. 2,456,210, Dec. 14.

Miller, Joseph C., Compton, Calif., assignor to Coast Envelope & Leather Products Company. Billfold. 2,456,300, Dec. 14.

Miller, Jules, Atlantic City, N. J. Reversible reed for wind instruments. 2,456,298, Dec. 14.

Miller, Jules, Atlantic City, N. J. Perforated reed for wind instruments. 2,456,299, Dec. 14.

Miller, Paul L. and F. T., Clearwater, S. C., assignors to United Merchants & Manufacturers, Inc., Wilmington, Del. Process and apparatus for drying textiles. 2,456,301, Dec. 14.

Miller Spreader Corporation, The, assignee: *See*—
Andrews, Edward F.

Mills, George A., Swarthmore, Pa., assignor to Houdry Process Corporation, Wilmington, Del. Supported sodium catalyst and preparation thereof. 2,456,525, Dec. 14.

Milsteel Products Co., assignee: *See*—
Busch, Fred, and Nelson.

Mining Safety Device Company, The, assignee: *See*—
Merritt, Glenn W.

Minneapolis-Honeywell Regulator Company, assignee: *See*—
Malek, Sidney K., and Laing.

Minnesota Mining & Manufacturing Company, assignee: *See*—
Simons, Joseph H.

Mintz, William, assignee: *See*—
Keith, Glenn.

Mocnik, Ladimer M., Cleveland, Ohio. Supporting device. 2,456,302, Dec. 14.

Modine Manufacturing Company, assignee: *See*—
Dixon, Arthur G.

Mogan, James E., Denver, Colo. Clothes rack for automobiles. 2,456,303, Dec. 14.

Monsanto Chemical Company, assignee: *See*—
Glick, Sanford E.
Hunt, Richard H.
Park, Harold F.
Scott, Milton J.
Scott, Milton J., and Rider.

Moore Corporation, The, assignee: *See*—
Stuckey, Warren A., and Gregurich.

Moore, Guy S., Fall River, assignor to A. Lagasse, Boston, Mass. Tie rack. 2,456,527, Dec. 14.

Moore, Samuel, & Company, assignee: *See*—
Austin, Dwight E.

Morane, Roger, Paris, and R. Martinet, Ville D'Avray, France. Machine for the manufacture of metal grains. 2,456,439, Dec. 14.

Morberg, Kenneth F., assignor to H. A. Torstenson, Chicago, Ill. Tacker. 2,456,526, Dec. 14.

Morey, Glen H., assignor to Commercial Solvents Corporation, Terre Haute, Ind. 4-amino-4-methylvaleroalkylamides and preparing same. 2,456,590, Dec. 14.

Morin, Louis H., Bronx, N. Y. Forming coaxial cables. 2,456,304, Dec. 14.

Morrill, Horace M., Pontiac, Mich. Propelling device. 2,456,440, Dec. 14.

Morrison, Alexander L.: *See*—
Bergel, Franz, Morrison, Moss, Konigstein, and Rinderknecht.

Morrison, Montford, Upper Montclair, N. J. Electronic tube motor device. 2,456,441, Dec. 14.

Morrison, Montford, Upper Montclair, N. J. Electromechanical oscillator. 2,456,442, Dec. 14.

Moss, Albert R.: *See*—
Bergel, Franz, Morrison, Moss, Konigstein, and Rinderknecht.

Moyle, Robert J., Innisfail, Queensland, Australia. Stationary cutter with rotary drum feed for cutting sugar cane into seed lengths. 2,456,528, Dec. 14.

Mueller, George P., E. T. Stiller, and S. V. Lieberman, assignors to Wyeth Incorporated, Philadelphia, Pa. Preparing nordihydroguaiaretic acid and intermediates. 2,456,443, Dec. 14.

Mueller, Siegfried E., East Cleveland, G. V. Anderson, Shaker Heights, and A. Dacas, assignors, by mesne assignments, to Jack & Heinz Precision Industries, Inc., Cleveland, Ohio. Adjustable chamfering device. 2,456,140, Dec. 14.

Muller, Otto, Bronx, N. Y. Fluid heater. 2,456,564, Dec. 14.

Muskat, Morris: *See*—
Coggeshall, Norman D., and Muskat.

Muskat, Morris, Oakmont, and N. D. Coggeshall, O'Hara Township, Allegheny County, assignors to Gulf Research & Development Company, Pittsburgh, Pa. Geophysical exploration by microwaves. 2,455,940, Dec. 14.

Muskat, Morris, Oakmont, and N. D. Coggeshall, O'Hara Township, Allegheny County, assignors to Gulf Research & Development Company, Pittsburgh, Pa. Geophysical prospecting in boreholes by microwaves. 2,455,941, Dec. 14.

Muskat, Morris, Oakmont, and N. D. Coggeshall, O'Hara Township, Allegheny County, assignors to Gulf Research & Development Company, Pittsburgh, Pa. Method of and apparatus for measuring the electrical properties and surface characteristics of materials. 2,456,012, Dec. 14.

Musser, Clarence W., Philadelphia, Pa. Apparatus for aligning preengraved projectiles in rifled firearms. 2,456,011, Dec. 14.

Myerson, Simon, Brookline, Mass. Apparatus for extrusion molding of plastic articles. 2,456,141, Dec. 14.

Naab, Julius, Easton, Pa., assignor to Ingersoll-Rand Company, New York, N. Y. Sealing device. 2,456,529, Dec. 14.

Nachtrieb, Norman D.: *See*—
Martin, Don S., Jr., Nachtrieb, and Seegmiller.

Nardone, Romeo M., Teaneck, assignor to Bendix Aviation Corporation, Teterboro, N. J. Fluid pressure servomotor. 2,456,211, Dec. 14.

National Carbon Company, Inc., assignee: *See*—
Winter, Lester L.

Navy, United States of America as represented by the Secretary of the, assignee: *See*—
Anderson, Milton B.
Martin, Don S., Jr., Nachtrieb, and Seegmiller.
Schuck, Oscar H.
Sweenes, Benjamin A.
Wilson, Finley B.

Neaves, Ernest J., Boston, Mass. Trouser hanger. 2,456,014, Dec. 14.

Neiman, Robert, assignor to E. A. Steinbock, Louisville, Ky. Producing commercial castings. 2,456,424, Dec. 14.

Nelson, Adelbert M., deceased, by M. Witt, executrix, Milwaukee, Wis. Collapsible trailer. 2,456,013, Dec. 14.

Nelson, August J.: *See*—
Busch, Fred, and Nelson.

Nelson, Wilbur L., Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Closure device for crystal converters. 2,456,305, Dec. 14.

Nemec, Frantisek, Prague-Brevnov, Czechoslovakia. Device for the mutual and detachable support of two objects. 2,456,425, Dec. 14.

Nemeth, Otto R., Chicago, Ill. Projector lamp housing and cooling system therefor. 2,456,530, Dec. 14.

Neracher, Carl A., W. T. Dunn, T. Iavelli, and A. J. Syrovy, Detroit, assignors to Chrysler Corporation, Highland Park, Mich. Power transmission. 2,455,943, Dec. 14.

Ness, Harold J.: *See*—
Thomas, Charles E., Felter, and Ness.

Newhouse, Ray C., Wauwatosa, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Tube or ball mill with cooled trunnion. 2,456,073, Dec. 14.

Newhouse, Ray C., Wauwatosa, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Overload responsive system for controlling feed and operation of crushing apparatus. 2,456,074, Dec. 14.

Newhouse, Ray C., Wauwatosa, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Rod deck screen with rubber-covered cylindrical clamping means. 2,456,075, Dec. 14.

Ney, Edward P.: *See*—
Nier, Alfred O. C., and Ney.

Nicholson, Edward W. S., Baton Rouge, La., assignor to Standard Oil Development Company. Conversion of hydrocarbon oils with finely divided catalyst. 2,456,306, Dec. 14.

Nickel Cadmium Battery Corporation, assignee: *See*—
Berg, Carl and M.

Nier, Alfred O. C., New York, N. Y., and E. P. Ney, Charlottesville, Va., assignors to the United States of America, as represented by the United States Atomic Energy Commission. Mass spectrometer system. 2,456,426, Dec. 14.

Noblett, Wayland J., Long Beach, Calif. Can opener. 2,456,307, Dec. 14.

Nordquist, Ronald E. J., Maplewood, N. J., assignor to American Can Company, New York, N. Y. Expansible tunnel fish canning machine. 2,455,944, Dec. 14.

North, Anna P.: *See*—
North, Charles E. and A. P.

North, Charles E. and A. P., Montclair, N. J. Apparatus for breaking and making emulsions. 2,455,945, Dec. 14.

Northey, Elmore H.: *See*—
Hultquist, Martin E., and Northey.

O'Brien, James E., Cleveland, Ohio. Locomotive coaling apparatus. 2,456,308, Dec. 14.

Odén, Knut, assignor to Aktiebolaget Hadar Schmidt, Stockholm, Sweden. Postal franking machine. 2,456,309, Dec. 14.

Ofeldt, Frank W., assignor to Homestead Valve Manufacturing Company, Coraopolis, Pa. Multiple spark circuit. 2,456,076, Dec. 14.

Ogden, Harold S., Erie, Pa., assignor to General Electric Company. Protective system for electric motors. 2,456,427, Dec. 14.

Oil Center Tool Company, assignee: *See*—
Penick, Arthur J.

Orefraction Incorporated, assignee: *See*—
Horsfield, Basil.

Orr, Franklin M., Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J. Operation of a fluid catalytic conversion unit. 2,456,310, Dec. 14.

Orser, Keith L., assignor to Columbian Rope Company, Auburn, N. Y. Electrical conductor. 2,456,015, Dec. 14.

Orshansky, Elias, Jr., New York, N. Y., assignor to The Acrotorque Company, Stamford, Conn. Hydraulic transmission. 2,456,077, Dec. 14.

Osterheld, Clark M., Stoughton, Wis., assignor to McGraw Electric Company, Elgin, Ill. Water heater. 2,456,143, Dec. 14.

Osterheld, Clark M., Stoughton, Wis., assignor to McGraw Electric Company, Elgin, Ill. Water heater. 2,456,144, Dec. 14.

Osterheld, Clark M., Stoughton, Wis., assignor to McGraw Electric Company, Elgin, Ill. Thermal retarder. 2,456,152, Dec. 14.

Otto, Merritt M.: *See*—
Cislak, Francis E., and Otto.

Owen, Robert P., assignor to Allen B. Du Mont Laboratories, Inc., Passaic, N. J. Keyed oscillator. 2,456,016, Dec. 14.

Owens-Illinois Glass Company, assignee: *See*—
Jobst, Conrad.

Ozark-Mahoning Company, assignee: *See*—
Stengl, Rudolph J., and Bedwell.

Paget, Bertie K., Detroit, Mich. Ventilator. 2,456,311, Dec. 14.

Paget, Bertie K., Detroit, Mich. Ventilator. 2,456,312, Dec. 14.

Paille, Eugene, Los Angeles, assignor to General Controls Co., Glendale, Calif. Manual reset valve. 2,456,078, Dec. 14.

Panhandle Eastern Pipe Line Company, assignee: *See*—
Young, Farrile S.

Pardee, Curtis G.: *See*—
Hoern, Joseph H., and Pardee.

Park, Harold F., East Longmeadow, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Stabilized vinyl resin. 2,456,565, Dec. 14.

Park, Marion A., St. Louis, Mo. Polio exercising machine. 2,456,017, Dec. 14.

Parke, Davis & Company, assignee: *See*—
Rieveschl, George, Jr.

Parker, James H., Berkeley, assignor to Shell Development Company, San Francisco, Calif. Polyallyl amine and related polymeric amines. 2,456,428, Dec. 14.

Parker, John W., Grosse Pointe, Mich. Surface grinder. 2,456,079, Dec. 14.

Parry, Frank, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J. Lubricating device for sewing machines. 2,456,591, Dec. 14.

Parsons, John B., Toledo, Ohio. Actuating mechanism for refrigerator tops or the like. 2,456,429, Dec. 14.

Patent License Corporation, assignee: *See*—
Arenberg, Albert L.

Patrick, Lawrence M., assignor of one-third to A. A. Locke and one-third to R. F. Ternes, Detroit, Mich. Regulator. 2,456,212, Dec. 14.

Patterson, Edgar W., Downey, Calif. Setback means for pumping units. 2,456,531, Dec. 14.

Patterson, Franklin G., Schenectady, N. Y., and M. W. Sims, Fort Wayne, Ind., assignors to General Electric Company. Telemetering apparatus. 2,456,430, Dec. 14.

Paxton, Gerald C.: *See*—
Stilwell, Glenn E., and Paxton.

Paxton, Homer W.: *See*—
Ladd, Elbert C., and Paxton.

Payne, John W.: *See*—
Bodkin, Ernest A., and Payne.

Pe, Wu, Nanking, China. Ignition plug. 2,456,080, Dec. 14.

Pearson, Otto H., assignor to L. N. Strike, Salt Lake City, Utah. Pressing machine tail clamp. 2,456,145, Dec. 14.

Pelc, Stanley, Sharon, Pa. Diesel engine air meter. 2,456,213, Dec. 14.

Penick, Arthur J., assignor to Oil Center Tool Company, Houston, Tex. Well-head seal. 2,456,081, Dec. 14.

Penn Electric Switch Co., assignee: *See*—
Schell, Paul.

Perazzo, Peter L., Napa, Calif. Rod bender. 2,456,532, Dec. 14.

Peroutky, Donald C.: *See*—
Wargin, Edward F., and Harkness, and Peroutky.

Perry, Charles, Bexley, England, assignor to Vickers-Armstrongs Limited. Cam profiling machine. 2,456,146, Dec. 14.

Personal Products Corporation, The, assignee: *See*—
Ganz, Henry.

Pessel, Leopold, Philadelphia, Pa., assignor to Radio Corporation of America. Art of metallizing nonmetallic bodies. 2,456,082, Dec. 14.

Peters, George E., and L. E. Russell, assignors to Peters & Russell, Inc., Springfield, Ohio. Pump. 2,455,946, Dec. 14.

Peters & Russell, Inc., assignee: *See*—
Peters, George E., and Russell.

Peterson, Edward S., Elmwood Park, assignor to Automatic Electric Laboratories, Inc., Chicago, Ill. Timing device. 2,456,018, Dec. 14.

Petruschell, Lucius P., Mount Dora, Fla., assignor to Dictaphone Corporation, New York, N. Y. Commercial phonograph signal device. 2,456,592, Dec. 14.

Pettipiece, John J., Powell, Wyo. Motor attachment for tractors. 2,456,019, Dec. 14.

Philco Corporation, assignee: *See*—
Bocciarelli, Carlo V.
Sunstein, David E.

Phillips Petroleum Company, assignee: *See*—
Gibbs, Frank C., Jr., Baird, and Brosamer.
Matuszak, Maryan P.
Waddill, Paul M.
Wobker, Burle F.

Picker X-Ray Corporation Waite Manufacturing Division, Inc., assignee: *See*—
Goldfield, Edwin R., and Schiring.

Pitney-Bowes, Inc., assignee: *See*—
Heyel, Frederick W.
Rouan, Francis J., and Uthenwoldt.

Pittsburgh-Des Moines Company, assignee: *See*—
Jackson, James O.

Plank, Norris, East Chicago, Ind., assignorto Shell Development Company, San Francisco, Calif. Reverse flow bypass valve. 2,456,566, Dec. 14.

Poe, Bryce, Kansas City, Mo. Peep sight for firearms. 2,456,214, Dec. 14.

Poitras, Edward J., Pasadena, Calif., and J. D. Tear, Great Neck, assignors to Ford Instrument Company, Inc., Long Island, N. Y. Gyroscope precessor and follow-up. 2,456,020, Dec. 14.

Polak, Joseph F., Newark, N. J., assignor to Monroe Sherman, New York, N. Y. Silver brazing alloy containing indium. 2,456,593, Dec. 14.

Polak, Joseph F., Newark, N. J., assignor to Monroe Sherman, New York, N. Y. Brazing alloy. 2,456,594, Dec. 14.

Polymerisable Products Limited, assignee: *See*—
Weizmann, Charles.

Pratt, Burt C., Brandywine Hundred, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Pigment compositions. 2,456,313, Dec. 14.

Pratt, Burt C., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Saturated linear polyesters of mercaptodicarboxylic acids with dihydric alcohols. 2,456,314, Dec. 14.

Premier Crystal Laboratories, Incorporated, assignee: *See*—
Jahrling, Robert J.

Preston, Nell D., and F. B. Hitchcock, assignors to General Railway Signal Company, Rochester, N. Y. Centralized traffic control system for railroads. 2,456,533, Dec. 14.

Price, Nathan C., Hollywood, Calif., assignor to Boeing Airplane Company. Pressure-regulating control mechanism. 2,456,215, Dec. 14.

Price, Osborne I., assignor to Magnetic Devices, Inc., Frederick, Md. Electrically controled switch. 2,455,947, Dec. 14.

Price, Ralph E., Highfield, Md., assignor to Landis Tool Company, Waynesboro, Pa. Valve means to compensate for viscosity in hydraulic systems. 2,456,431, Dec. 14.

Prichard, William W., Claymont, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Making amines. 2,456,315, Dec. 14.

Priestley, Kenneth D., Campbell, Calif. Irrigation ridge blocker. 2,456,083, Dec. 14.

Prill, Edward A., Yonkers, N. Y., assignor to Boyce Thompson Institute for Plant Research, Inc. Producing α-ethylpiperonyl ethers. 2,456,316, Dec. 14.

Pruitt, Willis, assignor to Lawrence Products Co., Attalla, Ala. Stop motion mechanism for narrow fabric looms. 2,456,021, Dec. 14.

Puchner, Irving A., assignee: *See*—
Elliott, Gordon R.

Purdue Research Foundation, assignee: *See*—
Hass, Henry B., and Bourland.

Pure Oil Company, The, assignee: *See*—
Marisic, Milton M.
Stadtherr, John J.

Pusiecki, Frank: *See*—
Miller, Dola F., and Pusiecki.

Rabinow, Jacob, Washington, D. C. Automatic focusing of cameras. 2,456,317, Dec. 14.

Radio Corporation of America, assignee: *See*—
Brown, George W.
Brunside, Don G.
Conklin, James W.
Goble, George H.
Harvey, Robert L.
Pessel, Leopold.
Shenk, Eugene R., and Liguori.
Snyder, Richard L., Jr.

Ralston, Eldon K.: *See*—
Skelly, James J., and Ralston.

Ramler, Edward O., North Arlington, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Esters of p-di(omega-hydroxy-alkoxy) benzenes. 2,456,318, Dec. 14.

Ray, William A., Los Angeles, Calif., assignor to General Controls Co. Hydraulic control system for airplanes. 2,455,948, Dec. 14.

Ray, William A., Los Angeles, Calif., assignor to General Controls Co. Fluid control valve. 2,456,084, Dec. 14.

Ray, William A., Glendale, Calif., assignor to General Controls Co. Burner control system. 2,456,147, Dec. 14.

Raytheon Manufacturing Company, assignee: *See*—
Schmidt, Robert C.
Spencer, Percy L.

Read, Davis, Jr., Downers Grove, assignor to Universal Oil Products Company, Chicago, Ill. Stripping of spent catalyst in hydrocarbon conversion processes. 2,456,148, Dec. 14.

Read, Henry R., Queens Village, N. Y. Safety wrist watch strap. 2,456,319, Dec. 14.

Rebo, Noreen C., Gorin, Mo. Manicure apparatus. 2,456,022, Dec. 14.

Reece, Ralph P.: *See*—
Kamlet, Jonas, and Reece.

Rees, Gladys and J., Chicago, Ill. Article-holding device. 2,456,445, Dec. 14.

Rees, Janet: *See*—
Rees, Gladys and J.

Reichhold Chemicals, Inc., assignee: *See*—
Hewett, Philip S.

Reid, Chester L.: *See*—
Reid, Ralph W. and C. L.

Reid, Ralph W. and C. L., assignors to J. R. Brant, Indianapolis, Ind. Electric motor powered wheel drive and control for tool carriages. 2,456,444, Dec. 14.

Reilly Tar & Chemical Corporation, assignee: *See*—
Cislak, Francis E., and Otto.

Repke, Edward P., Coloma, assignor to The Ross Carrier Company, Benton Harbor, Mich. Lift truck. 2,456,320, Dec. 14.

Republic Flow Meters Company, assignee: *See*—
Ackley, Robert A.

Rhodes, Harold B., Los Angeles, Calif. Piano dampening mechanism. 2,456,321, Dec. 14.

Rice and Adams Corporation, assignee: *See*—
Alling, E. Roy, and Knepflar.

Richardson, Marshall L., Wakefield, Mass. Simulated golf target unit. 2,456,322, Dec. 14.

Richter, Henry J., Glen Ellyn, Ill., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Chlorine-containing vinyl resins stabilized with a tri-(2-alkenyl)-phosphite and a 1,2-epoxy compound. 2,456,216, Dec. 14.

Rider, Stuart H.: *See*—
Scott, Milton J., and Rider.

Riedele, Andrew P., Los Angeles, Calif. Ventilated toilet. 2,456,534, Dec. 14.

Riegel Paper Corporation, assignee: *See*—
Bidwell, George L.

Rieske, Otto G., Buffalo, N. Y. Coconut peeling machine having rotary radial cutter blades with fan portions. 2,456,446, Dec. 14.

Rieveschl, George, Jr., Grosse Pointe Woods, assignor to Parke, Davis & Company, Detroit, Mich. Dialkylaminoalkyl benzhydryl ethers and salts thereof. 2,455,949, Dec. 14.

Rinderknecht, Heinrich: *See*—
Bergel, Franz, Morrison, Moss, Konigstein, and Rinderknecht.

Ringle, Charles J., and Roy W. Smith, Buffalo, N. Y., assignors to Williams Gold Refining Company, Inc. Dental surveying instrument. 2,456,447, Dec. 14.

Risser, Jacob R., Belmont, and R. J. Wlodkowski, Attleboro, Mass., assignors, by mesne assignments, to the United States of America as represented by the Secretary of War. Radiating horn. 2,456,323, Dec. 14.

Robinson, Bestor, United States Army, Oakland, Calif. Portable stove for burning liquid fuel and burner control mechanism therefor. 2,455,950, Dec. 14.

Rocky Mountain Metal Products Co., assignee: *See*—
Brusse, Archie B.

Roesen, Oscar C., Scarsdale, N. Y., assignor to Wood Newspaper Machinery Corporation, Plainfield, N. J. Device for splicing cable. 2,456,149, Dec. 14.

Roessner, William L., Denver, Colo. Insecticide dispenser. 2,456,324, Dec. 14.

Rohm & Haas Company, assignee: *See*—
Rowland, Stanley P.

Rolle, Clifford J.: *See*—
Gessler, Albert E., Grupe, Rolle, and Tuttle.

Rood, Clifford T., assignor to S. C. Johnson & Son, Inc., Racine, Wis. Solid water-repellency composition. 2,456,595, Dec. 14.

Roper, John M., Washington, D. C., and M. K. Laufer, Chevy Chase, Md. Instrument lighting. 2,455,951, Dec. 14.

Rosenbalm, Isaac L., Inglewood, Calif. Tennis racket. 2,456,023, Dec. 14.

Ross Carrier Company, The, assignee: *See*—
Repke, Edward P.

Ross, Frank D., assignee: *See*—
Malone, Homer F.

Ross Gear & Tool Company, assignee: *See*—
Creson, William K., and Jordan.

Ross, Robert M., Katonah, N. Y. Receptacle closure. 2,456,448, Dec. 14.

Rothrock, Linville L., Thomasville, N. C. Sanding machine. 2,456,217, Dec. 14.

Rouan, Francis J., Stamford, and F. W. Uthenwoldt, Glenbrook, assignors to Pitney-Bowes, Inc., Stamford, Conn. Card stripping and feeding device. 2,456,449, Dec. 14.

Rowen, Irving, Bronx, assignor to Glen Jewelry Company, Inc., New York, N. Y. Clasp. 2,456,596, Dec. 14.

Rowland, Stanley P., assignor to Rohm & Haas Company, Philadelphia, Pa. Cation-exchange resins prepared by condensing sulfophthalic anhydride and xylene. 2,456,085, Dec. 14.

Rowley, Garold N., Fort Pierce, Fla. Grinding apparatus with upper gyratory drive. 2,456,150, Dec. 14.

Roy, Albert E., Glendale, Calif. Pressure cylinder for hydraulic brakes. 2,456,325, Dec. 14.

Rundell, Raymond R., Miami, Fla. Universal all wire bracket. 2,456,535, Dec. 14.

Rupp, Walter H., Mountainside, and C. T. Harding, Hillside, N. J., assignors to Standard Oil Development Company. Preparation of supported aluminum chloride catalysts. 2,456,326, Dec. 14.

Russell, Linus E.: *See*—
Peters, George E., and Russell.

Sandoz Ltd., assignee: *See*—
Gutzwiller, Ernst.

Sauter, Joseph H., Rutherford, N. J., and J. E. Byrne, New Rochelle, assignors to General Baking Company, New York, N. Y. Method of and means for slabbing cakes. 2,456,327, Dec. 14.

Sauter, Joseph L., Poughkeepsie, N. Y. Switch box holder. 2,456,450, Dec. 14.

Sawyer, James G., Williamsville, N. Y., assignor to Curtiss-Wright Corporation. Aircraft engine cooling system. 2,456,151, Dec. 14.

Schell, Paul, Elkhart, assignor to Penn Electric Switch Co., Goshen, Ind. Thermal cutout. 2,456,153, Dec. 14.

Schiring, Ralph C.: *See*—
Goldfield, Edwin R., and Schiring.

Schlesman, Carleton H., Camden, W. I. Denton, Woodbury, and R. B. Bishop, Pitman, N. J., assignors to Socony-Vacuum Oil Company, Incorporated. Production of phenol by catalytic oxidation of benzene. 2,456,597, Dec. 14.

Schmidt, Robert C., assignor to Raytheon Manufacturing Company, Newton, Mass. Magnetron. 2,455,952, Dec. 14.

Schmitz, Norbert L.: *See*—
Seeger, Edwin W., and Schmitz.

Schneider, Adolf G., Muncie, Ind., assignor, by mesne assignments, to Schneider Brothers Company, a copartnership composed of H. and V. Schneider, Hamilton, Ohio, and A. G. and E. Schneider, Muncie, Ind. Variable speed transmission. 2,456,328, Dec. 14.

Schneider Brothers Company, assignee: *See*—
Schneider, Adolf G.

Schneider, Emmor V., assignor to The Alliance Manufacturing Company, Alliance, Ohio. Rubber grommet. 2,456,087, Dec. 14.

Schneider, Erna: *See*—
Schneider, Adolf G.

Schneider, Heinrich: *See*—
Schneider, Adolf G.

Schneider, Robert H., Madison, Wis., assignor, by mesne assignments, to Air Reduction Company, Incorporated. Sterile distribution and drawoff system. 2,456,152, Dec. 14.

Schneider, Viva: *See*—
Schneider, Adolf G.

Schoder, Erlo F., Union, N. J., assignor to Standard Oil Development Company. Dust separator equipment. 2,456,329, Dec. 14.

Schofield, E. L., Incorporated, assignee: *See*—
Schofield, E. L.

Schofield, Earl L., assignor to E. L. Schofield, Incorporated, Rockford, Ill. Foldable stretcher carrier for ambulances. 2,456,024, Dec. 14.

Scholl Mfg. Co., Inc., The, assignee: *See*—
Hendrickson, Emil G., and La Cour.

Schuck, Oscar H., Belmont, Mass., assignor to the United States of America as represented by the Secretary of the Navy. Method and apparatus for monitoring underwater echo range and bearing systems. 2,456,598, Dec. 14.

Schultz, Walter E., Weirton, W. Va. Wheel mounting holder. 2,455,953, Dec. 14.

Schwall, Chester F., Jr., assignor to The General Tire & Rubber Company, Akron, Ohio. Collapsible boat and making the same. 2,456,086, Dec. 14.

Schwinn, Frank W., Chicago, Ill. Parking stand and mounting therefor. 2,456,536, Dec. 14.

Scientific Research and Development, United States of America as represented by the Office of, assignee: *See*—
Veneklasen, Paul S.

Scircle, William M., Scircleville, Ind. Hinged motor hanger for cream separators or like machines. 2,456,088, Dec. 14.

Scott, Milton J., Springfield, Mass., assignor to Monsanto Chemical Company, St. Louis, Mo. Aminotriazine product. 2,456,567, Dec. 14.

Scott, Milton J., and S. H. Rider, Springfield, Mass., assignors to Monsanto Chemical Company, St. Louis, Mo. Textile treating resins. 2,456,568, Dec. 14.

Scott, Russell J., assignor to Shakespeare Products Company, Kalamazoo, Mich. Antirattling device for antenna masts. 2,456,330, Dec. 14.

Scott, Ruth P., executrix: *See*—
Scott, Winfield.

Scott, Winfield, deceased, late of Akron, Ohio; by Ruth P. Scott, executrix, assignor to Wingfoot Corporation, Akron, Ohio. Treatment of rubber. 2,456,154, Dec. 14.

Scovill Manufacturing Company, assignee: *See*—
Seaver, Donald A.

Seaman, David J., A. E. Wood, Battle Creek, and C. A. Hathaway, Lansing, Mich., said Wood and said Hathaway assignors to said Seaman. Hydraulic door check. 2,456,537, Dec. 14.

Seaman, Emily C., New York, N. Y. Device for teaching the blind. 2,456,155, Dec. 14.

Seaver, Donald A., West Cheshire, assignor to Scovill Manufacturing Company, Waterbury, Conn. Inhaler. 2,456,451, Dec. 14.

Seeger, Edwin W., Wauwatosa, and N. L. Schmitz, assignors to Cutler-Hammer, Inc., Milwaukee, Wis. Control for alternating current motors. 2,456,538, Dec. 14.

Seeger, Nelson V., Cuyahoga Falls, assignor to Wingfoot Corporation, Akron, Ohio. 2-Chloroindone. 2,456,452, Dec. 14.

Seegmiller, Jarvis E.: *See*—
Martin, Don S., Jr., Nachtrieb, and Seegmiller.

Seeley, Homer A.: *See*—
Gruver, John H., and Seeley.

Segool, Howard D.: *See*—
Gilbert, Everett E., and Segool.

Seifert, Emmett, San Gabriel, Calif. Mechanical filter. 2,456,025, Dec. 14.

Semisch, Kurt F., Holyoke, Mass. Jack support. 2,456,218, Dec. 14.

Servel, Inc., assignee: *See*—
Simpson, Walter M.

Servis Equipment Company, assignee: *See*—
Collins, Johnnie C.

Sewell, Benjamin W., Tulsa, Okla., assignor to Standard Oil Development Company. Core barrel. 2,456,331, Dec. 14.

Seyforth, Rome C., assignor to The Shelby Metal Products Company, Shelby, Ohio. Hardware package and display. 2,456,332, Dec. 14.

Shaffer, Stewart, Muncie, Ind. Liner lid for containers. 2,456,607, Dec. 14.

Shaheen, John, West Roxbury, assignor to Sylvania Electric Products Inc., Salem, Mass. Coated inductive device. 2,456,219, Dec. 14.

Shallot, Douglas, assignor to Briggs Manufacturing Company, Detroit, Mich. Insulation break detector. 2,456,453, Dec. 14.

Shakespeare Products Company, assignee: *See*—
Scott, Russell J.

Sharp & Dohme, Incorporated, assignee: *See*—
Cope, Arthur C.

Sharp, John V., Brighton, and O. W. Boughton, Victor, assignors to Bausch & Lomb Optical Company, Rochester, N. Y. Photogrammetric projection apparatus and diapositive adjustment means. 2,456,333, Dec. 14.

Shelby Metal Products Company, The, assignee: *See*—
Seyforth, Rome C.

Shell Development Company, assignee: *See*—
Crake, Wilfred S.
Dyduszynski, Adam.
Gilmore, Ronald P.
Parker, James H.
Plank, Norris.
Smith, Grafton A.

Shellmar Products Corporation, assignee: *See*—
Swedlow, David A.

Shelton, George I., and H. L. Dowell, Athens, Tex. Automobile service table. 2,456,220, Dec. 14.

Shenk, Eugene R., Brooklyn, and A. Liguori, New York, N. Y., assignors to Radio Corporation of America. Modulator employing trigger circuit. 2,456,026, Dec. 14.

Shenk, Eugene R., Brooklyn, and A. Liguori, New York, N. Y., assignors to Radio Corporation of America. Wide band frequency modulator. 2,456,089, Dec. 14.

Shepherd, Clark B.: *See*—
Buehl, Walter M., and Shepherd.

Sherman, Monroe, assignee: *See*—
Polak, Joseph F.

Shindel, Harry F., assignor to Willson Products, Inc., Reading, Pa. Protective goggle. 2,456,334, Dec. 14.

Shure Brothers Incorporated, assignee: *See*—
Bauer, Benjamin B.

Signer, Ralph J., assignor to The Visking Corporation, Chicago, Ill. Butadiene-acrylonitrile copolymer mixed with vinylidene chloride-acrylonitrile copolymer. 2,456,454, Dec. 14.

Simons, John K., Toledo, Ohio, assignor, by mesne assignments, to Libbey-Owens-Ford Glass Company. Preparation of novel dicyandiamide derivatives. 2,456,090, Dec. 14.

Simons, Joseph H., State College, Pa., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn. Making fluorocarbons. 2,456,027, Dec. 14.

Simons, Joseph H., State College, Pa., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn. Fluorocarbon compound. 2,456,028, Dec. 14.

Simpson Electric Company, assignee: *See*—
Bernreuter, Herbert A.

Simpson, Walter M., Evansville, Ind., assignor to Servel, Inc., New York, N. Y. Heat exchanger. 2,456,455, Dec. 14.

Sims, Marion W.: *See*—
Patterson, Franklin G., and Sims.

Singer Manufacturing Company, The, assignee: *See*—
Parry, Frank.
Turner, Edgar P., and Happe.

Skelly, James J., Cleveland Heights, and E. K. Ralston, University Heights, assignors to Circo Products Company, Cleveland, Ohio. Degreasing. 2,456,335, Dec. 14.

Slovin, David G., Providence, R. I., assignor to United States Rubber Company, New York, N. Y. Coagulation of neoprene latex. 2,456,539, Dec. 14.

Smalley, Oliver, Larchmont, N. Y., assignor to Meehanite Metal Corporation. Producing white cast iron castings. 2,455,954, Dec. 14.

Smith, Andrew I., Long Beach, assignor to Union Oil Company of California, Los Angeles, Calif. Motor fuel. 2,456,569, Dec. 14.

Smith, Earl K., West Orange, assignor to Electrons, Incorporated, Newark, N. J. Electrode structure for electron discharge tubes. 2,456,540, Dec. 14.

Smith, Everet F., assignor to Commercial Solvents Corporation, Terre Haute, Ind. Preparing methylamines. 2,456,599, Dec. 14.

Smith, Glen A.: *See*—
Coppock, Kenneth E., and Smith.

Smith, Glenn A., United States Navy. Wing-tip float structure for aircraft. 2,455,955, Dec. 14.

Smith, Grafton A., Tulsa, Okla, assignor to Shell Development Company, San Francisco, Calif. Oil well pump control system. 2,456,456, Dec. 14.

Smith, Herschel G., Wallingford, and T. L. Cantrell, Lansdowne, assignors to Gulf Oil Corporation, Pittsburgh, Pa. Agent and mineral oil lubricant compositions containing the same. 2,456,336, Dec. 14.

Smith, Roy W.: *See*—
Ringle, Charles J., and Smith.

Smith, Russell W., assignee: *See*—
Caruso, Rocco P.

Smith, S., & Sons (England) Limited, assignee: *See*—
Meredith, Frederick W.

Snader, Craige M., Rosedale, Pa. Adjustable generator. 2,455,956, Dec. 14.

Snyder, Richard L., Jr., Glassboro, N. J., assignor to Radio Corporation of America. Thermionic tube circuits. 2,456,029, Dec. 14.

Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Bodkin, Ernest A., and Payne.
Gorin, Everett and M. H.
Koppenhoefer, Robert M.
Schlesman, Carleton H., Denton, and Bishop.

Sohns, Carl B., Grafton, Wis. Electric soldering iron. 2,456,030, Dec. 14.

Solliday, Raymond E.: *See*—
Gordon, John T., and Solliday.

Soloway, Saul: *See*—
Friedheim, Ernst A. H., and Soloway.

Somerville, Gareth G., Pittsfield, Mass., assignor to General Electric Company. Electromagnetic induction apparatus and forming same. 2,456,457, Dec. 14.

Somerville, Gareth G., Pittsfield, Mass., assignor to General Electric Company. Electromagnetic induction apparatus and forming same. 2,456,458, Dec. 14.

Somerville, Gareth G., Pittsfield, Mass., assignor to General Electric Company. Magnetic core. 2,456,459, Dec. 14.

Somerville, Gareth G., Pittsfield, Mass., assignor to General Electric Company. Magnetic core. 2,456,460, Dec. 14.

Soper, Roy M., Tacoma, Wash. Sanitary nursing bottle. 2,456,337, Dec. 14.

Soreng Manufacturing Corporation, assignee: *See*—
Fisher, Hardin Y.

Spain, William P., Villa Park, assignor to E. J. Brach & Sons, Chicago, Ill. Article arranging and advancing conveyer mechanism. 2,456,031, Dec. 14.

Speck, William F., West Memphis, Ark. Cotton cleaner. 2,456,156, Dec. 14.

Spencer, Percy L., West Newton, assignor to Raytheon Manufacturing Company, Newton, Mass. Multielement electron-discharge device. 2,455,957, Dec. 14.

Stadtherr, John J., Newark, Ohio, assignor to The Pure Oil Company, Chicago, Ill. Catalytic polymerization of olefinic hydrocarbons. 2,456,338, Dec. 14.

Staley, A. E., Manufacturing Company, assignee: *See*—
Thomas, McCalip J.

Stamatoff, Gelu S., Nutley, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Stabilization of polyvinyl butyral resins. 2,456,462, Dec. 14.

Standard Oil Company, The, assignee: *See*—
Hughes, Everett C.

Standard Oil Development Company, assignee: *See*—
Draeger, Arthur A.
Nicholson, Edward W. S.
Orr, Franklin M.
Rupp, Walter H., and Harding.
Schoder, Erlo F.
Sewell, Benjamin W.
Welty, Albert B., Jr., and Holder.
Young, David W.

Starle, George B., Schenectady, N. Y., assignor to General Electric Company. Motor protective device. 2,456,463, Dec. 14.

Starrett, L. S., Company, The, assignee: *See*—
Hastings, James E.

Steinbock, Edmund A., assignee: *See*—
Neiman, Robert.

Steinicke, Norman C., East Cleveland, assignor to Weather-Seal, Inc., Barberton, Ohio. Combination latching, unlatching, and ejecting means for windows and doors. 2,456,464, Dec. 14.

Stengl, Rudolph J., and F. B. Bedwell, Tulsa, Okla., assignors to Ozark-Mahoning Company. Fuel control device for submerged burners. 2,456,032, Dec. 14.

Stephenson, Richard M.: *See*—
Hopkins, Abner C., Jr., and Stephenson, and Watson.

Stevens, Nelson B., Woodhaven, and P. R. Capolongo, assignors to Induction Heating Corp., New York, N. Y. Inductor for high-frequency induction heating. 2,456,091, Dec. 14.

Stiger Precision Products, Inc., assignee: *See*—
Forsmark, Harold R.

Stiller, Eric T.: *See*—
Mueller, George P., Stiller, and Lieberman.

Stillwell, Glenn E., Riverside, and G. C. Paxton, Huntington Beach, Calif., assignors to Food Machinery and Chemical Corporation. Nailing machine. 2,456,221, Dec. 14.

Stoecklin, Josef, assignor to Aktiengesellschaft Brown, Boveri & Cie, Baden, Switzerland. Differential relay. 2,456,541, Dec. 14.

Stop-Motion Devices Corp., assignee: *See*—
Violandi, Marco.

Storevik, Rasmus, Brooklyn, N. Y. Pump for clearing water traps. 2,456,092, Dec. 14.

Strandlund, Carl G., assignor to Deere & Company, Moline, Ill. Convertible disk plow. 2,456,465, Dec. 14.

Stricklin, Darwin B., Milwaukee, Wis. Pump construction. 2,456,339, Dec. 14.

Strike, Louis N., assignee: *See*—
Pearson, Otto H.

Stuckey, Warren A., and M. Gregurich, assignors to The Moore Corporation, Joliet, Ill. Smokeless heater for burning coal and other solid fuel. 2,456,570, Dec. 14.

Stull, John S., Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Article forming apparatus. 2,456,222, Dec. 14.

Stull, John S., Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Apparatus for forming terminal ends of coils. 2,456,223, Dec. 14.

Sullivan, Norman M., Kent, Ohio. Overhead conveyer mechanism. 2,456,224, Dec. 14.

Sulzer Frères, Société Anonyme, assignee: *See*—
Atteslander, Edouard.

Sun, Kuan-Han, assignor to Eastman Kodak Company, Rochester, N. Y. Fluoborate glass. 2,456,033, Dec. 14.

Sunstein, David E., Elkins Park, assignor to Philco Corporation, Philadelphia, Pa. Variable time delay electronic apparatus. 2,456,466, Dec. 14.

Suydam, Norman, Toledo, Ohio. Moving target machine. 2,456,034, Dec. 14.

Swedlow, David A., Los Angeles, Calif., assignor, by mesne assignments, to Shellmar Products Corporation, Chicago, Ill. Polymerization. 2,456,093, Dec. 14.

Swedlow, David A., North Hollywood, Calif., assignor by mesne assignments to Shellmar Products Corporation, Chicago, Ill. Laminated transparent plastic. 2,456,467, Dec. 14.

Swennes, Benjamin A., Rockford, Ill., assignor, by mesne assignments, to United States of America, as represented by the Secretary of the Navy. Amphibian cargo carrier. 2,456,542, Dec. 14.

Swift Electric Welder Company, assignee: *See*—
Lewis, Alfred H.

Sylvania Electric Products Inc., assignee: *See*—
Frohock, Warren S.
McCarthy, Henry J.
Shaheen, John.

Syrovy, Augustin J.: *See*—
Neracher, Carl A., Dunn, Iavelli, and Syrovy.

Tadd, Ro. W., San Gabriel, Calif. Protector for the doors of vehicles. 2,456,157, Dec. 14.

Tancred, William L., assignor to Jones & Lamson Machine Company, Springfield, Vt. Tracer and automatic pattern feed. 2,456,158, Dec. 14.

Tawney, Pliny O., Passaic, N. J., assignor to United States Rubber Company, New York, N. Y. Preparing butane-1,2,4-tricarboxylic acid. 2,456,543, Dec. 14.

Taylor, John, Bronxvile, N. Y. Delay arming antidisturbance fuse. 2,455,958, Dec. 14.

Tear, James D.: *See*—
Poitras, Edward J., and Tear.

Tennessee Coal, Iron and Railroad Company, assignee: *See*—
Trevor, Paul F.

Ternes, Raymond F., assignee: *See*—
Patrick, Lawrence M.

Texas Company, The, assignee: *See*—
Wolf, Alexander.

Theodore, Henry P., assignor to Bobrich Manufacturing Corp., New York, N. Y. Electrically heated comfortable. 2,456,468, Dec. 14.

Thiokol Corporation, assignee: *See*—
Kamlet, Jonas, and Reece.

Thomas, Carrol E., Oakland, Calif. Securing a canvas to a frame. 2,456,225, Dec. 14.

Thomas, Charles E., North Arlington, J. S. Felter, Livingston, and H. J. Ness, assignors to Metallurgical Processes Co., Newark, N. J. Metallurgical furnace. 2,456,469, Dec. 14.

Thomas, McCalip J., assignor to A. E. Staley Manufacturing Company, Decatur, Ill. Refining of inositol solutions. 2,456,470, Dec. 14.

Thompson, Julien A.: *See*—
Ballantyne, William G., and Thompson.

Thompson Products, Incorporated, assignee: *See*—
Venditty, Anthony.

Thoresen, Oscar, Pittsburgh, Pa. Siren top. 2,456,341, Dec. 14.

Thorpe, Warren, New York, N. Y. Information posting board. 2,456,226, Dec. 14.

Torstenson, Henry A., assignee: *See*—
Morberg, Kenneth F.

Threedy, Clarence E., assignee, trustee: *See*—
Tratsch, Walter A.

Tideman, Harold F., Kenilworth, Ill. Ventilator. 2,456,340, Dec. 14.

Tide Water Associated Oil Company, assignee: *See*—
Beattie, Robert.

Time, Inc., assignee: *See*—
Faeber, Harry W.

Toledo Scale Company, assignee: *See*—
Yeasting, Maynard C.

Torrington Manufacturing Co., The, assignee: *See*—
Brown, Raymond H.

Tratsch, Walter A., assignor to Clarence E. Threedy, Chicago, Ill., as trustee. Shot cartridge. 2,456,159, Dec. 14.

Trevor, Paul F., Bessemer, Ala., assignor to Tennessee Coal, Iron and Railroad Company. Method and apparatus for determining the approximate amount of oil film on an article. 2,456,342, Dec. 14.

Tri-Clover Machine Co., assignee: *See*—
Kessler, Joseph S.

Tripp, Kenneth F.: *See*—
Axler, Meyer H., and Tripp.

Trout, Norwood S., Jr., Elmira, assignor to Bendix Aviation Corporation, Elmira Heights, N. Y. Variable-speed transmission. 2,456,600, Dec. 14.

Tschan, Ernst, assignor to Durand & Huguenin, A. G., Basel, Switzerland. Process and paste for printing fabrics made of cellulose, such as textile fabrics, paper and the like, with chromium mordant dyestuffs. 2,456,471, Dec. 14.

Turner, Douglas F., Detroit, Mich. Knee pad. 2,456,472, Dec. 14.

Turner, Edgar P., Fanwood, and R. Happe, Pittstown, assignors to The Singer Manufacturing Company, Elizabeth, N. J. Portable electric tool. 2,456,571, Dec. 14.

Turner, John, Boston, Mass. Vehicle tire antiskid device. 2,456,473, Dec. 14.

Tuttle, Francis J.: *See*—
Gessler, Albert E., Grupe, Rolle, and Tuttle.

Tuttle & Kift, Inc., assignee: *See*—
Tuttle, William R.

Tuttle, William R., Riverside, assignor to Tuttle & Kift, Inc., Chicago, Ill. Electric heater and making same. 2,456,343, Dec. 14.

Union Oil Company of California, assignee: *See*—
Lake, George R., and McDowell.
Smith, Andrew I.

Union Switch & Signal Company, The, assignee: *See*—
Dodd, Arthur E.

United Aircraft Corporation, assignee: *See*—
Beardsley, Guy E., Jr., and Laubin.

United-Carr Fastener Corporation, assignee: *See*—
Churchill, Wilmer H.
Johnson, Frank E.
Wagstaff, George.

Friedman, Bernard S., and Hervert.
Gerhold, Clarence G.
Read, Davis, Jr.
Watson, Charles C.

Uthenwoldt, Frederick W.: *See*—
Rouan, Francis J., and Uthenwoldt.

Vaala, Gordon T., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Polyamides plasticized with a mixture of phenol and ester type plasticizers. 2,456,344, Dec. 14.

Vale, Baldwin, San Francisco, Calif. Garden hand tool for soil cultivation. 2,456,345, Dec. 14.

Van der Mark, Jan, and T. J. Weyers, Eindhoven, Netherlands, assignors to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Device for the transmission of signals by means of frequency-modulated carrier waves. 2,455,959, Dec. 14.

Varner, Charles E., Toledo, Ohio. Antiskid device. 2,456,544, Dec. 14.

Vaughan, John A.: *See*—
McLaren, Peter J., Vaughan, and Fry.

Vaughn, Thomas H., Grosse Ile, assignor to Wyandotte Chemicals Corporation, Wyandotte, Mich. Synthesis of chloral. 2,456,545, Dec. 14.

Venditty, Anthony, Detroit, Mich., assignor to Thompson Products, Incorporated, Cleveland, Ohio. Tie rod joint seal. 2,456,546, Dec. 14.

Veneklasen, Paul S., Saugus, Mass., assignor to the United States of America as represented by the Office of Scientific Research and Development. Sound shield for telephone transmitters. 2,456,346, Dec. 14.

Vickers-Armstrongs Limited, assignee: *See*—
Perry, Charles.

Victoreen, John A., Cleveland, Ohio. Method and apparatus for regulating water temperature. 2,456,094, Dec. 14.

Violandi, Marco, assignor to Stop-Motion Devices Corp., Brooklyn, N. Y. Light system for knitting machines. 2,456,160, Dec. 14.

Visking Corporation, The, assignee: *See*—
Signer, Ralph J.

Vogel, Hilmond O., Chicago, Ill., assignor to International Harvester Company. Centrifugal separator. 2,456,347, Dec. 14.

Waddill, Paul M., Bartlesville, Okla., assignor to Phillips Petroleum Company. Prevention of siliceous deposits in hydrocarbon conversion processes. 2,456,348, Dec. 14.

Wade, John B., Arcadia, Calif., assignor to Food Machinery and Chemical Corporation. Coupling stabilizer for moineau pumps. 2,456,227, Dec. 14.

Wagstaff, George, Long-Eaton, England, assignor to United-Carr Fastener Corporation, Cambridge, Mass. Holder for thermionic valves and other electrical devices. 2,456,572, Dec. 14.

Wainwright, Joseph A., Syracuse, N. Y., assignor to General Electric Company. Electric discharge device. 2,456,474, Dec. 14.

Walker, Joseph F., Staten Island, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Paraformaldehyde compositions. 2,456,161, Dec. 14.

Walker, Kenneth E., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Hydraulic fluid. 2,455,961, Dec. 14.

Wall, Alexander C., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind. Electrical transformer. 2,455,960, Dec. 14.

Walter, Henry A., Longmeadow, Mass., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Urea-formaldehyde composition. 2,456,095, Dec. 14.

War, United States of America as represented by the Secretary of, assignee: *See*—
Risser, Jacob R., and Wlodkowski.

Ward, Robert S., assignor to Fosgood Corporation, Leominster, Mass. Locking device. 2,456,349, Dec. 14.

Wargin, Edward F., San Anselmo, Calif., J. R. Harkness and D. C. Peroutky, Schenectady, N. Y., assignors to General Electric Company. Ignition system. 2,456,475, Dec. 14.

Waterbury, Carl C., assignor to Diaphragm & Chemical Company, Chicago, Ill. Mold. 2,456,162, Dec. 14.

Watson, Charles C., Evanston, assignor to Universal Oil Products Company, Chicago, Ill. Hydrogen meter. 2,456,163, Dec. 14.

Watson, Harold M.: *See*—
Herwald, Seymour W., and Watson.

Watson, William E.: *See*—
Hopkins, Abner C., Jr., Stephenson, and Watson.

Weather-Seal, Inc., assignee: *See*—
Steinicke, Norman C.

Weaver, Welcome I., assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio. Dispersing a solid polymerization catalyst in a polymerizable thermosetting resin sirup. 2,456,228, Dec. 14.

Weber, Arthur E., Monee, Ill. Electric fence wire fastener. 2,456,547, Dec. 14.

Weeks, Loren R., Coeur d'Alene, Idaho. Door lock. 2,456,229, Dec. 14.

Wehmer, Bruno F., Melrose Park, assignor to The Wm. Meyer Company, Chicago, Ill. X-ray equipment. 2,456,096, Dec. 14.

Weiner, Leon, and B. I. Bell, Houston, Tex. Electrical plug and socket. 2,456,548, Dec. 14.

Weinstein, Harry, assignee: *See*—
Keith, Glenn.

Weinstein, Milton M., assignee: *See*—
Keith, Glenn.

Weisberg, Sidney M., Newark, assignor to Allied Electric Products, Inc., Irvington, N. J. Solderless contact terminal. 2,456,601, Dec. 14.

Weizmann, Charles, assignor to Ketarome Limited, London, England. Preparation and isolation of ethylene chlorohydrin. 2,456,350, Dec. 14.

Weizmann, Charles, London, assignor to Polymerisable Products Limited, London County, England. Preparation of carboxylic acids by the oxidation of aldehydes. 2,456,549, Dec. 14.

Welding Machines Manufacturing Company, assignee: *See*—
Beronius, Harry V.

Welsh, James W., Providence, R. I., assignor to Welsh Manufacturing Company. Fountain pen. 2,456,602, Dec. 14.

Welsh Manufacturing Company, assignee: *See*—
Welsh, James W.

Welty, Albert B., Jr., Mountainside, and C. H. Holder, Cranford, N. J., assignors to Standard Oil Development Company. Activation of catalyst. 2,456,351, Dec. 14.

Wenzel, Robert N.: *See*—
Ford, James G., and Wenzel.

Wepplo, Isaac W., Minneapolis, Minn. Fuel vaporizer. 2,456,097, Dec. 14.

West, James R., and F. D. Jones, Ottumwa, Iowa, assignors to Deere Manufacturing Co. Wire tying mechanism. 2,456,476, Dec. 14.

Western Electric Company, Incorporated, assignee: *See*—
Nelson, Wilbur L.
Stull, John S.
Yonkman, William.

Western Electrical Instrument Corporation, assignee: *See*—
Lamb, Anthony H.

Westinghouse Electric Corporation, assignee: *See*—
Ford, James G., and Wenzel.

Van der Mark, Jan, and Weyers.

Wheeler, Albert H., Worcester, Mass. Game board and playing pieces therefor. 2,456,098, Dec. 14.

Wheeler, Harold R., and J. A. Kofalt, Harrisburg, Pa. Recording liquid dispenser. 2,455,962, Dec. 14.

Wheeler, Phillip R., Alexandria, Va. Electrical gun sight control. 2,455,963, Dec. 14.

White, Eric L. C., Iver, M. G. Harker, Pinner, and J. P. W. Houchin, Burnham, assignors to Electric and Musical Industries Limited, Hayes, Middlesex, England. Electrical motor control system. 2,456,573, Dec. 14.

White, Jesse O.: *See*—
Bren, Bozetech C., and White.

Whitney, Frances, Weston, Mass. Headdress. 2,456,352, Dec. 14.

Widmer, Willy, Bottmingen, Switzerland, assignor to Ciba Limited. Chromed monoazo compound. 2,456,230, Dec. 14.

Wiley, Richard H., Chapel Hill, N. C., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Chlorine-containing vinyl resins stabilized with a tri(2-alkenyl)-phosphite. 2,456,231, Dec. 13.

Williams Gold Refining Company, Inc., assignee: *See*—
Ringle, Charles J., and Smith.

Willson Products, Inc., assignee: *See*—
Shindel, Harry F.

Wilson, Finley B., San Antonio, Tex., assignor to United States of America, as represented by the Secretary of the Navy. Keyed oscillator. 2,456,550, Dec. 14.

Wilson, Robert A., Dallas, Tex. Well swab. 2,456,551, Dec. 14.

Wingfoot Corporation, assignee: *See*—
Campaigne, William E.
Carter, Raymond S., and Dorf.
Clifford, Albert M.
Gordon, John T., and Solliday.
Scott, Winfield.
Seeger, Nelson V.

Winter, Arthur, Weehawken, N. J. Pen. 2,455,964, Dec. 14.

Winter, Lester L., Lakewood, Ohio, assignor to National Carbon Company, Inc. Electrode for vacuum discharge apparatus. 2,456,099, Dec. 14.

Wirth, Emil O.: *See*—
Barfod, Frederik, and Wirth.

Wirth, Emil O., and F. Barfod, assignors to Bendix Aviation Corporation, South Bend, Ind. Fuel supply system. 2,456,605, Dec. 14.

With, Julius E. B., Port Townsend, Wash. Chimney cowl. 2,456,232, Dec. 14.

Witt, Minnie, executrix: *See*—
Nelson, Adelbert M.

Wittner, Max E., Brooklyn, N. Y. Bust molding and uplifting garment. 2,456,552, Dec. 14.

Wlodkowski, Raymond J.: *See*—
Risser, Jacob R., and Wlodkowski.

Wobker, Burle F., Mission, Kans., assignor to Phillips Petroleum Company. Treatment of fluids with comminuted solids. 2,456,035, Dec. 14.

Wohlberg, George, Annapolis, Md. Wet-type water-separating steam-inhibiting exhaust muffler. 2,455,965, Dec. 14.

Wolf, Alexander, Houston, Tex., assignor to The Texas Company, New York, N. Y. Liquid level measurement and control. 2,456,233, Dec. 14.

Wolf, John L., Bloomsburg, and W. C. Wolf, York, Pa. Wire-bending machine. 2,456,353, Dec. 14.

Wolf, William C.: *See*—
Wolf, John L. and W. C.

Wood, Albert E.: *See*—
Seamon, David J., Wood, and Hathaway.

Wood, Fredric E., Oak Park, assignor to Automatic Electric Laboratories, Inc., Chicago, Ill. Relay yoke. 2,456,036, Dec. 14.

Wood, Justice W., Detroit, Mich. Toggle clamp. 2,456,100, Dec. 14.

Wood Newspaper Machinery Corporation, assignee: *See*—
Roesen, Oscar C.

Woods, Webster F., Glendale, Calif. Folding dinette table. 2,456,037, Dec. 14.

Woodworth, N. A., Company, assignee: *See*—
Hohwart, George.

Wyandotte Chemicals Corporation, assignee: *See*—
Vaughn, Thomas H.

Wyeth Incorporated, assignee: *See*—
Mueller, George P., Stiller, and Lieberman.

Wynne, Ira H.: *See*—
Manegold, Robert L., and Wynne.

Yankee Metal Products Corp., assignee: *See*—
Daon, Rene.

Yarroll, Warren H.: *See*—
Jacobs, James H., and Yarroll.

Yeasting, Maynard C., Elmore, assignor to Toledo Scale Company, Toledo, Ohio. High-speed counter. 2,456,101, Dec. 14.
Yeomans Brothers Company, assignee: *See*—
Yeomans, Charles.
Yeomans, Charles, Hubbard Woods, assignor to Yeomans Brothers Company, Chicago, Ill. Pneumatic pumping system. 2,456,574, Dec. 14.
Yonkman, William, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Lead coating ferrous articles. 2,456,235, Dec. 14.
Youhouse, Joseph, Fairfield, Conn. Combined internal-combustion and turbine engine. 2,456,164, Dec. 14.
Young, David W., Roselle, N. J., assignor to Standard Oil Development Company. Copolymers of iso-olefins with thiophene sulfones and making same. 2,456,354, Dec. 14.
Young, Farrile S., assignor to Panhandle Eastern Pipe Line Company, Kansas City, Mo. Bolt protector. 2,456,234, Dec. 14.
Young, Lyman, San Francisco, Calif. Decatonic keyboard. 2,456,575, Dec. 14.
Young, Richard E., Detroit, Mich. Portable fire alarm device. 2,456,038, Dec. 14.
Yuza, Rudolph, assignor to A. Dalkin Company, Chicago, Ill. Valve mounting. 2,456,165, Dec. 14.

LIST OF REISSUE INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 14TH DAY OF DECEMBER, 1948

NOTE.--Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Curling rod. S. Molchan. Re. 23,061, Dec. 14.
Insulating material, Electric. A. A. New, S. A. Foord, and D. R. Beckwith. Re. 23,062, Dec. 14.
Method and apparatus for sand blasting. L. L. Tirrell. Re. 23,064, Dec. 14.
N-substituted Pantoyl amides. W. Shive and E. E. Snell. Re. 23,063, Dec. 14.
Open-back shoe with stiffening means. T. A. Cochary. Re. 23,059, Dec. 14.
Organo-silicon polymers and methods of making them. R. R. McGregor and E. L. Warrick. Re. 23,060, Dec. 14.
Refrigerator. L. J. Bronaugh and T. I. Potter. Re. 23,058, Dec. 14.
Signalling system. G. E. Atkins. Re. 23,057, Dec. 14.

LIST OF PLANT INVENTIONS

English or Persian walnut tree. W. A. Benton and G. L. Smith. 815, Dec. 14.
Peach tree. O. F. and W. C. Jones. 814, Dec. 14.

LIST OF DESIGN INVENTIONS

Airplane. W. J. Clark. 152,063, Dec. 14.
Ash tray. J. Melillo. 152,114, Dec. 14.
Book end. A. W. McGowen. 152,112, Dec. 14.
Bracelet or similar article. W. W. Hobé. 152,078–9, Dec. 14.
Bracelet or similar article. W. W. Hobé. 152,081, Dec. 14.
Bracelet or similar article. A. Philippe. 152,127, Dec. 14.
Brassière. J. A. Coleman. 152,064, Dec. 14.
Brooch and locket, Combined. A. Katz. 152,102–6, Dec. 14.
Brooch or similar article. W. W. Hobé. 152,071–3, Dec. 14.
Brooch or similar article. W. W. Hobé. 152,075–7, Dec. 14.
Brooch or similar article. W. W. Hobé. 152,080, Dec. 14.
Brooch or similar article. W. W. Hobé. 152,082, Dec. 14.
Brooch or similar article. A. Katz. 152,092–7, Dec. 14.
Brooch or similar article. A. Katz. 152,100, Dec. 14.
Cabinet, Alarm. R. E. Young. 152,132, Dec. 14.
Cabinet for bottle vending machine. W. L. Martling, Jr. 152,110, Dec. 14.
Can punch. W. A. Campion. 152,060, Dec. 14.
Car body, Railway. F. L. Murphy and J. E. Candlin, Jr. 152,119, Dec. 14.
Carrier, Bottle. A. L. Barnes. 152,053, Dec. 14.
Casing, Electric heater. W. W. Chatfield. 152,062, Dec. 14.
Chair. J. C. Sanford. 152,129, Dec. 14.
Coin head. J. W. Nimitz. 152,121, Dec. 14.
Cooking appliance, Electric. C. Karstadt. 152,090–1, Dec. 14.
Cover plate, Electrical push button. W. Huppert. 152,087, Dec. 14.
Crib and bureau, Combined. J. Staartjes. 152,130, Dec. 14.
Display carton. J. G. Fettinger. 152,069, Dec. 14.
Display fixture, Bottle. W. I. Carr. 152,061, Dec. 14.
Display stand or similar article. L. Martling, Jr. 152,111, Dec. 14.
Doll. F. B. Salter. 152,128, Dec. 14.
Earring or similar article. A. Katz. 152,098–9, Dec. 14.
Earring or similar article. A. Katz. 152,101, Dec. 14.
Earring or similar article. A. Katz. 152,107, Dec. 14.
Guard for motor vehicles, Grille. L. Bustin. 152,058–9, Dec. 14.
Handbag or the like. G. Murphy. 152,120, Dec. 14.
Handle, Door. S. C. Brull. 152,056, Dec. 14.
Hoist, Puller. H. F. Parker. 152,123–4, Dec. 14.
Holder, Meat. E. S. Morfesi. 152,117, Dec. 14.
Lock for portfolios or the like. S. H. Lifton. 152,109, Dec. 14.
Multigem setting or similar article. S. R. Donchi. 152,068, Dec. 14.
Necklace. W. W. Hobé. 152,083–5, Dec. 14.
Necklace or similar article. W. W. Hobé. 152,074, Dec. 14.
Necklace or similar article. W. W. Hobé. 152,086, Dec. 14.
Necklace or similar article. A. Philippe. 152,126, Dec. 14.
Negligee. V. Giovagnoni. 152,070, Dec. 14.
Piano, Grand. E. D. Kapphan. 152,089, Dec. 14.
Plate for electric room heating units, Front. A. J. D. Ohm. 152,122, Dec. 14.
Record player and radio, Combination. C. A. Peterson. 152,125, Dec. 14.
Reflector assembly for a heat lamp. J. A. Mehr. 152,113, Dec. 14.
Ring or similar article. M. Koven. 152,108, Dec. 14.
Shears. C. L. Mortensen. 152,118, Dec. 14.
Shower head. R. E. Bletcher and E. H. Bucknell. 152,054, Dec. 14.
Swatter, Fly. H. Jahn and C. S. Zaremba. 152,088, Dec. 14.
Sweater. B. A. Bryce. 152,057, Dec. 14.
Tank vehicle. G. A. Brasfield. 152,055, Dec. 14.
Textile fabric or similar article. R. E. Minger. 152,115–16, Dec. 14.
Tire gauge and key holder, Combined. J. C. Crowley. 152,065–6, Dec. 14.
Vise and clamp, Parallel. D. Wright. 152,131, Dec. 14.
Winch, Power. J. C. Curtis. 152,067, Dec. 14.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 14TH DAY OF DECEMBER, 1948

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Acetylene generator. G. L. Hill. 2,456,278, Dec. 14.
Acid derivatives and the manufacture of same, Bile. F. Bergel, A. L. Morrison, A. R. Moss, M. Königstein, and H. Rinderknecht. 2,456,363, Dec. 14.
Acrylonitrile process. H. W. Arnold. 2,456,360, Dec. 14.
Activation of catalyst. A. B. Welty, Jr., and C. H. Holder. 2,456,351, Dec. 14.
Actuating mechanism for refrigerator tops or the like. J. B. Parsons. 2,456,429, Dec. 14.
Addition compounds of pyridine derivatives and preparing some. E. A. H. Friedheim and S. Soloway. 2,455,924, Dec. 14.
Adjustable generator. C. M. Snader. 2,455,956, Dec. 14.
Agent and mineral oil lubricant compositions containing the same. H. G. Smith and T. L. Cantrell. 2,456,336, Dec. 14.
Agents for use in low-temperature polymerization reactions, Modifying. P. K. Frolich. 2,456,265, Dec. 14.
Aggregate, Light weight, and producing same. W. J. McCoy. 2,456,207, Dec. 14.
Air brake apparatus. J. W. Marsh. 2,456,137, Dec. 14.
Aircraft structural material and making the same. J. C. MacKinnon and W. R. Hickler. 2,456,005, Dec. 14.
Alarm device, Portable fire. R. E. Young. 2,456,038, Dec. 14.
Alkali process for wheat starch production. R. J. Dimler. 2,455,981, Dec. 14.
Alkylation process. M. P. Matuszak. 2,456,435, Dec. 14.
α-ethylpiperonyl ethers, Producing. E. A. Prill. 2,456,316, Dec. 14.
Alloy: *See*—
Brazing alloy.
Amines, Making. W. W. Prichard. 2,456,315, Dec. 14.
Aminotriazine product. M. J. Scott. 2,456,567, Dec. 14.
Amphibian cargo carrier. B. A. Swennes. 2,456,542, Dec. 14.
Amusement device, Cathode-ray tube. T. T. Goldsmith, Jr., and E. R. Mann. 2,455,992, Dec. 14.
Annunciating device. J. B. Englander. 2,455,922, Dec. 14.
Antirattling device for antenna masts. R. J. Scott. 2,456,330, Dec. 14.
Antiskid device. C. E. Varner. 2,456,544, Dec. 14.
Apparatus for aligning preengraved projectiles in rifled firearms. C. W. Musser. 2,456,011, Dec. 14.
Apparatus for and method of treating food products. J. J. Hoffman. 2,456,124, Dec. 14.
Apparatus for breaking and making emulsions. C. E. and A. P. North. 2,455,945, Dec. 14.
Apparatus for electrostatic separation of material particles. B. Horsfield. 2,456,279, Dec. 14.
Apparatus for extrusion molding of plastic articles. S. Myerson. 2,456,141, Dec. 14.
Apparatus for forming terminal ends of coils. J. S. Stull. 2,456,223, Dec. 14.
Apparatus for handling metal sheets. C. A. Larkin. 2,456,004, Dec. 14.
Apparatus for producing variegated fiber lengths in the manufacture of paper. G. L. Bidwell. 2,456,249, Dec. 14.
Apparatus suitable for use in the treatment of water containing chlorides dissolved. H. D. Meincke, Jr. 2,456,524, Dec. 14.
Appliqués for attachment, Preparing. M. A. Friedlen. 2,456,264, Dec. 14.
Article forming apparatus. J. S. Stull. 2,456,222, Dec. 14.
Article-holding device. G. and J. Rees. 2,456,445, Dec. 14.
Aryl amines, Making. E. C. Hughes. 2,455,932, Dec. 14.
Aryl thio-ethers of metal-containing phthalocyanines and producing same. E. Gutzwiller. 2,456,274, Dec. 14.
Assembly for weighing scales, Balance weight. W. A. Dimick. 2,456,178, Dec. 14.
Attachment for skis, Antispill. N. E. Ebbley, Jr. 2,455,920, Dec. 14.
Automobile body structure. A. E. Gessler, W. F. Grupe, C. J. Rolle, and F. J. Tuttle. 2,455,926, Dec. 14.
Automobile service table. G. I. Shelton and H. L. Dowell. 2,456,220, Dec. 14.
Axle spring suspension, Tandem. V. Frazier. 2,455,989, Dec. 14.
Azeotropic separation of xylene isomers. G. R. Lake and J. M. McDowell. 2,456,561, Dec. 14.
Banding machine. J. H. Mead. 2,456,523, Dec. 14.
Bar: *See*—
Handle bar.
Barrel, Core. B. W. Sewell. 2,456,331, Dec. 14.
Bathtub. L. E. Harris. 2,456,275, Dec. 14.
Battery gland for terminals or vents. C. and M. Berg. 2,456,246, Dec. 14.
Battery improvement, Electric. V. Alvear. 2,456,477, Dec. 14.
Bearing: *See*—
Center bearing.
Billfold. J. C. Miller. 2,456,300, Dec. 14.
Blackboard, Collapsible. W. Amstutz. 2,456,103, Dec. 14.
Blotting device for duplicating machines, Friction-rotary. J. S. McLane. 2,456,009, Dec. 14.
Board: *See*—
Boat, Collapsible, and making the same. C. F. Schwall, Jr. 2,456,086, Dec. 14.
Boiler: *See*—
Sectional type boiler.
Bolt protector. F. S. Young. 2,456,234, Dec. 14.
Bookbinding and producing the same. J. F. Bosch. 2,455,971, Dec. 14.
Bottle, Sanitary nursing. R. M. Soper. 2,456,337, Dec. 14.
Box: *See*—
Folding box.
Bracket: *See*—
Universal all wire bracket.
Brake: *See*—
Ski brake.
Brake and safety leg for perambulators, Combined. A. M. Boudreau. 2,456,250, Dec. 14.
Brake booster, Hydraulic. G. R. Elliott. 2,455,985, Dec. 14.
Brazing alloy. J. F. Polak. 2,456,594, Dec. 14.
Breathing apparatus. C. J. Lambertsen. 2,456,130, Dec. 14.
Broiler. P. Gallichio and F. Ferrari. 2,456,397, Dec. 14.
Buffer device for firearms. F. L. Humeston. 2,456,280, Dec. 14.
Burner control, Liquid fuel. A. C. Bennett. 2,456,170, Dec. 14.
Bushing and manufacturing same. S. Imerman. 2,456,418, Dec. 14.
Butadiene-acrylonitrile copolymer mixed with vinylidene chloride-acrylonitrile copolymer. R. J. Signer. 2,456,454, Dec. 14.
Butane-1,2,4-tricarboxylic acid, Preparing. P. O. Tawney. 2,456,543, Dec. 14.
Cables, Forming coaxial. L. H. Morin. 2,456,304, Dec. 14.
Calcium-nickel phosphate catalyst and preparation thereof. E. C. Britton and A. J. Dietzler. 2,456,367, Dec. 14.
Calcium nickel phosphate-chromium oxide catalyst. E. C. Britton and A. J. Dietzler. 2,456,368, Dec. 14.
Cam profiling machine. C. Perry. 2,456,146, Dec. 14.
Capacitor, Electric. F. M. Clark. 2,456,381, Dec. 14.
Car-dumping apparatus. G. W. Merritt. 2,456,209, Dec. 14.
Carboxylic acids by the oxidation of aldehydes, Preparation of. C. Weizmann. 2,456,549, Dec. 14.
Card stripping and feeding device. F. J. Rouan and F. W. Uthenwoldt. 2,456,449, Dec. 14.
Carrier: *See*—
Amphibian cargo carrier. Pack carrier.
Carton with sliding closure, Display. A. Behrens. 2,456,168, Dec. 14.
Cartridge, Shot. W. A. Tratsch. 2,456,159, Dec. 14.
Caster. J. G. Maresco. 2,456,520, Dec. 14.
Casting machine, Centrifugal. T. C. Kuhlman. 2,456,067, Dec. 14.
Catalyst preparation. F. C. Gibbs, Jr., B. M. Baird, and R. J. Brosamer. 2,456,268, Dec. 14.
Catalytic conversion of hydrocarbons. W. H. Borcherding. 2,455,915, Dec. 14.
Catalytic conversion unit, Operation of a fluid. F. M. Orr. 2,456,310, Dec. 14.
Catalytic oxidation of nicotine. F. E. Cislak and W. R. Wheeler. 2,456,380, Dec. 14.
Catalytically hydrogenating organic substances. H. M. Guinot. 2,456,187, Dec. 14.
Cathode-ray apparatus. R. B. Gethmann. 2,456,399, Dec. 14.
Cell for recovering manganese, Electrolytic. J. H. Jacobs and W. H. Yarroll. 2,456,196, Dec. 14.
Censer. J. M. Bash. 2,456,244, Dec. 14.
Center bearing. H. A. Balke. 2,455,970, Dec. 14.
Centrifugal separator. H. O. Vogel. 2,456,347, Dec. 14.
Chair and table, Child's knockdown. B. Creech. 2,456,111, Dec. 14.
Chamfering device, Adjustable. S. E. Mueller, G. V. Anderson, and A. Dacas. 2,456,140, Dec. 14.
Chimney cowl. J. E. B. With. 2,456,232, Dec. 14.

Chlorine-containing vinyl resins stabilized with a tri-(2-alkenyl)-phosphite. R. H. Wiley. 2,456,231, Dec. 14.
Chlorine-containing vinyl resins stabilized with a tri-(2-alkenyl)-phosphite and a 1,2-epoxy compound. H. J. Richter. 2,456,216, Dec. 14.
Chuck operating mechanism. F. W. Kelleher. 2,455,934, Dec. 14.
Circuit: *See*—
Modulator employing trigger circuit. Toggle clamp.
Circuit arrangement for the modulation of electrical oscillations. J. Ensink. 2,456,494, Dec. 14.
Circuits, Electrical. J. R. Cooney. 2,456,050, Dec. 14.
Clamp: *See*—
Pressing machine tail clamp. Multiple spark circuit.
Clamping unit for surface gauges or the like. J. E. Hastings. 2,456,505, Dec. 14.
Clasp. I. Rowen. 2,456,596, Dec. 14.
Clasp having safety locking means, Rotatable-joint. M. Hattan. 2,455,929, Dec. 14.
Cleaner: *See*—
Cotton cleaner.
Clinching ball ears to can body blanks and apparatus therefor. J. Henchert. 2,456,506, Dec. 14.
Clip: *See*—
Fastener clip. Visor document clip.
Closure device for crystal converters. W. L. Nelson. 2,456,305, Dec. 14.
Closure, Receptacle. R. M. Ross. 2,456,448, Dec. 14.
Clothesline reel. S. J. Duhaime and C. V. Butler. 2,456,115, Dec. 14.
Coagulation of neoprene latex. D. G. Slovin. 2,456,539, Dec. 14.
Coating apparatus, Locomotive. J. E. O'Brien. 2,456,308, Dec. 14.
Coating compositions. W. C. Mast. 2,456,295, Dec. 14.
Coating for welding rods, Flux. W. Goerg. 2,456,121, Dec. 14.
Coating machine. H. W. Faeber. 2,456,495, Dec. 14.
Collapsible container. M. Antil. 2,456,479, Dec. 14.
Comb. C. Marini. 2,456,138, Dec. 14.
Combined internal-combustion and turbine engine. J. Youhouse. 2,456,164, Dec. 14.
Combustion chamber and supplying plural liquid fuels thereto. R. H. Goddard. 2,456,402, Dec. 14.
Comfortable, Electrically heated. H. P. Theodore. 2,456,468, Dec. 14.
Concrete feed and fertilizer mixer. J. S. Kamper. 2,456,285, Dec. 14.
Condenser structure. K. A. Duerk. 2,456,114, Dec. 14.
Conductor, Electrical. K. L. Orser. 2,456,015, Dec. 14.
Connection for structural steel beams, End. J. R. Farrar. 2,456,055, Dec. 14.
Connector for cords or cables. W. H. Churchill. 2,456,554, Dec. 14.
Contact terminal, Solderless. S. M. Weisberg. 2,456,601, Dec. 14.
Container: *See*—
Collapsible container.
Container. R. Beattie. 2,456,483, Dec. 14.
Container. H. L. Carpenter. 2,456,047, Dec. 14.
Container and coupling, Sectional. H. L. Carpenter. 2,456,048, Dec. 14.
Container for liquefied gases, Spherical type insulated. J. O. Jackson. 2,456,195, Dec. 14.
Continuous sediment separator. B. F. Harbison. 2,456,189, Dec. 14.
Control. C. F. Kettering and A. W. Fischer. 2,456,198, Dec. 14.
Control and/or measuring system, Electrical. G. H. Fritzinger. 2,456,499, Dec. 14.
Control apparatus, Fractionation. C. G. Gerbold. 2,456,398, Dec. 14.
Control device for submerged burners, Fuel. R. J. Stengl and F. B. Bedwell. 2,456,032, Dec. 14.
Control for alternating current motors. E. W. Seeger and N. L. Schmitz. 2,456,538, Dec. 14.
Control gap for spark spectroscopes, Stabilized. J. H. Enns. 2,456,116, Dec. 14.
Control mechanism, Pressure-regulating. N. C. Price. 2,456,215, Dec. 14.
Control of vaporizable material. W. S. Frohock. 2,456,396, Dec. 14.
Control system, Burner. W. A. Ray. 2,456,147, Dec. 14.
Control system, Drilling. W. S. Crake. 2,455,917, Dec. 14.
Control system, Electronic direct-current. E. J. Jackson. 2,456,420, Dec. 14.
Control system for airplanes, Hydraulic. W. A. Ray. 2,455,948, Dec. 14.
Control system, Generator. A. H. Lamb. 2,456,199, Dec. 14.
Conversion of dimethyl ether. E. and M. H. Gorin. 2,456,584, Dec. 14.
Conversion of hydrocarbons in the presence of a catalyst and calcium oxide together with steam and/or carbon dioxide. M. M. Marisic. 2,456,072, Dec. 14.
Conveyer mechanism, Article arranging and advancing. W. P. Spain. 2,456,031, Dec. 14.
Conveyer mechanism, Overhead. N. M. Sullivan. 2,456,224, Dec. 14.
Cooling system, Aircraft engine. J. G. Sawyer. 2,456,151, Dec. 14.
Copolymer of cyclohexyl alpha chloroacrylate and butadiene-1,3. A. M. Clifford. 2,456,382, Dec. 14.
Copolymers of iso-olefins with thiophene sulfones and making same. D. W. Young. 2,456,354, Dec. 14.
Core, Magnetic. C. G. Dunn. 2,456,461, Dec. 14.
Core, Magnetic. G. G. Somerville. 2,456,459–60, Dec. 14.
Cotton cleaner. W. F. Speck. 2,456,156, Dec. 14.
Counter, High-speed. M. C. Yeasting. 2,456,101, Dec. 14.
Counting device, Electromagnetic. J. I. Bellamy. 2,456,169, Dec. 14.
Coupling: *See*—
Pipe coupling.
Coupling for tubular members. A. J. Loepsinger. 2,456,203, Dec. 14.
Crystal unit, Dual. R. J. Jahrling. 2,456,421, Dec. 14.
Currying machine. D. L. Jensen. 2,456,197, Dec. 14.
Curtain for focal plane shutters. I. W. Doyle and C. V. Johnson. 2,456,052, Dec. 14.
Curtain rod support. J. Irling. 2,456,000, Dec. 14.
Cutout, Thermal. P. Schell. 2,456,153, Dec. 14.
Cutter: *See*—
Seed potato cutter.
Cyanhydrin esters. V. L. Hansley and J. E. Bristol. 2,456,188, Dec. 14.
Cyanoethyl, aceto-succinic acid esters. E. C. Ladd and H. W. Paxton. 2,456,517, Dec. 14.
Cylinder and piston device, Hydraulic. R. D. Acton. 2,456,236, Dec. 14.
Cylinder construction, Engine. A. T. Gregory. 2,456,272, Dec. 14.
Cylinder for hydraulic brakes, Pressure. A. E. Roy. 2,456,325, Dec. 14.
Dampening mechanism, Piano. H. B. Rhodes. 2,456,321, Dec. 14.
Degreasing. J. J. Skelly and E. K. Ralston. 2,456,335, Dec. 14.
Desk of packing case construction. E. R. Goldfield and R. C. Schiring. 2,455,991, Dec. 14.
Detector, Insulation break. D. Shallot. 2,456,453, Dec. 14.
Determining the approximate amount of oil film on an article, Method and apparatus for. P. F. Trevor. 2,456,342, Dec. 14.
Device for adjusting the blades of ships propellers. E. Atteslander. 2,456,361, Dec. 14.
Device for air bombs, Safety. E. I. Lindman. 2,456,289, Dec. 14.
Device for block molding, Tamping. F. C. George. 2,456,181, Dec. 14.
Device for clamping and locking work in jigs or fixtures. C. P. Green. 2,456,183, Dec. 14.
Device for detecting turn or measuring rate of turn. F. W. Meredith. 2,455,939, Dec. 14.
Device for hair driers, Protection. J. E. Garing. 2,456,180, Dec. 14.
Device for splicing cable. O. C. Roesen. 2,456,149, Dec. 14.
Device for teaching the blind. E. C. Seaman. 2,456,155, Dec. 14.
Device for the mutual and detachable support of two objects. F. Nemec. 2,456,425, Dec. 14.
Device for the transmission of signals by means of frequency-modulated carrier waves. J. van der Mark and T. J. Weyers. 2,455,959, Dec. 14.
Dial scale mechanism. G. Guldbrandsen. 2,456,186, Dec. 14.
Dialkylaminoalkyl benzhydryl ethers and salts thereof. G. Rieveschl, Jr. 2,455,949, Dec. 14.
Diaper washer. W. S. Berry. 2,456,364, Dec. 14.
Diaphragm control valve. F. R. Goehring. 2,456,403, Dec. 14.
Dicyandiamide derivatives, Preparation of novel. J. K. Simons. 2,456,090, Dec. 14.
Die assembly, Chase. F. Auer. 2,456,240, Dec. 14.
Diesel engine air meter. S. Pelc. 2,456,213, Dec. 14.
Digger, Posthole. W. J. McGarr. 2,456,208, Dec. 14.
Digging machine, Potato. L. W. Hogan. 2,456,416, Dec. 14.
Direction signal. P. L. Franck. 2,456,498, Dec. 14.
Discharge device, Electric. J. A. Wainwright. 2,456,474, Dec. 14.
Discharge device for ultra high frequencies, Electron. D. G. Burnside. 2,456,579, Dec. 14.
Discharge tube. T. Hagenberg. 2,455,993, Dec. 14.
Disk plow, Convertible. C. G. Strandlund. 2,456,465, Dec. 14.
Dispenser: *See*—
Insecticide dispenser. Recording liquid dispenser.
Dispenser for stacked articles. J. Liben. 2,456,068, Dec. 14.
Dispensing device. A. Hammerstein. 2,456,504, Dec. 14.
Dispersing a solid polymerization catalyst in a polymerizable thermosetting resin sirup. W. I. Weaver. 2,456,228, Dec. 14.
Display lamp. N. Chirelstein. 2,456,376, Dec. 14.
Display stand. A. E. Johnson. 2,456,064, Dec. 14.
Door check, Hydraulic. D. J. Seaman, A. E. Wood, and C. A. Hathaway. 2,456,537, Dec. 14.
Door lock. L. R. Weeks. 2,456,229, Dec. 14.
Double throw switch. H. W. Graybill. 2,456,502, Dec. 14.
Draft control means for fuel burners. W. S. Landon. 2,456,131, Dec. 14.
Drill support and driving mechanism, Mine. L. J. Fellay and H. H. Kavanaugh. 2,456,056, Dec. 14.
Drum, Barking. B. Branch. 2,456,365, Dec. 14.

Drying compositions, Synthetic. S. O. Greenlee. 2,456,408, Dec. 14.
Drying of sodium nitrite to obtain a relatively noncaking granular form. D. R. Duncan. 2,456,393, Dec. 14.
Drying textiles, Process and apparatus for. P. L. and F. T. Miller. 2,456,301, Dec. 14.
Dyeing nylon-acetate mixed fabric with 3-nitro-4-amino-2'-chlorobiphenyl. J. G. Kern. 2,456,288, Dec. 14.
Dyestuffs and making the same, Gray vat. L. D. Lytle. 2,456,589, Dec. 14.
Edge finishing machine. T. W. Hart. 2,456,123, Dec. 14.
Ejector for vending machines, Article. M. Caruso. 2,455,976, Dec. 14.
Elastic snap ring fastener. J. S. Aber. 2,456,355, Dec. 14.
Electric drive, Continuously adjustable speed. P. J. McLaren, J. A. Vaughan, and M. Fry. 2,456,522, Dec. 14.
Electric fence wire fastener. A. E. Weber. 2,456,547, Dec. 14.
Electric heater. E. C. Adams. 2,455,967, Dec. 14.
Electric lighting. A. L. Arenberg. 2,456,166, Dec. 14.
Electric soldering iron. C. B. Sohns. 2,456,030, Dec. 14.
Electric switch. S. S. Grady. 2,455,927, Dec. 14.
Electrically controlled switch. O. I. Price. 2,455,947, Dec. 14.
Electrode for vacuum discharge apparatus. L. L. Winter. 2,456,099, Dec. 14.
Electrode structure for electron discharge tubes. E. K. Smith. 2,456,540, Dec. 14.
Electron-discharge device, Multielement. P. L. Spencer. 2,455,957, Dec. 14.
Electroplating apparatus. W. L. Grube. 2,456,185, Dec. 14.
Electro-servo system. J. W. Conklin. 2,455,979, Dec. 14.
Eliminator for high altitude oxygen apparatus, Inert gas. D. S. Martin, Jr., N. D. Nachtrieb, and J. E. Seegmiller. 2,456,606, Dec. 14.
Eliminator for seismic recording systems, Interference. R. P. Gilmore. 2,456,401, Dec. 14.
Embalming. T. C. Brogan, Jr. 2,456,108, Dec. 14.
Emulsion polymerization of 2-chloro-1,3-butadiene in the presence of tetraalkyl-diamino-diphenyl-methanes. R. S. Barrows. 2,456,243, Dec. 14.
Engine: *See*—
Combined internal-combustion and turbine engine. — Internal-combustion engine.
Entrapping condensation. A. O. Ackerman. 2,456,238, Dec. 14.
Equipment, Dust separator. E. F. Schoder. 2,456,329, Dec. 14.
Esters of benzenediacetic acids and their polymers, Unsaturated. H. C. Miller. 2,456,210, Dec. 14.
Esters of p-di(omega-hydroxyalkoxy) benzenes. E. O. Ramler. 2,456,318, Dec. 14.
Ethylene polymers, Curing. W. L. Alderson, Jr. 2,455,910, Dec. 14.
Exercising device. C. L. Heimbaugh. 2,456,412, Dec. 14.
Exercising machine, Polio. M. A. Park. 2,456,017, Dec. 14.
Fabrication of polytetrafluoroethylene articles. R. T. Fields. 2,456,262, Dec. 14.
Fastener: *See*—
Elastic snap ring fastener. — Shiftable rotary operative fastener.
Electric fence wire fastener.
Fastener clip. W. H. Churchill. 2,456,553, Dec. 14.
Feed composition, Animal. J. Kamlet and R. P. Reece. 2,456,515, Dec. 14.
Feeding attachment, Auxiliary. W. Johndrew. 2,456,126, Dec. 14.
Film, Nontacky synthetic. C. W. Cooper. 2,456,387, Dec. 14.
Filter: *See*—
Mechanical filter.
Filtering apparatus, Liquid. H. S. Manwaring. 2,456,292, Dec. 14.
Fish canning machine, Expandible tunnel. R. E. J. Nordquist. 2,455,944, Dec. 14.
Flooring, Rubber. W. E. Campaigne. 2,456,373, Dec. 14.
Fluid control valve. W. A. Ray. 2,456,084, Dec. 14.
Fluid controlled feathering means for propellers. H. D. Hurt. 2,456,510, Dec. 14.
Fluid heater. O. Muller. 2,456,564, Dec. 14.
Fluid pump. C. C. Buckner. 2,456,109, Dec. 14.
Fluids with comminuted solids, Treatment of. B. F. Wobker. 2,456,035, Dec. 14.
Flume for air laid wire. H. G. Jordan. 2,456,284, Dec. 14.
Fluorocarbon compound. J. H. Simons. 2,456,028, Dec. 14.
Fluorocarbons, Making. J. H. Simons. 2,456,027, Dec. 14.
Flushing device for douche syringes. W. R. Curry. 2,456,257, Dec. 14.
Focusing of cameras, Automatic. J. Rabinow. 2,456,317, Dec. 14.
Folding box. A. L. Jackson and H. A. Brown. 2,456,419, Dec. 14.
Folding dinette table. W. F. Woods. 2,456,037, Dec. 14.
Footrest and drainage for bathtubs. N. Clark. 2,456,174, Dec. 14.
4-amino-4-methylvaleroalkylamides and preparing them. G. H. Morey. 2,456,590, Dec. 14.
Franking machine, Postal. K. Oden. 2,456,309, Dec. 14.
Front post and windshield construction. K. E. Coppock and G. A. Smith. 2,456,175, Dec. 14.
Fuel supply system. F. Barfod. 2,456,603, Dec. 14.
Fuel supply system. F. Barfod and E. O. Wirth. 2,456,604, Dec. 14.
Fuel supply system. E. O. Wirth and F. Barfod. 2,456,605, Dec. 14.
Furnace, Metallurgical. C. E. Thomas, J. S. Felter, and H. J. Ness. 2,456,469, Dec. 14.
Fuse, Delay arming antidisturbance. J. Taylor. 2,455,958, Dec. 14.
Game board and playing pieces therefor. A. H. Wheeler. 2,456,098, Dec. 14.
Garment, Bust molding and uplifting. M. E. Wittner. 2,456,552, Dec. 14.
Garment, Self-adjusting. H. S. Heilbronner. 2,456,190, Dec. 14.
Garment supporting device for ironing boards. A. M. Harvey. 2,456,411, Dec. 14.
Gas generator. W. M. Buehl and C. B. Shepherd. 2,455,975, Dec. 14.
Gas turbine, Steam and combustion. P. Horsdal. 2,456,417, Dec. 14.
Gatherer for silage harvesters. H. G. Good. 2,456,404, Dec. 14.
Gauge: *See*—
Micrometer bore gauge.
Gear: *See*—
Steering gear.
Generator: *See*—
Acetylene generator. — Gas generator.
Adjustable generator.

Lighting standard, Street. H. J. Finer. 2,456,179, Dec. 14.
Lipstick dress protector. D. Evenwell. 2,455,986, Dec. 14.
Load breaking device, Electrical. P. B. Hoye. 2,455,998, Dec. 14.
Lock: *See*—
Door lock.
Locking and adjusting device. C. B. Kidney. 2,456,516, Dec. 14.
Locking device. R. S. Ward. 2,456,349, Dec. 14.
Locking device for rocking chairs. A. J. Belisle. 2,456,043, Dec. 14.
Locking device for the sliding members of extensible frames. D. A. Eberhardt. 2,456,054, Dec. 14.
Lubricants. J. G. Ford and R. N. Wenzel. 2,456,496, Dec. 14.
Lubricating device. H. L. Giwosky and P. Ketelsen. 2,456,270, Dec. 14.
Lubricating device for sewing machines. F. Parry. 2,456,591, Dec. 14.
Machine for and banding boxes. W. E. Grupe. 2,456,059, Dec. 14.
Machine for applying fasteners to web material. C. H. Lofgreen. 2,456,433, Dec. 14.
Machine for drilling capstan head screws. W. B. Burke. 2,456,245, Dec. 14.
Machine for machining arcuate surfaces. E. Barker. 2,456,041, Dec. 14.
Machine for producing screwthreads. A. Green. 2,456,407, Dec. 14.
Machine for the manufacture of metal grains. R. Morane and R. Martinet. 2,456,439, Dec. 14.
Magnetron. R. C. Schmidt. 2,455,952, Dec. 14.
Magnifying lens and punch or the like, Combination. H. L. Bowditch. 2,455,972, Dec. 14.
Manicure apparatus. N. C. Rebo. 2,456,022, Dec. 14.
Manual reset valve. E. Paille. 2,456,078, Dec. 14.
Marking device, Sextant. I. W. Doyle. 2,456,392, Dec. 14.
Measuring the electrical properties and surface characteristics of materials, Method of and apparatus for. M. Muskat and N. D. Coggeshall. 2,456,012, Dec. 14.
Mechanical filter. E. Seifert. 2,456,025, Dec. 14.
Metacresol-1,3,4-xylenol, Preparing. F. E. Cislak and M. M. Otto. 2,456,581, Dec. 14.
Meter: *See*—
Diesel engine air meter. — Hydrogen meter.
Metering system, Salinity. A. M. Feller. 2,456,117, Dec. 14.
Methylamines, Preparing. E. F. Smith. 2,456,599, Dec. 14.
Micrometer bore gauge. H. R. Forsmark. 2,456,497, Dec. 14.
Mill with discharge openings in the liner, Drum grinding. D. W. Gates. 2,456,266, Dec. 14.
Mixer: *See*—
Concrete feed and fertilizer mixer.
Modulator or employing trigger circuit. E. R. Shenk and A. Liguori. 2,456,026, Dec. 14.
Modulator, Wide band frequency. E. R. Shenk and A. Liguori. 2,456,089, Dec. 14.
Mold. C. C. Waterbury. 2,456,162, Dec. 14.
Molding machine, Injection. C. Jobst. 2,456,423, Dec. 14.
Molding of extensive articles, Step-by-step. J. A. Dorner. 2,456,113, Dec. 14.
Monitoring underwater echo range and bearing systems, Method and apparatus for. O. H. Schuck. 2,456,598, Dec. 14.
Monoazo compound, Chromed. W. Widmer. 2,456,230, Dec. 14.
Monomeric addition products of azobisformates and polyfluoroethylenes. R. D. Cramer. 2,456,176, Dec. 14.
Motor attachment for tractors. J. J. Pettipiece. 2,456,019, Dec. 14.
Motor control system, Electric. S. W. Herwald and H. M. Watson. 2,456,508, Dec. 14.
Motor control system, Electrical. E. L. C. White, M. G. Harker, and J. P. W. Houchin. 2,456,573, Dec. 14.
Motor fuel. A. I. Smith. 2,456,569, Dec. 14.
Motor protective device. G. B. Starie. 2,456,463, Dec. 14.
Mount, Camera lens. I. W. Doyle. 2,456,053, Dec. 14.
Mounting: *See*—
Rearview mirror mounting. — Valve mounting.
Semirimless opthalmic mounting.
Muffler for internal-combustion engines. G. V. Johnson. 2,456,512, Dec. 14.
Muffler, Wet-type water-separating steam-inhibiting exhaust. G. Wohlberg. 2,455,965, Dec. 14.
Multiple spark circuit. F. W. Ofeldt. 2,456,076, Dec. 14.
N-alkyl polymeric amic acids and coating compositions containing them. M. E. Cupery. 2,456,177, Dec. 14.
N'-dodecanoylsulfanilamides. M. E. Hultquist and E. H. Northey. 2,456,051, Dec. 14.
N-methyl aniline, Making. E. C. Hughes. 2,455,931, Dec. 14.
Nailing machine. G. E. Stilwell and G. C. Paxton. 2,456,221, Dec. 14.
Nitriles from certain olefins and HCN, Production of. C. R. Harris and W. W. De Atley. 2,455,995, Dec. 14.
Nitrohydroxy compounds, Production of. H. B. Haas and J. F. Bourland. 2,456,585, Dec. 14.
Nonmetallic bodies, Metallizing. L. Pessel. 2,456,082, Dec. 14.
Nonskid device applier and remover. D. F. Miller and F. Pusiecki. 2,456,438, Dec. 14.

Nozzle with automatic cutoff, Dispensing. D. Biermann. 2,456,044, Dec. 14.
Oil composition, Soluble. R. M. Koppenhoefer. 2,456,587, Dec. 14.
Opener, Can. W. J. Noblett. 2,456,307, Dec. 14.
Opener, Envelope. E. C. Metzger. 2,456,436, Dec. 14.
Optical transmission filters by thermal evaporation, Making. M. H. Axler and K. F. Tripp. 2,456,241, Dec. 14.
Organo-silicones, Preparing. J. F. Hyde. 2,455,999, Dec. 14.
Ornament, Head. C. Arkus. 2,456,167, Dec. 14.
Oscillator, Electromechanical. M. Morrison. 2,456,442, Dec. 14.
Oscillator, High-frequency. E. G. James. 2,456,422, Dec. 14.
Oscillator, Keyed. R. P. Owen. 2,456,016, Dec. 14.
Oscillator, Keyed. F. B. Wilson. 2,456,550, Dec. 14.
Overload responsive system for controlling feed and operation of crushing apparatus. R. C. Newhouse. 2,456,074, Dec. 14.
Pack carrier. G. E. Bushey. 2,456,253, Dec. 14.
Pad: *See*—
Knee pad.
P-amino phenyl-p'-amino pyridyl sulfone and making the same. M. Dobrn and O. Lauberean. 2,456,258, Dec. 14.
Packsack. A. C. Bernau. 2,456,247, Dec. 14.
Package and display, Hardware. R. C. Seyforth. 2,456,332, Dec. 14.
Package, Carboy. O. Z. Brewer. 2,456,107, Dec. 14.
Packing gasket and static seal. J. S. Aber. 2,456,356, Dec. 14.
Paraformaldehyde compositions. J. F. Walker. 2,456,161, Dec. 14.
Parking stand and mounting therefor. F. W. Schwinn. 2,456,536, Dec. 14.
Partition structure, Interlocking. T. Carrozza. 2,456,049, Dec. 14.
Peeling machine having rotary radial cutter blades with fan portions, Coconut. O. G. Rieske. 2,456,446, Dec. 14.
Pen. A. Winter. 2,455,964, Dec. 14.
Pen, Fountain. J. W. Welsh. 2,456,602, Dec. 14.
Permutation ignition switch. G. F. Miller. 2,456,010, Dec. 14.
pH of synthetic elastomer latices, Adjusting the. H. K. Livington. 2,456,069, Dec. 14.
Phenol by catalytic oxidation of benzene, Production of. C. H. Schlesman, W. I. Denton, and R. B. Bishop. 2,456,597, Dec. 14.
Photochlorination of acetylene. O. W. Cass. 2,456,173, Dec. 14.
Pigment compositions. B. C. Pratt. 2,456,313, Dec. 14.
Pipe coupling. W. H. J. Brock. 2,456,045, Dec. 14.
Pipe, Irrigation, and constructing same. A. Giannopulos. 2,456,400, Dec. 14.
Pipe union for air compressors. R. E. Lamberton. 2,456,200, Dec. 14.
Plastic cork composition, Making a. J. Ehrlich. 2,455,921, Dec. 14.
Plug: *See*—
Ignition plug.
Plug and socket, Electrical. L. Weiner and B. I. Bell. 2,456,548, Dec. 14.
Plug receptacle. H. Hubbell. 2,455,930, Dec. 14.
Polyallyl amine and related polymeric amines. J. H. Parker. 2,456,428, Dec. 14.
Polyamides plasticized with a mixture of phenol and ester type plasticizers. G. T. Vaala. 2,456,344, Dec. 14.
Polychloroprene compositions, Self-curing. L. S. Bake. 2,455,911, Dec. 14.
Polyesters of mercaptodicarboxylic acids with dihydric alcohols, Saturated linear. B. C. Pratt. 2,456,314, Dec. 14.
Polymerization. D. A. Swedlow. 2,456,093, Dec. 14.
Polymerization of olefinic hydrocarbons, Catalytic. J. J. Stadtherr. 2,456,338, Dec. 14.
Polymerization of styrene and related compounds. S. E. Glick. 2,456,558, Dec. 14.
Polymers from carbylamine and carboxylic compounds, Production of. H. Dreyfus. 2,455,983, Dec. 14.
Polymers of trifluoroethylene and obtaining them. D. D. Coffman and T. A. Ford. 2,456,255, Dec. 14.
Polyvinyl acetal compositions, Plasticized. B. C. Bren and J. O. White. 2,456,366, Dec. 14.
Polyvinyl acetal resin compositions. R. H. Hunt. 2,456,413, Dec. 14.
Polyvinyl alcohol coatings, Gelling of. W. G. Lowe. 2,455,936, Dec. 14.
Polyvinyl alcohol coatings, Preparation of hardened. W. G. Lowe. 2,455,937, Dec. 14.
Portable electric tool. E. P. Turner and R. Happe. 2,456,571, Dec. 14.
Poultry house. J. D. Burkholder, Jr. 2,456,489, Dec. 14.
Power transmission. T. Iavelli and V. E. Matulaitis. 2,455,933, Dec. 14.
Power transmission. C. A. Neracher, W. T. Dunn, T. Iavelli, and A. J. Syrovy. 2,455,943, Dec. 14.
Preparation and isolation of ethylene chlorohydrin. C. Weizmann. 2,456,350, Dec. 14.
Preparing nordihydroguaiaretic acid and intermediates. G. P. Mueller, E. T. Stiller, and S. V. Lieberman. 2,456,443, Dec. 14.
Prerinsing apparatus for container washers. E. R. Alling and J. C. Knepflar. 2,456,040, Dec. 14.
Pressing machine tail clamp. O. H. Pearson. 2,456,145, Dec. 14.
Pressure cooker cover structure. W. C. Lueneburg. 2,456,134, Dec. 14.
Pressure sheeting of dough. J. Buechek. 2,456,371, Dec. 14.
Prevention of siliceous deposits in hydrocarbon conversion processes. P. M. Waddill. 2,456,348, Dec. 14.
Printing machine. J. H. Gruver and H. A. Seeley. 2,456,273, Dec. 14.
Prism system and prism system mount for optical viewing instruments. B. T. Maxwell. 2,456,521, Dec. 14.
Process and paste for printing fabrics made of cellulose, such as textile fabrics, paper and the like, with chromium mordant dyestuffs. E. Tschan. 2,456,471, Dec. 14.
Producing commercial castings. R. Neiman. 2,456,424, Dec. 14.
Producing electrodeposited nickel strip containing boron. M. P. Buck. 2,456,370, Dec. 14.
Production of organic mercaptans. A. Loverde. 2,456,588, Dec. 14.
Projection apparatus and diapositive adjustment means, Photogrammetric. J. V. Sharp and O. W. Boughton. 2,456,333, Dec. 14.
Projection apparatus, Visual inspection. R. D. McDill. 2,456,296, Dec. 14.
Projector for game boards, Spring-actuated. L. Colaluca. 2,455,978, Dec. 14.
Projector lamp housing and cooling system therefor. O. R. Nemeth. 2,456,530, Dec. 14.
Projector, Motion-picture. R. A. Clapp. 2,455,918, Dec. 14.
Propelling device. H. M. Morrill. 2,456,440, Dec. 14.
Protective system for electric motors. H. S. Ogden. 2,456,427, Dec. 14.
Protector: *See*—
Bolt protector. Lipstick dress protector.
Protector for the doors of vehicles. R. W. Tadd. 2,456,157, Dec. 14.
Protein hydrolysis. D. Melnick. 2,456,297, Dec. 14.
Pump: *See*—
Fluid pump.
Pump. G. E. Peters and L. E. Russell. 2,455,946, Dec. 14.
Pump and impeller therefor. J. S. Kessler. 2,456,128, Dec. 14.
Pump construction. D. B. Stricklin. 2,456,339, Dec. 14.
Pump control system, Oil well. G. A. Smith. 2,456,456, Dec. 14.
Pump for clearing water traps. R. Storevik. 2,456,092, Dec. 14.
Pump for gaseous working fluids. R. Lipscomb. 2,456,133, Dec. 14.
Pumping system, Pneumatic. C. Yeomans. 2,456,574, Dec. 14.
Purification of diaryl monosulfides. E. E. Gilbert and H. D. Segool. 2,456,500, Dec. 14.
Purification of tetrachlorethylene. W. C. Greenwald. 2,456,184, Dec. 14.
Rack: *See*—
Tie rack.
Rack for automobiles, Clothes. J. E. Mogan. 2,456,303, Dec. 14.
Radiating horn. J. R. Risser and R. J. Wlodkowski. 2,456,323, Dec. 14.
Radio testing system, Frequency modulated. R. L. Harvey. 2,455,996, Dec. 14.
Razorstrop composition. W. O. Flatt. 2,456,263, Dec. 14.
Reaction product of n-substituted polyamides with hydroxylated materials and obtaining same. B. Graham. 2,456,271, Dec. 14.
Rearview mirror mounting. R. Daon. 2,455,919, Dec. 14.
Receptacle: *See*—
Plug receptacle.
Receptacle closure means. G. Keith. 2,456,560, Dec. 14.
Recording liquid dispenser. H. R. Wheeler and J. A. Kofalt. 2,455,962, Dec. 14.
Recovering olefins from a hydrocarbon stream. A. A. Draeger. 2,456,260, Dec. 14.
Reed for wind instruments, Perforated. J. Miller. 2,456,299, Dec. 14.
Reed for wind instruments, Reversible. J. Miller. 2,456,298, Dec. 14.
Reel: *See*—
Clothesline reel. Thread advancing reel.
Refining of inositol solutions. M. J. Thomas. 2,456,470, Dec. 14.
Refrigeration unit with controls therefor, Cascade. H. C. Cooper. 2,456,386, Dec. 14.
Regulating system, Current. R. W. Holman. 2,455,997, Dec. 14.
Regulator: *See*—
Voltage regulator.
Regulator. L. M. Patrick. 2,456,212, Dec. 14.
Relay, Differential. J. Stoecklin. 2,456,541, Dec. 14.
Relay, Electrical. A. E. Dodd. 2,456,112, Dec. 14.
Relay yoke. F. E. Wood. 2,456,036, Dec. 14.
Remote-control adjustable mirror. F. J. Aves. 2,456,362, Dec. 14.
Removing incrustations from lead anodes used for chromium plating. J. Hyner. 2,456,281, Dec. 14.
Repeater, Voice operated antisinging. F. J. Biltz. 2,455,914, Dec. 14.
Resin-bonded composite product, Manufacturing a. W. R. Hickler. 2,456,006, Dec. 14.

Resin for stabilizing textiles, Aqueous urea formaldehyde. P. S. Hewett. 2,456,191, Dec. 14.
Resins and making, Complex. H. L. Allen and E. G. Kerr. 2,456,357, Dec. 14.
Resins and making, Thermoplastic. H. L. Allen and E. G. Kerr. 2,456,358, Dec. 14.
Resins prepared by condensing sulfophthalic anhydride and xylene, Cation-exchange. S. P. Rowland. 2,456,085, Dec. 14.
Resistor, Low torque toroidal. G. M. Giannini. 2,456,261, Dec. 14.
Retarder, Thermal. C. M. Osterheld. 2,456,142, Dec. 14.
Retreading device, Tire. H. V. James. 2,456,063, Dec 14.
Reverse flow by-pass valve. N. Plank. 2,456,566, Dec. 14.
Ridge blocker, Irrigation. K. D. Priestley. 2,456,083, Dec. 14.
Rifle, Gas operated automatic. A. V. Ljutic. 2,456,290, Dec. 14.
Rig, Fishing. R. P. Caruso. 2,456,254, Dec. 14.
Riveter, Automatic multiple. W. Johndrew. 2,456,125, Dec. 14.
Riveting machine. W. Johndrew. 2,456,127, Dec. 14.
Rod bender. P. L. Perazzo. 2,456,532, Dec. 14.
Rolling baking dough. J. Buechek. 2,456,372, Dec. 14.
Rubber, Treatment of. W. Scott. 2,456,154, Dec. 14.
Safety device for firearms. L. P. Gaugler. 2,455,990, Dec. 14.
Sanding machine. L. L. Rothrock. 2,456,217, Dec. 14.
Screen: *See*—
Glare screen. Gyratory screen.
Screen with rubber-covered cylindrical clamping means, Rod deck. R. C. Newhouse. 2,456,075, Dec. 14.
Seal, Well-head. A. J. Penick. 2,456,081, Dec. 14.
Sealing device. J. Naab. 2,456,529, Dec. 14.
Sealing means, Member. L. A. Kempton. 2,456,066, Dec. 14.
Secondary alkyl(secondary)amino alcohol esters of aryl-substituted aliphatic acids. A. C. Cope. 2,456,555, Dec. 14.
Secondary-alkyl(secondary)amino alcohol esters of para-dialkyl amino benzoic acid. A. C. Cope. 2,456,556, Dec. 14.
Sectional type boiler. W. S. Anderson, Jr. 2,456,239, Dec. 14.
Securing a canvas to a frame. C. E. Thomas. 2,456,225, Dec. 14.
Securing device. M. H. Abramson. 2,456,039, Dec. 14.
Seed potato cutter. W. Burns. 2,456,172, Dec. 14.
Selective propulsion means for amphibious craft. M. B. Anderson. 2,456,478, Dec. 14.
Self-loading vehicle. O. F. Manthie. 2,456,434, Dec. 14.
Semirimless ophthalmic mounting. S. Markell. 2,456,293, Dec. 14.
Separating 2,4 lutidine and 2,5 lutidine. F. E. Cislak and M. M. Otto. 2,456,377, Dec. 14.
Separation of isometric xylenols. F. E. Cislak and M. M. Otto. 2,456,582, Dec. 14.
Separator: *See*—
Centrifugal separator.
Continuous sediment separator.
Servomotor, Fluid pressure. R. M. Nardone. 2,456,211, Dec. 14.
Setback means for pumping units. E. W. Patterson. 2,456,531, Dec. 14.
Sharpener, Lawn mower. O. G. Craver, Sr. 2,456,389, Dec. 14.
Sheet insulating materials, Composite bonded. W. A. Boughton, C. L. Dawes, and W. R. Mansfield. 2,456,251, Dec. 14.
Shield for telephone transmitters, Sound. P. S. Veneklasen. 2,456,346, Dec. 14.
Shiftable rotary operative fastener. F. E. Johnson. 2,456,559, Dec. 14.
Shock-absorbing device for pivots of watch balance staffs. A. Marchand. 2,456,071, Dec. 14.
Shoe support. K. W. Macdonald. 2,456,135, Dec. 14.
Sight for firearms, Peep. B. Poe. 2,456,214, Dec. 14.
Signal: *See*—
Direction signal.
Signal and circuits therefor, Directional. B. F. Bailey. 2,456,242, Dec. 14.
Signal device, Commercial phonograph. L. P. Petruschell. 2,456,392, Dec. 14.
Signal device, Low brake pressure. J. D. Kennelly. 2,456,286, Dec. 14.
Silver brazing alloy containing indium. J. F. Polak. 2,456,593, Dec. 14.
Sink. M. J. Just. 2,456,065, Dec. 14.
Sintering ores, Art of. R. L. Manegold and I. H. Wynne. 2,456,136, Dec. 14.
Siren top. O. Thoresen. 2,456,341, Dec. 14.
Ski brake. C. Jonette. 2,456,002, Dec. 14.
Ski pole. J. Magder. 2,456,205, Dec. 14.
Slabbing cakes. J. H. Sauter and J. E. Byrne. 2,456,327, Dec. 14.
Soap composition, Nondusting, and making same. G. D. Miles. 2,456,437, Dec. 14.
Socket, Lamp. G. H. Goble. 2,456,501, Dec. 14.
Sodium catalyst and preparation thereof, Supported. G. A. Mills. 2,456,525, Dec. 14.
Solenoid and plunger, Nonchattering alternating current. H. Y. Fisher. 2,456,394, Dec. 14.
Solution of linear simultaneous equations, Automatic. G. W. Brown. 2,455,974, Dec. 14.
Sound translating head, Magnetic. L. B. Cornwell. 2,456,388, Dec. 14.
Spectrometer system, Mass. A. Nier and E. P. Ney. 2,456,426, Dec. 14.
Split roll for briquetting machines or the like. G. M. Dallas and B. M. Fine. 2,455,980, Dec. 14.
Stabilization of polyvinyl butyral resins. G. S. Stamatoff. 2,456,462, Dec. 14.
Stabilizer for moineau pumps, Coupling. J. B. Wade. 2,456,227, Dec. 14.
Stabilizing inorganic oxide gels against wetting. E. A. Bodkin and J. W. Payne. 2,456,577, Dec. 14.
Stabilizing inorganic oxide gels against wetting. E. A. Bodkin and J. W. Payne. 2,456,578, Dec. 14.
Stabilizing treating of inorganic oxide gels against wetting. E. A. Bodkin and J. W. Payne. 2,456,576, Dec. 14.
Stall cock for milking machines. W. H. Harstick. 2,456,276, Dec. 14.
Stanchion connection. D. E. Austin. 2,456,480, Dec. 14.
Sand: *See*—
Display stand.
Stationary cutter with rotary drum feed for cutting sugar cane into seed lengths. R. J. Moyle. 2,456,528, Dec. 14.
Steam-press iron and steam baffle and separator therefor. F. Busch and A. J. Nelson. 2,456,490, Dec. 14.
Steering gear. W. K. Creson and R. H. Jordan. 2,456,390, Dec. 14.
Sterile distribution and drawoff system. R. H. Schneider. 2,456,152, Dec. 14.
Stop motion for looms, Pick controlled. C. W. Howell and G. L. Elderbaum. 2,456,193, Dec. 14.
Stop motion mechanism for narrow fabric looms. W. Pruitt. 2,456,021, Dec. 14.
Storm window, Inside. M. W. Berghoff. 2,456,486, Dec. 14.
Stove for burning liquid fuel and burner control mechanism therefor, Portable. B. Robinson. 2,455,950, Dec. 14.
Strap, Safety wrist watch. H. R. Read. 2,456,319, Dec. 14.
Stretcher carrier for ambulances, Foldable. E. L. Schofield. 2,456,024, Dec. 14.
Stripping of spent catalyst in hydrocarbon conversion processes. D. Read, Jr. 2,456,148, Dec. 14.
Stroboscopic projector of the continuously moving film type. J. Brosius, Jr. 2,456,487, Dec. 14.
Structure for aircraft, Wing-tip float. G. A. Smith. 2,455,955, Dec. 14.
Stylus construction. B. B. Bauer. 2,455,913, Dec. 14.
Support: *See*—
Curtain rod support. Universal indicator support.
Jack support.
Shoe support.
Support for electric wiring, Insulating. H. Dorjée. 2,456,259, Dec. 14.
Supported aluminum chloride catalysts, Preparation of. W. H. Rupp and C. T. Harding. 2,456,326, Dec. 14.
Supporting device. L. M. Mocnik. 2,456,302, Dec. 14.
Supporting structure, Folding stool. R. B. Long. 2,456,519, Dec. 14.
Surface active agents, Production of. B. S. Friedman and G. L. Hervert. 2,456,119, Dec. 14.
Surgical table. M. G. Heitz-Boyer. 2,456,277, Dec. 14.
Suspension hook. C. H. Carter. 2,456,374, Dec. 14.
Switch: *See*—
Double throw switch. Permutation ignition switch.
Electric switch.
Electrically controlled switch.
Switch box holder. J. L. Sauter. 2,456,450, Dec. 14.
Switch control means for slicing machines. M. Brustowsky. 2,456,369, Dec. 14.
Switching device, Remote control. D. G. Crowley. 2,456,256, Dec. 14.
Synthesis of chloral. T. H. Vaughn. 2,456,545, Dec. 14.
Synthesis of riboflavin. L. A. Flexser and W. G. Farkas. 2,456,395, Dec. 14.
Synthesizing carbazole. F. E. Cislak and A. L. Kranzfelder. 2,456,378, Dec. 14.
Synthetic resins, Continuous process for the manufacture of. H. G. Houlton. 2,456,192, Dec. 14.
Syringe, Hypodermic ampoule. G. E. Jones. 2,456,001, Dec. 14.
Table: *See*—
Automobile service table. Surgical table.
Folding dinette table.
Table construction. W. A. Hillenbrand. 2,456,415, Dec. 14.
Tacker. K. F. Morberg. 2,456,526, Dec. 14.
Tampons, Manufacture of absorbent. H. Ganz. 2,455,925, Dec. 14.
Tape advancing and retracting means. F. W. Heyel. 2,456,414, Dec. 14.
Target machine, Moving. N. Suydam. 2,456,034, Dec. 14.
Telemetering apparatus. F. G. Patterson and M. W. Sims. 2,456,430, Dec. 14.
Tennis racket. I. L. Rosenbalm. 2,456,023, Dec. 14.
Terminal member. C. J. Foster. 2,456,118, Dec. 14.
Tetramethylethylene oxide, Polymerized. T. L. Cairns and R. M. Joyce, Jr. 2,455,912, Dec. 14.
Textile treating resins. M. J. Scott and S. H. Rider. 2,456,568, Dec. 14.

Textile wax compositions. G. D. Jefferson. 2,456,283, Dec. 14.
Thermal-stretching apparatus for yarn. R. F. Conaway. 2,456,384, Dec. 14.
Thermometer and thermostatically operable electric signaling device. E. F. Inwanski. 2,456,062, Dec. 14.
Thread advancing reel. W. H. Furness. 2,456,120, Dec. 14.
Thread feed arresting device. J. T. Gordon and R. E. Solliday. 2,456,406, Dec. 14.
Tie rack. G. S. Moore. 2,456,527, Dec. 14.
Tie rod joint seal. A. Venditty. 2,456,546, Dec. 14.
Time controlled valve. P. B. Drane and C. D. Laidley. 2,456,493, Dec. 14.
Time delay electronic apparatus, Variable. D. E. Sunstein. 2,456,466, Dec. 14.
Time zone watch. I. Gulden. 2,456,122, Dec. 14.
Timing device. E. S. Peterson. 2,456,018, Dec. 14.
Tire antiskid device, Vehicle. J. Turner. 2,456,473, Dec. 14.
Toaster. H. F. Malone. 2,456,291, Dec. 14.
Toggle clamp. J. W. Wood. 2,456,100, Dec. 14.
Toilet, Ventilated. A. P. Riedele. 2,456,534, Dec. 14.

Ventilator. C. Davies. 2,456,391, Dec. 14.
Ventilator. B. K. Paget. 2,456,311–12, Dec. 14.
Ventilator. H. F. Tideman. 2,456,340, Dec. 14.
Vinyl resin, Stabilized. H. F. Park. 2,456,565, Dec. 14.
Visor document clip. R. E. Krogh. 2,456,129, Dec. 14.
Voltage regulator. C. N. Keller. 2,455,935, Dec. 14.
Washer: *See*—
  Diaper washer.
Washer, Sealing. G. H. Dowty. 2,455,982, Dec. 14.
Water heater. T. C. Fife. 2,455,988, Dec. 14.
Water heater. C. M. Osterheld. 2,456,143–4, Dec. 14.
Water-repellency composition, Solid. C. T. Rood. 2,456,595, Dec. 14.
Water temperature, Method and apparatus for regulating. J. A. Victoreen. 2,456,094, Dec. 14.
Well swab. R. A. Wilson. 2,456,551, Dec. 14.
Wheel drive and control for tool carriages, Electric motor powered. R. W. and C. L. Reid. 2,456,444, Dec. 14.
Wheel mounting holder. W. E. Schultz. 2,455,953, Dec. 14.
Wire-bending machine. J. L. and W. C. Wolf. 2,456,353, Dec. 14.
Wire tying mechanism. J. R. West and F. D. Jones. 2,456,476, Dec. 14.
Work positioning means for heel nailing machines. W. R. Goodwin. 2,456,405, Dec. 14.
X-ray equipment. B. F. Wehmer. 2,456,096, Dec. 14.
X-ray tube sighting device. T. R. Hawks. 2,455,928, Dec. 14.

CLASSIFICATION OF PATENTS

ISSUED DECEMBER 14, 1948

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number = class, second number = subclass, third number = patent number

1—	8.1: 2,456,221	38—	61: 2,456,385	90—	16: 2,456,041	136—	133: 2,456,477	177—	311: 2,456,286	219—	38: 2,456,057

DECISIONS IN PATENT AND TRADE-MARK CASES

Supreme Court of the United States

MANDEL BROS., INC., *v.* WALLACE

No. 16. Decided November 8, 1948

[— F.2d —; 79 USPQ 220]

1. CERTIORARI.
The Supreme Court of the United States grants certiorari to resolve conflict between the United States Court of Appeals for the Seventh Circuit which held claims of Wallace and Hand patent, No. 2,236,387, valid, and the United States Court of Appeals for the Second Circuit which held the claims invalid.

2. PATENTABILITY—INVENTION—ROUTINE EXPERIMENTATION.
Held that skillful experiments in a laboratory in cases where the principles of the investigation are well known, and the achievements of the desired end require routine work rather than imagination, do not involve invention.

3. SAME—SAME—NEW USE.
Where the patentees merely applied an old process of inhibition to a new cosmetic use, *Held* this is not invention.

ON WRIT of certiorari to United States Court of Appeals for the Seventh Circuit.

REVERSED.

Leonard S. Lyon (*Thomas H. Sheridan* on the brief) for petitioner.

Charles J. Merriam (*Bernard A. Schroeder* on the brief) for respondent.

MR. JUSTICE BLACK delivered the opinion of the Court.

[1] The respondent, owner of Wallace and Hand patent, No. 2,236,387, filed a complaint against this petitioner for infringement of claims 1 to 6, 8 to 13, 15 and 16. The district court held the claims invalid for want of patentable invention and dismissed the complaint. 67 F. Supp. 814 [70 USPQ 312]. The United States Court of Appeals for the Seventh Circuit held the claims valid and reversed. 164 F.2d 861 [76 USPQ 347]. The United States Court of Appeals for the Second Circuit had previously affirmed a district court's invalidation of the same patent. *Wallace* v. *F. W. Woolworth Co.*, 45 F. Supp. 465 [53 USPQ 620]; 133 F.2d 763 [56 USPQ 488]. To resolve the conflict we granted certiorari.

The patent is for an "improved" cosmetic preparation to retard or inhibit perspiration. Prior to application for the patent (1938), many antiperspirants were on the market containing acid salts of a metal, usually aluminum chloride or aluminum sulfate. The acidity produced by these acid-reacting salts is an astringent which retards perspiration. But, as stated in the patent specifications, the acid sometimes irritates the skin and also rots clothing to which the acid may adhere, particularly when that clothing is heated by ironing. Thus in the old antiperspirants the astringent qualities of the acid were desirable because essential to their effectiveness in retarding perspiration; on the other hand, the skin irritating and cloth corroding qualities of the acid were obviously undesirable. This was the problem as posed by the patent application.

The patent specifications asserted and the district court found that though standard alkalies would neutralize and thus reduce acidity and consequent skin irritation and cloth corrosion, these alkalies would by neutralizing acidity also reduce the astringency essential to check perspiration. The claimed discovery of the patent is in adding to the old acid-salts cosmetics certain types of the reactive amino chemical group, particularly urea. This addition, the patentees asserted, results in an improved compound which checks perspiration but neither irritates the skin nor corrodes the clothing.

The district court found that the addition of urea to the older preparations greatly reduced whatever likelihood there had been that application of the preparation would irritate skin [1] or corrode garments. It found that the patentees were the first persons to use urea as a corrosion inhibiting agent in an antiperspirant. But the district court also found that prior to the patentees' alleged discovery the use of urea as an anticorrosive agent was already a matter of public knowledge, and that it had previously been used as a corrosion inhibitor in compounds other than antiperspirants. As a consequence of these findings, the district court held

[1] Petitioner points out that the district court in the Woolworth case found the evidence before it inadequate to show that the old preparations had resulted in substantial skin irritation and urges a like inadequacy of evidence here. But the district court here found that "the astringent materials may attack the skin of sensitive individuals" and that "a residue remained which sometimes irritated the skin."

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $19.50; single numbers, 35 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 25 cents each; copies of TRADE-MARKS and DESIGNS at 10 cents each. Address orders to the Commissioner of Patents, Washington 25, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or TRADE-MARKS will be sent without cost on request to the Commissioner of Patents, Washington 25, D. C.

the patent invalid. The district court and the United States Court of Appeals in the case of *Wallace* v. *F. W. Woolworth Co.*, supra, had held the patent invalid for the same reason.

Long prior to this patent, it was generally recognized in the chemical field that urea would react with acids, bases, and salts to produce new substances. Urea had been in general use wherever these results were desirable for chemical stabilizations. And respondent concedes that before application was made for this patent it was commonly known, at least by chemists, that urea would react with acids in a manner which would reduce their corrosiveness. These facts are made clear by this record, by the opinions of the four courts that considered this patent, and by their discussions of the prior patents relied on by the respondent here.

Prior patents (Schupphaus, No. 514,838, and Koch, No. 2,011,292) had suggested use of urea as a stabilizer against decomposition of chemical combinations into deleterious acidic substances. It may be assumed that these patents standing alone would not have taught these patentees to experiment with urea to solve their cosmetic problem. They do, however, show the state of the prior art and point to the possibility of using urea to inhibit unwanted decomposition of substances containing acid or acid salts. Indeed, Koch dealt with the addition of urea to aluminum salts. And Missbach, in No. 2,069,711, proposed to protect clothes from the deleterious effects of dry cleaning fluids by the use of urea to prevent injury due to acidic substances brought about by acidic reactions of carbon tetrachloride. He claimed his invention provided "an effective corrosion inhibitor."

Shipp patent, No. 2,174,534, pointed out that "certain uses of sulfuric acid are so advantageous that endeavors have been made to so treat textiles with sulfuric acid as to obtain the desired effects but to avoid the undesirable effects." The undesirable result Shipp wanted to eliminate was the "marked degrading or disintegrating effect on cellulose fibers" of "strong sulfuric acid." He therefore proposed use of an agent "capable of inhibiting or at least greatly retarding the normal degrading action of strong sulfuric acid upon cellulose." The "inhibiting" agent there proposed was urea or other materials such as "an amide alone or an amide and an amine . . ." The corrosion "inhibiting" agents here are amino groups which include urea.

Respondent contends that the Shipp patent is irrelevant. He urges that the Shipp preparation merely retards corrosion on cloth whereas respondent's stops corrosion completely. He also points out that Shipp dealt with sulfuric acid and not an acid salt as is involved in this patent. He argues that the teachings of the Shipp and other patents would not have led a chemist skilled in his art to undertake the experiment which eventuated in the success of these patentees. He takes this position because in the use of alkalies and even of urea with plain acids, the acids did not retain their full effectiveness as antiperspirants. The natural conclusion of a chemist, he argues, would have been that urea would result in the same failure if combined with the acid salts involved in his patent. But it did not. Urea combined with acid salts brought about the desired result. This result he therefore contends was a "paradoxical" one, unpredictable by a skilled chemist. Consequently, he says, the discovery rose to the level of patentable invention.

[2] But we think that the state of the prior art was plainly sufficient to demonstrate to any skilled chemist searching for an anticorrosive agent that he should make the simple experiment that was made here. The patentees knew that urea was in general use as a stabilizing agent with acid and salts. Moreover, the patentees knew that standard alkalies had been successfully employed in prior patents for their anticorrosive effect. It is not surprising therefore that after experimenting with various standard alkalies in an effort to find a corrosion inhibitor that would not greatly reduce acidic astringency, the patentees promptly turned to urea. Their success was immediate. As the United States Court of Appeals for the Second Circuit pointed out when this patent was before it [56 USPQ at 490]: ". . . skillful experiments in a laboratory, in cases where the principles of the investigation are well known, and the achievement of the desired end requires routine work rather than imagination, do not involve invention." These established principles of law would dispose of the case except for the position taken by the United States Court of Appeals in this case that the cosmetic problem here was remote and unrelated to the problems considered in the prior art. For this reason that court held that patentees in the field of cosmetics were not bound by prior art knowledge disclosed by the Shipp and other patents. The court therefore considered this patent almost as though patentees were writing on a clean sheet. Accordingly it held that the use of urea in the cosmetics field with the results here obtained was patentable invention.

[3] In this the court was in error. As we have pointed out, the general store of chemical knowledge in 1938 was such that anyone working on any problem of acidic corrosion and irritation would naturally and spontaneously have tried urea. All that these patentees did was to utilize in a cosmetic preparation, publicly available knowledge that urea would inhibit acidic corrosion. The step taken by the patentees in advance of past knowledge was too short to amount to invention. They merely applied an old process of inhibition to a new cosmetic use. This is not invention. *Dow Chemical Co.* v. *Halliburton Oil Well Cementing Co.*, 324 U. S. 320, 327 [64 USPQ 412, 415].

REVERSED.

MR. JUSTICE DOUGLAS affirms the judgment on the authority of *Funk Bros. Seed Co.* v. *Kalo Inoculant Co.*, 333 U. S. 127, 131 [76 USPQ 280, 281, 282], which was decided after the decision of the court of appeals in this case.

2,432,987.—*Robert V. Garner*, Westwood, Mass. COVERING FOR FLOORS. Patent dated Dec. 23, 1947. Disclaimer filed Nov. 10, 1948, by the assignee, *Bird & Son, Inc.*

Hereby enters this disclaimer to claims 1 and 2 of said patent.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

American Cyanamid Company has placed the following 49 patents on the Register of Patents as available for license on reasonable terms. Inquiries concerning licenses should be addressed to American Cyanamid Company, 1937 West Main St., Stamford, Conn.

Pat. 2,156,626. PHOTOGRAPHIC DEVELOPING MEDIUM PRODUCING FINE GRAIN RESULTS. Patented May 2, 1939. A watery solution of an alkali metal halide, a protective colloid, and silver nitrate are subjected to actinic light, after which a further solution of p-phenylenediamine, glycine, and metol is added. The mixture is allowed to stand, and the precipitate formed is removed by filtration. The final clear amber-colored solution that remains is a finished product which may be used for developing all kinds of film, including slow and fast panchromatic, motion picture positive, etc. The developer is used full strength, is light stable and does not have to be stored in brown bottles, keeps for months, may be used and re-used, and is relatively insensitive to temperature. Group 28—89. Reg. No. 14,781.

Pat. 2,165,166. BLUE PRINT COATING. Patented July 4, 1939. Reg. No. 14,782.

Pat. 2,172,319. BLUE PRINT COATING. Patented Sept. 5, 1939. Reg. No. 14,783.

In these two patents high quality line drawing blueprint reproductions developed at high speed are obtained from coatings to which strong base sensitizers have been added. The sensitizers used are compounds of amidine carbonates and quaternary ammonium compounds incorporated in a liquor of sodium ferricyanide and sodium ferrocyanide. Several examples of the sensitizers are given in the patents, effective examples of which are guanidine carbonate (Pat. 2,165,166) and trimethylbenzylammonium hydroxide (Pat. 2,172,319). Groups 28—89; 39—12.

Pat. 2,165,797. PHOTOGRAPHIC DEVELOPER. Patented July 11, 1939. Reg. No. 14,784.

Pat. 2,179,790. PHOTOGRAPHIC DEVELOPER. Patented Nov. 14, 1939. Reg. No. 14,785.

These developers for photographic negatives utilize quaternary ammonium compounds as alkalinity-producing agents which are capable of producing good variations in contrast without loss of fidelity, in accordance with the amount of the compound used. The use of guanidine carbonate is described in Pat. 2,165,797 and trimethylbenzylammonium hydroxide in Pat. 2,179,790. Modifications are included in which less expensive sodium carbonate is substituted advantageously for a large part of either of the compounds without harmful results. Group 28—89.

Pat. 2,166,546. STABILIZATION OF BLUE-PRINT COATINGS. Patented July 18, 1939. Small amounts of ammonium persulfate or potassium persulfate incorporated in blue-print solutions maintain the ferricyanide included in the coating in oxidized form for long periods of time. A marked advantage is that relatively impure potassium ferricyanide may be used, thereby reducing the cost of the blue-print paper. The persulfate is preferably added to freshly made blue-print solution. Groups 28—89; 39—12. Reg. No. 14,786.

Pat. 2,174,494. PHOTOGRAPHIC FIXING AGENT. Patented Sept. 26, 1939. This photographic fixing and hardening bath contains guanidine thiosulfate as a major silver halide dissolving agent. Solutions prepared with guanidine thiosulfate are long-keeping, having rapid fixing speeds, and do not become readily exhausted in use. Group 28—89. Reg. No. 14,787.

Pat. 2,178,450. DEVELOPING PHOTOGRAPHIC FILMS AND PLATES. Patented Oct. 31, 1939. The uneven development of film, the formation of air bubbles, and other difficulties due to surface tension between the developer solution and the film are eliminated by the presence of minute amounts of sulphodicarboxylic esters or similar com-

pounds. Depending upon the type of photographic developer emulsion used, the esters may be either incorporated in the developer, or as a very dilute aqueous solution used as a separate bath. Group 28—89. Reg. No. 14,788.

Pat. 2,179,242. PHOTOGRAPHIC FIXER. Patented Nov. 7, 1939. Reg. No. 14,789.

Pat. 2,196,901. PHOTOGRAPHIC DEVELOPER. Patented Apr. 9, 1940. Reg. No. 14,790.

Photographic fixing and hardening chemicals are molded in ball, cube, or brick form. The chemicals are arranged in layers and dissolve in a predetermined order when placed in water. The cubes, etc., are prepared in any size and eliminate the need for weighing and other preparation of the ingredients of the fixing solution. Group 28—89.

Pat. 2,199,368. BLUEPRINT COATING. Patented Apr. 30, 1940. Blueprint papers having improved speed, latitude, and great stability are produced, according to this patent, by the use of coating solutions containing a sulfonic acid wetting agent. The agent used is a sodium salt of an alkyl ester of sulphodicarboxylic acid prepared in the form of a guanidine salt. Groups 28—89; 39—12. Reg. No. 14,791.

Pat. 2,203,903. STABILIZED PHOTOGRAPHIC FIXING POWDER. Patented June 11, 1940. Citric or tartaric acid and small amounts of sodium phosphate in the presence of a buffer (sodium acetate) acts as a preservative for photographic fixing solutions. Solutions so prepared keep indefinitely without decomposition and are little affected by tropical temperatures. Group 28—89. Reg. No. 14,792.

Pat. 2,205,792. RECOVERY OF SILVER FROM SPENT PHOTOGRAPHIC SOLUTIONS. Patented June 25, 1940. Reg. No. 14,793.

Pat. 2,221,163. RECOVERY OF SILVER FROM SPENT PHOTOGRAPHIC SOLUTIONS. Patented Nov. 12, 1940. Reg. No. 14,794.

In these two patents silver is recovered from spent photographic solutions in comparatively short time by subjecting the solution to the action of a soluble salt of an ester of xanthic acid (Pat. 2,205,792) or to a guanidine salt or a like quaternary ammonium compound (Pat. 2,221,163). The silver complex which is precipitated may be readily treated by furnace to complete recovery. Group 28—89.

Pat. 2,206,572. PHOTOGRAPHIC TONING WITH FERRICYANIDES. Patented July 2, 1940. Impure sodium ferricyanide is substituted for the more expensive potassium ferricyanide without harmful effect. Toning results obtained are equal to those obtainable with potassium ferricyanide, and especially advantageous in the case of blues in the production of three color transparencies. Blues obtained have a greenish cast which results in better detail, etc., especially desirable in the projection of lantern slides, movie positives, etc. Groups 28—89; 39—12. Reg. No. 14,795.

Pat. 2,209,917. AEROSOL WETTING AGENTS IN BLUEPRINT COATINGS. Patented July 30, 1940. Much improved speed and latitude are obtained when blueprint paper is given a preliminary treatment with a wetting agent such as a dilute aqueous solution of dioctyl sulfosuccinate before it receives a blueprint coating. Treatment is effected by passing the paper to be coated over a roller dipped in the wetting agent. Groups 28—89; 39—12. Reg. No. 14,796.

Pat. 2,218,969. BLUE PRINT COATING. Patented Oct. 22, 1940. The substitution of ferric guanidine oxalate for the usual ferric ammonium citrate, ferric potassium oxalate, or ferric ammonium oxalate in standard blue print formulate results in blueprint coatings in which high speeds and great stability are associated. Groups 28—89; 39—12. Reg. No. 14,797.

Pat. 2,221,628. BLUEPRINT COATING. Patented Nov. 12, 1940. When diguanidine disodium ferrocyanide is used in blueprint coatings instead of the standard ferrocyanides, exposure time can be cut without sacrificing latitude or keeping qualities. Groups 28—89; 39—12. Reg. No. 14,798.

Pat. 2,224,816. ARC LAMP. Patented Dec. 10, 1940. Globe interiors of blueprint machine arc lamps in continual use have a tendency to become rapidly coated with carbon particles and organic salts. This is overcome by the insertion, into the globe, of a hollow tube having a cupped end adjacent the tip of the upper positive electrode of the arc lamp. Suction applied to the tube removes combustion gases and any unburned particles so that globes need not be removed for frequent cleaning. Group 39—12. Reg. No. 14,799.

Pat. 2,227,644. PHOTOGRAPHIC REDUCER. Patented Jan. 7, 1941. Reg. No. 14,800.

Pat. 2,229,891. PHOTOGRAPHIC REDUCER. Patented Jan. 28, 1941. Reg. No. 14,801.

Monosodium dipotassium ferricyanide (Pat. 2,227,644) and monosodium diguanidine ferricyanide (Pat. 2,229,891) used as reducers differ from tripotassium ferricyanide by showing more rapid reducing action. Not only does the cutting of the lightest silver deposits take place quickly, but the resulting image retains good fidelity. The compositions are handled in the same way as standard potassium ferricyanide reducers. Groups 28—89; 39—12.

Pat. 2,230,977. SINGLE SOLUTION PHOTOGRAPHIC DEVELOPING AND FIXING BATH. Patented Feb. 4, 1941. A single combined developing and fixing solution may be prepared using aminobenzoic acids and their salts (particularly anthranilic acid). Good contrast control is obtained with little or no effect on the emulsion speed of X-ray and other classes of film. The solution has good keeping qualities, relatively low sensitiveness to actinic light, and may be re-used. Group 28—89. Reg. No. 14,802.

Pat. 2,237,084. BLUEPRINT COATING. Patented Apr. 1, 1941. A blueprint coating having a deeper blue intensity and excellent stability even under warm and moist conditions is produced by mixing a guanidine oxalate solution having a pH value between 5 and 6 with a ferric oxalate solution. Potassium ferricyanide is then added to the mixture. Broadly, the composition may be added to any blueprint formula containing a light-sensitive ferric salt. Group 39—12. Reg. No. 14,803.

Pat. 2,238,301. BLUEPRINT COATING. Patented Apr. 15, 1941. Reduced quantities of ammonium sodium ferricyanide are used in place of potassium ferricyanide. Increased blue intensity and latitude, as well as a decrease in ferricyanide consumption, are obtained without substantial offsetting disadvantages. Groups 28—89; 39—12. Reg. No. 14,804.

Pat. 2,248,905. CONCENTRATED PHOTOGRAPHIC FIXING AND HARDENING SIRUP. Patented July 8, 1941. Concentrated hardening and fixing solutions are prevented from precipitating if prepared with urea or a similar hydrotropic compound which increases the solubility of the components of the sirup. The sirups are highly stable, will keep for long periods of time, and may be used by merely adding the water necessary to make the proper solution. Group 28—89. Reg. No. 14,805.

Pat. 2,255,731. PHOTOGRAPHIC DEVELOPER. Patented Sept. 9, 1941. Developers containing a soluble sulfite as an oxidation inhibitor can be further fortified against oxidation by the addition of an amidine salt of an aminobenzoic acid. The use of such compounds in the developing solution not only improves keeping qualities, but in some cases the densities obtained exceed those of fresh developing solution. Group 28—89. Reg. No. 14,806.

Pat. 2,268,508. TONING PHOTOGRAPHIC MATERIAL. Patented Dec. 30, 1941. Two different ferricyanides containing one equivalent of sodium and two of either potassium or an amidine such as guanidine, when used in blue toning solutions, are characterized by two important properties: Clear and brilliant highlights, which are excellent for projection; and a greenish blue, which makes color corrections possible with cheap and economical dyes, important in the processing of colored motion picture film. Groups 28—89; 39—12. Reg. No. 14,807.

Pat. 2,311,293. PRODUCTION OF HIGH CONCENTRATED FIXING AND HARDENING SIRUPS. Patented Feb. 16, 1943. If sodium thiosulfate and a portion of the sulfite of the fixing and hardening bath are dissolved separately, and the alum, acid, and remainder of the sulfite dissolved in separate solution, and then mixed, preferably cold, no precipitation results. The stable, highly concentrated sirup obtained may be rapidly diluted with water as necessary, thus making unnecessary the storage of large quantities of normal strength fixing baths. Group 28—89. Reg. No. 14,808.

Pat. 2,221,170. AUTOMATIC SPECTROPHOTOMETER. Patented Nov. 12, 1940. Generally described, this spectrophotometer employs two cyclic drives automatically operated from a single driving source, one of the drives remaining constant and the other varying in length. This enables a series of spectrograms to appear on the same plate, which show the varying exposures of a number of samples in comparison to a constant exposure of a standard. Group 39—11. Reg. No. 14,809.

Pat. 2,269,674. METHOD FOR PHOTOMETRIC ANALYSIS. Jan. 13, 1942. A narrow infrared beam passes through a transparent holder into which flows a continuous sample of any chemical compound or mixture being produced. The beam, reduced in intensity in accordance with the amount of light absorbed by the sample, is focused on a radiation detector capable of transforming the beam received into electric current. The current produced affects a galvanometer causing the beam to strike any one of several mechanical controls (valves, blowers, pumps, etc.). Photometric analysis may be based either upon infrared absorption or upon emission of the chemical compound sample being produced. Group 39—11. Reg. No. 14,810.

Pat. 2,280,993. TURBIDIMETER. Patented Apr. 28, 1942. This turbidimeter measures light transmitted by any sample submitted for measurement regardless of color and without adjustment of the device. Measurement may be made of light scattered by fine particles dispersed in solution, haze or cloudiness of translucent objects, the density of smoke from stack gases, etc. The device has four sections: an optic barrel, a holder for the sample being tested, an integrating sphere having two oppositely placed openings, and a light absorber. In addition the sphere is further provided with a reflecting inner surface, a shutter for the rear opening, and a pair of photoelectric cells connected to a galvanometer. In use, galvanometer readings are taken of light directed through the sample first with the shutter closed, and then open. The difference measures the amount of light transmitted by the sample. Group 39—11. Reg. No. 14,811.

Pat. 2,314,193. SELF-RELEASING MACHINE DRIVE. Patented Mar. 16, 1943. Machine drive (which replaces the hand crank of a well-known testing machine) embodies a clutch which automatically disengages at the instant of fracture of the material being tested so that an accurate determination of the strength of the material may be made. As long as the material being tested does not break, the clutch remains frictionally engaged, the amount of stress meanwhile being read off directly from a scale. Group 39—11. Reg. No. 14,812.

Pat. 2,337,306. METHOD AND APPARATUS FOR QUANTITATIVE ANALYSIS OF RADIOACTIVE SUBSTANCES. Patented Dec. 21, 1943. This patent pertains to a method for determining the total quantity of an element present in a sample where the element occurs in the form of its radioactive and non-radioactive isotopes and where the radioactive isotope is subject to decay. The radioactivity of the sample is measured in an apparatus which includes a Geiger tube. The apparatus is calibrated by determining the radiation of a standard sample under similar conditions and comparing the radioactivity as observed from a tabulation of the net counts of the standard sample with the radiation of the solution of unknown normality. Allowance is made in each measurement for a decay factor, using a formula cited in the patent. Group 39—11. Reg. No. 14,813.

Pat. 2,359,734. SPECTROPHOTOMETER AMPLIFIER. Patented Oct. 10, 1944. This patent relates to an amplifying system for a recording infrared spectrophotometer used in the analysis of chemical compounds and many other fields of research and measurement. The system may be used with any type of flickering beam infrared instrument in which two beams are caused to flicker, one of the beams passing through the sample being analyzed. Group 39—11—13. Reg. No. 14,814.

Pat. 2,376,311. PHOTOELECTRIC RECORDING SYSTEM. Patented May 15, 1945. This device mechanically records temperature differences between two thermocouples that cause proportional changes in the direction of a pair of light beams. The beams in turn effect changes in the intensity of impulses in an electric circuit, which are measured and recorded. The apparatus has many applications in analytical work such as infrared spectrophotometry. By recording the percent of infrared absorption vs. frequency transmission (or any other desired function of temperature differential) it eliminates the necessity of making two records, which in usual practice must be replotted by hand and mathematically interpreted. Group 39—11. Reg. No. 14,815.

Pat. 2,379,233. PHOTOELECTRIC CONTROLLING OR RECORDING SYSTEM. Patented June 26, 1945. In this photoelectric controlling system a self-powered A. C. amplifier is used which is undisturbed by drifts that usually occur due to changes in supply voltages or other disturbances not connected with an input signal from a twin cathode phototube. A fairly wide light beam is also utilized. The recorder may be built as a separate unit for use with various mirror galvanometers and may be operated in brightly lighted rooms, in that the amplifier responds only to the A. C. signal and is unaffected by stray light. Group 39—11—13. Reg. No. 14,816.

Pat. 2,396,620. IMPACT TESTING APPARATUS. Patented Mar. 12, 1946. Reg. No. 14,817.

Pat. 2,422,317. MEANS FOR IMPACT TESTING. Patented June 17, 1947. Reg. No. 14,818.

These two patents provide a pivoted arm having a short and long end, the latter of which carries a weighted hammer. The device is operated by a rotatable cam which depresses the short end of the arm to raise the hammer. The cam has a leading and a trailing edge separated by a cut-out portion that permits the hammer to fall against the test piece without interference. The device may be adjusted to the different resiliencies of the pieces being tested, records the number of impacts absorbed, and may be operated over long periods of time without requiring attention. An automatic cut-off mechanism stops the device upon breaking of the test piece. Pat. 2,396,620 relates particularly to the structure of an adjustable cam. Pat. 2,422,317 provides a mechanism which overcomes the vibration caused by the rebound of the hammer striking a resilient test piece. Group 39—11.

Pat. 2,410,385. PLASTOMETER. Patented Oct. 29, 1946. Recording device for measuring the viscosity of fluids, etc., is of the spinning cup type. The device includes a torque-measuring mechanism. The speed of rotation is automatically varied from a predetermined minimum to a predetermined maximum over a selected period of time, after which the speed is reduced to the original minimum over the same or different time interval. A recording method

may be used in which a curve is traced through both the accelerating and decelerating cycle by a pen (controlled by a galvanometer) drawn across a strip of paper moving over a drum. Group 39—11. Reg. No. 14,819.

Pat. 2,411,092. PHOTOELECTRIC TURBIDIMETER. Patented Nov. 12, 1946. Turbidimeter is adapted for measuring the solids content of thick slurries. The suspension to be measured is passed into a cell having a transparent front wall and a light-absorbing rear wall. Turbidity is measured by directing a beam of light through an opening in the front wall and determining the amount of light reflected on the rear wall by photocell. Group 39—11. Reg. No. 14,820.

Pat. 2,417,657. X-RAY GONIOMETER CAMERA. Patented Mar. 18, 1947. Camera produces and records crystal X-ray diffraction patterns of the distorted reciprocal lattice type. The camera may be run at any speed and has a single actuating mechanism that does not require a special shape or type of film. Group 39—11. Reg. No. 14,821.

Pat. 2,423,704. FABRIC ABRADING TESTER. Patented July 8, 1947. This patent is principally concerned with a cut-off device for a fabric abrading tester. The tester consists basically of a motor-driven turntable on which a sample is clamped for rotation beneath a pair of rubber-tired abrading rollers. A hook is provided which rests lightly on the sample undergoing test. Should a hole be worn, the fabric is caught by the hook, tripping a switch which immediately stops rotation of the turntable. Group 39—11. Reg. No. 14,822.

Pat. 2,317,329. SPECIMEN HOLDER FOR X-RAY ANALYSES. Patented Apr. 20, 1943. Apparatus provides a comb-like sample holder for powdered material which consists of a series of capillary compartments. The collimated beam of a conventional X-ray camera set up for standard powder analysis passes through the powdered specimen. A series of superimposed X-ray pictures are recorded on a film strip in the form of a continuous line of even intensity. The shape of the sample is well defined and appears without the superimposition of the sample holder as a background. The very fine grinding of crystalline material is unnecessary, thus preventing distortion of the crystalline pattern. Groups 36—92; 39—12. Reg. No. 14,823.

Pat. 2,332,391. PROJECTOMETER. Patented Oct. 19, 1943. Calculating device is used for solving problems in crystal analysis by reproducing diffraction spots and a zero beam spot of an X-ray diffraction photograph of a crystal. The projector consists of a base having a straight edge which includes a point so that the base may be positioned over the zero spot. A projection arm having a straight side is pivoted for rotation on the base as well as an intersecting arm mounted on the pivot for locating a spot along the straight edge. Several interconnecting parts form a pantograph on the intersecting arm to actuate the projection arm in response to rotation of the intersecting arm to impart similar angular movement. Groups 36—92; 39—11. Reg. No. 14,824.

Pat. 2,341,108. X-RAY TECHNIQUE. Patented Feb. 8, 1944. Reg. No. 14,825.

Pat. 2,347,638. X-RAY TECHNIQUE. Patented Apr. 25, 1944. Reg. No. 14,826.

These two patents feature a reciprocating mount for a sample attached to a conventional X-ray camera so that crystalline specimens may be photographed. The mount is motor actuated by a cam and roller and moves up and down along a slotted bar to enable an incident X-ray beam to play across the opening of the mount in which a number of sample holders filled with powdered material are held (the holders may be similar to those described in Pat. 2,317,329, Reg. No. 14,823). In Pat. 2,347,638 the apparatus further provides for the step-by-step removal and insertion of specimens. Groups 36—92; 39—12.

Pat. 2,387,597. MEDICAL X-RAY RADIOGRAPHY FOR LOCATING EMBEDDED MATERIALS. Patented Oct. 23, 1945. Reg. No. 14,827.

Pat. 2,387,704. X-RAY RADIOGRAPHY OF INCLUSIONS. Patented Oct. 23, 1945. Reg. No. 14,828.

These two patents relate to an X-ray procedure that makes use of an immersion or embedding technique by means of which a clearer X-ray image is obtained of shattered bones, small pieces of glass embedded in the flesh, etc. Pat. 2,387,597 pertains particularly to the method of immersing the body to be radiographed in liquids or pastes of opacities which approximate that of human flesh. The paste, which consists of a non-toxic powder such as barium sulfate incorporated in a mixture of petrolatum and beeswax, is described in Pat. 2,387,704. Group 36—92.

Pat. 2,401,949. FLEXIBLE TUBE. Patented June 11, 1946. Tube is composed of several spiral strips or bands to provide flexibility without binding. The method of utilizing the strips provides openings for ventilation or other purposes, minimizes cutting, etc. In the patent, the tube is used to line a bent planar tube of a mass spectrograph apparatus, but it has other applications, for example as a protecting sheath for wires, etc. The multi-part tube includes a main strip, the edges of which are spaced apart; an overlay band which covers the space between turns of the main strip; a shim strip that is held between main and overlay strips; and a long constraining band fixed to the outside of the overlay strip. Group 35—69. Reg. No. 14,829.

Pat. 2,444,091. STRUCTURAL SECTION AND STRUCTURAL MEMBERS COMPOSED THEREOF. Patented June 29, 1948. A metal structural section of uniform thickness and strength in which the stresses will be uniformly distributed. The section forms a T in cross section with top and bottom flanges connected by a web. The top flange is wider than the bottom flange and has its opposite ends inturned. Section has substantially equal moments of inertia about more than two axes which lie in a common plane and pass through the center of gravity of the section. A section may be used alone as a structural member, or various columns, girders, and other structural members may be constructed by combining several of the T-sections by welding or riveting the flanges together. (Owner) Olaf Carlsen, 448 73d St., Brooklyn 9, N. Y. Group 33—12—81. Reg. No. 14,830.

Pat. 2,447,187. PARACHUTE. Patented Aug. 17, 1948. Parachute is designed to increase safety in landing by reducing the depth of the canopy dome and increasing its radial dimension by means of an annular pocket. The pocket, which is open at its bottom, is firmly attached to hang circumferentially from edge of canopy dome and bulges inwardly in descent, thus using a greater amount of air for breaking the fall. Air vents are provided at upper edge of pocket, and an annular flap extends around the canopy edge to serve as a flap valve for air vents. Suspension lines are provided in the usual way but are shorter because of the greater diameter of the parachute, resulting in a slower descent. (Owner) Clarence A. Kunkler, P. O. Box 128, Station E, Columbus 5, Ohio. Group 37—21. Reg. No. 14,831.

Pat. 2,437,223. SPORTSMAN'S COAT. Patented Mar. 2, 1948. An attachment to a sportsman's coat serves as an identification signal or for protection. A strip of bright-colored waterproof material, of approximately the same width as the coat back, is fastened by a zipper or other means to the bottom of the back of coat. May be folded over outside of coat and fastened at shoulders to indicate the presence of a hunter, or dropped to a hanging position to protect fisherman's clothes while sitting. When not in use, it may be folded and fastened on inside of coat. (Owner) Claude H. Dutrow, R. F. D. 5, Frederick, Md. Group 23—29. Reg. No. 14,832.

Pat. 2,446,558. BENCH TOOL FOR STRIPPING ARMOR FROM CABLE. Patented Aug. 10, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) A bench tool for stripping sheathing from a cable has a removable blade which may be adjusted to make a cut of any desired depth in the cable and to make both circumferential and longitudinal cuts. A base supports an upright having a bushing journaled therethrough on which a cutter head is rotatably mounted. A manually operated lockable cam advances the cutter a fixed depth into the cable extending through the bushing. A V-vise is axially aligned behind the bushing for holding the cable in position. By rotating the cutter head a full revolution, a circular cut around the cable is accomplished. The cutter blade is then released and turned to a position extending longitudinally of the cable, relatched into cutting position, and the vise released from the cable so it can be withdrawn from the tool, cutting the sheathing longitudinally as it is withdrawn. (Co-owner) Carl W. Schwarz, Blue Ridge Summit, Pa. Groups 33—51—52; 35—42. Reg. No. 14,833.

Pat. 2,297,040. STRUCTURAL UNIT. Patented Sept. 29, 1942. A tubular structural unit is placed in wall-to-wall abutting relation with like tubular units and interconnected by welding. Each tubular unit is stiffened by an internal diaphragm having flanges by which a second unit may be positioned in end-to-end relation to the first unit. The diaphragm may be shrunk by cooling, and the outer body expanded by heating under temperature control, for telescoping bodies. On return to normal temperature the composite unit has great strength and resistance to shock loads. (Owner) Samuel Weening, 88 Bentley St., Tottenville, Staten Island, N. Y. Group 33—12—81. Reg. No. 14,834.

Pat. 2,447,826. POULTRY NEST. Patented Aug. 24, 1948. A poultry nest or laying chamber has a closure panel for front opening which is automatically closed or released by actions of hen. A ledge along each side of nest is connected with a bell-crank mechanism by which the closure is controlled. The weight of a hen during the laying of an egg depresses the ledges, moving the panel downward across opening. As hen rises, the ledges are released and the closure retracts automatically. Floor arrangement guides egg to trough at front of nest. Provides a trapping device for hen tending to set. (Owner) Magnus Torie. Address correspondence to Smith & Tuck, Central Bldg., Seattle 4, Wash. Groups 25—99; 35—22. Reg. No. 14,835.

Pat. 2,446,777. SHOEHORN. Patented Aug. 10, 1948. Inventor states that the primary feature of this invention is to provide a shoehorn (worn in the shoe) of flexible material which aids in inserting the foot into shoe, conforms to shape of the heel and counter while the shoe is on the foot, and aids in retaining shoe on the foot. (Owner) Frederick C. Menenko, 18701 Roselawn Ave., Detroit 21, Mich. Groups 33—73; 39—81; 40. Reg. No. 14,836.

Pat. 2,445,020. LOCKING DEVICE FOR INTERFITTING MEMBERS. Patented July 13, 1948. A device for locking interfitting connections, e. g. a handle to a fishing rod or a detachable connection between the head and shaft of a golf club. A pin is transversely fitted in bore of a socket member in which a male member is telescoped. Male member has a locking passage at end to receive the pin against the tension of a spring at inner end of bore. When male member is turned, the pin passes through a circular groove and the locking passage engages the pin, locking the male member to the socket. (Owners) Howard S. Charles and Henry Charles Morris, 49 Fairside Ave., Toronto, Ontario, Canada. Group 39—49. Reg. No. 14,837.

Pat. 2,445,033. RADIO PLUG ADAPTER. Patented July 13, 1948. An electrical connector for radio equipment and the like has a protector clamp at end to prevent the conductors from pulling loose. The conductors are drawn through a flexible tube having an end flared to fit over a conical-shaped core. A metal clamp encircles the flared portion of tube and has prongs for pressing an insulated wafer against the core. The ends of conductors are soldered into the hollow pins projecting from the wafer. Connector is removed by grasping and pulling the tube, placing no strain upon the conductors. (Owner) E. L. Mettz, Route 5, Franklin, Tenn. Group 36—61. Reg. No. 14,838.

Pat. 1,952,957. PROTECTING COVERING FOR WINDOW FRAMES. Patented Mar. 27, 1934. Covering strips for window frame provide a seal between frame and its sashes and between frame and the wall of building. Strips of metal or other suitable material are bent to engage the usual frame guide rails of upper and lower frames, and beadings on the strips are received in grooves of the sashes. The strips between the frame and wall extend beyond the frame to form flashings between outer planking of wall (or molding) and the frame. A strip provided for the sill has an attaching flange to slip in groove in sill strip, while the opposite edge of strip is bent upon itself to form a beading and a flange resting on the upper face of sill. The lower ends of side strips may be offset to form grooves to receive the beading in sill strip. (Owner) Bernard G. Wieting, Route 2, Norfolk, Nebr. Groups 24—31; 25—61; 33—73. Reg. No. 14,839.

Pat. 2,446,587. SLUDGE TRAP. Patented Aug. 10, 1948. A sludge trap for insertion in the piping of a circulating system has a removable container for holding entrapped foreign matter. Trap is particularly applicable to automobile heater or cooling systems, domestic hot-water heaters, or any hydraulic piping system. A valve is provided for shutting off the trap from the circulating system in order to remove the container for cleaning or repair. Air venting means is provided to permit removal of air from the container upon replacing the trap in the circulating system. A drain valve is provided for draining off circulating medium from the system. (Owner) Robert S. Henry, 29 Pearl St., New Hartford, N. Y. Groups 33—65—66; 38—31. Reg. No. 14,840.

Pat. 2,372,586. PEANUT HARVESTER. Patented Mar. 27, 1945. A harvester for digging peanuts from at least two rows at a time may be attached to a tractor or may be horse drawn. A pair of digging plows loosen the plants, and a rotatable pick-up means lifts them from the ground into conveyors. Plants hang in an inverted position on the supporting arms of oscillating fingers and travel over a guide, on which they are held by a rear spring-pressed gate. Opposed fingers carried by the rear conveyor periodically push the plants collected on the guide through a gate onto ground in a single row of spaced piles, with the peanuts uppermost for sun curing. (Owner) Edmund Kraus, Fredericksburg, Tex. Group 35—22. Reg. No. 14,841.

Pat. 2,448,984. AWNING. Patented Sept. 7, 1948. The inclined roof of this all-metal awning consists of a top louver to be rigidly secured to side of a building and a plurality of pivoted louvers which may be rocked to open or closed position from within a building by turning a lever. When louvers are closed, projections on adjacent louvers contact each other to provide a tight fit to exclude rain, etc. The movable louvers at their opposite ends are pivotally connected for rocking movement to a pair of outer inclined side supporting members and a pair of inner inclined movable side members. The movable side members are connected by actuating mechanism to crank. (Owner) Edmund Kraus, Fredericksburg, Tex. Groups 23—95; 25—63; 34—41. Reg. No. 14,842.

Pat. 2,446,935. AUTOMATIC ELECTRIC TOASTER. Patented Aug. 10, 1948. Automatic electric toaster has a pair of horizontally swingable casing sections. One section supports horizontally a series of bread slices in vertically superposed spaced-apart relation. Electric heating elements are provided on the other section in offset spaced positions. When the sections are closed, a toasting chamber is formed, with bread holders disposed between adjacent heating elements. An adjustable temperature-controlled latch and electric switch operate simultaneously to interrupt the circuit through heating chamber and open the sections. A single-pole double-throw switch in the circuit allows the toasting of one or two slices without heating all the elements. (Owner) Oscar G. Kreer, 18068 Dwyer Ave., Detroit 12, Mich. Group 36—21. Reg. No. 14,843.

Pat. 2,445,451. COMBINATION SPRAYING BOOTH AND DRYING CHAMBER. Patented July 20, 1948. A semi-automatic machine whereby metal articles are uniformly sprayed with enamel or lacquer under the control of an operator and then automatically advanced through a drying oven. A circular rail, rotatably mounted on a standard, supports radially arranged bars, their offset ends pivoted to the standard. Turntables are provided on the bars to support articles, which are rotated step by step by an electric motor through an oven formed on the framework. A series of lamps are provided at intervals in the oven where the articles are temporarily stationary during operation of the device. As each successive turntable emerges from the oven, the bar of that turntable breaks the circuit and stops the motor. The article is removed, and another placed on the turntable. (Owner) Lester E. Padelford, 67 Bergen Ave., North Arlington, N. J. Group 35—61. Reg. No. 14,844.

Pat. 2,296,795. NAIL GUARD. Patented Sept. 22, 1942. Nail guard, which can be snapped over the end of the finger, is shaped to define an opening closely fitting the outline of the fingernail to protect the flesh when polish is being applied. Guard may be snapped laterally for removal without damaging polish on nail. (Owner) Mary Stevens Landsman, 7433 Luella Ave., Chicago 49, Ill. Groups 33—73; 39—81; 40. Reg. No. 14,845.

Des. Pat. 150,635. DESIGN FOR A COSMETIC APPLICATOR. Patented Aug. 17, 1948. A disc-shaped applicator representing a flower. Owner states it is preferably made from foam rubber. (Owner) Mary Stevens Landsman, 7433 Luella Ave., Chicago 49, Ill. Groups 30—52; 39—91; 40. Reg. No. 14,846.

Pat. 2,444,917. SINGLE-ELECTRODE HIGH-SPEED RECORDING DEVICE. Patented July 13, 1948. (Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757.) An electrical recording device for measuring short time intervals. A housing supports a rotating drum-type spark chronograph having a replaceable tape mounted around its inner wall. A single marking electrode in a tubular enclosure is mounted with its end spaced a predetermined distance from the tape. Two input electrodes are spaced in arcing relationship to the marking electrode. Separate circuits to each input electrode are provided so each may record through the marking electrode independently of the other. When a suitable potential is applied between the electrode and drum, a spark is produced which passes through the tape and produces a mark. (Owner) Austin B. J. Clark, 6371 Oxon Hill Road S. E., Washington 20, D. C. Group 36—13. Reg. No. 14,847.

Pat. 2,438,645. COLLAR CLIP. Patented Mar. 30, 1948. A collar clip includes a bar to span the collar opening. Jaws at back of bar secure it to collar. Modifications show different means for actuating jaws. May be made of various materials. (Owner) Joseph R. Palagonia, 257 Cooper St., Brooklyn 27, N. Y. Groups 39—71—81—99; 40. Reg. No. 14,848.

Pat. 2,298,596. STEERING WHEEL. Patented Oct. 13, 1942. A steering wheel of conventional form has a series of disc-like gripping members, preferably made of plastic, with axial bores to receive the rim-core of the wheel. Forms an unbroken bead-like appearance and prevents slipping of the hands while giving a firm grip to the wheel. (Owner) Herbert A. Schrantz, 1440 Hartford Ave., St. Paul 5, Minn. Groups 37—22; 38—11—31; 39—81. Reg. No. 14,849.

Pat. 2,215,758. CONVERTIBLE SEAT. Patented Sept. 24, 1940. A seat has adjustable arm rests which may be pushed downwardly to provide one continuous seat when two or more seats are placed in juxtaposition. Tubes are provided at the front and rear of the arms to slide in a cavity beneath the seat and are guided by a pair of vertical tubes attached to base of seat. The weight of arms is supported by compression springs housed within the tubes which normally maintain the arms in raised position. Arms are operable by a press-button or finger piece at outside of each arm to permit downward movement of the arm rest in the cavity beneath the seat. (Co-owner) E. W. Knight, 99 Overslade Crescent, Coventry, England. Groups 25—12—31; 38—11. Reg. No. 14,850.

Pat. 2,336,131. PROCESS OF PREPARING SILVER ALLANTOINATE. Patented Dec. 7, 1943. This medicinal preparation combines the germicidal qualities of silver in combination with the cell-proliferating properties of the chemical allantoin. (Owner) Charles F. Schaffer, Hope Road, Lakewood, N. J. Group 28—31—89. Reg. No. 14,851.

Pat. 2,427,472. RATCHET OPERATED EXPANSION OR COMPRESSION CLAMP. Patented Sept. 16, 1947. A combination ratchet clamp and jack. A metal stock has a serrated rack along its lower edge and a fixed jaw at one end. A carriage slidable on the stock and rack has a movable jaw extending upwardly to cooperate with the fixed jaw. The carriage is moved along the rack and stock by swinging the operating handle in either direction. The handle has a double-ended dog pivoted in upper end which rotates a pinion at bottom of carriage that meshes with the rack and holds the carriage in any adjusted position. (Owner) Oscar Peterson, 2414 West Broadway, Spokane, Wash. Group 35—69. Reg. No. 14,852.

Pat. 2,446,814. BROOM AND MOP COMBINATION. Patented Aug. 10, 1948. An attachment for a broom or brush to which various scrubbing or mopping elements may be attached. A washable, removable saddle having two spaced bands of tape is placed over upper portion of bristles. A cleaning cloth is wrapped around the bristles and detachably suspended from lower tape. The free end of the cloth may be folded over ends of bristles and attached to the tape on one side of broom for mopping or polishing. When broom is used for sweeping, the cloth may be swung over the upper tape to expose the bristles. (Owner) Nelle M. Crofton, 326 Logan St., McMechen, W. Va. Groups 23—93; 39—21—22. Reg. No. 14,853.

Pat. 2,449,033. ANTISKID TIRE CLAMP. Patented Sept. 7, 1948. An antiskid tire clamp for vehicle wheels has a curved metal strap which straddles the tire and is fastened to the tire rim. Ribs with projecting teeth are provided at the curved edges of the strap, and a pair of chains bisect openings in the strap between the ribs. Applied by placing strap on top of tire and slipping the lugs on one end of the strap down until they grip the flange of

rim. The strap is then pulled tightly and fastened in place by thumbscrews. (Owner) David Youngiove, 345 Otsego St., Ilion, N. Y. Group 33—49—73. Reg. No. 14,854.

Pat. 2,446,739. REPEATING ELECTRIC FUSE. Patented Aug. 10, 1948. An automatic multiple fuse constructed on an insulated base has a metallic disc fastened at the center of each side. Studs electrically and mechanically connected to the discs receive a loop of a fuse, and the other loop is attached to end of a flexed spring. Terminal studs are secured to the base and secure the other end of the contact spring to the base. When the free end of a stud is released by breaking or burning of the fuse element, the spring unflexes and moves over into contacting position with the next succeeding stud. (Owner) John W. Bryan, Traphill, N. C. Group 36—19. Reg. No. 14,855.

Pat. 2,448,710. VERTICALLY ADJUSTABLE BOOKKEEPER'S TABLE. Patented Sept. 7, 1948. Bookkeeper's table has a vertically movable book support which is elevated or lowered by a crank handle and is so constructed that open pages of ledger may lie in a plane with surface of table. Table top moves on tracks so that it may be rotated on stationary support or moved toward and away from worker. Other features are recited in the patent. (Owner) Willima F. Graeske, R. F. D. 2, Mayville, N. Y. Group 25—21—22. Reg. No. 14,856.

Pat. 2,448,807. FATTEN-THE-PIG SAVINGS BANK. Patented Sept. 7, 1948. A savings bank in the form of a pig or other animal, which expands as the number of coins in the bank is increased. A circular hole is provided in the opposite sides of the bank, in which is placed transversely a cylinder with a pair of movable hemispheres within it. Aligning slots in the top of body and cylinder admit coins. The bank is covered with a flexible material which stretches as the hemispheres move outwardly because of the filling of the bank, giving the effect of "fattening the pig." (Owner) June W. Kimball, 71 May Ave., Athens, Ohio. Groups 30—51; 39—41; 40. Reg. No. 14,857.

Pat. 2,448,972. INTERNAL-COMBUSTION ENGINE (TURBINE TYPE). Patented Sept. 7, 1948. A centrifugal feed turbine in which the entire periphery forms an exhaust port and combustion is continuous. All of the operating elements are in one fixed unit, including a series of spaced vanes. The gas and air mixture is ignited when the unit is revolved, causing a spark plug in wall of combustion chamber to brush a contact. Expansion of the gas presses upon all of the vanes and forces its way through passages separating the vanes and drives the rotor. The rotation of the engine draws gas into every part of the combustion chamber through centrifugal action. A fan formed by another series of vanes inwardly of the combustion chamber draws in air to be mixed with the incoming gas. (Owner) Edward W. Gizara, 55 Jay St., Amsterdam, N. Y. Group 35—19. Reg. No. 14,858.

Pat. 2,448,087. BUNNY-CAT. Patented Aug. 31, 1948. Reg. No. 14,859.

Pat. 2,448,088. BUNNY-CAT. Patented Aug. 31, 1948. Reg. No. 14,860.

These two patents refer to a stuffed toy animal which can be altered to resemble a cat or a rabbit by adjusting the length of the ears and tail.

In Pat. 2,448,087 slotted pockets are provided in the head and rear portion of the body for the movable ears and tail. Tapes are connected to the ears and tail for limiting the movement within the pockets.

In Pat. 2,448,088 a tube having a socket on one end is mounted within the body. The ears are movable within the socket and the tail is movable within the tube. The ears and tail are connected by a slidable control rod having a loop at one end to which the ears are secured and a groove at other end to which the tail is secured. The change of the animal is accomplished by pushing the tail inwardly, which pushes the ears outwardly, or by pulling the tail outwardly, thereby drawing the ears inwardly. (Owner) Anna P. Driggs, P. O. Box 1341, Grass Valley, Calif. Group 39—41.

Pat. 2,392,007. COMBINATION SHAVING MUG AND SHAVING CREAM DISPENSER. Patented Jan. 1, 1946. A shaving mug, having a handle ear, consists of an open-end cylinder which is divided by a fixed transverse partition into an upper lather chamber and a smaller lower storage chamber for shaving cream, etc. The storage chamber is interiorly screw-threaded and is adapted to receive an exteriorly threaded disk from the bottom. This disk forms the lower closure for the cylinder and may be removed for filling storage chamber. A longitudinal ridge containing a duct extends through partition from storage to lather chamber. As disk is turned, shaving cream is forced up through duct and discharged in lather chamber. Disk has ribs on outer face for turning. (Owner) Cyril A. Spinola, 4609 49th Ave. South, Seattle 8, Wash. Groups 32—65—69; 40. Reg. No. 14,861.

Pat. 2,320,310. APPARATUS FOR INTEGRATING TIME AND TEMPERATURE. Patented May 25, 1943. The average temperature obtained during a given time period is measured by a combination of a standard clockwork keeping accurate time and a second clockwork having a heat-sensitive pendulum or balance. The rate of movement of the second clockwork is varied with temperature, and the difference registered on either of a pair of plus or minus mechanical counters. Another counter is provided for the standard clockwork. The numerals of these counters are seen through openings in the face of the apparatus. To obtain the average temperature for a given period, the plus or minus change (whichever has the smallest total) is divided by the elapsed period of time. (Owner) Joseph W. Myers, 506 West Mount Airy Ave., Mount Airy, Philadelphia 19, Pa. Group 39—11. Reg. No. 14,862.

Pat. 1,959,527. ELECTRIC MACHINE WITH LAMINATED MASSES. Patented May 22, 1934. Laminated structure reduces bulk of machine and insures cooling without hindering the passage of magnetic flux. The casing framework has radial fins which bear against a stator formed of a laminated pack. Ducts divided by an inclined partition are provided between the fins for the admission of cool air and for the outlet of heated air. Alternately arranged laminae constitute a core which is also cooled by the passage of air. The rotor is likewise of laminated structure and packed on a spider. Between its arms, the spider provides inlets for cool air and outlets for heated air. Cold air circulated by fans enters axial ducts of the rotor and passes between the ducts formed by the fins and the cylindrical walls of the casing, heated air being discharged to the exterior. Openings in the ducts permit a portion of the cold air to cool the heads of the winding bobbins, etc. (Owner) P. Ehrmann, 60 Rue Madame, Paris VI, France. Group 35—69. Reg. No. 14,863.

Pat. 2,043,655. COOLING OF ELECTRIC MACHINES. Patented June 9, 1936. A double wall casing equipped with internal and external fins acts as a support for a machine having a laminated rotor and stator arrangement which provides air ducts. The rotor is cooled by air currents drawn, by fans at both ends of the laminated core, through the ducts in one direction and then another. Heat absorbed by the air in passage through the ducts is transferred to the internal fins and then to the external fins. A space is provided between the external fins and the outer casing walls so that air may be circulated to cool the outer fins. (Owner) P. Ehrmann, 60 Rue Madame, Paris VI, France. Group 35—69. Reg. No. 14,864.

Pat. 1,903,308. COMBUSTION DEVICE. Patented Apr. 4, 1933. Reg. No. 14,865.

Pat. 2,082,696. COMBUSTION AIDING MEANS. Patented June 1, 1937. Reg. No. 14,866.

These two patents relate to a heat-intensifying device to aid combustion within a furnace. The device is a hollow body having an air inlet at one end and a discharge nozzle at the other. An enlarged central portion is divided into two sections to provide transverse passageways for steam and hot furnace gases. Air admitted into the hollow interior is pre-heated by mixing it with firebox gases and steam before discharge into the furnace. By use of the device, air is heated to great intensity, utilizing a smaller amount of steam than is customary and a greater portion of air. The device shown in Pat. 1,903,308 is spherical in form as compared to that of Pat. 2,082,696, which is elongated. (Owner) Olga Craven Hulbert. Address correspondence to William R. Hulbert, Jr., 84 State St., Boston 9, Mass. Groups 33—65; 35—64.

E. I. du Pont de Nemours and Company has placed more than 4,000 of its patents on the Register of Patents as available for license on reasonable terms. The index to these patents was published in the Official Gazette, November 2, 1948. Abstracts of the patents are being published in the Official Gazette beginning November 9, 1948. The following patents (Reg. Nos. 14,867 through 15,135) are part of Schedule 4, Groups 28; 32.

Inquiries concerning these patents should be addressed to Patent Division, E. I. du Pont de Nemours and Company, Wilmington 98, Del.

SCHEDULE 4

[Continued]

Section 3

Pigments (Including Metallic Powders) and Dispersion Processes Therefor

Pat. 2,009,435. Noncaking Pigment. July 30, 1935. A noncaking, substantially dry pigment mass in finely divided form, the individual particles of which have a film on their surfaces of a protective agent from the group consisting of rubber, rubber latex, balata and gutta percha.

Pat. 2,009,436. Noncaking Pigment. July 30, 1935. A substantially dry titanium oxide pigment mass in finely divided form, the individual particles of which have a film on their surfaces of Montan wax as a protective agent in amount from 0.25 to 2.0% based on the weight of the pigment mass whereby said pigment mass is substantially noncaking in a coating composition.

Pat. 2,009,437. Noncaking Pigment. July 30, 1935. A non-caking, substantially dry, finely divided titanium oxide pigment having a specific gravity greater than 2.5, the individual particles of said pigment having their surfaces coated with the acid sulfonation product of an oil.

Pat. 2,052,470. Manufacture of Coating Compositions. Aug. 25, 1936. Process of dispersing dry pigment in a colloided cellulose derivative composition which comprises kneading the materials proportionately adjusted to develop maximum shearing action in the dough-type kneading machine.

Pat. 2,094,146. Process for Dispersing Black Pigments. Sept. 28, 1937. Process for the dispersion of black pigments in nitrocellulose compositions in which the black pigment is added to the uncolloided nitrocellulose after having been wet with the plasticizer. This mixture is then kneaded to accomplish the dispersion.

Pat. 2,102,595. Coating Composition and Method of Making the Same. Dec. 21, 1937. Process of preparing pigmented intermediates which comprises mixing, under conditions of high shear, a pigment and a homogeneous mixture of about two parts of undissolved cellulose nitrate and one part of organic liquid consisting of diluent in major proportion and volatile solvent in minor proportion.

Pat. 2,114,713. Process of Dispersing Pigments and Products Thereof. Apr. 19, 1938. Dispersion of pulp pigment in nitrocellulose with the aid of a wetting agent such as triethanolamine oleate.

Pat. 2,118,511. Coating Compositions and Process of Preparing Same. May 24, 1938. Process for the dispersion of iron blue pigment in blown castor oil to eliminate the reddish cast which these pigments frequently exhibit.

Pat. 2,118,512. Manufacture of Black Lake Pigments. May 24, 1938. Black lake pigment made by mixing a slurry of carbon black with a solution of a black acid dye, and then adding a precipitant.

Pat. 2,138,860. Process for Dispersing Pigments. Dec. 6, 1938. A process for manufacturing pigmented intermediates which comprises mixing under high consistency kneading conditions pigment and a resinous vehicle and thereafter reducing the mass to a free flowing paste with additional resinous vehicle.

Pat. 2,140,745. Cellulose Derivative Composition and Process for Preparing Same. Dec. 20, 1938. A process for dispersing water wet pigment pulps in a cellulose derivative vehicle which comprises initially kneading wet pigment, vegetable oil having preferential wetting characteristics and uncolloided water-wet cellulose nitrate and, secondly, adding a non-volatile, liquid, water repellent cellulose derivative colloiding agent to effect water-separation and consolidation of the mass at kneading consistency for removal of residual water.

Pat. 2,157,901. Coating Composition and Process of Preparing Same. May 9, 1939. Manufacture of a cellulose derivative and iron ferro-cyanide blue pigment coating composition in which the pigment is ground in the presence of a blown oil in amount sufficient that no reddish cast is evident in the dry film, which without the oil would produce such a cast.

Pat. 2,212,641. Process for Dispersing Pigments. Aug. 27, 1940. Pigment dispersion process dependent upon bombarding the charge with steel balls projected by means of a high speed propeller.

Pat. 2,263,606. Basic Calcium Silicate Pigment, Its Method of Preparing, and Compositions Containing the Same. Nov. 25, 1941. Basic calcium silicate made by reacting lime and silica in certain molecular proportions.

Pat. 2,303,504. Treatment of Metal Powders. Dec. 1, 1942. A tarnish-resistant, lamellar disintegrated metal powder having on its surface a thin uniformly distributed coating of an insoluble urea-formaldehyde resin polymer.

Pat. 2,328,250. Barium Sulphate Pigments and Process for Preparing Them. Aug. 31, 1943. A coating composition comprising calcined natural barytes which has been heated at a temperature between 1100° C. and 1300° C. for at least 4 hours.

Pat. 2,337,128. Nondusting Litharge. Dec. 21, 1943. Non-dusting litharge made by brisquetting the litharge with a non-reactive petroleum residue.

Pat. 2,356,297. Aluminum Silicate Pigments and Process for Preparing Them. Aug. 22, 1944. A coating composition containing a pigment, at least 50% of the said pigment being pyrophylite calcined at a temperature between about 800° C. and 1100° C.

Pat. 2,379,678. Process for Dispersing Pigments. July 3, 1945. The use of phosphoric acids in the pulp process of dispersing maroon pigment to prevent losses of pigment.

Section 4

Apparatus and Process for Manufacturing and Using Organic Coatings Including Coated Fabrics

Pat. 1,919,747. Apparatus for Festooning Cloth. July 25, 1933. Apparatus for curing rubber coated fabrics by festooning continuously in a hot chamber.

Pat. 1,929,127. Striping Knife. Oct. 3, 1933. Striping knife for putting stripes on coated fabrics for luggage, etc.

Pat. 1,998,053. Continuous Method of Applying Glass Spheres or Particles to Flat Surfaces. Apr. 16, 1935. A process for preparing beaded cinema screen comprising dipping the surface of a continuously moving strip of embossed sheet material into an adhesive, scraping to remove the adhesive from the high portions of the design depositing glass particles over the adhesive in the depressed portions and drying.

Pat. 1,998,055. Machine for Continuously Applying Glass Spheres or Particles to Flat Surfaces. Apr. 16, 1935. Apparatus for continuously applying glass beads and other such materials to flat surfaces. Glass beads are deposited on a previously prepared flat surface through a pair of horizontally positioned screens. Apparatus useful for preparing beaded cinema screen.

Pat. 2,041,859. Liquid Level Indicator. May 26, 1936. A mercury gauge which shows the level of a liquid when activated by an air pump which bubbles air to the bottom of the vessel containing the liquid.

Pat. 2,060,897. Apparatus for Impregnating Nonwoven Fabrics. Nov. 17, 1936. Apparatus for impregnating with aqueous saturants, web material incapable of supporting its own weight when wetted.

Pat. 2,115,752. Rubber Spreading Machine. May 3, 1938. Apparatus in which rubber dope and the starch or mica used to prevent sticking are applied on the same machine.

Pat. 2,115,757. Carton Stenciling Device. May 3, 1938. An automatic stenciling device comprising a rotatable stencil holder for rotating the stencil against the carton and a mechanically operated stencil brush.

Pat. 2,165,286. Sheet Material. July 11, 1939. In the process of embossing fabrics in which the fabric is pressed between a member bearing a design and a registering embossing bed bearing the counterpart of the design, the improvement comprises removing a portion of the bed to a depth greater than the design and pressing a fabric between the said member bearing the design and the embossing bed.

Pat. 2,168,278. Apparatus for Thinning Varnishes. Aug. 1, 1939. An apparatus for thinning varnishes whereby the thinner is added to the hot resin quickly, and below the surface so that the thinner does not boil off or burst into flame.

Pat. 2,175,337. Wrinkle Eliminator. Oct. 10, 1939. Apparatus and process for embossing pyroxylin coated fabrics to prevent the formation of longitudinal wrinkles which comprises directing a blast of air on the goods as it emerges from the nip of the embossing rollers.

Pat. 2,196,692. Coating Device. Apr. 9, 1940. A coating device comprising two doctor blades, the second of which is higher than the first and horizontal tables immediately in front of each knife to support a sheet to be coated.

Pat. 2,196,983. Mixing Apparatus. Apr. 16, 1940. A dough-type kneading mixing apparatus having as the mixing blades substantially parallel adjacent companion worms rotating in opposite directions to convey the material being mixed toward opposite ends of the worms.

Pat. 2,201,628. Renewable Type Filter. May 21, 1940. A filter unit comprising a plurality of hinged interlocking leaves and a filter medium of greater width than the leaves folded over each leaf enclosed in a housing whereby the liquid to be filtered may enter the unit from three sides but is excluded from the outlet side.

Pat. 2,208,135. Filtering Device. July 16, 1940. An apparatus for removing sand, dirt, hair and other foreign materials from paint, varnishes and lacquers.

Pat. 2,228,756. Cable Coating Mechanism. Jan. 14, 1941. Apparatus for coating electric cables, comprising an electric motor having a hollow shaft, means for applying a liquid coating composition to the cable to be coated, and two dies attached to the opposite ends of the said motor shaft, and means for passing the coated wire through the said dies and hollow shaft.

Pat. 2,231,911. Worm Mixer. Feb. 18, 1941. A viscous paste mixing apparatus comprising a vessel and companion rotatable worms, each worm having two oppositely pitched spirals intermeshing with the adjacent spiral on the companion worm.

Pat. 2,278,056. Process for Decorating Sheet Material. Mar. 31, 1942. An improved coating head which comprises an undriven rotatable doctor roller having a design in relief thereon to apply or spread the coating in greater amount where the edges of the design in relief contact the surface being coated. The design on the roller is outlined on the coated material.

Pat. 2,302,610. Automatic Feeder for Two-Roll Mill. Nov. 17, 1942. Apparatus for automatically feeding material to roller mills for pigment dispersion and controlling the roller mill scraper blades.

Pat. 2,302,756. Apparatus for Dispensing Liquid Materials. Nov. 24, 1942. Apparatus for formulating a colored paint from a plurality of colors, in which the mixing device consists essentially of a vertical stand carrying a rotatable spider supporting several containers of individual tinting colors.

Pat. 2,319,082. Apparatus for Overspray Recovery. May 11, 1943. Apparatus for recovering overspray which provides for electrostatically charged baffles as part of a spray booth.

Pat. 2,406,718. Embossing Bowl. Aug. 27, 1946. Apparatus for embossing coated fabrics consisting of a paper counter roll impregnated with a water-soluble polyvinyl alcohol composition to prevent powdering of the paper surface during use.

Section 5

Coated Fabrics (Cellulose Derivative Coatings) and Compositions Therefor, Including Products Manufactured Therefrom

Re. 22,145. Treatment of Fabrics. Reissued July 28, 1942. (Original 2,127,320; dated Aug. 16, 1938.) The process of preparing shade cloth which comprises the improvement of applying directly to an uncoated cloth a composition containing an acid acceptor consisting substantially of colloidal zinc oxide, removing all the ingredients of the said composition except the acid acceptor, and thereafter applying a cellulose derivative coating.

Pat. 1,915,163. Cellulose Nitrate Composition and Solvent Mixture Therefor. June 20, 1933. A coating composition comprising cellulose nitrate, a vegetable oil, a pigment and a solvent mixture consisting of, by weight, ethyl acetate 20–40%, ethyl alcohol 32–70%, and ethylene dichloride 10–28%.

Pat. 1,923,275. Candy Support. Aug. 22, 1933. A heavy fabric laminated to a finely woven fabric with the latter fabric coated with a nitrocellulose composition resistant to chocolate.

Pat. 1,934,711. Covering Material for Tires and the Like. Nov. 14, 1933. A tire cover comprising a textile fabric having an outer surface of a light colored cellulose derivative film and an inner surface of a film comprising casein and glycerine whereby migration of the antioxidant contained in the tire and the resultant discoloration of the outer surface of the cover are prevented.

Pat. 1,940,212. Aeroplane Fabric. Dec. 19, 1933. An aeroplane fabric coated with a first coating of a solution containing both cellulose nitrate and cellulose acetate with a topcoat containing nitrate only in a solvent which does not attack the cellulose acetate of the first coat.

Pat. 1,940,462. Coated Fabric. Dec. 19, 1933. Fabrics coated with a discontinuous film of cellulose nitrate, wax and softener which renders the product resistant to water, oil and grease.

Pat. 1,951,119. Production of Coated Fabrics. Mar. 13, 1934. Method of preparing coated fabrics for window shade material, the improvement which comprises subjection of both sides of the partially coated fabric to a pressure treatment (intermediate skivering) while the coating is still in a plastic state and then further coating on each side.

Pat. 1,954,751. High Glaze Finish for Fabrics and the Like. Apr. 10, 1934. A product comprising a flexible fabric or paper base having a lustrous finish comprising a non-brittle primer of cellulose nitrate-blown cottonseed oil composition and a topcoat of fatty oil modified alkyd resin.

Pat. 1,955,888. Fireproof Screen for Projected Images. Apr. 24, 1934. A fire resistant cinema screen comprising a fabric base coated with a white nitrocellulose composition containing ammonium metal phosphates or ammonium metal arsenates.

Pat. 1,962,151. Cellulose Nitrate Compositions and Solvent Mixtures Therefor. June 12, 1934. A nitrocellulose-vegetable oil coating composition in which the solvent consists of acetone, ethyl alcohol and ethylene dichloride.

Pat. 1,970,704. Coating Compositions. Aug. 21, 1934. A composition comprising rubber, cellulose nitrate, a mutual solvent for the rubber and cellulose nitrate and a plasticizer.

Pat. 1,998,054. Cinema Screen. Apr. 16, 1935. A cinema screen having differently colored glass particles uniformly distributed over the surface of the screen.

Pat. 2,031,629. Coated Textile Material. Feb. 25, 1936. A coated fabric suitable for wearing apparel manufactured from a textile base coated with a water repellent plastic composition comprising cellulose acetate and a plurality of plasticizers therefor.

Pat. 2,033,170. Production of Coated Fabrics. Mar. 10, 1936. A non-curling and non-tendering nitrocellulose coated shade cloth in which the predominating pigment is leaded zinc oxide.

Pat. 2,033,202. Cellulose Derivative Coated Fabric. Mar. 10, 1936. A non-sticky book binding material comprising a nitrocellulose coated fabric on top of which is a layer of tanned gelatin.

Pat. 2,038,755. Pigment Paste. Apr. 28, 1936. Process for dispersing pigments for use in coating materials, in which the pigment is ground in a vehicle comprising an oil and a dilute nitrocellulose solution.

Pat. 2,046,165. Cellulose Derivative Compositions. June 30, 1936. Unsaturated fatty oils stabilized against rancidity with a phenoldipentene condensation product. Also compositions with cellulose derivatives.

Pat. 2,046,944. Nonpiping High Glazed Coated Fabric. July 7, 1936. A non-piping glazed finish coated fabric with (1) an ordinary nitrocellulose coating, (2) a nitrocellulose coating containing blown cotton-seed oil and (3) a topcoat of drying oil varnish.

Pat. 2,049,507. Inks. Aug. 4, 1936. A volatile solvent-free ink consisting of pigment, alkyd resin and a drying oil. Suitable for printing pyroxylin coated bookbinding fabrics.

Pat. 2,059,203. Sheet Rubber. Nov. 3, 1936. A floor covering in which the underlayer is sponge rubber and the top layer is vulcanized rubber.

Pat. 2,061,127. Coated Fabric. Nov. 17, 1936. Fabric coated with a composition comprising hydrogenated rubber and a cellulose derivative.

Pat. 2,063,602. Stabilization of Animal and Vegetable Oils. Dec. 8, 1936. Sugar amines as antioxidant for oils.

Pat. 2,064,610. Stabilization of Non-Drying and Semi-Drying Oils. Dec. 15, 1936. Fatty oils stabilized against rancidity with an antioxidant such as vanillin.

Pat. 2,067,937. Treatment of Cellulose Esters Containing Colloiding Agents. Jan. 19, 1937. Removal of camphor from movie film scrap by extracting it with ethylene dichloride.

Pat. 2,067,938. Treatment of Cellulose Esters Containing Colloiding Agents. Jan. 19, 1937. Extraction of camphor from moving film scraps by means of a mixture of ethylene dichloride and 90% ethyl alcohol.

Pat. 2,082,592. Coated Fabric and Process of Making Same. June 1, 1937. Water repellent coated fabric for mattress covering obtained by coating a fabric on one side with a cellulose derivative and impregnating the other side of the fabric with a nitrocellulose-wax-plasticizer dispersion.

Pat. 2,085,170. Sizing Composition. June 29, 1937. A size for pyroxylin coated fabric book-binding material comprising shellac, copal, a solvent and softener for application to nitrocellulose coated fabric to adapt it for the reception of gold leaf and water soluble adhesives.

Pat. 2,085,197. Duplicator Pad. June 29, 1937. A base for gelatin duplicator pads in which a fabric coated with a cellulose derivative is treated with a tanning agent and then has a layer of gelatin placed upon the tanning agent, thus assuring adhesion of the subsequent gelatin duplicating material.

Pat. 2,087,094. Metallic Finish. July 13, 1937. Coated fabric with a metallic surface in which metal powder is adhered to the coated fabric base by means of an alkyd resin and in which the final lustre is obtained by buffing to orient the particles of metal powder so that their light reflecting faces are in one plane.

Pat. 2,094,613. Composite Sheet Material. Oct. 5, 1937. Flexible, tough, pliable composite sheet material having a surface feel like leather comprising a closely woven fabric base coated with a cellulose derivative coating composition and a surface layer of a sheet of soft pliable absorbent fibrous cellulose tissue adhered to the coating.

Pat. 2,102,715. Decorative Coated Fabric. Dec. 21, 1937. Process for printing the coated surface of a nitrocellulose coated fabric with a photographically reproduced leather design, embossing the printed surface and applying a final surface coat of a clear nitrocellulose lacquer.

Pat. 2,104,070. Stabilization of Animal and Vegetable Oils. Jan. 4, 1938. Animal and vegetable oils rendered

resistant to rancidity development by incorporation of a phenol having at least one alkoxy group ortho or para to the phenolic hydroxyl and at least one carboxyl group or esters thereof directly attached to a carbon of the aromatic ring.

Pat. 2,104,084. Stabilization of Animal and Vegetable Fats and Oils. Jan. 4, 1938. Animal and vegetable oils rendered resistant to rancidity development by incorporation of a phenol having at least one alkoxy group ortho or para to the phenolic hydroxyl and at least one hydroxy aliphatic group directly attached to a carbon of the aromatic ring.

Pat. 2,113,653. Cellulose Derivative Compositions. Apr. 12, 1938. Aryl boric acids as antioxidants for semi-drying and non-drying oils.

Pat. 2,118,101. Coated Fabric. May 24, 1938. A coated fabric designed for use in the manufacture of non-soiling adhesive tape comprising a fabric coated on one side with a nitrocellulose composition, on the other side with a pressure-sensitive adhesive.

Pat. 2,124,749. Stabilization of Animal and Vegetable Fats and Oils. July 26, 1938. Animal and vegetable oils rendered resistant to rancidity development by incorporation of a phenol having at least one alkoxy group in the ortho or para position to the phenolic hydroxyl.

Pat. 2,125,341. Coated Fabric and Process of Making Same. Aug. 2, 1938. A cellulose acetate sheet coated on one side with a metallic powder having light reflecting faces oriented in one plane and this sheet then adhered to a nitrocellulose type coated fabric.

Pat. 2,131,882. Design Embossed High Luster Finish Material. Oct. 4, 1938. Process for embossing nitrocellulose coated fabrics having a clear top coating so that the tops of the embossing will have a high lustre, and the valleys will have a low lustre by piercing the clear coating.

Pat. 2,131,904. Stabilization of Animal and Vegetable Fats and Oils. Oct. 4, 1938. Animal and vegetable fats and oils rendered resistant to rancidity development by incorporation of a polyhydric phenol having at least one hydroxyl group ortho or para to another hydroxyl and an alkyl radical of 12 carbon atoms.

Pat. 2,137,969. Article of Manufacture. Nov. 22, 1938. An embossed nitrocellulose coated fabric for adhesive tape manufacture, treated with water to restore the fibers of the fabric to their condition before embossing and applying a pressure-sensitive coating to the uncoated side. Process improves adhesion of the rubber adhesive to the fabric.

Pat. 2,139,824. Colored Metallic Finish. Dec. 13, 1938. A high gloss colored metallic finish coated fabric in which the color is obtained by applying a top coat of a colored lacquer over oriented aluminum particles having their light reflecting faces in one plane.

Pat. 2,142,115. Composition. Jan. 3, 1939. Ammonium sulfamate as a fire retarding agent for coated fabrics.

Pat. 2,145,385. Treatment of Coated Fabrics. Jan. 31, 1939. Coated fabric treated to prevent shrinkage by saturating it with water and then drying it under little or no tension.

Pat. 2,153,755. Beaded Surfaces. Apr. 11, 1939. A coated fabric having on it a layer of beads of methyl methacrylate adhered to the surface.

Pat. 2,156,046. Paper Window Shade Capable of Transmitting Light Uniformly. Apr. 25, 1939. A window shade material comprising a paper base having a design embossed on its surface and overcoated with a nitrocellulose coating composition to give the appearance of a coated fabric.

Pat. 2,165,317. Printer's Blanket. July 11, 1939. A felt impregnated with an "oil in water" type cellulose derivative emulsion, an intermediate coat of plasticiser free cellulose nitrate and finally coated with a pigmented pyroxylin composition.

Pat. 2,187,121. Venetian Blind Slat. Jan. 16, 1940. A Venetian blind slat comprising a flexible fabric having a metal reinforcing member about its periphery embedded in a mass of adhesive.

Pat. 2,187,127. Translucent Light Shield. Jan. 16, 1940. A transiucent coated fabric light shield for use in connection with windows having two roller shades centrally located.

Pat. 2,215,061. Coating Glass Fabric. Sept. 17, 1940. Coating of woven glass fabric with a cellulose nitrate pigmented composition.

Pat. 2,223,288. Process of Making Dull-Finish Coated Fabrics. Nov. 26, 1940. Dull-finish produced on nitrocellulose coated fabrics by applying a topcoat of a nitrocellulose emulsion in which a plasticized nitrocellulose solution is the external phase and water is the internal phase.

Pat. 2,227,843. Opaque Window Shade Material. Jan. 7, 1941. Opaque shade cloth made by coating a fabric on each side with a mixture comprising a cellulose derivative and aluminum flakes and a second coating on each side comprising nitrocellulose and non-metallic pigments.

Pat. 2,229,146. Drawsheet. Jan. 21, 1941. A drawsheet comprising a base fabric prepared from threads of regenerated cellulose of uniform denier, on one side of said fabric a base coat comprising a cellulose derivative and an alkyd resin, an intermediate coat comprising a cellulose derivative, alkyd resin and pigment and a surface coat of a dull cellulose derivative composition, on the opposite side of said fabric a plasticized resin coat, said last mentioned coat having a slight tack under pressure.

Pat. 2,241,384. Sterilizable Adhesive Tape. May 13, 1941. A sterilizable surgical adhesive tape comprising a flexible base having a pressure-sensitive rubber adhesive firmly attached to one side and a highly pigmented plasticized cellulose ether (ethyl cellulose) composition firmly attached on the other side.

Pat. 2,263,900. Window Shade Material. Nov. 25, 1941. A coated fabric window shade material in which the fabric is woven from a continuous filament of uniform denier and free from nap and fabric imperfections and coated with a composition having approximately the same light transmission as the fabric.

Pat. 2,307,225. Coated Fabric. Jan. 5, 1943. A textile fabric having a thin coating of a thermoplastic composition containing a cellulose ether and a thin surface coat of a thermosetting composition containing a urea formaldehyde resin. Useful as table covers.

Pat. 2,310,740. Adhesive Tape. Feb. 9, 1943. A luminescent adhesive tape comprising a sheet material having a base coating on one side comprising a cellulose ether binder and from 50 to 80 per cent thereof of a luminous material, a clear unpigmented cellulose ether coating superposed over said base coating, and a pressure-sensitive adhesive coating on the opposite side.

Pat. 2,335,739. Coated Fabric. Nov. 30, 1943. A base material containing a nitrocellulose discoloring agent, said base material having superposed on at least one side thereof a coating of a mixed cellulose ester and a surface coating of a nitrocellulose. The mixed ester acts as a barrier to the discoloring agent.

Pat. 2,336,265. Coated Fabric. Dec. 7, 1943. Coating each side of a textile fabric base material with a liquid coating composition comprising a solution of nitrocellulose, a plasticiser and pigment. At least 20% of the total pigment in the coating composition consists of zinc oxide particles, the size of which is greater than 14 microns in any one direction.

Pat. 2,336,266. Airplane Fabric and Method of Making Same. Dec. 7, 1943. A predoped fabric suitable for covering airframes comprising a fabric base having a water insoluble cellulose derivative coating composition containing a plasticizer deposited in the interstices thereof without substantially permeating the individual threads, the portion of said coating contacting said fabric being in the form of fine discrete checks.

Pat. 2,336,267. Method of Making Airplane Fabric. Dec. 7, 1943. The process of manufacturing predoped fabric which comprises wetting the fabric with water, applying thereto a water-insoluble cellulose derivative coating composition containing a volatile solvent for the cellulose derivative, and evaporating said solvent at a rate greater than the evaporation of the water in the said fabric.

Pat. 2,344,495. Nonstaining Coated Fabric. Mar. 21, 1944. A nitrocellulose coated fabric carrying a stain resistant topcoat of a coating comprising cellulose acetobutyrate.

Pat. 2,351,182. Process for Treating Fabric and Product Produced Thereby. June 13, 1944. An open weave fabric (leno cloth) having the interstices bridged with individual films of a non-thermo-adhesive composition containing polyvinyl acetate. Useful as carpet seaming tape.

Pat. 2,356,354. Method of Coating fabric. Aug. 22, 1944. Surgical adhesive tape coated with a pigmented cellulose acetate composition.

Section 6

Coated Fabrics (Non-Cellulosic Coatings) and Compositions Therefor, Including Products Manufactured Therefrom

Pat. 1,907,496. Gas Cell Material. May 9, 1933. Method of preparing an impermeable material comprising coating a fabric base with a rubber composition, superposing thereon an adhesive coating, superposing thereon a composition including viscose and latex, and exposing the coated side of said fabric base to an atmosphere of an acid gas.

Pat. 1,931,110. Rubber Coated Fabric. Oct. 17, 1933. A rubber coated fabric having as a topcoat a composition containing an asphalt oil which is unsaturated.

Pat. 1,934,709. Coated Fabric. Nov. 14, 1933. Coated flexible fabric sheet having a final coat of baked drying oil modified alkyd-asphalt varnish.

Pat. 1,936,500. Rubber Coated Fabric. Nov. 21, 1933. Making artificial leather from fabric sheet material by applying a final coating comprising steam-refined petroleum residue asphalt varnish, and baking.

Pat. 1,955,355. Asphaltic Coating Compositions and Materials Coated Therewith. Apr. 17, 1934. Varnish from asphalt, oil- or natural resin-modified alkyd resin, and an organic iron compound (e. g., iron oleate).

Pat. 1,967,967. Artificial Leather. July 24, 1934. A flexible artificial leather product comprising a felt of artificially crinkled mercerized paper-making fibers impregnated with rubber latex, a rubber coating on the impregnated felt, and top coat of dried asphalt varnish.

Pat. 1,981,909. Improved Perforated Corset Material and Method of Making the Same. Nov. 27, 1934. An elastic rubber garment material comprising a plurality of layers of knitted material joined by a layer of rubber composition, said garment material being perforated with a plurality of holes.

Pat. 1,982,231. Asphaltic Coating Composition and Materials Coated Therewith. Nov. 27, 1934. Coating rubber-coated fabric with a varnish containing drying oil, asphalt, solvent for the asphalt and an organic iron compound soluble therein, and baking.

Pat. 1,987,605. Auto Top Material and the Like. Jan. 15, 1935. A rubberized coated fabric having an intermediate sheet of aluminum foil adhered to the rubber with an alkyd resin with a nitrocellulose topcoat on the foil.

Pat. 1,990,474. Oil Acid Varnish and Product Coated Therewith. Feb. 12, 1935. Fabric coated with a mixture of free fatty oil acid and asphalt.

Pat. 1,990,475. Asphaltene Varnish. Feb. 12, 1935. Rubber-coated fabric coated with varnish comprising a film forming material containing the acid radicals of a drying oil and asphaltene derived from asphalt.

Pat. 1,995,957. Asphaltic Coating Composition and Material Coated Therewith. Mar. 26, 1935. Coatings comprising asphalt, a fatty oil and/or resinic acid and/or naphthenic acid modified alkyd and rubberized fabrics coated therewith.

Pat. 1,999,186. Chemical Compounds and Method of Making Same. Apr. 30, 1935. Peracetylated rubber with resins or cellulose derivatives.

Pat. 2,002,634. Vulcanized Asphalt Oil and Product Containing It. May 28, 1935. Coating compositions comprising asphalt oil and sulfur and process for making them.

Pat. 2,003,918. Hose Coupling. June 4, 1935. A detachable coupling for use with collapsible mine ventilating tubing comprising a resilient discontinuous ring with suitable wire coupling.

Pat. 2,007,999. Hose Suspension. July 16, 1935. A ventilating tube comprising the combination of a tube and a suspension device having two parts, a part of said tube being securely fixed by means of a plurality of clinched ears between the said two parts of the suspension device.

Pat. 2,012,108. Resistant Material. Aug. 20, 1935. Mine ventilating tubing having an interlayer of metal foil to prevent the transfer of fungus infection.

Pat. 2,030,226. Casein Dispersion. Feb. 11, 1936. A composition comprising a homogeneous fluid dispersion of casein and a cellulose ether in a solvent mixture composed essentially of organic solvents and containing an alcohol and a sulphonated fixed oil.

Pat. 2,041,836. Impervious Fabric. May 26, 1936. Flexible oil pump diaphragm comprising a fabric impregnated with a drying oil containing an anti-oxidant such as diphenylguanidine.

Pat. 2,046,975. Paper Container. July 7, 1936. A moistureproof tobacco pouch comprising a strong paper base having a coating of sticky uncured rubber composition comprising inert pigments to which is applied a pulverulent tack reducing material in amount sufficient to render the rubber composition tack free but which leaves the rubber adhesive under pressure.

Pat. 2,054,274. Perforated Corset Material. Sept. 15, 1936. A perforated corset material comprising two plies of knitted fabric laminated by means of rubber layer.

Pat. 2,059,278. Process for Making Sponge Rubber Articles. Nov. 3, 1936. Sponge rubber containing animal or vegetable fibers.

Pat. 2,059,948. Coating Compositions. Nov. 3, 1936. A coating composition for renewing fabric automobile top comprising alkyd resin, carbon black, an iron drier, and lead oxide.

Pat. 2,062,469. Auto Top Material. Dec. 1, 1936. A rubberized auto top material having a topcoat of an alkyd resin containing aluminum powder.

Pat. 2,063,073. Aqueous Dispersions of Hydrogenated Rubber and Process of Preparing the Same. Dec. 8, 1936. Aqueous dispersions of hydrogenated rubber, method for making and fabrics coated therewith.

Pat. 2,063,134. Casein Dispersions. Dec. 8, 1936. A homogeneous water dispersion containing about 20% casein, 60% water and about 20% of a sulphonated fixed oil as the dispersing agent.

Pat. 2,065,881. Coated Fabric. Dec. 29, 1936. Rubber-coated fabric sheet having a coat of baked varnish comprising gilsonite, drying oil and pigment.

Pat. 2,069,314. Process for Making Bituminous Compositions. Feb. 2, 1937. Asphalt coating compositions consisting of heat processed asphaltites (gilsonite) to increase the fixed carbon content by 8–40%.

Pat. 2,074,769. Dining Table Equipment. Mar. 23, 1937. A table-pad made from coated fabric with sponge rubber adhered to one side.

Pat. 2,075,967. Sheet Material. Apr. 6, 1937. Artificial chamois made by impregnating a napped cotton fabric with a thin rubber dispersion containing rubber, factice and glycerol.

Pat. 2,078,921. Coating Composition. May 4, 1937. Anti-wrinkling coating compositions comprising tung oil-asphalt mixtures and an amine or an organic hydroxy compound as a wrinkling inhibitor.

Pat. 2,082,559. Method of Coating Fibrous Material. June 1, 1937. Coated fabric prepared by first applying a thin coat of a dispersion of rubber in gasoline. Second, dusting this material with powdered mica. Third, removing the surplus mica. Fourth, applying several coats of rubber latex. Fifth, vulcanizing.

Pat. 2,084,173. Wearing Apparel. June 15, 1937. A moistureproof jacket having ventilating means back of the shoulder.

Pat. 2,084,933. Asphalt Varnish. June 22, 1937. Gilsonite-drying oil varnish highly pigmented with carbon black and containing a long chain aliphatic monohydric alcohol.

Pat. 2,085,204. Antiskid Device for Power Driven Vehicles. June 29, 1937. An attachment for automobile tires to prevent skiding comprising a cross-strap of a plurality of laminated rubberized fabrics with an outer layer of sponge rubber.

Pat. 2,087,569. Gasket Material. July 20, 1937. A strip gasket comprising a fabric having a rubber outer surface and an inner sponge rubber surface with bulged edge portion connected by a narrower section, said bulged portions having resilient core of fibrous material.

Pat. 2,089,940. Coupling Device for Collapsible Tubes. Aug. 17, 1937. A coupling device for collapsible mine ventilating tubing.

Pat. 2,091,265. Flexible Noncollapsible Tubing. Aug. 31, 1937. Collapsible tubing reinforced in such a manner as to make it noncollapsible for use in mine ventilating, transporting fluids, etc.

Pat. 2,098,748. Article of Manufacture. Nov. 9, 1937. A coated vulcanized rubber sand-blasting stencil sheet comprising rubber and wood flour.

Pat. 2,098,754. Auto Top Material. Nov. 9, 1937. A rubberized auto top material having a superimposed coat of varnish and upon that a coat of aluminum paint in which the vehicle is an alkyd resin.

Pat. 2,098,788. Leather Substitute. Nov. 9, 1937. A flock sueded rubberized coated fabric, with the sueded surface impregnated with a rubber compound to prevent napping, smoothed and embossed.

Pat. 2,098,789. Leather Substitute. Nov. 9, 1937. A pigmented rubberized coated unnapped cotton fabric, with the cotton flock sueded surface impregnated with a pigment rubber compound, smoothed and embossed.

Pat. 2,110,070. Coated Fabrics. Mar. 1, 1938. A rubberized coated fabric with a base coat of rubber-wax composition and a colored topcoat in which the vehicle is an alkyd resin.

Pat. 2,110,072. Mixed Synthetic Glyceride Varnish. Mar. 1, 1938. Coatings comprising asphalt and glycerides of tung oil acids and another drying oil acid.

Pat. 2,121,678. Footwear and Sole Material Therefor. June 21, 1938. An imitation crepe rubber shoe sole which consists of a fabric first coated with dense rubber, then with rubber sponge and then with a water varnish.

Pat. 2,121,709. Leather Like Material and Process of Producing Same. June 21, 1938. A felted fabric coated on one side with a rubber cement and impregnated on the other side with a rubber latex.

Pat. 2,121,717. Method of Coating Fabrics and Product Thereof. June 21, 1938. Process of coating fabrics with latex in which the fabric is pretreated with a material which coagulates latex and then is coated with the latex.

Pat. 2,149,913. Perforated Fabric. Mar. 7, 1939. Rubberized fabric perforated by passing pins through it and into complementary cavities contained in a supporting die.

Pat. 2,166,224. Tobacco Pouch. July 18, 1939. A laminated tobacco pouch material comprising a flexible dense non-fibrous base intimately joined by means of an oil-varnish ink to a substantial layer of uncured rubber composition.

Pat. 2,186,124. Laminated Structure and Method for Making the Same. Jan. 9, 1940. A flexible laminated tobacco pouch material comprising a transparent base having a smooth, dense surface, an intermediate film comprising a nitrocellulose ink and a composition containing polymerized isobutylene and rosin, and joined thereto a substantial layer of filled, uncured rubber composition.

Pat. 2,187,563. Article of Manufacture. Jan. 16, 1940. Surgical adhesive tape made water repellent by coating the cloth with an emulsion containing deacetylated chitin.

Pat. 2,192,708. Laminated Material. Mar. 5, 1940. A laminated tobacco pouch material comprising a dense, non-fibrous, transparent, flexible base securely joined to a substantial layer of a filled, uncured rubber composition by means of an intermediate film of an alkyd resin containing rosin, said rubber composition being rendered non-tacky by means of a surface coat of starch.

Pat. 2,201,891. Coated and Impregnated Fabric. May 21, 1940. Fabrics coated and impregnated with compositions comprising monohydric alcohol modified urea formaldehyde resin.

Pat. 2,201,931. Article of Manufacture. May 21, 1940. A rubberized coated fabric in which the rubber compound contains an appreciable quantity of wood fiber (obtained from newsprint paper) evenly dispersed throughout it.

Pat. 2,208,619. Sealing Tape. July 23, 1940. A sealing tape comprising a fabric base, a coating of neoprene containing a salt of a chromic acid.

Pat. 2,213,899. Process of Making an Elastic Fabric. Sept. 3, 1940. Laminated sheet material comprising alternate layers of rubber and knitted fabrics for use in corset and brassiere manufacture.

Pat. 2,219,697. Article of Manufacture. Oct. 29, 1940. An insole for shoes consisting of laminations of latex coated paper.

Pat. 2,246,101. Floor Covering. June 17, 1941. A laminated floor covering in which the bottom layer is a sheet of metal foil, the next layer is sponge rubber adhered to the metal foil, and the top layer is a rubberized fabric.

Pat. 2,250,674. Diaphragm for Fuel Pumps. July 29, 1941. A fuel pump diaphragm capable of withstanding repeated flexings at a high rate comprising a textile fabric impregnated with a composition containing polyvinyl alcohol and a plasticizer selected from the class consisting of ethanol acetamide and ethanol formamide.

Pat. 2,268,121. Coated Fabric. Dec. 30, 1941. A fabric coated with a composition containing a polyvinyl butyraldehyde resin, plasticizer, wax and a suitable solvent.

Pat. 2,292,454. Treatment of Surface Halogenated Rubber. Aug. 11, 1942. Treatment of halogen-hardened rubber surfaces with long chain amines or amides.

Pat. 2,302,557. Rubber Product. Nov. 17, 1942. An article of manufacture which comprises rubber having a halogen-hardened surface overlaid with an adherent baked film comprising a phenol-aldehyde resin.

Pat. 2,307,508. Preventing Evaporation From Oil Storage Tanks. Jan. 5, 1943. A floating roof for storage tanks comprising a layer of buoyant material which is covered by a membrane of fabric coated with a material which is not penetrated by the vapor of the liquid contained in the tank and which will float on the surface of the liquid and is non-rigid.

Pat. 2,336,792. Rubber Product. Dec. 14, 1943. Rubber surfaces coated with compositions containing phenol-aldehyde resins and vinyl-type resins.

Pat. 2,370,457. Rubber Products. Feb. 27, 1945. As a rubber filler chrome-tanned leather shavings which have been fat-liquored.

Pat. 2,371,042. Noncollapsible Tubing. Mar. 6, 1945. A non-collapsible mine ventilating tubing comprising a coated fabric tubing supported by strips of spring steel.

Pat. 2,377,989. Car Lining. June 12, 1945. A lining for boxcars for petroleum products made from a fabric coated with a hydrocarbon resistant synthetic rubber-like material.

Pat. 2,386,095. Heating Device. Oct. 2, 1945. An improved heating element adapted to develop heat when connected to a source of electric energy comprising a semi-conducting film of a polymeric organic substantially non-conducting composition containing an alkyd resin, a polyvinyl acetal resin, an insolubilizing agent for said acetal resin and a carbon black having an electrical resistivity of less than 1.0 ohm per 1" cube.

Pat. 2,387,512. Luminescent Adhesive Tape. Oct. 23, 1945. A phosphorescent adhesive tape comprising a transparent base having on one side thereof a thin, substantially transparent layer of rubber, a layer of luminescent pigment and another layer of rubber adhesive superposed over said pigment layer.

Pat. 2,400,918. Airplane Wing or Fin With Improved Airfoil Characteristics. May 28, 1946. A rubberized coated fabric applied manually to airplane wing or fin, the fabric containing a potentially gas-evolving substance in its rubber coating, and this assembly heated to cause the rubber coating to become sponge rubber.

Pat. 2,404,313. Coated Fabric. July 16, 1946. A light weight textile fabric coated with a 90–10 copolymer of vinyl chloride and vinyl acetate containing pigment and as a plasticizer azelaic di-ester of monobutyl ether of ethylene glycol.

Pat. 2,408,416. Semi-Conducting Composition. Oct. 1, 1946. A semi-conducting composition comprising finely divided carbon-black dispersed in a vehicle containing an alkyd resin, a polyvinyl acetal resin and urea-formaldehyde resin as the essential film forming ingredient. The carbon black is preferably acetylene black.

Pat. 2,413,931. Pressure Sensitive Adhesive Fabrics. Jan. 7, 1947. A pressure sensitive adhesive fabric comprising a fabric coated with a mixture of polyvinyl butyral, polyvinyl acetate and dibutyl phthalate.

Pat. 2,423,565. Polyvinyl Acetal Resin Composition. July 8, 1947. A polyvinyl butyral resin rendered insoluble by heating in the presence of a butanol modified urea-formaldehyde resin.

Pat. 2,426,775. Process of Curing Sheeted Plastic Material. Sept. 2, 1947. Process in which the sheeted material is rapidly heated, then compacted, as by forming a roll, then stored in roll form without materially changing the temperature until the curing is completed, and then cooling.

Section 7

Impregnated Paper and Similar Sheet Material

Pat. 1,913,283. Impregnated Paper Product. June 6, 1933. As an article of manufacture an impregnated sheet of felted artificially crinkled cellulose fibers, said fibers having a freeness of 15 to 40 seconds and exhibiting a blue stain when treated with zinc chloride solution.

Pat. 1,944,906. Absorbent Felt and Artificial Leather Product Made Therefrom. Jan. 30, 1934. Making absorbent felt by hydrating mercerized but unpurified paper pulp, and use as impregnating base for artificial leather.

Pat. 1,944,907. Impregnated Paper Product. Jan. 30, 1934. A sheet of felted, artificially crinkled, superficially mercerized fibers impregnated with a mixture of drying oil and bituminous material, said fibers having a freeness of 15 to 40 seconds.

Pat. 1,945,537. Artificial Fabric. Feb. 6, 1934. Sheets of artificially crinkled, fibrous cellulosic material having starch absorbed therein.

Pat. 1,945,538. Artificial Fabric. Feb. 6, 1934. Web of artificially crinkled, fibrous cellulosic material impregnated with coagulated rubber latex.

Pat. 1,953,083. Artificial Fabric Containing Resins. Apr. 3, 1934. Artificial fabric comprising artificially crinkled cellulosic material impregnated with a vinyl ester polymer.

Pat. 1,967,929. Top Spinning Cover. July 24, 1934. A top spinning roll cover which comprises crinkled paper making fibers felted into a paper and impregnated with rubber latex, and forming the impregnated sheet into a cylinder.

Pat. 1,998,758. Treatment of Paper Pulp. Apr. 23, 1935. Starch-impregnated hydrated mercerized paper pulp.

Pat. 2,003,961. Inner Sole and Like Product. June 4, 1935. A shoe sole having closely spaced lines impressed therein and running transversely of the sole and impressed lines running in the heel to toe direction of the sole, said last mentioned lines being further spaced than said first mentioned lines.

Pat. 2,011,914. Fibrous Material and Process of Making It. Aug. 20, 1935. Artificial leather comprising a mat of compressed gelatinizable and ungelatinizable fibers.

Pat. 2,015,132. Vulcanized Fiber. Sept. 24, 1935. A process of making vulcanized fiber which comprises treating wood pulp of 700–1200 centipoise viscosity with a mercerizing agent to a freeness of 25 to 55 seconds, cutting the fibers to a freeness of 160 to 250 seconds, forming into paper and treating with a gelatinizing agent.

Pat. 2,216,845. Manufacture of Paper. Oct. 8, 1940. Greaseproof paper prepared by a process involving the new steps of mixing the paper pulp with a size solution containing as a film former an alkali soluble cellulose ether and treating the sized fibers with an aqueous solution of an alkaline swelling agent.

Section 8

Finishes for Metal and Glass—Including Automobiles, Refrigerators, Etc.

Pat. 1,912,369. Coating Composition and Method of Making and Applying It. June 6, 1933. Alkyd resin surfacers applicable in several coats with one baking operation, containing specified pigment combinations and proportions of oil.

Pat. 1,912,370. Coating Composition and Method of Making and Applying It. June 6, 1933. Oil-type coatings applicable in several coats with one baking operation and containing specified pigment combinations and proportions of oil.

Pat. 1,912,371. Coating Compositions and Method of Making and Applying Them. June 6, 1933. Coating articles with oil-type primer, drying, applying several coatings of alkyd resin surfacer without intermediate drying, and drying surfacer coats simultaneously.

Pat. 1,912,372. Method of Coating and Article Produced Thereby. June 6, 1933. Coating articles with a primer, applying several surfacer coatings without drying, drying the surfacer coatings simultaneously and applying a topcoat.

Pat. 1,914,097. Insulated Electrical Conduit. June 13, 1933. An electrical conductor carrying a coating comprising cellulose acetate, triacetin, magnesium carbonate and rottenstone.

Pat. 1,914,563. Nonchalking Coating Composition. June 20, 1933. A chalking resistant coating composition comprising a cellulose derivative vehicle and antimony oxide, said vehicle normally yielding chalking films with zinc oxide, titanium dioxide and lithopone.

Pat. 1,936,533. Phosphates of Alkylolamine Compounds and Their Production. Nov. 21, 1933. Phosphate of triethanolamine ester of an aliphatic monobasic acid having a molecular weight greater than 150, to impart anti-rust properties to a paint.

Pat. 1,936,534. Coating Compositions. Nov. 21, 1933. A coating composition comprising a hydrocarbon solvent and a phosphate of a triethanolamine ester of a fatty acid having a molecular weight greater than 150, used to impart anti-rust properties to a paint.

Pat. 1,941,398. Coating Composition. Dec. 26, 1933. A coating composition comprising a flaked pigment, a drier and a solution of a volatile solvent of an oil modified resin having an acid number not greater than 15 comprised of the reaction product of a polyhydric alcohol, a polybasic acid and drying oil.

Pat. 1,948,580. Nonchalking Coating Composition. Feb. 27, 1934. An opaque, chalk resistant coating composition comprised of zirconium oxide as the sole white pigment in a cellulose derivative vehicle which normally yields a chalking film when combined with zinc oxide.

Pat. 1,948,582. Antioxidants. Feb. 27, 1934. Oil-type coating compositions containing creosole as antiskinning agent.

Pat. 1,954,835. Crystallizing Varnish. Apr. 17, 1934. A crystallizing varnish containing 19 parts by weight of a glycerol-phthalic anhydride-China-wood oil acids resin, 38 parts by weight of blown China-wood oil, 5.5 parts by weight of cobalt drier solution, 9.5 parts by weight of high boiling gasoline.

Pat. 1,967,936. Paint Vehicle for Flaked Pigments. July 24, 1934. A coating composition comprising flaked aluminum pigment, a drier and a solution in a volatile solvent of an oil modified polyhydric alcoholic-polybasic acid resin.

Pat. 1,972,521. Synthetic Resin. Sept. 4, 1934. A process for preparing light-colored, nonyellowing alkyds which comprises polymerizing and bleaching drying oils by heating in the absence of an oxidizing gas followed by heating with a polyhydric alcohol to form a single phase and finally esterifying with a polybasic organic acid.

Pat. 1,983,460. Nonyellowing Baking Enamel. Dec. 4, 1934. A nonyellowing baking enamel comprising an alkyd resin modified with a substantial quantity of fatty oil acids of which not less than about 90% consists of the fatty oil acids of a fatty oil having an iodine value not greater than 150 and a hexabromide number not greater than 10.

Pat. 1,986,930. Enamel-Like Coating Composition. Jan. 8, 1935. An alkyd resin coating composition in which an oil soluble polyhydric alcohol-polybasic acid resin is blended or dissolved in the cold in a bodied oil of the drying or semi-drying type.

Pat. 1,986,936. Polishing Composition. Jan. 8, 1935. An emulsified polish containing carnauba wax, paraffin, naphtha, heavy mineral oil, petroleum base sulphonic acid soluble in petroleum hydrocarbon solvents and water.

Pat. 1,989,711. Light Colored Coating Composition. Feb. 5, 1935. A rapid drying light colored coating composition comprising oil modified alkyd resin and a drier containing a major proportion of an organic peroxide.

Pat. 1,995,954. Rust-Resisting Coating Composition. Mar. 26, 1935. A rust-resisting coating composition comprising phosphoric acid and a varnish vehicle in hydrocarbon solvent wherein the acid is insoluble and is rendered compatible therewith by incorporation of a miscible organic solvent for the phosphoric acid.

Pat. 1,998,744. Baking Enamel. Apr. 23, 1935. A coating composition comprising an aqueous solution of an alkyd resin prepared by heating a polyhydric alcohol with at least 10% excess of polycarboxylic acid, dissolving resulting resin in an aqueous solution of a water soluble volatile base and adding thereto an amount of polyhydric alcohol chemically equivalent to the excess of polycarboxylic acid.

Pat. 1,999,413. Method of Decorating Surfaces. Apr. 30, 1935. Adhering of a decalcomania to a surface by means of a heat-hardening alkyd resin, and baking to thoroughly harden the resin.

Pat. 2,000,095. Insulated Electric Conductor. May 7, 1935. An electric conductor comprising a wire, a layer of rubber surrounding the wire, a fabric layer surrounding the rubber layer and an outer cellulose lacquer coating, said fabric layer being impregnated with a solution of a synthetic resin resistant to oil.

Pat. 2,003,068. Protective Finish. May 28, 1935. An article of manufacture having as a base coat finish a nitrocellulose composition and as a topcoat finish an oil modified alkyd resin composition.

Pat. 2,008,018. Graining Ink. July 16, 1935. A graining ink comprising pigment dispersed in a vehicle which is non-solvent for cellulose esters, said vehicle comprising a 4% solution of natural resins in a solvent mixture of which the major components are high boiling alcohols and terpineol.

Pat. 2,011,898. Stencil Paste. Aug. 20, 1935. A stencil paste comprising a drying oil alkyd resin, pigment, drier and a dilute soap solution to prevent runs and sags.

Pat. 2,047,797. Baking Enamel. July 14, 1936. A high-temperature baking enamel comprising asphalt and an alkyd resin.

Pat. 2,047,889. Baking Enamel. July 14, 1936. A high-temperature black baking enamel comprising asphalt and a drying oil.

Pat. 2,064,608. Cellulose Derivative Coating Composition. Dec. 15, 1936. A flat black lacquer for switchboards in which the black pigment is manganese dioxide.

Pat. 2,072,770. Coating Composition and Drier Therefor. Mar. 2, 1937. Polyvalent metal salts of phthalamic acids as driers for oil-type coating compositions for use in fender enamels.

Pat. 2,078,971. Process for the Manufacture of Polishing Wax Compositions. May 4, 1937. A process of manufacturing polishing waxes in which the temperatures of adding the different ingredients are carefully controlled.

Pat. 2,086,714. Coating Compositions. July 13, 1937. A high lustre white coating composition comprising small particle size (0.12 to 0.12 micron) zinc oxide dispersed in a vehicle selected from the group consisting of cellulose derivatives and alkyd resins, said pigment being present in excess of 15% of the solids content.

Pat. 2,096,448. Insulated Electric Cable. Oct. 19, 1937. A corona resistant, nonblocking cable lacquer which contains a spewing mineral oil ingredient.

Pat. 2,110,085. Resinous Coating Compositions. Mar. 1, 1938. A nonfrosting China-wood oil alkyd resin composition containing from 2% to 15% of an oil-soluble phenol-formaldehyde resin.

Pat. 2,155,775. Bituminous Compositions and Process for Making Same. May 3, 1938. Fender enamels containing processed asphaltites and fatty oils or resins.

Pat. 2,116,318. Electrical Equipment. May 3, 1938. Insulating varnish for electrical coils comprising a mixture of monomeric and polymeric methyl methacrylate.

Pat. 2,118,521. Polishing Composition. May 24, 1938. A liquid wax polishing composition consisting of a wax, a readily volatile solvent therefor and 1 to 6% of an acid phthalate alkyl ester, the alkyl group having more than 4 carbon atoms.

Pat. 2,121,680. Coating Compositions. June 21, 1938. Rigid articles coated with non-heat-hardening resin consisting essentially of ether linkage, said resin being the reaction product of a polyhydric phenol and an organic polyhalide.

Pat. 2,121,690. Resinous Coating Compositions. June 21, 1938. A nonfrosting Chinawood oil composition comprising a Chinawood oil modified alkyd resin containing an excess of glycerine, and a urea-formaldehyde resin.

Pat. 2,128,961. Coated Products and Process Whereby Prepared. Sept. 6, 1938. Rigid, porous non-fibrous inorganic surface primed with deacetylated chitin and coated thereover with film forming material of the class consisting of drying oils, resins and cellulose derivatives.

Pat. 2,139,008. Coating Composition. Dec. 6, 1938. Chalk resistant coating compositions comprising one-half to one part of acrylic resin for each part of cellulose nitrate as the vehicle for the pigment which normally chalks in a cellulose nitrate vehicle.

Pat. 2,141,729. Polishing Composition. Dec. 27, 1938. A polish comprising as an emulsifying agent, an alkali metal salt of a sulfated alcohol and another emulsifying agent of the bodying type, a non-drying oil as the dispersed phase, and water as the continuous phase.

Pat. 2,149,914. Coating Compositions. Mar. 7, 1939. A rust inhibiting paint comprising a rust inhibiting lead pigment and an extender in an oil vehicle in specific ratios.

Pat. 2,149,915. Coating Compositions. Mar. 7, 1939. A rust inhibiting paint comprising a rust inhibiting chromium pigment and an extender in an oil vehicle in specific ratios.

Pat. 2,170,658. Enamel Composition. Aug. 22, 1939. A coating composition comprising an alkyd resin as the predominating film forming component, cellulose nitrate, plasticizer, pigment and 0.05 to 1.00% orthophosphoric acid to promote adhesion.

Pat. 2,189,530. Finishing Composition. Feb. 6, 1940. The process of preparing mar-resistant coating compositions in which a wax is colloidally dispersed in a heat bodied oil having drying properties.

Pat. 2,191,530. Coating Composition. Feb. 27, 1940. A non-bronzing maroon cellulose derivative coating composition comprising a cellulose derivative (e. g., cellulose nitrate), and an azo pigment selected from the class consisting of diazotized meta-nitro-para-anisidine coupled with meta-nitranilide of 2-hydroxy-3 naphthoic acid and diazotized meta-nitro-ortho-anisidine coupled with meta-nitranilide of 2-hydroxy-3 naphthoic acid.

Pat. 2,191,947. Coating Compositions. Feb. 27, 1940. A white coating composition resistant to yellowing comprising an alkyd resin vehicle, a major proportion of white pigment, a blue tinting pigment and a maroon pigment selected from the class of Mineral Violet and Cobalt Violet.

Pat. 2,214,127. Coating Composition. Sept. 10, 1940. An oil and grease resistant coating composition comprising cellulose nitrate and up to an equal amount of combined low acid number alkyd resin and plasticizer, said resin being an alkyd modified with non-hydroxy non-drying vegetable oils and a phthalic acid ester of alkyl and cyclic alcohols.

Pat. 2,214,667. Coating Composition. Sept. 10, 1940. A chalking and bronzing resistant coating composition comprising pigment, cellulose nitrate and one-half to one part of non-hydroxy-non-drying oil modified low acid number alkyd resin for each part of cellulose nitrate.

Pat. 2,223,026. Metal Container. Nov. 26, 1940. A lacquer for the interior of beer cans using a cyclohexyl ester of a carboxylic acid as a plasticizer.

Pat. 2,225,256. Coating Composition. Dec. 17, 1940. A coating composition comprising a heat hardening urea-formaldehyde resin and from about 0.05% to 4.5% of chlorinated rubber.

Pat. 2,225,303. Acid and Alkali Resistant Paint. Dec. 17, 1940. A coating composition which is highly resistant to acids and alkalies and which has a metallic luster when dry, comprising 2 to 10 pounds of finely divided leafed lead and from .4 to 2 pounds of chlorinated rubber for each gallon of coating composition.

Pat. 2,246,095. Coating Composition. June 17, 1941. An enamel resistant to yellowing comprising titanium dioxide pigment, alkyd resin modified with oils having an iodine number below 100 and urea formaldehyde resin modified with monohydric alcohol.

Pat. 2,250,667. Polishing Composition and the Method of Preparing the Same. July 29, 1941. An emulsion polishing composition of the oil-in-water type comprising an emulsifying agent of the bodying type, a matting agent consisting essentially of methyl cellulose, an oil, and water.

Pat. 2,258,708. Glass Article. Oct. 14, 1941. Glass coated with alkyd undercoats and heat-hardening phenol formaldehyde resin topcoats.

Pat. 2,260,819. Coating Composition. Oct. 28, 1941. The reaction product at room temperature of a blown drying oil and from 1 to 3% of ortho-phosphoric acid, dispersed in solvent to below 50% solids before a rubbery gel is produced.

Pat. 2,279,496. Stencil Paste. Apr. 14, 1942. A coating composition adapted to be used as a silk screen stencil paste comprising a modified alkyd resin, a cadmium red lithopone pigment and diphenyl guanidine.

Pat. 2,286,767. Coated Alkaline Articles and Process of Making Them. June 16, 1942. A primer composition for application over calcareous surfaces and under alkali sensitive oleoresinous coatings comprising an alkali impermeable vinyl polymer plasticized with bis-aryloxy alkyl ether.

Pat. 2,286,964. Sealing Coating Composition. June 16, 1942. A sealing coating composition for use over "bleeding" enamels, comprising an organic film forming polymer vehicle and activated vegetable carbon.

Pat. 2,287,986. Resinous Coating Composition. June 30, 1942. Synthetic resin enamel containing diphenyl or triphenyl guanidine as a drier.

Pat. 2,302,583. Plastic Composition. Nov. 17, 1942. Coating compositions comprising chlorinated rubber and bis-aryloxy-ethyl ethers as plasticizers.

Pat. 2,310,866. Luminescent Tube. Feb. 9, 1943. A lacquer for depositing a thin layer of luminous material in which the essential ingredient is dynamite nitrocellulose for use in the production of fluorescent lights.

Pat. 2,310,867. Coating Composition. Feb. 9, 1943. Nonsagging nitrocellulose lacquer characterized by the presence of a small amount of dynamite nitrocellulose.

Pat. 2,315,347. Coating Composition. Mar. 30, 1943. An oil and greaseproof automobile enamel characterized by the presence of malic acid.

Pat. 2,316,041. Process for Simulating Hammered Metal. Apr. 6, 1943. A hammered metal effect obtained by spraying large drops of thinner on a partially hardened metallic enamel.

Pat. 2,318,606. Corrosion Inhibition. May 11, 1943. Long chain alkyl ammonium phosphates as anti-corrodents.

Pat. 2,326,623. Coating Composition. Aug. 10, 1943. A coating composition adapted to be applied by spraying comprising a resinous film-forming agent, flake aluminum, and from 0.8 to 2.0% of rubber.

Pat. 2,335,760. Coating Composition. Nov. 30, 1943. A durable coating composition comprised by hydrous iron oxide of average particle size less than 100 millimicrons dispersed in a cellulose derivative vehicle.

Pat. 2,343,925. Metallic Finish Enamel. Mar. 14, 1944. An improved metallic synthetic enamel composition comprising an alkyd resin, metallic flake and 1 to 8% of 12-hydroxystearin (hydrogenated castor oil), the latter introduced in the form of a colloidal paste.

Pat. 2,344,793. Coating Composition. Mar. 21, 1944. A non-yellowing, non-marring white baking enamel containing up to 1% of a wax based on the pigment.

Pat. 2,383,548. Coating Composition. Aug. 28, 1945. A corona-proof cable lacquer containing ethyl cellulose and a butyl alcohol modified urea-formaldehyde resin.

Pat. 2,384,093. Photographic Transfer Paper. Sept. 4, 1945. A photographic transfer paper of improved resistance to fogging made by coating the back side of the photographic transfer paper with non-fogging, substantially gas impervious sealer prior to or during the lamination to template stock.

Pat. 2,384,270. Coating Compositions and Process for Preparing Them. Sept. 4, 1945. A non-settling paint containing a drying oil acid, an air blown drying oil, and amount of water equal to twice the combined weight of the acid and the oil.

Pat. 2,389,210. Airplane Wing or Fin With Improved Airfoil Characteristics. Nov. 20, 1945. An airplane wing coated with a rubber compound or a vinyl compound to level out irregularities caused by rivet heads, etc.

Pat. 2,393,583. Coating Compositions for Use in Preparing Photo-Templates. Jan. 29, 1946. A photo-template comprising a rigid base having an oil primer in contact therewith, superimposed upon the primer a transfer lacquer, a photo-sensitive emulsion cemented thereto, and a mild alkaline material incorporated in one of the coats between the metal and the photo-sensitive emulsion.

Pat. 2,402,551. Metal Protective Coatings. June 25, 1946. A coating composition comprising lanolin, a volatile organic solvent and ethyl cellulose. Useful as a stripping lacquer.

Pat. 2,424,730. Coating Composition Comprising a Vehicle Containing a Drying-Oil-Modified Alkyd or Phenol Formaldehyde Resin, Pigment Litharge and Calcium Hydrate. July 29, 1947. A rapid drying, anti-corrosion metal protective primer composition comprising drying oil modified alkyd or phenolic resins, pigment and 0.1% to 4.0% of litharge and calcium hydrate based on film forming solids.

Pat. 2,432,747. Coated Wall Tile. Dec. 16, 1947. An imitation ceramic wall tile made of pressed wood, primed, surfaced and topcoated with an alcohol modified urea formaldehyde-alkyd resin enamel.

TRADE-MARKS

OFFICIAL GAZETTE, DECEMBER 14, 1948

[VOL. 617. NO. 2]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Ser. No. 521,992. SCHNEIDER LEATHER NOVELTY CO., New York, N. Y. Filed May 6, 1947.

SECRET SERVICE

FOR WALLETS AND BILLFOLDS.
Claims use since May 6, 1946.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 516,146. NELSON-FRENCH COMPANY, Warsaw, N. Y. Filed Jan. 22, 1947.

N & F

FOR SOAP CLEANSER.
Claims use since Oct. 10, 1946.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 509,655. LEO HABER, doing business as Equalife Laboratories, Los Angeles, Calif. Filed Sept. 24, 1946.

BLUE CROSS

FOR LIQUID CUTICLE REMOVER.
Claims use since February 1939.
